There is no way to estimate the perils that would result from forcing high-masted vessels into the open sea. It can safely be presumed however that if these vessels are forced to travel north and south outside the safety of cruising in inland waters, men and boats would needlessly be exposed to stormy and treacherous Atlantic waters. The recent disappearance of Harvey Conover, the well-known yachtsman, together with his yacht and all on board is a most vivid illustration of the perils which must be considered in forcing the high-masted vessels into the open sea.

We submit that the advantages which a small group might realize in lowering the vertical clearance below the present 80 feet are far outweighed by the disadvantages which would follow in its path, and that no change should be made in the long established minimum vertical clearance of 80 feet.

Respectfully,

JEROME F. HEALY, Jr.,
Executive Secretary.

Reds To Produce Atomic Plane

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD at this point an article from the Cincinnati Enquirer of April 22 regard-

ing plans of the Soviet Union to place a nuclear-powered aircraft in the skies by 1960. I believe it is important for the Members of the House to be aware of the tremendous progress which the Russians are making in the nuclear aircraft and nuclear rocket field, and of the threat which this poses to the United States, both from a military and psychological point of view.

As the Members of this body are well aware, my colleagues and I on the Joint Committee on Atomic Energy have for years pressed for a vigorous development program to insure that the United States achieve the first nuclear-powered aircraft. We have felt that America must be first to place a nuclear aircraft in the skies both from the point of view of the important military missions which such an aircraft can perform and, equally important, from the point of view of world confidence in America's scientific capability. The urgency for doing so has been underlined dramatically by the recent Soviet successes with their sputniks.

I am convinced from my own conversations with Russian scientists in Moscow last fall that the Soviets are well along in their atomic plane program and I believe that it is entirely reasonable to assume that the 1960 target date mentioned in the article is a correct one. For this reason I cannot but regret that the administration has seen fit to kill efforts last fall by the Air Force to accelerate our nuclear aircraft program and, more recently, that the Killian committee has delivered a crushing blow to these hopes after a cursory review of the program.

I hope, however, Mr. Speaker, that this Russian threat to the United States will help change the attiude of those who believe that we can conduct our nuclear aircraft program in a business-as-usual fashion, and that action will be taken immediately to restore funds to the program so that it can be pushed forward with all speed.

The article follows:

[From the Cincinnati Enquirer of April 22, 1958]

REDS TO PRODUCE ATOMIC PLANE, OFFICIAL SOVIET BOOKLET DECLARES

(By Phillip M. Swatek)

WASHINGTON, April 21.—Russian science and engineering are on the verge of creating aircraft with atomic engines, a technical publication of the Soviet Defense Ministry says.

The booklet, just translated by the United States Air Force and made public here for the first time, declares the Communists want to fly a nuclear transport but that an atomic bomber with unlimited range would be of particular interest.

American imperialists, the Soviet authors say, have been working hard on a nuclear bomber to deliver bombs of enormous destructive power to any point on the earth's surface.

The Soviet Union has been compelled, in view of the military preparations of the capitalist countries, to develop armed forces capable of repulsing an attack by an aggressor at any time.

In the Russians' view, more than 10 United States aircraft engine manufacturers are working on atomic engines and reactors, including General Electric. Actually, GE is the only manufacturer working on the engine, though Pratt & Whitney has a contract with the Atomic Energy Commission for work on the reactor.

GE also is doing reactor development work for the AEC, and the Evendale (Cincinnati) plant is regarded as the nerve center of the entire United States program.

Authorities who have examined the booklet, published by the Russian military press last fall, and a volume filled with formulas and engineering diagrams, said today that on the basis of this evidence Russia apparently has at least as much theoretical knowledge in this field as the United States has.

Whether Russia actually is ahead and will fly an atomic aircraft before the United States just on the basis of this display of technical knowledge, authorities here will not say. They explain so much depends on Soviet ability to translate their plans into hardware and the pressure under which they are doing it.

No specific target date for the first Russian flight was mentioned in the book. The most authoritative estimate used here for the first Russian flight is 1960. The United States target date was given to the House Military Appropriations Subcommittee last winter as 1963.

Experts here were impressed with the attention given in the book to nuclear-powered turboprop engines. Most consideration in the United States program, in the past anyway, has been given to turbojet engines in order to provide a higher and faster bomber for the Air Force, which was putting up most of the money. Turboprops would have been better for a big transport plane, which would have been easier to develop than a high-performance bomber, but the Air Force hasn't been interested.

Because of the great weight required for radiation shielding, progress in developing a militarily-useful jet has been slow. Enthusiasm for the project fluctuated within the Air Force and last summer it appeared it might be cut back drastically.

These were dark days at Evendale. Then sputnik reestablished the value of being first and the nuclear-plane project was brought back for another look. Advocates of early flight in anything that would fly prevailed within the service. Last winter the Navy began aggressively pushing its turboprop seaplane project.

Studies still are being made by the Defense Department on the Navy project, but President Eisenhower decided last month not to pursue the Air Force program on a crash basis. If a switch in emphasis to the Navy turboprop project is made, most of the work still would be done at Evendale.

Authorities feel the Russians' interest in the turboprop concept, their charges that America wants the atom plane for war while the Russians want to fly a nuclear transport plane, give a pretty good hint at what they are doing.

The Russians admit in the book that they haven't solved the radiation-shield weight problem either, so, it is guessed, they decided to skip the more difficult jet project and concentrate on turboprops which are more efficient at low altitudes and subsonic speeds. Because turboprops were the best bet technically, they went ahead and developed their program to match—calling attention to the fact that the United States was developing its atom plane for war and they were developing theirs for peaceful purposes.

In the introduction of the book it is stated, "The ruling circles of the United States marked the beginning of the atomic age by the barbaric destruction of the Japanese cities of Hiroshima and Nagasaki, although there was no military necessity for this whatsoever."

In addition to the many engineering drawings and technical details, the Russian authors included in their volume some believe it or not facts, including the information that a nuclear plane could fly around the world and consume no more than 1 to 2 pounds of nuclear fuel.

The same flight with conventional engines would take 1,000 tons or more than 20 railway tank carloads of kerosene, they figure. Nuclear fuel, the Russians explain, contains approximately 2 million times as much energy per unit weight as does an equal unit weight of modern aircraft fuel.

Our Railroads Are in a Desperate Situation

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. ROBISON of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story published in the Elmira (N. Y.) Advertiser on April 17, 1958. This story is in the form of questions and answers developed at a round-table discussion between newspapermen in Elmira and representatives of the railroad industry.

The newspapermen were Cove Hoover and W. Charles Barber, the Elmira Star-Gazette; Alan Gould, Jr., and Robert Clark, the Elmira Sunday Telegram; and Hillard Gordon, the Elmira Advertiser.

Railroad representatives were James M. Dean, Erie Railroad; William J. Noone, Pennsylvania Railroad; and Franklin B. Hoffman, chairman of the Railroad Community Committee.

The questions asked and the answers given to them so pointedly highlight the plight of our Nation's railroads that I thought Members of the Congress should have the advantage of reading these questions and answers:

Question. How in the world did the railroads get into their present financial predicament?

Mr. DEAN. There are several reasons. The railroads—the only form of passenger-freight transportation that must buy, build, maintain and pay taxes on its own right-of-way—are governed on Federal, State and local levels by an archaic system of laws and regulations that deny them the fundamental right of equal competition.

These laws were put on the books way back in the days when the railroads did have a virtual monopoly on transportation. Today while there is no longer any trace of monopoly, the same old laws are in use.

Actually, the railroads are the only true common carrier of both freight and passengers. They carry almost half of all intercity freight and about 35 percent of commercial passenger traffic.

Because they are legitimate common carriers, they must accept every type of freight, while their competitors may pick and choose just what they want to carry.

This has left the railroads in the position of being forced to haul the undesirable and oftentimes unprofitable freight, while their competitors grab off the lucrative business and do not have to worry about declining passenger business.

Question. How has inflation affected the railroads?

Mr. DEAN. Along with its other woes, the railroad industry, like every one else, has been caught in the inflationary squeeze. It has been confronted with steadily climbing labor and material costs, together with a reduction in the level of our economy.

Since November of last year, for example, wage rates of railroad workers have gone up 12 cents an hour.

This has resulted in a dangerous drop in railroad earnings and many roads are scraping the bottom of the barrel for money to meet expenses.

Unlike other businesses—perhaps like yours—the railroads cannot act immediately to cope with these rising costs.

Under obsolete regulations, they apply for freight and passenger rate increases to offset their losses, but by the time the slow legal machinery gets around to acting, it is far too late, and too often, the increases are sadly inadequate to cover the added costs.

Right here in New York State every railroad in the State loses money on its passenger business. For two railroads alone, the deficit last year was more than $100 million.

Question. The claim is made that railroads are losing money because of taxation. How badly are they hit?

Mr. DEAN. At the Federal, State and local levels, the railroads get it in the neck from the tax appraisers and there has been little, if any, relief despite the desperate situation in which the railroads find themselves.

As an example, the taxes last year on Grand Central Terminal and Pennsylvania Station in New York amounted to $13 million, even though both facilities are used exclusively for passenger trains.

In other words, while the passenger losses have been rising, ironically, so has the tax bill. Here is another shocking example. New York City taxes on the New York Central's Harlem River Bridge have jumped from $70,000 a year to $490,000 a year since 1954—an increase of 600 percent.

And while the railroads are reeling under the paralyzing burden of taxation and regulation, their competitors are enjoying a relative field day.

Question. We hear a lot about declining railroad passenger business. What has happened in this field?

Mr. NOONE. Much of it has gone to the railroads' subsidized competitors—the airlines, buses and private cars.

And millions of these subsidy dollars have come, ironically, from the huge taxes paid by the railroads on the facilities they have had to build and pay for themselves.

The airlines, for example, use airports and traffic-control systems built for them by public authorities. Millions have been spent right here in the Elmira area.

The taxes on these facilities—when they are any—are ridiculously low.

For example, the property in New York on which LaGuardia and Idlewild airports are built is assessed at $110 million. Not a dollar of tax is paid. Railroads, for this amount of property, would be paying a tax bill of $4,400,000 a year.

Billions of dollars in taxpayers' funds have gone into the construction of our mammoth system of throughways, expressways, highways, bridges and tunnels, which are used by buses and trucks as well as by automobiles.

These publicly sponsored and paid for projects have had a tremendous impact on the railroads. In the case of the New York State Thruway, which is close to us, the effect was dramatic.

As each section of the road was opened for use, there was a sharp corresponding drop in the passenger business of the parallel running New York Central Railroad.

Now with the Thruway completed, New York Central's business is down 40 percent under the pre-Thruway level.

When you come right down to brass tacks, we are losing money on just about every passenger train we run.

Question. Don't the railroads charge more—to other users, such as freight shippers—to offset losses in passenger service?

Mr. NOONE. In the past, the profit on the railroad freight operation was enough to offset these passenger income losses, but now we are in trouble there, too.

The obvious solution, of course, is to do more business and cut down on the losses, but here again we are up against a blank wall.

Railroad equipment has been wearing out, and we just can't get the money needed to replace it, or keep it in proper repair.

Ironically, to improve our earnings, we must have new equipment, but because our earnings are so poor, we cannot attract the investment capital needed to replace the equipment.

The return on railroad investment has dropped to a dangerously low point—a point at which we had to pass up dividends—and that means the investors are not willing to pour any more money into railroad stocks.

Question. What are the railroads doing about this situation?

Mr. NOONE. Well, we have tightened our belts until it hurts. Thousands of employees have been furloughed. Every possible economy has been made to conserve our dwindling supply of cash.

But frankly, we are scraping the bottom of the barrel.

Some roads have torn up track, closed and sold stations and freight houses, sold off real estate, and just about everything possible to raise the precious cash we need to keep operating from day to day.

Some railroads have been forced into self-cannibalism.

The New York Central, for example, has been forced to scrap hundreds of old cars, just to sell the metal and scrap material, in a desperate attempt to raise cash. This practice, obviously, is dangerous, but we are in a desperate situation.

Question. What role do the railroads play in our peacetime economy—and during times of national emergency?

Mr. HOFFMAN. In World War II the railroads carried 90 percent of all military freight and 97 percent of all organized military troop movements.

In Korea—and here I will quote General Van Fleet—"No other form of transportation, nor all other forms combined, could have done the job the railroads did."

As of this moment, however, because of their weakened condition, the railroads just couldn't do the job they did in World War II, if they were given an emergency call by the Government.

Their physical plants have been weakened, because they haven't had the money to maintain them properly, and there is no prospect at the moment of that situation improving.

Then, too, when the railroads are sick, so is the economy of the Nation. The railroads are the second biggest employer in the Nation and they are a tremendous purchasing force.

But they have had to cut their purchases, and that loss has been felt all across the Nation. They have had to lay off workers, and that has seriously impaired the economy.

Question. What then can be done to get the railroads back on the track, so to speak, and in a healthy condition?

Mr. HOFFMAN. The railroads desperately need relief from three oppressions—regulation, taxation and subsidy of the competitors.

The railroads do not want to be taken over by the Government—they want to remain a vigorous, free enterprise industry, progressing with the Nation's free economy, doing the vital job only they are equipped to do.

But they cannot fill this role, if they continue to be shackled by outmoded and obsolete regulations of the horse and buggy era.

They cannot live a free life if they are choked by excessive taxes which take away the dollars the railroads need to build themselves back up into a healthy industry.

They desperately need the basic American right to compete as a free segment of the economy.

Regulations in some form are, of course, necessary in all things.

But they should be fair and equitable and not force the railroads to lose money merely to help a competitor.

We feel that the railroads must not be permitted to perish into the limbo of Government ownership. That would be a dark day for the country.

We earnestly hope that Congress will study well the recommendations of the Smathers Committee and give the railroads the helping hand they need so urgently if they are to help themselves.

Duck Hill Has 16 FFA Members Who Earned Top Degree

EXTENSION OF REMARKS

OF

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. WHITTEN. Mr. Speaker, in this time of real trouble on the farm, I take real pleasure in calling attention to the fine record of a school, a school instructor, and the outstanding record of a number of young farmers. It is a record which constitutes a real challenge.

The article follows:

DUCK HILL HAS 16 FFA MEMBERS WHO EARNED TOP DEGREE—RECORD FOR STATE COMES UNDER INSTRUCTOR TRAPP

(By Carl McIntire)

Duck Hill believes in its school producing good farmers through the vocational agriculture department—and believes in having those farmers stay at home to become a part of a thriving community.

That it succeeds is evidenced by the record established by the school's Future Farmers of America chapter, which numbers in its members the boys who are students in the vo-ag department. In the past 20 years there have been 16 boys from the chapter to earn the coveted American Farmer Degree, highest award that the National FFA Association may award to its members.

For most chapters, to have had 5 boys earning the degrees would be distinctive, but for 1 chapter in a comparatively small school to have 16 so honored is an outstanding achievement. Needless to say, there is no other school in the State to attain such a record.

Then consider the fact that all 16 American Farmers from Duck Hill are still farming in the Duck Hill area.

Undoubtedly this unique achievement must be credited to one man, the person who has been responsible for the training of the young fellows who gained national stature as student farmers and have gone on to make successes as adult agriculturists.

THERE 28 YEARS

He is B. M. Trapp, for 28 years the vocational agriculture instructor at Duck Hill High School.

He must be a good teacher, interested in his boys. The record indicates the fact.

We found he is also a very nice guy, still very much interested in the young fellows who have been in his classes for this more than a quarter of a century.

Trapp has kept pace with the boys who were in FFA chapters with him at Duck Hill. He can recite most of their achievements almost as well as they could themselves, he has that much pride in their successes. He can tell you, too, most of the things about their farming operations, because they keep in touch with him and still seek his advice.

With him and A. G. Shepherd, executive secretary of the Mississippi FFA, we visited 1 day this week with 3 of his former American Farmer degree winners.

One is a former State president of Mississippi's Future Farmers of America, D. R. Branch. Another is a former State reporter of the FFA, Elmo Branch, a brother of D. R. The third is Curtis Riley, the first American Farmer degree winner at Duck Hill.

SCHOOL HAS 19 OF 21 CHAMPIONS

Another achievement of the Duck Hill High School FFA chapter under Instructor B. M. Trapp is most unusual and is a record in the State, perhaps the Nation.

For 19 of the past 21 years Duck Hill has had the State championship FFA dairy products judging team—and the other 2 years the Duck Hill squad placed second.

HERE'S LIST OF DUCK HILL'S 16-PLUS AMERICAN FARMERS

A complete list of Duck Hill High School's FFA American farmer degree winners includes:

Billy Abel, now in partnership with his father in a livestock farm operation near Duck Hill.

Walter Abel, Jr., a merchant near Duck Hill, also operates a farm near there.

James Bowen, who owns and operates a farm 2 miles east of Duck Hill.

D. R. Branch farms near Duck Hill.

Elmo Branch farms near Duck Hill.

J. D. Branscome, graduate of State College, has farm south of Duck Hill, is in livestock business and lives in Grenada.

L. L. Branscome, Jr., farms with his father near Duck Hill and owns livestock sales at Batesville and Lexington.

Manley Hayward, now in armed service.

Charles Heath, graduate of Texas A. and M., a veterinarian at Winona, owns farm near Duck Hill where he keeps his herd of registered Angus.

Julian Kirk farms 7 miles east of Duck Hill.

S. S. Reeves, now in armed service.

Curtis Riley farms north of Duck Hill.

O. W. Scott, Jr., has an interest in farms near Duck Hill with his father, has herd of beef cattle, works as salesman.

Dalton Windham farms near Duck Hill and works part time in Grenada.

Ernest Windham farms near Duck Hill and works part time in Greneda.

E. B. Wray, Jr., farms 9 miles east of Duck Hill, has row crop and grade beef herd operation.

In addition, Mr. Trapp, the vocational-agriculture instructor, holds an honorary American farmer degree.

Where Does Liberty End and Protection Start?

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. SMITH of Kansas. Mr. Speaker, much has been written about Ezra Taft Benson, the highly controversial Secretary of Agriculture. It is generally known that the Secretary starts all speeches and closes them with a plea that his policies have only one basic objective—lower prices for food and more liberty for the farmer. This editorial very clearly points out the difficulties of trying to put into practice such a policy.

I commend this editorial from the Goodland Daily News of Goodland. Situated on the high plains of Kansas, a geographical area of clear vision and cloudless skies, but at times some of these theories get a bit murky and smog-covered.

The editorial follows:

WHERE DOES LIBERTY END AND PROTECTION START?

"Doc" Benson, Secretary of Agriculture came up with such a curious prescription for these times you couldn't be expected to believe he originated it unless you read it in such a reliable place as herewith. Something has to be done, says the Secretary, because farmers are not responding to the "old prosperity pills" provided by present farm aid programs.

The main trouble with the farmers today is their cost of operation has risen $3 billion, $7 million in the last 7 years—a billion dollars more than their realized income. The Secretary points out the old price support program was written to cope with a depression, changed to help fight a war, revised again to meet the need of peace. It has been an expensive effort but it hasn't solved the farm problem.

The Secretary didn't mention it but he might have added the farm problem is so variable, complicated, huge, it never will be solved to the satisfaction of us all. But Benson has a program for the Nation's 22 million farm people, and he contends they are entitled to it. That's where the incredible part comes in, considering the regimentation most of us believe essential to controlled production which we are assured is essential to the farm program we have. Benson recommends these four freedoms:

More freedom to plant so farms can be operated efficiently.

More freedom to market so farm incomes can be increased.

More freedom to meet competition so markets can be expanded.

More freedom from government interference so farmers again may be independent and self-reliant.

Wonderful, wonderful. Benson's dimming popularity should take on added luster, in the fashion of applause accorded any loud expounder and champion of patriotism, motherhood, integrity, justice.

Few farmers would refuse any of the four freedoms. Most of them demand the last. But the belief persists that a few years out in the cold of depending on individual resources, while all about our complicated civilization was doling out unemployment checks and assured profits on armament contracts, would send men of the soil back to Congress for protection. Thus, Doc Benson, this is no time for snoozin' by the haystack, straw hat over your eyes, dreamin'.

Kansas wheat farmers have been essentially honest in the acreage allotment program over the years, according to William C. Farmer, United States district attorney for Kansas, whose duty is to prosecute if anyone seeks to defraud the Government on any farm program. Since the wheat allotment program was started his office has obtained judgment on more than 70 cases and has 20 pending. Most of the charges involve overplanting. Some cases are concerned with disputes between ASC committees and farmers over measurements. Considering the thousands of farmers who have operated under the Government program there has been only insignificant chiseling.

Florida Playing Vital Part in National Trend Southward

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. SIKES. Mr. Speaker, I find an excellent summation of Florida's growing importance in the national picture in a recent column by Dr. Caleb J. King, Sr. It is entitled "Florida Playing Vital Part in National Trend Southward." It appeared in the Florida Times Union. I believe that it will be interesting to all the Members of Congress.

FLORIDA PLAYING VITAL PART IN NATIONAL TREND SOUTHWARD

(By Dr. Caleb J. King, Sr.)

Look up and not down; look forward and not back; look out and not in; and lend a hand.

Florida is playing a leading role in one of the most thrilling economic dramas—one of the most significant movements—ever staged in America.

Surface appearances which point up this fact are convincingly attested by facts assembled by the United States Census Bureau and the Department of Commerce and published by the latter Federal agency.

Statistics embodying the story of what is happening usually cover the entire South or the Southeast. They are broken down, however, to show the part each of the several States has in the dramatic trend of movement from the North to the South, and what the respective States are doing independent of that trend.

A look at the whole picture prompts thinking of the utmost significance to the American people in their confusion and dissatisfaction over the disruption of the long-standing status quo.

Conclusions are encouraged by mediations thus produced which augur well for a future that is not entirely unforeseeable.

Substance is given the southward trek by the news release from the office of Rufe B. Newman, Jr., manager of the Jacksonville Department of Commerce office showing the region as leading other regions in gain in motor-vehicle registrations, telephones in operation, and value of cattle on farms.

And the fact that it was second among all regions in rate of increased expenditures for plant and equipment, electric energy produced, retail sales, per capita personal income, industrial and commercial firms in operation, airline passenger transportation, value of commercial broilers produced, and cash farm income.

A phase of the trend thus depicted that is particularly interesting, and important from the national viewpoint, is the increase made in foreign trade through Florida ports and others of the Southeast.

Efforts to build up the country's foreign aid are being given almost as much attention as the defense program. It is stressed as a major weapon against the economic recession which is now plaguing America—and rightly so.

And while the talk goes on Florida ports are leading the region in foreign-trade development, with the exception of the giant, New Orleans.

A total of $3,766,900,000 worth of exports and imports passed through the ports of the region, composed of Florida, Mobile, New Orleans, and the Carolinas last year.

These figures represented an increase of $615,800,000 over 1956. All of the six customs districts shared in the gains in the total trade.

Florida's gain is especially noteworthy. In total trading the ports of this State registered a gain from $629.9 million to $792.7 million. These figures are more than double those of any of the other ports except New Orleans.

These regional port figures appear very small, of course, when they are compared with the dozen or so big ports of the country. But they show gains, which is a vital factor in the current situation in the United States.

And that word "situation" is filled with significant meaning at this time. It takes into consideration the waterfront racketeering in New York City, the aggravating nuisances maintained there and at others of the big ports by people who have much to do with getting ships in and out of docks.

It also includes the national trend of thought that is centering more and more upon the desirability of living in this section than elsewhere, the result of great numbers seeking refuge from the evils of loose-thinking reformers among the country's political and judicial leadership.

Examine whatever phase of the economy of Florida and her neighboring States you may, and you will find the conditions equally as favorable, some perhaps more so, as those prevailing with the ports. And it is interesting to note here that the Department of Commerce is doing an excellent job of translating Census Bureau facts into informative news articles on the subject.

Florida, for example, is building better highways at the rate of close to $100 million worth a year. Keeping pace therewith is the program of expanding educational facilities to include another expensive university setup at Tampa, and junior colleges within easy reach of all young people in every section.

Of all the progress that is to be noted, however, the churches take the lead. If spiritual development could be measured by the number and scope of new sanctuaries and church-educational buildings, Florida might quickly become the object of the whole religious world in recognition of the leadership here.

The fact of primary interest in the statewide evaluation, however, is that Florida is moving forward in population more than 4,000 persons a week, and otherwise in a way that acts like a magnet.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

Texas Representative's Work Commended by Washington Post

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Snooping," published in the Washington Post and Times Herald, commending the work being done by an able and distinguished young Representative from Texas, my very good friend, the honorable JACK BROOKS, of the Second Congressional District of Texas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SNOOPING

It is indeed, as Representative JACK BROOKS, of Texas, so indignantly put it, "a disgraceful, ethically reprehensible thing for a big, national firm to send detectives snooping into the personal life of a Government official with whom they must deal in business." Representative BROOKS was referring to the Freeport Sulphur Co. which, according to testimony, hired a special investigator a year ago to dig up hometown dirt on Ira D. Beynon, an official of the General Services Administration, who was being a somewhat stubborn negotiator.

The president of the Freeport Sulphur Co. sought to justify what his company had done on the very basis commonly employed in justification of the Government's personnel investigating techniques. "Any honorable man would have no objection whatever to being investigated," he declared grandiloquently. "Why Mr. Beynon should feel so damaged by having people ask questions about him, I don't understand." An explanation which may prove helpful was offered long ago by Thomas Erskine May in his Constitutional History of England:

"Next in importance to personal freedom is immunity from suspicion and jealous observation. Men may be without restraints upon their liberties; they may pass to and fro at pleasure; but if their steps are tracked by spies and informers, their words noted down for crimination, their associates watched as conspirators, who shall say that they are free?

"Nothing is more revolting to Englishmen than the espionage which forms part of the administrative system of continental despotism. It haunts men like an evil genius, chills their gayety, restrains their wit, casts a shadow over their friendships and blights their domestic hearth."

A Religious Leader's View of the Family Farm

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. PROXMIRE. Mr. President, yesterday I received a message from Father Peter Minwegen, O. M. I., of the Shrine of Our Lady of Sorrows, Rhineland, Mo., about the fundamental importance of preserving our family-operated farming system.

Father Minwegen warns that the present farm policies are destroying our family farms, and inexorably replacing them with a form of collective agriculture which he says is close kin to the collective farms of the communistic countries. This strikes me as an extremely significant point. Truly, there is more similarity between a farming system in which the work is done by laborers who are hired by the communistic state and one in which the workers are hired by a big coorporation than there is between either of them and the traditional family-sized farm owned by the family that does the work.

Father Minwegen's warning is clear and blunt. "The trend toward the large industrialized business farm is evident," he says. "Unless the wisdom of honest statesmen change the present course, this country will be a land of collective farms like Russia, with the difference that over there communism has used compulsion, while here the silent but irresistible power of capitalism will have achieved the same end."

Mr. President, this warning from a Catholic clergyman should be taken most seriously. I agree most emphatically with Father Minwegen that the collective farm is wrong. It is wrong not merely because it is communistic; it is wrong because it deprives people of their opportunity for dignity and individual integrity, whether it is a communistic collective or a corporation-owned collective. It behooves all of us to heed Father Minwegen's warning—which I have heard echoed by many religious thinkers of many denominations—and to take the action that is necessary to preserve and improve the opportunities of our farm families.

Mr. President, I ask unanimous consent to have Father Minwegen's statement printed in the Appendix of the RECORD, so that others can share his wise counsel.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DEAR SIR: Speaking frequently in farmer communities and having lived among farmers many years, I have been asked the question: "Why is it that few Congressmen—if any at all—have the courage to come out openly and unequivocally in favor of the family farm? If in their legislative actions they did take a courageous stand in favor of the family-size farm it would be a great step toward the ultimate solution of the most vexing farm problem.

Here are my reasons for this statement.

The Secretary of Agriculture, E. T. Benson, recognizes farming only as an economic unit, producing food and fiber for the Nation. He is logical and consistent in favoring the mechanized industrial superfarm, because from his exclusive viewpoint of production it is more efficient than the small family farm. The superfarms grow and expand from year to year while the number of farmers and farms decreases. It sounds like cynical boasting, when we are told that the per capita income of the farmer has increased for everybody knows that when agricultural income is divided among fewer participants, the per capita share is larger.

The superfarm or business farm is in the field of production only for profit, or for no other purpose than making money, while the family farm seeks also to provide the means of existence.

The superfarm can survive, even become prosperous, on a return of 10 percent of his investment. The family-size farmer cannot make a living on 10 percent on his investment and his labor. It is not the small existence farm of the rural family, but the huge industrialized superfarm which creates the surpluses, forces down the market price and in the case of the Soil Bank and price supports reaps the real benefits. Even on a small margin he can make money, because of the large acreage. Thus he becomes the worst competitor and enemy of the family farm.

The average family farmer has not got the arable land to put into the Soil Bank. When he is notified that he has planted 16½ acres of wheat, while he was entitled only to 15, and that he has to plow under 1½ acres, if he wants to obtain price support and that this so-called parity-price support has dwindled down to almost nothing, he wonders how he can make a living. He is inclined to believe that the farm policy of the Government is more of a curse than a benefit to the small family farm. Congressmen ought to realize that the rural family is not only an economic unit engaged in agriculture, but also a social unit in the life of the Nation. Only when considered in this dual role can it become a source of blessings for the whole country.

If a choice is to be made between the superfarm and the family farm, there can be no

question which of the two ought to be preferred. It should not be considered unjust discrimination or favoritism if the laws of the land favored those who seek the means of existence, while engaged in providing food for the Nation, as against those who use agriculture only for the purpose of making money. Let us admit that it will be difficult to define a family-size farm. Taking into account the variety of farm products, which may be dairy, cattle, hogs, poultry, wheat, corn, cotton, tobacco, etc., it would be impossible to define it by the acreage, but it could be done on the basis of net income. Let us say, tentatively, a family farm is a farm that has a net annual income of less than $6,000.

Suppose for one moment that only such family farms enjoyed a modified Soil Bank and real parity price support, look at the revolutionary yet beneficious social and economic results:

1. It would discourage the expansion and the monopolistic tendencies of the superfarm.

2. It would reduce the surpluses to a minimum and with it the million-dollar-a-day storage fees for such surpluses.

3. The Soil Bank would not have to pay immense amounts for huge tracts of land that lie idle while an absentee landlord in a faraway metropolis harvests large profits by doing nothing.

4. It would give the family farmer the means of modernizing his farming methods and thus become more efficient.

5. It would keep the young people in the country instead of going to the city to swell the number of unemployed.

6. It would put sense into the policy of the Government, which is often contradictory in itself, defeating its own avowed purposes. At present the United States Government spends millions of dollars on soil conservation, irrigation, flood control, fertilizers, all sorts of local and Federal agencies to promote and stimulate agricultural production, and then spends untold millions again to restrict it.

7. The party that would come out in deeds, not in campaign promises only, might lose some campaign contributions, but would make up in votes from the desperate rural districts.

CONCLUSION

The trend toward the large industrialized business farm is evident. Unless the wisdom of honest statesmen change the present course, this country will be a land of collective farms, like Russia, with the difference that over there communism has used compulsion, while here the silent but irresistible power of capitalism will have achieved the same end.

If the policy of the past 20 years is continued, the family farm will be supplanted by an army of poor tenants, sharecroppers, and hired men, all working to concentrate more wealth in the hands of a few.

The honest politician who runs for office should let the voters know where he stands.

P. J. MINWEGEN, O. M. I.

RHINELAND, MO.

The Civil Rights Commission

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. ERVIN. Mr. President, on April 11, 1958, the Manchester Union Leader, of Manchester, N. H., published an editorial entitled "Tiffany Is Dead Wrong." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the RECORD, as follows:

TIFFANY IS DEAD WRONG

Despite the fact that both New Hampshire Senators are supporting Gordon M. Tiffany for the post of Staff Director of the new Civil Rights Commission, it is apparent to this newspaper that the latter's thinking on civil rights leaves much to be desired.

One would think, after the Little Rock debacle, that the folly of sending Federal troops into a sovereign State to force integration has been clearly established. And several outstanding legal authorities have pointed out the illegality of the President's action so vividly that proponents of Federal intervention will not even debate the issue any more.

But along comes Tiffany to announce that he still believes the use of force is permissible. During hearings of the Senate Judiciary Subcommittee on his nomination, Tiffany said he would not oppose the use of Federal troops to enforce school integration, "when necessary and as a last resort."

Apparently, the legality or illegality of the use of Federal troops is an issue that concerns Tiffany not at all.

New Hampshire would like to be proud of Tiffany's service on the Civil Rights Commission. Let us hope he changes his thinking on this issue between now and Senate ratification of his appointment.

Progress in Science and Technology

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. FULBRIGHT. Mr. President, there is much evidence of a deep interest in the Congress and in the country in the matter of scientific progress. I am confident that all my colleagues are anxious to maintain a reasonable rate of progress in science and technology, but sometimes they do not find the proper means to bring this about. I call their attention to the letter which I ask to have printed in the RECORD. I believe it will give them valuable information on this subject. I therefore ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 13, 1958.

DR. FRED COLE,
Academic Vice President,
Tulane University,
New Orleans, La.

DEAR DR. COLE: I venture to address you on a matter which, it seems to me, at least, affects Tulane University both as an institution of higher learning and as related to a problem which is of the utmost concern to the national interest.

In recent years leaders in education have been pointing out that while the American people excel in technology and applied science, they have done little to develop pure or theoretical science. In particular, the presidents of the Massachusetts Institute of Technology and of the California Institute of Technology have been active in voicing publicly their anxiety over this deficiency. Americans have performed miracles of applied science and extended its benefits to millions of citizens; but despite this admirable fact there has been little or no pure science developed in the United States. True, we have had J. Willard Gibbs, and we now have Linus Pauling; but we have not and we never have had any great theoretical scientists of the calibre of a Newton, a Darwin, an Einstein, or a Planck. But the problem was not generally recognized either as a real or as an acute one, until the Russians fired the two artificial satellites late last year, since when governmental official as well as many scientific authorities have changed what was a deep concern into a loud alarm. It has become painfully obvious that where no pure science exists, applied science must eventually suffer, because applied science is just what the term suggests: science which has been applied; and "science" here means "pure science."

Perhaps the distinction can be made clear by a definition of terms. "Science" can be defined as "the search for natural law," more specifically as "the search for those mathematically framed laws which are suggested by the examination of instrumentally discovered data below ordinary levels of analysts." "Pure science" is the traditional European term, "basic research" the recent American equivalent. "Applied science" is "the application to human problems of knowledge gained by the scientific method." "Technology" is applied science discovered through the method of trial-and-error at the level of ordinary experience. Now, the paradox is well understood in some quarters that before fruitful applications can be worked, the scientific knowledge involved must first be developed. Conic sections were discovered some 15 hundred years before their high applicability to engineering was known. Faraday discovered the principles underlying the dynamo in his wife's kitchen. When he presented the information to the Royal Society, he was asked of what use it was, and he is said to have replied, "Of what use is a new born baby?" Neither he nor anyone in his time could have foreseen the enormous size and number of the dynamos manufactured nowadays by a single company, say General Electric. There was a considerable lapse of time between his discovery, which was a piece of pure science or of basic research, and the lighting of our cities, which is an application of the highest utility. Again, relatively physics and quantum mechanics were discoveries made by Einstein and Planck in the search for pure scientific knowledge and without any thought of their possible practical results. Yet without them, atomic energy would never have been available. Two separate sets of scientists, with two distinct types of interest, are involved: ivory tower scientists, such as Einstein, to develop the knowledge of natural laws; and practical-minded scientists, such as Enrico Fermi and Edward Teller, to reduce the knowledge of natural laws to useful forms. We have specialized in the latter, and neglected the former almost altogether, with the result that we are in the predicament that everyone now recognizes, with the Russians threatening to take the lead in scientific developments.

It is true that pure and applied science now interact greatly to the benefit of both types of inquiry and research. But while pure and applied science aid each other and so have a common aim, they also have their separate aims. Things can only be properly related if they are first properly distinguished. And we cannot hope to make the proper arrangements between pure and applied science unless we have both of them to work with.

In the past we have depended upon Western Europe for pure science while we have

counted on ourselves to discover and utilize practices. Now, of course, there is no reason to take a nationalistic view of this division or to be chauvinistic about science. Science is by its very nature to some extent transcultural. For what we can learn about the regularities of behavior of phenomena do not, except in social matters, confine themselves to any one culture but must be true throughout the world. Thus if we could count upon Western Europe to continue to produce pure science in the future as it has in the past, it would mean that together with our splendid abilities at application, there would be no reason in particular to feel the need to cultivate pure science here. But is this an acceptable picture of the state of affairs? Given the condition of Europe today, it is more likely that wars of depletion and economic changes may retard or even prevent the kind of theoretical development in science we so urgently need. So it may devolve upon us to supply the deficiency in order that science itself may survive in the free world. If Western Europe has faltered, then we must produce pure as well as applied science—if only for practical purposes.

Strangely enough, the universities have fallen further behind in the development of pure science (or, if you prefer, of basic research) than have the industrial laboratories. Ordinarily one might suppose that the work would be neatly divided: The science departments in universities would be concerned primarily with pure science and the industrial laboratories, very appropriately, with applied science; but such is simply not the case. Among the few important developments in pure science in recent years, both information theory (Claude Shannon) and radio astronomy (Carl Jansky) have come out of the Bell Telephone Co. laboratories.

It might be useful to see how this has happened; for although we are more concerned with the future than we are with the past, we can take steps to correct the omission better if we know more clearly what has been responsible for it. Ours has been a pioneering society in which the practical problem always presented exigencies more importunate than important. We derived our theory from our practice, and put the practice first, not understanding the value to practice of the pursuit of pure theory for its own sake. Investment in pure theory is the way in which a society provides for its own future practice. We did not see fit to make an investment, and we have remained of such a mind until the Russian satellites drove home the penalty.

Such tendencies of emphasis and neglect as I have been endeavoring to describe do not come about by chance. I take it that the implicit philosophy of a society has a strong influence on the direction of that society's interests. Pragmatism as developed by by James was popular not because it introduced anything new but rather because it reflected, in abstract and succinct form, principles which everyone instictively believed already. What works is true James asserted, a sharp reversal of what his friend and mentor Peirce, the philosophical physicist, had said, that what is found to be true (according to the experimental method of science) will also work.

Pragmatism has been succeeded by logical positivism, a timid philosophy which points with pride to the scientific achievements while limiting the imaginative daring that has made science a success. In a well known study made in 1932, E. A. Burtt pointed out that behind every great scientific genius in the European tradition, there had stood the training in metaphysics which made possible the development of fruitful hypotheses by means of the controlled imagination. I have heard the same claim of the value of philosophy to science by such men as Carrel, Einstein, and other European scientists. In books and journal articles published in 1937 and after, I have pointed to the absence of pure science in the United States, and the danger to applied science which results. The failure of theoretical philosophy has accompanied and reinforced the neglect of theoretical science.

The purpose of this letter is not merely to point out a difficulty, however, but to suggest possible remedies. The difficulties are out in the open at last, but the remedies are not so obvious. Genius cannot be purchased at will, nor the scientific imagination developed in a hurry. Our problem may be stated as follows. In a problem which affects the whole Nation but which is primarily intellectual by nature, what can the universities contribute?

The first and most obvious answer suggested would be an earnest and deliberate effort to develop pure science. Applied science can be left to the industrial laboratories, whose business it is. Pure science, the search for abstract knowledge for its own sake, is peculiarly germane to the function of higher education. It is so recognized already in the humanities; it ought to be recognized equally by the sciences, just as it has been for centuries in European universities. Sciences departments ought to be urged to encourage pure over applied scientific pursuits.

The second and adjunctive step which could be taken in the university would be to promote courses in scientific method, in order to make clear the presuppositions, aims, and methods of the natural sciences. There could be undergraduate courses in the philosophy of science and, more particularly, in scientific method. In addition there could be faculty seminars devoted to these topics at a more advanced level. Cross-field courses, conducted by experts in scientific method and aided perhaps by illustrations furnished by teachers in the natural sciences: Physics, chemistry and biology, could be of immense service. We canot hope to develop pure science within the university unless our teaching staff and their students know what it is.

I trust you will not feel that in bringing up this topic I have exceeded my authority or that my motives are other than those indicated. If I can furnish any additional information in connection with this letter, I will be only too happy to try.

Sincerely yours,

JAMES K. FEIBLEMAN.

How UAW Fights a Senator—And Why

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an article by Roscoe Drummond which appeared in the New York Herald Tribune of this date, under the heading "How UAW Fights a Senator—And Why." The article has reference to the contest in Michigan and the opposition which is being raised to the distinguished Senator from that State [Mr. POTTER].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW UAW FIGHTS A SENATOR—AND WHY

(By Roscoe Drummond)

WASHINGTON.—Politics in Michigan offers a revealing case study of what a progressive Republican Senator is up against in an election in which the union leaders are implacably fighting him.

The candidate is the incumbent Senator CHARLES E. POTTER, who himself used to polish gears at Pontiac and who has a voting record which gives him a valid appeal to labor rank and file.

But the Michigan labor leaders, for reasons of their own, want no part of the liberal Republican war veteran. Their technique is to do everything in their power to make it impossible for him to put his case directly to the bulk of union membership.

The effect is to shield the union membership from an even-handed presentation of the campaign issues and, with minute exceptions, to prevent labor rallies from hearing candidates whom the leaders want to see defeated.

Here is what has been happening in recent days:

1. Senator POTTER was served with a "not welcome" notice after he had agreed to address a meeting to which he had been invited by the board of directors of the Federal credit union of the Ford Rouge plant employees. It had been all arranged. The date had been set. Mr. POTTER had accepted. Then the Senator got a telephone call from Detroit advising him that some officials of the union were displeased with the invitation and explaining that it would take his hosts off the spot if he did not appear. The credit union is a part of local 600, the biggest United Automobile Workers local with some 65,000 members.

HEARS PARTY ATTACKED

2. When it proved too embarrassing to erect a complete wall, without a single chink, between Senator POTTER and labor union membership, President Paul Silver, of the UAW Local 351, wrote a letter to the Senator openly questioning the sincerity of your professed desire to meet shop workers face to face, but inviting him to speak at a meeting. Mr. POTTER accepted immediately. The chairman introduced him with a 25-minute tirade against the Republican Party. Following the speech and question-and-answer period August Scholle, president of the Michigan AFL–CIO council, put on an act mimicking the Senator's speaking mannerisms and sarcastically attacking his views.

3. The UAW headquarters in Detroit is constantly pointing to the fact that Senator POTTER refuses to appear on a UAW radio-television program as evidence that the union is eager for Mr. POTTER to speak to their members and that it is the Senator who refuses. Senator POTTER'S view is that this is a fraud and a facade, that the UAW knows he will not appear on a radio-TV political program which he considers financed by a misuse of union dues and a violation of the Federal Corrupt Practices Act.

These events persuade Senator POTTER the UAW leaders want so badly to see him defeated that they are determined, so far as possible, to keep him from carrying his campaign directly to the UAW membership.

The puzzling question is: Why? Why should the union leadership be so intent upon shielding the union membership from hearing at their meetings both sides of the Senatorial campaign so that the members themselves could measure the merits of the candidates?

I can think of two reasons; perhaps there are others.

WILLIAMS BOOST SEEN

One is that UAW President Walter Reuther and his associates want to see Democratic Gov. Mennen Williams reelected for his sixth term by the largest possible majority to further his chances of getting the Presidential nomination in 1960.

The other is that Senator POTTER has such a sound pro-labor record—on current antirecession measures AFL–CIO officials in Washington scored him 75 to 85 percent on their side—that if he were allowed direct access to labor rank and file he might well win substantial labor support for himself and, as a byproduct, cut down Mr. Williams' vote for the governorship.

The massive opposition of union leadership to Senator POTTER may backfire as it did against Senator Taft in Ohio in 1950. Obviously Senator POTTER is not going to lie down and roll over.

Communities List Projects

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. PROXMIRE. Mr. President, I continue to receive letters from the executive officers of Wisconsin communities telling me their reactions to the Community Facilities Act of 1958, which was passed by the Senate recently.

I ask unanimous consent to have printed in the Appendix of the RECORD the letters I have received from the mayors of the cities of Cudahy, Kenosha, and Wausau in my State of Wisconsin.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CUDAHY, WIS., *April 18, 1958.*
Senator WILLIAM PROXMIRE,
Select Committee on Small Business,
Washington, D. C.

DEAR SENATOR PROXMIRE: I have reviewed your proposed legislation designed to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency (S. 3497). It is my understanding that the proposed legislation would authorize the extension of credit to assist in the provision of essential public works or facilities by States, municipalities, or other political subdivisions of States, where such credit is not otherwise available on equally favorable terms or conditions.

In common with most units of government the city of Cudahy has a large number of desirable public improvements that could be included in a public-works program. It would also be desirable to expand some of the public services of the city. A list of the desirable projects for the city of Cudahy together with an estimated cost of this work is attached to this letter for your information.

At the present time I do not feel that your proposed legislation would have any real benefit to the city of Cudahy. The city has in the past financed various improvements through the issuance of revenue bonds, general obligation bonds and through direct loans with various banks in Malwaukee County. The city has had no difficulty in raising money through these means at an interest rate comparable with what is proposed in your bill.

I believe that serious study should be made both in the Federal and State legislative bodies to deriving additional sources of revenue not only for the city of Cudahy but also including all municipalities. The expansion of the city of Cudahy and an ever increasing demand for improved public services has resulted in the city's expenses rising faster than its revenues. As expenses rise an ever increasing burden is placed upon the property owner. I believe that the elimination of the Federal excise tax would have beneficial effect on the purchasing power of this community.

Please be assured that the city of Cudahy and I will be most happy to cooperate with you at any time in the solution of our mutual problems.

Very truly yours,
VINCENT TOTKA,
Mayor.

Desirable public improvements

1. Lake Michigan water intake	$600,000
2. Incinerator	300,000
3. Elementary school	900,000
4. Addition to municipal garage	50,000
5. Extension of storm-sewer system	+2,000,000
6. Additional water-storage facilities	400,000
7. Addition to the high school	500,000
8. Off-street parking facilities	100,000
9. Street improvements and grade separations	1,000,000

KENOSHA, WIS., *April 18, 1958.*
Hon. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR PROXMIRE: The legislation you proposed, for the financing of a Federal program to aid and assist communities for the construction and planning of public-works projects, would greatly affect our community and enable it to provide necessary work and facilities.

The attached sheet lists projects which are needed by the city of Kenosha and have been scheduled for some time for construction, if and when funds are available.

Respectfully yours,
EUGENE R. HAMMOND,
Mayor.

PROPOSED PROJECTS

1. Construct storm-sewer outlets at Lake Michigan, $250,000.
2. Rebuild and reline sewers, $610,000.
3. Construct garage for meter shop and water department warehouse, $15,000.
4. Additions at sewage-treatment plant and secure property, $250,000.
5. Asphalt surface 5 miles of streets and rebuild curbing, $620,000.
6. Widen and pave 5 miles of urban designated streets, $3,650,000.
7. Construct storage building for street department and pave yard area, $75,000.
8. Construct 30 miles curb and gutter on unpaved streets, $650,000.
9. Widen and pave 30th Avenue from 52d Street to 75th Street, $365,000.
10. Widen and pave Roosevelt Road, $255,000.
11. Install new ornamental lighting system, $280,000.
12. Install street lights on Lincoln Road Boulevard, $20,000.
13. Construct new city hall and police station, $2,200,000.
14. Construct fire station, $200,000.
15. Construct additional dock warehouse, $200,000.
16. Construct steel sheeting in harbor area, $180,000.

WAUSAU, WIS., *April 14, 1958.*
Senator WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: In reply to your letter of March 29, 1958, with reference to the legislation that you are cosponsoring in the Senate to make low-interest loans available to local governments for public works projects.

In studying the Senate bill S. 3497 to which you referred, I feel that as far as the city of Wausau is concerned, that Wausau cannot gain too much by this legislation. The city itself is in a situation where they can go out on the market and issue bonds at approximately the same rate as this legislation offers at this time. Either way it is done; there is a direct obligation on the city to meet the payments.

However, I do think that this bill has some merits for some of the smaller municipalities or cities, that have a bond limitation to contend with and I believe these localities could gain some relief through this type of legislation. It would help these localities in that they may find themselves in a situation whereby they may have to request extension of time on interest and payments of these obligations, but where a city is in a situation where they can for the most part get money at approximately the same figure as quoted in your letter or perhaps a little better, there is no need for this type of legislation. But where localities are in such situation that their bond limits are restricted to the point where they have difficulty in going out to seek funds for public works, they could get relief through this type of help from the Federal Government.

I hope that this information will be of interest to you and to all those that are concerned in promoting public-work activity at this time.

Yours truly,
ARTHUR M. SMITH, *Mayor.*

Fine Work of the Committee on the Handicapped of the People-to-People Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. WILEY. Mr. President, on many occasions it has been my pleasure to salute the various committees of the people-to-people program.

This is the program, as we recall, inaugurated by President Eisenhower, but carried on by private, voluntary groups throughout our land, in contact with their opposite numbers abroad.

There are few, if any, of these grand groups of leading men and women whom it gives me more pleasure to commend than the distinguished Americans who are contributing their time and talents to the work of the committee on the handicapped.

For, through this means, the people of the United States, outstanding citizens who have specialized in aiding our own handicapped, are extending the hand of friendship and help to individuals abroad, interested in this same goal. The hearts of men of good will will be touched by American efforts in this field

in as stirring a fashion as can be achieved in almost any other field.

I send to the desk a list of the Handicapped Committee's members together with other background information, forwarded at my request, by Mr. William P. McCahill, executive assistant of this committee of the people-to-people program.

I ask unanimous consent that these items be printed in the Appendix of the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

FACT SHEET OF THE PEOPLE-TO-PEOPLE PROGRAM, COMMITTEE FOR THE HANDICAPPED, WASHINGTON, D. C., MAJ. GEN. MELVIN J. MAAS, USMCR, RETIRED, CHAIRMAN

The committee for the handicapped was formed at the request of President Eisenhower as 1 of 41 people-to-people program committees. It has adopted the following three objectives:

1. Stimulate and facilitate by all available mediums a continuing exchange of information on techniques, treatments, devices, and procedures in rehabilitating crippled children and adults and in employing the handicapped of all nations. Such interchanges should include stimulation of counterpart organizations and activities in and between the United States and other countries.

2. Through all available mediums, including direct correspondence and other personal means, project abroad an understanding of United States activities for the handicapped to show that they are a natural outgrowth of the spiritual and moral character of the American people and an evidence of our respect for human dignity.

3. Utilize and strengthen existing programs of United States organizations relative to their interest in international programs for the handicapped.

The keynote to action was sounded by General Maas at the first meeting of the committee for the handicapped on December 5, 1956, when he told members:

"We have an opportunity to do something in the way of action that will demonstrate to the whole world the superior benefits of democracy, to show to the world that under democracy we care about people. Probably the greatest distinguishing characteristic between communism and democracy is the attitude toward people. Nowhere is the humanitarian attitude toward people better demonstrated than in what people do for their unfortunates, their handicapped, and our program in this country, of rehabilitation and the ultimate objective of rehabilitation—a suitable job for the man or woman who has been given vocational training, will certainly make a tremendous impression on the rest of the world, and certainly in the Asian and African world, where such large numbers of their people are physically handicapped, and where traditionally for centuries, nothing has been done for them."

The committee for the handicapped welcomes cooperation from all professional and volunteer workers in the fields of rehabilitation and employment of the handicapped, particularly those whose business or personal contacts make it possible for them to travel abroad.

COMMITTEE FOR THE HANDICAPPED

Chairman

Maj. Gen. Melvin J. Maas, chairman, President's Committee on Employment of the Physically Handicapped, Department of Labor, Washington, D. C.

Mr. William P. McCahill, assistant to the chairman, Department of Labor, Washington, D. C.

Members

Graham Anthony, Veeder Root Corp., Hartford, Conn.

Leo Axlrod, Empire Furniture Factory and Rattan Works, 4118 Ponce de Leon Boulevard, Coral Gables, Fla.

M. Robert Barnett, executive director, American Foundation for the Blind, 15 West 16th Street, New York, N. Y.

Alfred Canel, executive vice president, Chamber of Commerce of the Americas, Chamber of Commerce Building, Miami, Fla.

John A. DeChant, Public Relations, 425 13th Street, Washington, D. C.

George P. Delaney, international representative, AFL–CIO, 815 16th Street, Washington, D. C.

Dr. Henry H. Kessler, Kessler Institute, 53 Lincoln Park, Newark, N. J.

Boniface R. Maile, 3025 Cadillac Towers, Detroit, Mich.

Leonard W. Mayo, director, Association for the Aid of Crippled Children, 345 East 46th Street, New York, N. Y.

Dr. Ross T. McIntire, executive director, International College of Surgeons, 1516 Lake Shore Drive, Chicago, Ill.

Laurence Melton, Melton Printing Co., 3920 Commerce Street, Dallas, Tex.

Dr. Howard A. Rusk, associate editor, New York Times, 230 West 41st Street, New York, N. Y.

Harold Russell, 212 East Central Street, Natick, Mass.

Dr. Douglas Toffelmier, 426 17th Street, Oakland, Calif.

P. J. Trevethan, executive vice president, Goodwill Industries of America, Inc., 1229 20th Street NW., Washington, D. C.

Henry Viscardi, Jr., president, Abilities, Incorporated, 59 Hempstead Gardens Drive, West Hempstead, Long Island, N. Y.

Hubert L. Will, Nelson, Boodell & Will, 105 South LaSalle Street, Chicago, Ill.

Donald V. Wilson, secretary general, International Society for the Welfare of Cripples, 701 First Avenue, New York, N. Y.

Observers

Miss Phyllis Francis, Office of Vocational Rehabilitation, Department of Health, Education, and Welfare, Washington, D. C.

Ralph Wright, International Labor Office, 917 15th Street, Washington, D. C.

Dr. Harold Williams, Specialist for Exceptional Children and Youth, Office of Education, Department of Health, Education, and Welfare, Washington, D. C.

John Lawyer, Office of International Labor Affairs, Department of Labor, Washington, D. C.

Sarah S. Dietrick, M. D., Director, Division of International Cooperation, Children's Bureau, Department of Health, Education, and Welfare, Washington, D. C.

OUR MISSION AND OUR ALLIES

(Address by William McCahill, executive assistant, handicapped committee, at civic committee luncheon of the people-to-people program)

The people-to-people program, although essentially one of individual contact, works best when properly organized and directed through groups and organizations which agree upon certain objectives and plans and then turn the execution of these mutually agreable missions to individuals like you and me.

The various autonomous committees of the people-to-people program movement have at least one common denominator, they are dealing with people. It is true that we are going about this program on more than 40 different highways, but at the end of each road is the man, woman or child in a faraway country.

There is an additional common denominator between our civil committee and the committee for the handicapped on which I also serve. Each of these individual human beings we mean to reach through various aspects of people-to-people program, belongs to some community organization. Man, being a social being, gathers himself into some kind of organized society no matter where he lives in this tired planet. Thus, there is a civic common denominator whereever men live.

At the same time, there is nothing more universal about human beings than the fact that regardless of creed, color or national origin, they all have the same human, destructible, physical attributes. Whatever the contient, the chemistry of the body is essentially the same. And, the resulting physical handicaps.

I could, if we had the time, probably draw a similar analogy between the civic committee or the handicapped committee (and most of our committees are handicapped one way or other) and the other people-to-people program groups which you have listed in your basic flyer. I shall not, of course, but I believe that it is important for us to remember that in almost every major thing in our lives, peoples of all countries have more similarities than they have differences. This is basic to our people-to-people approach.

After a year of experience with the committee for the handicapped and my first foreign visit this summer for 3 weeks in Europe (not counting an all-expenses-paid tour with the Marines in the Pacific during World War II) I have become more and more enthusiastic about this program on which the President has asked for help.

To those of you who have been doing the job for years through your town affiliation program, as well as to those who are involving yourself for the first time under the banners of the people-to-people program and the President's request, I believe that the most important ingredients you can put into this recipe of world understanding are enthusiasm, imagination, and initiative.

Many centuries ago, Christ told us that we must be either hot or cold and that the lukewarm he would spew out of his mouth. In our own time, Pope Pius XII has said that "it is no longer given to anyone to be mediocre."

In our people-to-people relations we cannot be lukewarm. In this vital program for world understanding and in the battle for men's minds, we cannot afford to be mediocre. This does not mean that we must turn this matter over to the people with I. Q.'s in the genius area. What it does mean is that given enthusiasm, imagination, and initiative, any of us can apply our God-given talents to this great crusade.

Our mission, scientifically stated (and I am no scientist), is to shoot around the world this missile of understanding and get it into orbit so that countless contacts between Americans and peoples of other lands will result in each of us having a better image of our overseas neighbors, neighbors whom we will find have more similarities and more common interests than they have differences or ideological clashes.

If I may presume to suggest one more ingredient of value in this menu which we are preparing, I would think that we might well flavor it at every stage with liberal amounts of humility.

The Sermon on the Mount promised an eternity of blessedness to the peacemakers. This people-to-people program gives all of us a fighting chance to start the world in the true direction of a lasting peace and peace is worth fighting for. If the peoples of the world want peace badly enough, as the President told us last year, their leaders will have to give it to them or be thrown out of office. And you mayors and community leaders know that enlightened public opinion has cleared up many a hopeless local situation.

So too with the world situation. We have a great mission, a real challenge. It is only worthy of our best and if we give it our honest best, making allowances for human failings, we shall get this missile of world understanding into orbit sooner than any of us may suspect.

We have two great allies on our side. In the natural order we have the President of the United States and on the supernatural side we have the God of Peace. How can we lose?

[From Performance, the Story of the Handicapped, issue for February 1957]

EMPLOYMENT OF THE HANDICAPPED—A WORLDWIDE PROGRAM

(By Donald V. Wilson, secretary-general, International Society for the Welfare of Cripples)

There is increased interest in all parts of the world in establishing and improving rehabilitation services for the physically handicapped. Many international organizations, including the United Nations, the World Health Organization, and the International Labor Organization, are actively engaged in helping individuals and organizations to establish and improve their programs for training and employment of the handicapped. In addition to these large governmental organizations, there are many voluntary international groups that are participating in this global program. One of these is the International Society for the Welfare of Cripples, which has for more than 30 years, been promoting the exchange of experience and technical knowledge so that a country in one part of the world may benefit from the work being done in another.

The International Society is a federation of national organizations in 31 countries which provide services for the rehabilitation and employment of handicapped children and adults. The society has consultative status with the United Nations and maintains official relations with the World Health Organization and other international governmental agencies. The services of the society are provided not only to the member organizations but also to individuals and associations in other countries where services for the handicapped have been established in recent years. Included among the society's services is a publication and translation program which facilitates the exchange of information between countries; and a large film library which contains film from many different countries portraying services for the disabled.

Many individuals and organizations in the United States have been active in the work of the International Society. The National Society for Crippled Children and Adults is the affiliated national organization. Dr. Henry H. Kessler is a member of the council of the International Society, and a former president. Dr. Howard A. Rusk currently serves as president.

THE PROBLEM OF EMPLOYMENT

It is becomingly increasingly evident that the most difficult and challenging phase of rehabilitation is to assist the handicapped person in securing employment that will enable him to function to his maximum ability. In may parts of the world, there has been an interest in the program of the President's Committee for the Employment of the Physically Handicapped, and a number of countries are planning to initiate similar efforts.

In the past, the United States has greatly benefited by the experiences of other countries which have been dealing with the problem of vocational rehabilitation for many years. As early as 1919, an International Conference on Rehabilitation was held in New York as a result of the interest of Mr. Jeremiah Milbank. One of the purposes of this congress was to enable persons from other countries to present their experience which would be useful in developing employment services for the handicapped in this country.

The United States can continue to benefit from what has been undertaken in other countries. For example, it is clear that there is a difference of philosophical viewpoint as to how employment of the handicapped can best be promoted. One group contends that this can be done most efficiently and equitably by legislation that makes it mandatory for all employers to hire a certain percentage of employees who are physically disabled. An opposing viewpoint is that such a quota system is not the best approach and that employers must first be convinced that employment of the disabled is indeed good business. The experience of such countries as the United Kingdom with its quota system has real value for those who are interested in these problems.

INTERNATIONAL RECOMMENDATION

The worldwide interest in the employment of the physically handicapped has been pointed up by the fact that the International Labour Organization, in 1955, adopted a recommendation concerning vocational rehabilitation of the disabled. This recommendation was adopted unanimously by the representatives of 70 countries, who had considered the subject over a period of more than 2 years. Because of the divergent viewpoints concerning the quota system, the following compromise statement was adopted:

"Wherever appropriate in the national circumstances, and consistent with national policy, the employment of disabled persons should be promoted by means such as—

"(a) The engagement by employers of a percentage of disabled persons under such arrangements as will avoid the displacement of nondisabled workers;

"(b) Reserving certain designated occupations for disabled persons;

"(c) Arranging that seriously disabled persons are given opportunities for employment or preference in certain occupations considered suitable for them;

"(d) Encouraging the creation and facilitating the operation of cooperatives or other similar enterprises managed by, or on behalf of, disabled persons."

The important part of this section of the recommendation is the words, "Wherever appropriate in the national circumstances," for it gives due recognition to the inherent differences between countries and encourages diversity of experiment.

In many heavily populated countries where the unemployment ratio is higher, the development of rehabilitation programs and employment opportunities is consequently more difficult. There is not the same economic urgency to hire the handicapped because of shortages of qualified labor. In many of these countries, however, there is a shortage of adequate skilled personnel, and a constantly increasing awareness that such skills should not be lost to the community and the Nation merely because the person suffers a physical disability. Although the economic factors are not as pressing in less developed countries as they are in North America and in Europe, there is, nevertheless, an increasing humanitarian recognition everywhere that all persons should be given an opportunity to be self-supporting and useful.

Because the United States has had extensive experience in this field, particularly during the past 10 or 15 years, people in other countries are eager to learn more about the progress of our programs here. In this area, the President's Committee has a real opportunity not only to serve the handicapped of this country but of sharing the results of its new experience with the rest of the world.

WORLD MEETINGS

A heightened interest in the problem of selective placement also stems from the seminar on this subject which was held in Stockholm in May 1955, with the collaboration of the World Veterans Federation, the International Labor Organization, and the International Society for the Welfare of Cripples. During the International Conference on Social Work in Munich this past summer, a large study group considered the social aspects of rehabilitation. These and other international meetings provided the opportunity for many countries to exchange information and experiences, as well as stimulation of current efforts being made.

The Seventh World Congress on Rehabilitation which will be held by the International Society in London, from July 22-26, 1957, promises to be the most widely attended, comprehensive forum of its kind ever staged. This significant meeting will also give major attention to discussions of the social and vocational phases of the rehabilitative process. It will be developed broadly around the keynote, "Planning for Victory Over Disablement," and should engage the attention and personal participation of doctors, nurses, scientists, employment counselors, therapists, social workers, administrators, and other professional groups concerned with any of the interconnected problems of the disabled. The Congress will again also be the occasion for the presentation of three Albert Lasker awards for outstanding achievement of international significance in the development of services for the physically handicapped. For those who are interested in further details of this important forthcoming meeting, a preliminary program, outlining the day-to-day scope of general, special and sectional meetings, is available on request from the International Society for the Welfare of Cripples, 701 First Avenue, New York, N. Y.

Defect in Present Excise Taxes on Automobiles and Automobile Parts

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two letters from the Breaux Ballard Co., an automobile dealer in Louisville, Ky., which give the clearest and most comprehensive discussion which has been brought to my attention on the defect of the present excise taxes on automobiles and parts.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

BREAUX BALLARD, CO.,
Louisville Ky., April 17, 1958.

Senator THURSTON B. MORTON,
Senate Office Building,
Washington, D. C.

DEAR THURS: Enclosed little green sheets indicate the Federal excise taxes that are on Buicks, and I have marked the series. In addition there is a 10 percent tax on all the accessories which on a car fully equipped with automatic transmission, power brakes, power steering, etc., etc., makes an addition of $50 and upwards.

We have lost money every month this year and sales are not getting any better.

Buick itself lost money in the first quarter. I am convinced that every automobile division of General Motors, except possibly Chevrolet and Cadillac lost money the first quarter. (General Motors itself may have made money because of its other allied trades, but I am strictly speaking about Buick, Oldsmobile, Pontiac, etc.)

I would be willing to bet you and every Member of Congress any amount you want, that if these taxes were taken off I could double my sales in the next 30 days and would have to reemploy some of the people I have laid off, as well as raise some salaries we have cut.

The question, Mr. Anthony, is whether these added sales and profits would more than offset the loss of revenue for these taxes. In my opinion, it would.

A few days ago my sales manager and I went over approximately 150 appraisals which we have made in the past 60 days, and in over 75 percent of these we are between $100 and $300 off of what the customer was willing to pay. In checking back on these people they have not bought any automobile, but have simply decided to wait. You can obviously see what removing these excise taxes would mean. Dealers are going out of business like flies. I believe there are only three liquid dealers left in Frankfort, and in New Albany and Jeffersonville in the past 30 days 4 dealers have folded up, and I am sure the situation is far more serious than most people realize.

I am convinced these excise taxes must come off now, and because the automobile business is a big wheel in the economy, this should be the first priority of business and I don't mean 6 months from now, because the problem of moving the inventory before new models will be at hand and nothing will have been done to strengthen sales and production for this summer.

Kindest regards.

Very truly yours,

BREAUX

G. Breaux Ballard, Jr.

BREAUX BALLARD CO.,
Louisville, Ky., April 23, 1958.

Senator THRUSTON B. MORTON,
Senate Office Building,
Washington, D. C.

DEAR THURSTON: Reference yours of April 21st: It is perfectly agreeable with me to put my letter in the CONGRESSIONAL RECORD. Below I am listing the excise taxes on a special 4-door hardtop, with more or less standard equipment. These, of course, are the direct excise taxes billed to us by the factory and have nothing to do with all the hidden taxes or transportation taxes, etc.:

Car	$205.00
Flight pitch dynaflow	20.63
Heater and defroster	5.25
Power steering	7.50
Radio	7.13
Instrument panel safety pad	1.44
Safety group	2.78
Windshield washer and wide-angle wiper	.98
Deluxe steering wheel	1.13
Easy eye glass	2.63
Air foam seat cushions	1.58
Power brakes	2.78
Accessory group	2.70
White-wall tires	4.13
Air-cooled aluminum brakes	1.39
State tax (3. percent)	90.64
License	5.00
Total	362.69

You will also note that when the State takes their 3 percent of the delivery price of the automobile, they are taking the 3 percent on all the above taxes. In other words, they are taxing a tax. If you are interested in the hundred's of dollars of other taxes on a car, I suggest that you contact the National Automobile Dealer's Association's office in Washington and they can give you the breakdown on all the hidden taxes such as the excise tax on the chrome, tires, glass, and other component parts.

There is no question, whatsoever, in my mind that the buyer's strike on automobiles is directly attributable to prices. We have people that for years have been buying new cars are now buying used cars, and as I pointed out in my other letter, eliminating these taxes would certainly double or more our volume. Further, yesterday we were trying to sell a woman one of our demonstrators and she made us an offer provided we would agree to refund her the excise taxes if Congress removed same. This, of course, we could not do, inasmuch as it is a demonstrator. This is merely to point out that the talk of reducing taxes is making the buyers quite conscious of it, and is in itself affecting sales.

Kindest regards.

Very truly yours,

BREAUX

G. BREUX BALLARD, Jr.,
President.

Restrict Secrecy in Government

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. PROXMIRE. Mr. President, the voices of the newspapers of the Nation are being heard in swelling chorus in favor of the bill which prevents Government agencies from using the old housekeeping bill passed by the First Congress to keep secret information which ought to be in the possession of the public.

In my State of Wisconsin the Janesville Daily Gazette, a newspaper with a proud record of 113 years of community service, has spoken out in favor of the principle of the bill which has passed the House of Representatives under the sponsorship of Representative Moss, and which is sponsored in the Senate by the senior Senator from Missouri [Mr. HENNINGS].

Mr. President, I ask unanimous consent that the editorial entitled "To Cut the Secrecy Knot," which appeared in the Janesville Daily Gazette on April 22, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

TO CUT THE SECRECY KNOT

Americans cannot act freely, cannot perform their duties as citizens, cannot preserve what they hold most dear as free citizens if they do not know and understand. They cannot know unless they have access to information. And there is a "hitch" that smothers freedom.

One basic "housekeeping" statute, 168 years old, is used by Government agencies and bureaus as a means or excuse for withholding information from the public to which the public is entitled.

To open the way for public access to information, now bottled up through this old law, the Moss Freedom of Information bill, H. R. 2767, has cleared the House Rules Committee and now is before Congress. It is a simple amendment that prohibits use of the old "housekeeping statute" by those agencies and bureaus to interfere with the public's right to know.

The Moss bill should be passed as it is without change. It has the endorsement of the American Society of Newspaper Editors, the American Newspaper Publishers Association and the Inland Daily Press Association.

All newspapers have an interest in seeing the Moss bill passed. It would go far toward eliminating a lot of unnecessary and dangerous Government secrecy.

Interoceanic Canal Problem: Independent Congressional Inquiry

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. MARTIN of Iowa. Mr. President, over a period of many years, first in the House and more recently in the Senate, I have endeavored to secure, by means of a proposed Interoceanic Canals Commission—S. 611—a comprehensive and independent inquiry under congressional authorization of the entire question of interoceanic canals, with the objective of determining the future isthmian canal policy of the United States.

Thus, I note with considerable interest in the March 7, 1958, issue of the Panama Canal Review, the official publication of the Panama Canal Company, an account of the Isthmian Canal Consulting Board appointed by the House Committee on the Merchant Marine and Fisheries pursuant to House Resolution 149, which recently visited the isthmus. It is certainly to be hoped that this body will be able to render substantial services in the premises.

Because the article summarizes the professional records of the distinguished members of this group that ought to be better known and available for future reference, I ask unanimous consent that

the story be printed in the Appendix of the RECORD.

There being no objection, the subject article was ordered to be printed in the RECORD as follows:

CONSULTANTS FOR CONGRESS DUE HERE NEXT WEEK

The panel of consultants appointed by the House Merchant Marine and Fisheries Committee to study Panama Canal transit facilities and other broad phases of the interoceanic canal problem will pay a 5-day visit to the Canal Zone this month.

The group, composed of six prominent members of the engineering profession in the United States, is scheduled to be here from next Tuesday through Saturday. A tentative schedule of activities prepared and submitted to the panel for its approval calls for a busy period. It includes visits to the principal Canal Zone installations, and the provision of much background material on canal operations, and other facets of the problem which is attracting national attention.

The consulting board was named last November by Representative HERBERT C. BONNER, chairman of the Merchant Marine and Fisheries Committee which handles canal legislative matters in the House of Representatives. In announcing the appointment, Chairman Bonner said that the special committee consultants are expected to review and reevaluate various proposals which have been made in the past as the result of studies on the isthmian canal problem.

"I feel that it is the urgent responsibility of the Merchant Marine and Fisheries Committee to be fully informed concerning the adequacy of the existing canal and the need for additional facilities either in the Canal Zone or at alternate locations in the Central American Isthmus," he stated.

The panel members, all of whom are expected to be here next week, are:

Francis S. Friel, of Philadelphia, president of the engineering firm of Albright & Friel in Philadelphia, and vice president of the American Society of Civil Engineers.

Lt. Gen. Leslie R. Groves, United States Army (retired), of Darien, Conn., formerly head of the Manhattan Project, and now a vice president of Remington-Rand, Inc.

Dr. S. C. Hollister, of Ithaca, N. Y., dean of engineering at Cornell University.

E. Sydney Randolph, of Baton Rouge, La., industrial engineer.

Hartley Rowe, of Boston, vice president of the United Fruit Co.

John E. Slater, of New York City, consulting engineer and senior partner of the firm of Coverdale & Colpitts in New York.

Mr. Rowe and Mr. Randolph are both well acquainted with the canal and its operations. Both were employed here for many years and both held responsible engineering positions with the organization.

Mr. Rowe came to the Isthmus in 1905 and was municipal (now maintenance) engineer when he left the organization in 1919. One of his first jobs with the Isthmian Canal Commission was the location, design, and construction of the masonry dam to provide the water supply for Panama City and zone towns on the Pacific side. During his 14 years here, he had charge of installing much of the electrical and municipal facilities for the canal and for the Army and Navy. Among the Army and Navy projects were France Field and the Coco Solo Submarine Base, for which he had charge of the design and construction.

Mr. Randolph also entered the canal service during the construction period and was continuously employed for almost 36 years before his retirement in March 1946. During this period he held many important engineering posts in the organization, including office engineer, designing engineer, and construction engineer. He was in charge of the design and later the construction of Madden Dam and powerplant. Later, as designing engineer, he was in charge of the early investigation and work on the third locks project.

Mr. Friel has had charge of all engineering work for his firm for the past 26 years. He specializes in numerous fields of engineering, among which are flood control, dams, powerplants, and industrial buildings, and various types of public works.

General Groves is best known for his work as head of the Manhattan project, during which he was in complete charge of the development and planning for the use of the atomic bomb. Among his many important assignments were as officer in charge of construction for the Quartermaster General during mobilization for World War II and as commanding general of the Armed Forces special weapons project for the Department of Defense after the close of the war. Since his retirement, in 1948, he has been associated with Remington Rand.

Dean Hollister has headed the College of Engineering at Cornell for 20 years. His specialties are municipal, structural, and flood-control projects. He has served on many important governmental and private commissions for engineering projects. One of his services to the United States Government was as a member of the Commision on Organization of the Executive Branch of the Government, better known as the Hoover Commission, from 1953 to 1955.

Mr. Slater specializes in transportation and marine engineering. In addition to serving as a member of the consulting engineering firm of Coverdale & Colpitts, he is president and director of the American Export Lines. He also has served 2 years as chairman of the board of the New York Shipbuilding Corp.

They are tentatively scheduled to meet Governor Potter Tuesday morning for a brief orientation. This will be followed by a management review and a description of bureau operations and later in the morning by a flight along the canal route. The afternoon will be largely devoted to a presentation and general discussion of the canal capacity problem, arranged by Lieutenant Governor Arnold.

Among the installations to be visited by the panel members will be locks, Gaillard Cut, and the construction project at Bend 1868, the dredging division, the LeTourneau towing devices at Gatun, Miraflores locks overhaul operations, and the marine control operations at the Balboa port captain's office

Proposed Educational Television Workshop

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an announcement that the Radio Corporation of America is to set up an educational television workshop. I wish to congratulate RCA on this progressive step, and I know it will be of interest to all in this country who believe in the necessity of improving our educational system.

In this connection I have also just received notice that the Ford Foundation has made a grant of $1.4 million to the John Hay Whitney Foundation to improve secondary-school teaching. This also is very encouraging. I ask unanimous consent to have this article also printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RCA TO SET UP $100,000 EDUCATIONAL TELEVISION WORKSHOP TO DEVELOP AND DISSEMINATE NEW TECHNIQUES FOR NATION'S SCHOOLS—PRESIDENT BURNS TELLS CONVENTION OF NATIONAL SCHOOL BOARDS ASSOCIATION THAT UNIQUE PROJECT WILL BE UNDERTAKEN WITH NEW YORK UNIVERSITY—SAYS TV AND OTHER ELECTRONIC AIDS CAN EASE TEACHER SHORTAGE AND BRING MASSIVE UPGRADING OF EDUCATIONAL STANDARDS

MIAMI BEACH, FLA., April 19.—The Radio Corporation of America will establish, in collaboration with New York Univerasity, a unique $100,000 educational television workshop to develop and disseminate the most effective television teaching techniques for the Nation's schools, President John L. Burns announced tonight.

Declaring that television and other electronic teaching aids can "bring about a massive upgrading of our educational standards," Mr. Burns told the annual dinner of the National School Boards Association convention here that RCA will set up the workshop at New York University. He said the company will also support a university professorship in educational TV at New York University to provide supervision for the workshop.

"The primary aim of this project," he said, "is to serve the public schools of the United States and to benefit all education. The workshop will bring together the best ideas of professional educators, responsible laymen in the education movement, broadcasters and experts in the graphic arts."

NEWS FROM THE FORD FOUNDATION

NEW YORK, April 23.—The Ford Foundation today announced a grant of $1.4 million to the John Hay Whitney Foundation to improve secondary-school teaching through expansion and development of the John Hay fellowships program over the next 2 years.

The expansion of the John Hay fellowships program will permit not only an increase in both the number of fellows and the institutions at which they may study but will alter the method of their selection and the objectives of the program.

Since 1952 the Whitney Foundation has provided fellowships for 20 secondary schoolteachers for humanistic study at Yale and Columbia. Under the new program, the number of fellows will be increased to a total of 150 in the academic years 1959–60 and 1960–61. The number of study centers will be enlarged to four or more. Selection of fellows will be made from school systems engaged in experiments directed especially at achieving the best utilization of unusually good teachers in secondary education.

These experiments, many of which have been supported in recent years by the Ford Foundation and the Fund for the Advancement of Education, include the use of closed- and open-circuit television and of techniques for more efficient utilization of teaching talent, such as teacher aides, employment of college graduates as teaching assistants, redeployment of teachers according to variations in the size of classes, and the development of teaching teams.

By selecting a few fellows from each of these demonstration-school systems and by making summer workshops available to additional personnel, the Whitney program will help insure high quality in the handling of subject matter in the experimental programs and advance the development of teaching techniques that may be used elsewhere.

The grant will provide each fellow with his regular year's salary, travel expenses, and an average stipend of $700 for tuition and fees for 1 year of study.

Delay in Legislation on Labor

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. GOLDWATER. Mr. President, apropos of the debate in the Senate, this morning, relative to the delay in connection with the enactment of legislation on labor, I hold in my hand an article entitled "Delay in Legislation on Labor," written by George Todt, and published in the San Fernando Valley Times of April 21. In the article, Mr. Todt discusses in a very intelligent way his observations on this unusual phenomenon. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DELAY IN LEGISLATION ON LABOR

"Make use of time, let not advantage slip"—William Shakespeare, Venus and Adonis.

With incontrovertible evidence already uncovered concerning corruption, theft and un-American totalitarianism residing in certain unions, the public is asking increasingly why no remedial legislation is being passed in Congress at this time?

Certainly, it is not necessary to wait years into the future after another round of future Senate investigations before we commence to repair the damage which is already seen to be extant. Why isn't anything being accomplished along these lines? Who is holding back at this time? Why?

I asked these questions of San Fernando Valley Congressman JOE HOLT recently. JOE was kind enough to furnish me with a portion of the record to date concerning proposed labor propositions now wasting away in deep six.

"I thought you would be interested in what we are trying to do in the House," said JOE, "but the Democrats are blocking this legislation. The Republican record is clean."

This is not a new view among the GOP members of the House Committee on Education and Labor, incidentally. As far back as last February 26, they all addressed a mass letter of protest to the Democratic chairman of the committee. * * *

The letter is worth repeating, and is as follows:

"DEAR MR. CHAIRMAN: President Eisenhower on January 23, 1958, transmitted to the Congress his recommendations for legislation in the labor-management field. He stated that action on the part of the Government was needed to protect the basic rights of the individual workers to maintain the basic integrity of trade unionism. The stated purpose of his program is to reassure the American public that:

"1. The funds which are set aside for the benefit of working men and women in health, welfare, and pension plans are accounted for.

"2. The moneys which are contributed by workers to union treasuries are being used solely to advance their welfare.

"3. Organizations in which working people associate together voluntarily to improve their status through collective action will be administered in such fashion as to reflect their will.

"4. The working people are more fully protected from dealings between representatives of labor and management which have the effect of preventing the full exercise of their rights to organize and bargain collectively.

"5. The public is protected against unfair labor and management practices within the collective-bargaining relationship which give rise to the exercise of coercive power by one as against the other, tending to impede the peaceful development of that relation, or which infringe the legitimate rights of innocent third parties.

"On January 30, 1958, the minority members (Republicans) of the Subcommittee on Labor-Management Relations requested the chairman of that committee to schedule hearings on the proposals of the President. As yet, no action has been taken to assure that hearings will be had on the President's proposals.

"Accordingly, we, the minority members of the House Education and Labor Committee, respectfully request hearings to begin at once on the labor-management proposals made by the President. We further request that the hearings be so arranged that there will be ample time for Congress to take final legislative action on the entire program during this session."

This was signed by the 13 GOP members of the committee, including Congressman HOLT.

On March 3, House Minority Leader JOE MARTIN had this to say:

"Legislation to remedy labor-management conditions harmful to trade unionism is before Congress. It has been there since January. * * * There is almost unanimous agreement throughout the country * * * that legislative action is needed. Surely there are as many Democrats in Congress as aware of the need as Republicans. Yet day after day passes without action. No hearings nave been scheduled. No witnesses called. * * * We call on our Democratic colleagues, especially those in control of the committees involved, to take action in the name of good government. * * * Organized labor should join us in urging the Democrat-controlled Congress to take immediate action."

This really has the earmarks of a most unusual situation, doesn't it? Makes one wonder just how many of the boys on Capitol Hill the dear old AFL–CIO COPE political machine may have at its beck and call, what? Does this deplorable legislative inability to discipline powerful—and corrupt—labor bosses presage our drift into a Social Labor government soon? Is State Socialism just around the corner?

Arizona Scans Economic Tide

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. GOLDWATER. Mr. President, on yesterday I had printed in the Appendix of the RECORD the first of a series of articles which John C. Waugh, of the Christian Science Monitor, has written on the subject of the economic situation in Arizona. At the time I said I would request the printing of the other articles in the RECORD, in order to provide a little economic sunlight and bring a little cheer into the gloomy atmosphere of depression and recession which seems to be found in many of the other States of the Nation.

The second of the five articles on the dynamic changes which have been taking place in Arizona's economy since World War II is entitled "Arizona Scans Economic Tide." So that Members of the Senate may have something to be cheerful about economically, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARIZONA SCANS ECONOMIC TIDE
(By John C. Waugh)

PHOENIX, ARIZ.—Attract people, add industry, stir well, and presto—a new economic concoction.

That is what booming Arizona has done. And it is finding the taste bittersweet.

Arizona is a major actor in the drama of growth that is being played all across the Southwest from New Mexico to California. The same patterns of change that earlier gripped California are tossing up new problems to Arizonans who only a decade ago would never have believed it could happen here.

In the years following World War II Arizona's population almost doubled from 616,000 to more than a million. About 35,000 new people each year flock into Arizona to live. To find jobs for all of them, Arizona turned to and is still turning to light industry and manufacturing.

Now the combination of the two—redoubled population and new industry—has sent the Arizona economic structure spinning off in new directions.

THREE C'S

As any old Arizona cowpuncher would tell you, "It just ain't the same old range." To this, the farmer, the miner, and everybody else, would probably say "Amen." Arizona is a portrait of dynamic change.

In a State where the economy has been dominated traditionally by the Three C's—copper, cattle, and cotton—the newly emerging economic strong man is light industry, led by electronics.

This is not to say that the Three C's are suddenly unimportant in this State. They are still pillars of the economy. In 1956 mining was still the biggest source of income, raking in $471 million. Manufacturing was second with $400 million. Agriculture, the tourist industry, and livestock were next in that order.

SETBACK FOR COPPER

But while manufacturing was on the upswing in 1957, the mining and cattle industries were running into trouble. And agriculture is losing some of its choicest Arizona acres to the flood tide of urbanization.

Here, briefly, is what is happening to Arizona's three traditional pillars of strength:

Copper, which has been king for decades, dropped in price during 1957 to well under 32 cents a pound, which is considered the rock bottom for the ductile metal. Foreign imports hit the industry hard, undercutting domestic prices and raising a clamor for Federal tariff protection. Rising production costs have also plagued Arizona mines.

Paradoxically, even as prices decline, the copper industry in Arizona continues to expand, primarily because of Federal encouragement.

The State still produces more than half of the Nation's copper. Even while prices were dipping, new mines were operating and old ones expanding. There are two relatively new mines in operation near Tucson. And Kennecott Copper Corp. is pushing a $40 million expansion of smelter and leeching operations in Ray, Ariz.

FARMLAND TRIMMED

Cattle, another traditional economic kingpin, was caught up in trouble during 1957

also. Hit by drought, cattlemen cut their Arizona herds in half. "For the first time in history," one leader complained, "we had more people in Arizona than we had cows."

Arizona agriculture, which cotton dominates, faces a problem that is plaguing the entire West. It is losing precious land.

One needs only to talk to Henry Shipley, assistant general manager of the Salt River irrigation project, to see what is happening. The Salt River project, world famous as a model irrigation system, once spread over 240,000 acres. It has lost 40,000 of these in 10 years to urban, industrial, and commercial development. Another 10,000 acres are expected to be sold and developed within the near future.

This is the most fertile and valuable farmland in all Arizona. It centers around Phoenix in Maricopa County, which is the State's fastest-growing area.

While such men as Mr. Shipley urge better planning and more foresight in an effort to save the fertile valleys for farming, leaders such as Ray W. Wilson, Phoenix city manager, are faced with the hard practical problems of providing for present and future city growth. This demands more and more urban development, almost all on fertile farmland.

URBANIZATION TIDE

The tide is clearly in the direction of increased urbanization of farm area. Arizona agricultural land, at a peak high of 1,300,000 acres in 1952, is expected to drop to 950,000 by 1970.

The simple fact is that it takes 3 to 4 acre-feet of water a year to raise crops while a housing development or a light industry on the same land would use only a third or half of that. This is the point that Arizona leaders drive home in their arguments for more urbanization.

Dr. L. W. Casaday, director of the bureau of business research at the University of Arizona in Tucson, reflects the dominant feeling in the State when he says that this increased urbanization of farmland is good.

"It is the highest and best use of our limited water resources," Dr. Casaday believes. "Let the food and fiber be raised where there is plenty of water."

Yet as farmland is shifting slowly, steadily to new uses, farm production in the State, blessed by the most modern methods, is increasing every year.

Of all the major underpinnings in the Arizona economic life today, manufacturing and tourism appear to be the youngest, the most vibrant, the fastest growing. They loom big in the Arizona future.

Whether they really constitute the major hope of the long-range future is still debatable.

The Coming Death of the Surface Navy

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. COTTON. Mr. President, the latest issue of Look magazine contains a most interesting and far-sighted article entitled "The Coming Death of the Surface Navy."

The article provides additional justification for, and support for, a swift expansion of our submarine building activities as the most effective way to providing an effective, economical national defense. This is a theme which has been brought to the attention of the Senate many times before, and which must be repeated until its full implications are realized by everyone concerned.

The Nation must be awakened to the inevitable future of undersea craft. We must act now to make sure we lead the way into the future. If we fail to do so, we will face the consequences of being left in the backwater.

I ask unanimous consent to have this article from Look magazine printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COMING DEATH OF THE SURFACE NAVY

(By Vice Adm. C. B. Momsen, U. S. Navy (retired), with Peter Maas)

On November 5, 1957, the Navy's last battleship was laid to rest. Her passing foreshadows the time when the surface Navy will be turned into obsolete hulks by submarines. This is no secret to the Russians. Right now, they are far ahead of us in submarines—further ahead than in sputniks. Even if they go to the moon, they can't wipe out Detroit or Pittsburgh or Washington from it. They can from their submarines.

The sudden ascent of submarines to sea supremacy is one of the most dramatic aspects of the atomic age. A decade ago, our carrier-conscious Navy was paying them scant heed. Now, the advent of nuclear power and missiles has helped make them the most potent warships ever devised.

The first of our own submarines of the future is already on shipyard ways at Groton, Conn. Her name is the *Skipjack*. When she takes to the water, she and her sisters will become true scourges of the sea. Although the performance expectations of these submarines are secret, I can say this much:

1. They will be able to outrun, outmaneuver and outfight any surface ships they meet. These deadly craft will be virtually free from detection, much less destruction, even with atomic depth charges.

2. Cruising submerged for indefinite periods off Eurasion shores, they will not have to surface even while firing the Navy's new 1,500-mile ballistic missile, the Polaris. In effect, they will give the Polaris intercontinental range against Soviet targets.

3. They will be our only weapons system immune to what I call the ABC horrors—atomic, bacteriological and chemical—of total war. If we ever need another Noah's ark to preserve the species, it will have to be a submarine.

Five years ago, submarines depended upon limited, carefully conserved battery charges for underwater propulsion. They were really surface ships that occasionally dipped below the waves.

The spectacular success of the atomic reactor aboard the *Nautilus* changed all this. Such a reactor does not require oxygen. For the first time, a submarine could stay submerged—regardless of speed—for long periods without air contact. But the *Nautilus* essentially was a nuclear laboratory, with her tremendous powerplant housed in a now antiquated hull, so the Navy built another submarine, the *Albacore*, designed solely for submerged speed. The stubby, blimplike *Albacore* surpassed every hope. She was the fastest, most maneuverable submarine in the world during the short speed bursts allowed by her conventional, comparatively weak power.

Combine the *Nautilus* and *Albacore*. Arm the result with missiles. What do we have? Secretary of the Navy Thomas S. Gates, Jr., says it gives us a "system which approaches the ultimate as a weapon of deterrence and retaliation." The *Skipjack* is the first step.

What about the Russians?

Less than 10 years ago, Russia was a third-rate naval power. Today, the Soviet submarine force is the biggest ever put together by any nation in peacetime. The Russians have over 500 submarines in the water, nine times as many as the Germans had when they touched off World War II. Almost all of them are capable of carrying—and delivering—missiles. The Soviet Union has been adding to this huge fleet at the chilling rate of 75 subs a year.

Exact information on the latest Soviet submarines is fragmentary. But an enemy so aggressively committed to underseas warfare isn't puttering about with antique models. The Russians have now launched a 16,000-ton atomic icebreaker, the *Lenin*. This is warning enough. Soviet technology can put nuclear reactors in submarines just as easily. Such scientific skill has already handed us a defeat more important and greater than Pearl Harbor, says Dr. Edward Teller, father of the H-bomb.

I worry a great deal about the menace of the Soviet Union's submarines. We have some grim reminders of the deadly effectiveness of this weapon. The Germans, in 1914, almost strangled the Allies with primitive submarines. In World War II, with not much better submarines, they sent more than 13 million tons of shipping to the bottom, despite our highly touted aircraft, radar, and sonar detection network. Our own submarines, by the same token, ranged freely through the Pacific—bagging eight enemy carriers in the process and destroying much of the huge Japanese merchant fleet.

None of these lessons has been lost on Russia. Nor have they been lost on Adm. Jerauld Wright, the man charged with the defense of the Atlantic under NATO. He says: "I believe the Soviet Navy is designed, constructed, tailored, and trained to drive a steel wedge down the Atlantic and cut the lifeline between Europe and North America."

Red submarines present an even greater peril. For the past year, the Russians have been busy drawing up comprehensive radar charts of our coastline. With them, a Soviet submarine commander will be able to surface some 50 or 100 miles off the United States mainland, take a couple of radar fixes for position, and zero in his missiles with neat—and frightening—precision.

Simultaneous firings by the Red submarine fiet could level most of our major cities.

The Russians are also reported working on a missile, Comet II, similar to our Polaris, that can be launched from submerged submarines. Few areas in America will then be out of range.

In case we don't get the point, Nikita Khrushchev blandly boasts: "It is true that we are surrounded by American bases, but we have our rocket missiles, and our submarines can block American ports and shoot into the American interior. America's vital centers are just as vulnerable as NATO bases."

What if the Kremlin ever did unleash a submarine offensive against us? How could the Navy keep our ocean lifelines open against swarms of new Soviet submarines? How would it safeguard our cities in the event of sneak missile attack from the sea?

I believe that our continuing reliance on carriers must cease. We will have need for them in the limited-type wars we may have to fight to contain Russian expansion. But beyond this the day of carriers will soon be done. Building still more of them is senseless. They will provide the same fat prey for future submarines as every other surface ship on the ocean.

Even now our own submarine commanders are contemptuous of conventional anti-submarine-warfare (ASW) methods. ASW has made very little progress since the days of World War II. Against a submarine as modern as the *Skipjack* it will be practically worthless.

The modern submarine's highly sensitive sonar "eyes and ears" will be able to pick up the propeller racket of a passing carrier as far as 80 miles away. Once she determines her quarry's direction, she will race in for the kill. Scout planes won't be able to spot her, because she will remain deeply submerged. Radar, which cannot pass through water, will be equally futile. Surface sonar, effective against ordinary submarines, will be baffled. To destroy a submarine, surface ships must make and maintain contact. The modern submarine's sustained underwater speed will be too fast for the carrier and her escorts. She will hurl her acoustical homing torpedoes armed with nuclear warheads at nearly helpless targets.

One such submarine can do the damage of two dozen conventional types. A school of these deadly killers would wipe out any carrier task force or convoy that dared to leave port.

The lesson is clear. We must completely rewrite the textbooks on naval warfare. The entire Navy will have to go under water. That's where tomorrow's great sea battles will be fought and won. Otherwise they will be most assuredly lost.

Where do we start? First, let us look at our present submarine program. The Navy has 110 submarines in service, powered by diesel and battery engines, most of them dating back to World War II days. They are the last of the type we will have. Every new sub is designed for the nuclear Navy. Seventeen are now abuilding or authorized.

The first of our atomic submarines joined the fleet for operational duty this January. They are the *Skate* class. No more of this type will be constructed. They were laid down before the *Albacore's* hull design received official sanction. Besides that, their twin screws, a navigational aid on the surface where submarines used to spend most of their time, actually cut down on submerged speed.

The biggest submarine in the world, the 5,500-ton *Triton*, with double reactors churning out tremendous power, is currently being built. She is slated for roving radar picket service. It is my contention, however, that her chief mission—warning carrier task forces of impending enemy air strikes—is for wars we've already fought.

Orders also have been placed for three missile submarines.

The first true, high-speed submersible we will have is the *Skipjack*. Ironically, she closely resembles the *Holland*, the first underwater warship we added to the fleet over 58 years ago. Present schedules call for her delivery in 1960. The Navy is now so sure of the *Skipjack's* success that six more like her have been requested.

This program is clearly inadequate. As revolutionary as the *Skipjack* may be, she is only the beginning.

In this lag, the Navy itself has not been wholly blameless. I am certain, however, that our revamped defense effort will drastically step up submarine development. There have been an increasing number of calls, notably from Senator HENRY M. JACKSON, Democrat, of Washington, for a crash program of at least 100 atomic submarines. And just any submarines won't do. In tomorrow's kind of war, our submersibles will have to be ticketed for specific tasks the same way destroyers, cruisers, carriers, and other surface warships are today.

The Russians will always have one grave advantage over us. They can call the shot on the day they want war. We have to meet the threat of that every day. Our first sealine of defense is the tremendous deterrent power of the Navy's missile submarines. The subsonic, surface-to-shore missile Regulus I now is operational. Polaris, last of the ballistic-missile programs to get started, is finishing fast. We have solved top-secret problems involved in submerged launchings and in fixing exact underwater locations for accurate firing. A Polaris development missile has been tested in flight. Given enough funds, the Navy will get off a full-scale shot within months.

Logically, these missile submarines should be sufficient. But most wars don't begin logically. We must also be able to seek out and stop every Soviet submarine coming in to pitch nuclear missiles at the mainland. We could recover, perhaps, from a rupture in our ocean lifelines; we could not afford to lose the capacity to recover at all.

Antisubmarine warfare has thus far been conducted on an attrition basis. To decimate undersea raiders during World War II, we took calculated losses. In the future, we must strive for a 100 percent detect-and-kill record. The awesome destructive capability of a single enemy submarine precludes anything else.

In my opinion, this is the greatest menace to the United States today.

We can start countering it right now by setting up a chain of stationary underwater listening posts far out at sea. They will be small spheres, manned or unmanned, set at the best thermal depths for sound detection. Anchored to the bottom by a nearly weightless nylon line, they will have power to raise themselves to the surface. Packed with delicate sonar devices, they will be able to pick up any object approaching or passing between them. Data from them will be quickly relayed to a seaplane member of the team via radio. Directed by double and triple sonar fixes, the seaplane will be able to attack accurately with air-to-underwater missiles.

To back them up, we must give top priority to the development of antisubmarine submarines. The submarine killers will have to be as small as possible for tight maneuvering. They will require nuclear powerplants lighter than those in use. They will also need supplementary power for high-speed spurts when they close for the kill.

And let us not forget that we must always keep our vital sea lanes open. We are basically a great island nation. The Soviet Unon is not. Key materials are in limited supply here and have to be brought over vast ocean stretches to fufill industrial wants. In a war, some of the cargo, of course, could be transported by huge cargo-carrying planes. But the bulk of it would still have to travel by water.

How? Fantastic as it seems, it all will be moved under water. We will use synthetic rubber tanks blown up in elongated shapes to cut resistance to a minimum. The tanks will be able to carry anything from grain to heavy machinery. At a safe depth under water, they will be pulled across the Atlantic in 2 days by submerged atomic tugs, and protected by submarine-killer escorts ranging far ahead and on each side of them.

This is a bare minimum of what we must do. The possibilities in the 300 million cubic miles of the earth's oceans rival those of space travel. The day is not far off when submarines will be almost completely silent, and will travel at speeds of 60 knots or better and at great depths unheard-of a decade ago. How long before that is a reality? Certainly no longer—less, I believe—than the period it took us to move from 450-mile-an-hour *Mustang* fighters in World War II to ballistic missiles roaring 5,000 miles through space in 30 minutes.

By that time, in war, our entire Navy will have gone under water. And our surface ships will be all the way under—at the bottom.

World Peace Through World Law: Comments by National Leaders

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, world peace must come through world law. There is no other way. How to obtain world law is explored in detail in a recently published book, World Peace Through World Law, by Grenville Clark and Louis B. Sohn.

Under a previous consent, I am including the following comments on this distinguished book by outstanding persons in the United States and the United Kingdom:

President Everett Case, Colgate University:

"Thomas à Kempis once remarked that 'all men desire peace, but very few desire the conditions requisite for peace.' Among these very few, the authors of this work have rendered a great public service in spelling out, for all to see, the nature of these requisites for our times.

"There is something immensely heartening, therefore, not only in the emergence of so challenging a book as World Peace Through World Law, but also in this fresh and compelling demonstration of what can be accomplished for the public good by the joint and voluntary enterprise of two private citizens whose abilities are matched only by their devotion.

"If our era is not to be the most destructive in human experience, it will have to be the most creative. Moreover, any free society which ceases to be creative, ceases to be. What Grenville Clark and Prof. Louis B. Sohn offer us in this book, then, is nothing less than a new lease on life. Whether we accept or reject the offer, we dare not ignore it.

"Let no one who professes a genuine concern for peace fail on any pretext to read and ponder their proposals. Rather let each who professes such concern read the brief but cogent introduction and then excuse himself, if he can, from pursuing the matter further."

United States Senator JOSEPH S. CLARK, of Pennsylvania:

"Every politician interested in the survival of civilization will want to read this book. So will all others with the same objective. The book spells out in detail a carefully thought through, feasible plan for achieving world peace and disarmament in this generation. It points the way, through practical political action, to prevent the threatened destruction of most of mankind."

President John Sloan Dickey, Dartmouth College:

"For many years I have envied reviewers and others their certain judgments that this or that book is 'the most important since * * *.' 'Until' is an even more unlimited word than 'since'; but I am sure that all those who use this great work (and that's what it is) will hope that a more important book on the organization of a lawful international order is not written until something is done about the subject by statesmen. This book is one of those magnificent intellectual ventures into concreteness on which better answers for big problems are built. It makes me wish I were a talent scout for the Nobel peace prize."

Mr. Justice William O. Douglas, Supreme Court of the United States:

"War can no longer be relied on to solve international problems if civilization as we know it today is to survive. The United Nations as it now exists is of great value. Yet the world must have a stronger United Nations with new powers and new functions or other agencies that can seek political solutions of present and future problems. This book in specific language suggests an alternative. These concrete proposals should be earnestly considered. Any suggestion that might ensure world peace deserves attention. But this particular plan should receive special consideration and be read and debated because it is presented in specific rather than general terms and because its authors bear distinguished credentials."

Thomas K. Finletter, lawyer:

"The launching of the 2 Russian satellites has started a new era. Now, for the first time since the end of World War II, the people of the United States, and I think the same is true of our allies in Europe and of the peoples of Asia and Africa, have had their eyes opened as to the scientific-military revolution through which we are passing. The people of the United States have been ignorant of the facts of this revolution. The Russian satellites woke them up. But the sputniks exposed more than the facts about the military situation. They revealed the need for something new in all our foreign policy and particularly in the area of the control of modern weapons of war and of the search for peace.

"For over 12 years now, ever since the end of World War II, Grenville Clark and Louis B. Sohn have been studying the problem of peace. They reached the conclusion early that world peace can be achieved only through world law, a conviction which was stated recently by President Eisenhower. But instead of contenting themselves with generalities about this greatest of all subjects of the political world today, Messrs. Clark and Sohn proceeded to study what this meant. What was world law? Law might mean many things. It might be a philosophic concept, existing only in men's mind without institutions to support it. Or it might mean law in the sense that we think of it in our States and in the Federal Government, with institutions to make it real.

"Messers. Clark and Sohn being practical men as well as scholars, took the latter meaning and then proceeded to the gigantic task of defining in detail exactly what they meant by a world law which might be put into effect today, with the very practical result of preventing the world from blowing itself up with hydrogen bombs. As Grenville Clark says in the book: "Accordingly our proposals are advanced in the firm conviction that genuine peace through world law is now a practical prospect which practical men can work for with reasonable hopes." Here is the great point about this invaluable book. It is a practical proposal. It is something that man can realize right now if he will bring his reason to bear on the problem. This is the kind of solution for which so much of the world has been grasping. This is the kind of solution which those who are talking of disengagement in Germany and the Near East, of missile-free zones in Europe, of trial areas for an inspection system are striving for. This practical, tough-minded 500 pages of analysis is the first blueprint yet made which can give those who want not to have hydrogen war a practical beacon toward which they can direct their efforts.

"The proposal is for an amendment to the United Nations Charter and for substantial revisions of its structure and of its functions. Disarmament means what it says. Disarmament is to be complete, down to the levels needed for local policing. The arrangement is to be enforceable within the limited field of the prevention of war. The United Nations is to have a police force. World law against international violence is to be explicitly stated. World tribunals are to interpret and apply the world law. There is to be a taxing system which will assure that the UN will have the money to carry out its responsibilities. A world development authority is to be set up to create conditions in which peace can grow in the undeveloped areas. And so on. A draft of a new Charter of the United Nations and annexes describe the institutions under which this world law shall operate.

"This book is a landmark. It may become the text out of which will grow man's effort to use his reason to save him from destroying himself. Those who cannot envisage any departure from the present world of anarchy will find the book disturbing to their prejudgments. But those who believe that now, finally, man must recognize that war is out of hand and that international anarchy is no longer tolerable will find in this book the greatest intellectual contribution yet made to the cause of world peace.

"Messrs. Clark and Sohn lay much store by the practical nature of their proposal. And in this they are indeed right, with one proviso only. This proposal is practical if the governments of the world are in any proper degree responsive to the will of the peoples whom they represent. If the peoples of the world were to be consulted there is no question what their verdict would be. It is that this is a proposal which they want put into practice."

United States Senator RALPH E. FLANDERS, of Vermont:

"The proposals of this book constitute the one logical working out of the problems of disarmament and the peaceful world. Nothing else that has been done, suggested, or thought of, approaches it in thoroughness and intelligence.

"World peace through world law is the attainable objective. There are two things necessary to its attainment. One is a background of popular determination the world over. The other is practical negotiation. The educational process needs to be far more fully developed and more strongly supported. The negotiations need an intelligence, an imagination, and a determination which have not yet been shown."

Raymond B. Fosdick, lawyer:

"This book, written by two lawyers, Grenville Clark and Louis B. Sohn, provides a comprehensive and systematic statement of the changes, article by article, which the authors believe should be made in the Charter of the United Nations if the world is to be saved from shipwreck. It represents years of research and consultation in the United States, in Europe and in Asia, and is the first detailed outline which I have seen of a world authority under worldwide law.

"The plan may not seem immediately practicable, but in the desperate condition which we face today we need to have spelled out to us the steps toward a larger unity which, whether we like it or not, we shall ultimately be forced to take. For we cannot go on as we are. Just as the Articles of Confederation before 1787 proved inadequate to meet the emerging problems, so the present Charter of the United Nations needs to be geared to the utterly new world with which technology has presented us since 1945.

"This is a gallant and highly intelligent attempt to point out the path into an inscrutable future. If it opens itself to the charge of idealism we can recall with profit one of Woodrow Wilson's last statements before he died: "The world is run by its ideals. Only the fool thinks otherwise.' "

Arthur L. Goodhart, master of University College, Oxford:

"It is a great thing to have presented in so powerful a way the case for civilization. Disarmament can only be maintained effectively if supreme power is placed in a body capable of enforcing the peace. This book states in a cogent and striking manner the problem which the world will have to solve if it is to escape from ultimate disaster."

Paul G. Hoffman, industrialist and public servant:

"World Peace Through World Law is a monumental work. Mr. Clark and Mr. Sohn are to be congratulated for having produced one of the truly important books of our time. It is important partly because the proposals are specific. I am sure they do not expect everyone to agree with everything they suggest; in fact, they make it clear that they do not. But they have given everyone who yearns for peace something that merits the most serious consideration."

Whitney North Seymour, lawyer:

"Every lawyer will be interested in this book. All of us recognize that the main problem of the modern world is to extend the rule of law everywhere. Most of us have felt that this is the one possible road to peace and to any prospect of ending the cold war. But there vagueness has set in; the necessary institutions have seemed painfully elusive. It is appropriate that Grenville Clark (with a distinguished collaborator), who once led the American bar to deep concern for individual freedom and then helped to lead the country to prepare to defeat Nazi tyranny, should now lay before us a detailed plan for saving the world from the nuclear war which would destroy civilization. The authors' proposals are bold, they make one gulp and conjure up many complications and difficulties, but they are far too carefully thought out to be disregarded. They do not pretend that they have all the answers or minimize the difficulties—but their pioneer work is worthy of the finest traditions of constructive professional thought."

Adlai E. Stevenson, lawyer:

"Certainly no one in the United States has given as much thought and scholarship to the legal basis of peace as Grenville Clark and Louis B. Sohn. And that is only one reason why the book which they have prepared is required reading for every thoughful student of man's most important business—peace."

Norman Thomas, writer and lecturer:

"The day when World Peace Through World Law is published will be a great landmark on mankind's road to peace. In it we have the definitive statement of the constructive conclusions reached by Messrs. Clark and Sohn after long years of study during which their tentative plans for peace through law have been laid before large numbers of men and women for comment and suggestion. In their completed plan lies, I am persuaded, mankind's best hope of escape from suicide as a result of our mad arms race which in this nuclear age can end only in annihilation.

"It seems to me axiomatic that if constructive fear of destruction by nuclear warfare does not lead to universal, controlled disarmament it will not in the madness of war lead to such self-control that every nation and its military will refrain from using the most destructive weapons then at its disposal.

"But disarmament, unless it is to be as futile as the nations' renunciation of war under the Kellogg-Briand Pact, requires a system of world law which to be effective in turn requires the existence of a representative international organization. The questions then arise: How much and what sort of law is necessary for effective disarmament and the maintenance of peace? How much and what sort of change should there be in the United Nations and its charter?

"The obsession of nation states with their sovereignty makes it important to answer these questions in minimum rather than maximum terms. To write an ideal constitution for a rational world would be an empty academic exercise. Our task is with what

may and must be done in time to avert catastrophe.

"And here the method followed by Messrs. Clark and Sohn is invaluable. Clause by clause they suggest necessary changes to the existing charter supporting each of them by clearly reasoned comment. It is hard to imagine an important question which they have not faced. The time has come when we must talk in terms of specific action, not in generalities. In this sort of fruitful discussion, World Peace Through World Law has given us extraordinary help and guidance."

James P. Warburg, author:

"If the world survives the present perilous period of transition from the era of the nation-state to the era of world organization, this book will be regarded by future historians as a milestone in human progress."

Barbara Ward (Lady Jackson), economist and writer:

"This is a time when men and women are becoming obscurely conscious that we cannot split the atom or conquer outer space without making some consequent adjustments to our basic institutions. Statesmen talk in general terms of sacrifices of sovereignty and the curtailment of some liberties to make greater ones more effective. We are growing aware that the total sovereign nation-state today is in some measure as anachronistic as a primitive tribal group. But all this confused sense of the necessity of change barely gets beyond the twilight zone of instinct or hunch.

"The immense value of World Peace Through World Law is that it confronts us with the concrete implications of our half-formed thoughts and helps us thereby to move forward to the clear light of understanding, decision and action. The proposals put forward by Mr. Clark and Dr. Sohn are not intended to be final or definitive, but they start from a definitive principle—that no nation today can be secure and prosperous save in a world community ruled by law. No one who has read these pages can ever again be confused on this basic point."

Leading Authority on Constitution Calls for Check on Supreme Court

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. THURMOND. Mr. President, recently Prof. Edward S. Corwin, of Princeton University, one of the Nation's leading authorities on constitutional law, wrote a letter to the New York Times discussing proposals to limit the jurisdiction of the Supreme Court.

This letter inspired a forceful editorial in the News and Courier, of Charleston, S. C., for March 30, and I ask unanimous consent that the editorial, entitled "Leading Authority on Constitution Calls for Check on Supreme Court," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEADING AUTHORITY ON CONSTITUTION CALLS FOR CHECK ON SUPREME COURT

Southern lawyers and laymen who believe it futile to protest the power seeking of the United States Supreme Court should heed the words of Prof. Edward S. Corwin, of Princeton University. Professor Corwin is one of the Nation's great authorities on constitutional law.

In a letter to the New York Times March 16, Professor Corwin called for limitations on the Supreme Court. He opposes the Court-reform bill introduced in the Senate by Senator JENNER, Republican, of Indiana.

At the same time, Professor Corwin wrote: "The measure deals with a real problem which is recognized, for instance, by Judge Learned Hand in his Harvard lectures—that of keeping the Court out of legislative territory; and, I might add, out of executive territory, too."

The significance of this statement lies in who Professor Corwin is. He is one of the most widely published American writers on constitutional topics—a northerner who has access to many influential journals. Thus his statement should have considerable influence on liberal opinion.

Professor Corwin asserted, "There can be no doubt that on June 17 last the Court went on a virtual binge and thrust its nose into matters beyond its competence, with the result that (in my judgment at least) it should have aforesaid nose well tweaked."

He also asserted that the Supreme Court's holding in the Watkins case, "in which it claims the right to recast congressional resolutions authorizing committee investigations, is quite irresponsible and indefensible."

Professor Corwin asked this question: "What, then, is the remedy for this vicious nonsense?"

His reply to his own question is: "I would suggest a declaratory act of Congress assertive of the correct reading of the Constitution on the points involved."

In summary, Professor Corwin wrote that "the country needs protection against the aggressive tendency of the Court."

Professor Corwin's statement indicates that the excesses of the Supreme Court may result in changed national opinion and the passage fo corrective legislation. Southern Senators, who recognize the danger of judicial tyranny, should move to implement Professor Corwin's arguments.

On Arms Aid for United States Friends

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. THURMOND. Mr. President, an article entitled "On Arms Aid for United States Friends," which was written by Constantine Brown, appeared in the Washington Evening Star for April 16.

In this article Mr. Brown points out some surprising facts. We have armed the Yugoslav forces of Marshal Tito with modern equipment, but we neglected to do as well for the Republic of Korea. Thus, we seem to be more interested in arming a Communist nation than we are in arming a free nation which is living under the shadow of Communist aggression.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON ARMS AID FOR UNITED STATES FRIENDS—EQUIPMENT FOR EIGHT TITO DIVISIONS IS CONTRASTED TO NEGLECT OF ROK'S

(By Constantine Brown)

American military aid to Yugoslavia was terminated last month with the departure of the United States military mission headed by Maj. Gen. Mercer C. Walter. In the 10 years we afforded assistance to President Tito, American taxpayers' moneys provided Yugoslavia with the latest equipment for 8 out of its 28 divisions and some 80 percent of its modern air force. Gen. Walter is reported to have stated before his departure from Belgrade that the American weapons had strengthened the capacity of the Yugoslav forces and the training program increased their efficiency. The general added that the money spent in Yugoslavia was "in the best interests of the United States" and that "if need ever arises, I am sure they will fight and fight well."

The question in the minds of some of our allies whose weapons are not quite of the quality of those delivered to Marshal Tito's forces is, "Against whom will the Yugoslavs fight so well?"

According to highly reliable information this reporter has been able to gather recently abroad, there exists an agreement between the Soviet and the Yugoslav general staff which assigns to the Yugoslav army the role of moving into northern Italy in the event the Soviet Union decides to strike against the NATO powers.

The likelihood of a Soviet aggression against Western Europe is of course remote. Prime Minister Khrushchev and those advisers from whom he is taking counsel expect to neutralize our western allies. But it is significant that such a Soviet-Yugoslav secret agreement should have been reached. It was negotiated at the time that Marshal Zhukov still was a predominant figure in the Presidium.

Yugoslavia has never been seriously threatened by the U. S. S. R., even when Marshal Tito's arch enemy and former boss, Stalin, was alive. Since his death, Marshal Tito has become a strong supporter of all political moves of international communism.

By contrast, it is pointed out here, some of our loyal allies who are directly under the Red guns are being neglected in their armament. A typical instance is Korea. Last summer, after paragraph 14 of the armistice agreement forbidding the NATO forces to improve their equipment was canceled, President Eisenhower wrote a personal letter to President Rhee promising an early replacement of the obsolescent weapons with which the 21 ROK divisions are equipped.

In the last few months, the two American divisions in South Korea have received a quantity of modern firepower capable of using nuclear heads. But the ROK armies have received next to nothing. When inquiries are being made, why the delay to a formal promise on the part of our Chief Executive, the official answer is "They are in the pipeline (or in the channels)."

Those responsible for the delay whisper to inquiring legislators that it would be dangerous to our objective of peace in the Far East if the ROK Army were provided with the necessary hardware to fight a real war. President Rhee, they argue, is so anxious to bring about the unification of Korea that he may not hesitate to use force. His armies are exceptionally good and, given the necessary weapons, he may not hesitate to commit something rash. Hence the go-slow policy on the part of the dispatchers.

Military observers who are familiar with the situation in that area point out the dangers of this go-slow policy at a time when Moscow may want to create divergencies and brush fires. The North Korean Government

is a mere tool in the hands of the Chinese Communists and the Russians. Neither boss government would hesitate to order the North Koreans to move against their brethren in the south, as they did in 1950, if such a move were necessary to the Moscow-Peiping plans.

It is true that the Chinese Communist forces have been withdrawn across the Yalu River. But they are available at a moment's notice. Before this withdrawal was decided, the reorganized forces of North Korea received from the U. S. S. R. the latest types of tanks and firepower available in that country. Among these weapons were included a sizable number of heavy jet bombers capable of carrying bombs with nuclear heads and medium-range missiles.

Herein lies the danger of our delaying policies toward an ally of proved loyalty. There is no question that President Rhee fervently desires to unite the two portions of his country. So do his people, including the unfortunate Koreans who are forced to live under Communist and foreign domination. But it is highly doubtful that he would commit a rash action unless he felt he had America's support.

Our active allies at the Soviet Union's and China's underbelly—Turkey, Iraq, Iran, Pakistan, Vietnam, the Philippines, Free China, and Korea—are sometimes wondering what makes Washington tick. They see the administration eager to help those who are proved supporters of the foreign policies of international communism, while they themselves meet with temporizations and sometimes rebukes when their own interests are directly involved. They wonder why some American policymakers look with more suspicion on South Korea and Turkey than on Yugoslavia and India.

Address by Hon. Antoni N. Sadlak, of Connecticut, at the Men-of-Management Dinner, Waynesboro, Pa., April 22, 1958

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include a copy of a most stimulating address delivered on Tuesday night in spacious Eagles Club Auditorium, Waynesboro, Pa., by my friend and colleague from Connecticut, the at-large Representative [Mr. SADLAK]. The audience consisted of more than 300 men at a dinner meeting of men of management under auspices of the Valley Branch, National Metal Trades Association, and the Waynesboro Manufacturers' Association. Mr. Grayson M. Stickell was the toastmaster and Rev. H. Clayton Moyer gave the invocation. It was a genuine pleasure to introduce the gentleman from Connecticut to constituents of my 18th Pennsylvania District.

The address follows:

TAX REFORM FOR A GROWING AMERICA

My distinguished colleague and friend and your outstanding Representative in the Congress, DICK SIMPSON, Mr. Toastmaster, Reverend Moyer, and my fellow citizens, the warmth, cordiality, and graciousness of the introduction and its reception make me feel very happy to have undertaken the 2-hour auto ride to be your guest this evening. Each of you knows DICK SIMPSON better and longer than it has been my privilege, but I can better certify to his application to congressional duties and responsibilities, being privileged to serve with him on the Ways and Means Committee of which he is a skillful, experienced, and energetic legislator of whom all of you can be proud.

No other nation's people can ever hope to reach the degree of fairmindedness consistently displayed by Americans in taking stands on public issues. Unfortunately, however, the full effect of this great trait is sometimes seriously blunted—if not lost entirely—by a tendency to decide on issues along general rather than specific lines. A good example of this is in the area of tax reduction.

Those individuals who customarily take polls—both professional and amateur—have been telling us that soundings taken during the recent congressional recess for Easter indicate that public sentiment, in the main, does not favor immediate tax cut action. I use the phrase "tax cut" purposely because that, unfortunately, is the way the question was put, in most cases, to the rather small segment of the population covered by the polls.

Even if the results could be termed accurate—and this is doubtful—how, using such a broad and general term, could you expect anything but a negative answer? If you throw all tax action proposals into the same basket without explaining the difference between them and then ask, "Are you in favor of tax cuts?" you have prevented almost every possibility of an intelligent answer since there is no reasoning process involved.

On the other hand if the question includes the salient features of a tax reduction proposal and an adequate explanation as to how and why it would contribute importantly to the well-being of the the country, then it is almost certain that it will bring a far different and truer expression of opinion.

Yes, you can no more lump together all the tax proposals that have been introduced in the Congress or aired publicly, than you can couple Elvis Presley with a grand opera star, as singers, or a minor leaguer with Ted Williams, as ball players.

There is a great need, then, for a long, searching look at the type of tax action best adapted to meeting the pressing current as well as future needs of the country and I know of no better forum for such a discussion than this distinguished gathering of industrial and business men.

It would be a very great privilege to address you, in any circumstances, but I am doubly honored by the opportunity to talk cold, hard facts to you who deal in that commodity every day. In exploring the need for tax action, I am always most comfortable in so doing before gatherings such as this—because I feel that you know the problem at hand and can better appreciate what I have to say.

First, let us examine some of the devastating effects of our present individual and corporate-income-tax system. I know that they are familiar because you are probably confronted with them in some form or other practically every business day and not solely on April 15. Nevertheless, the devastating impact of the oppressing high rates—particularly the steep progression in the middle and high main brackets, cannot be overemphasized.

They can best be summed up as a disastrous triple play.

1. They smother individual and business enterprise by penalizing success.

2. They curtail, drastically, the flow of investment funds vital to business stability and growth by preventing the accumulation of adequate savings, the chief source of these funds.

3. They create strong inflationary pressures by forcing those unable to acquire equity capital into overuse of bank credit.

This, of course, is a strong accusation but it is a well-founded one that calls for immediate and constructive action to put a halt to a tax rate that is destroying the economy, in greater force, with each passing day.

Naturally, many will ask how, in view of the crippling tentacles of our tax system, were we able to achieve economic expansion from the end of World War II until the onset of the current recession? The answer, by now, is obvious. It can be summed up in one word—inflation. The myth of our so-called expansion was measured in terms of diluted dollars and bore little resemblance to genuine, hard-rock growth.

Corporate debt increased from $85 billion at the end of 1945 to $208 billion by the close of 1956. Where could you possibly get better proof of the critical shortage of equity capital? Borrowing skyrocketed because it was the only way that capital requirements could be satisfied.

Our economic situation today proves beyond the slightest shred of doubt that we can never hope for real business recovery and a return to solid, noninflationary growth without dealing, forthrightly and boldly, with the crucial need for reform of the income-tax rate structure.

You will notice I used the term "reform of the income-tax rate structure" instead of the generalized description of "tax cut." There is a reason for that. As I explained earlier we have got to get down to specifics if we are ever going to pierce the fog of doubt and confusion surrounding the entire tax issue.

Now it is sometimes embarrassing for a Congressman to engage in a public discussion of the merits of his own bill. This does not apply in this case, however, because the legislation I am going to talk about has become what could very well be called the "American taxpayers' bill," rather than the Sadlak-Herlong bill, as it is more familiarly known. But before I show you why this is so let me give you a brief explanation of the bill.

It is the first thoroughgoing program for the reform of the income-tax rate structure since the rates began their upward spiral some 26 years ago. The legislation provides for coordinated reductions, over a 5-year period, in all the progressive rates of individual tax, with the first bracket rate, of $2,000 or less of taxable income, being reduced from 20 to 15 percent. The top rates of tax would be brought down to 42 percent, the individual tax from its present top of 91 percent, and the corporate tax from its present top of 52 percent.

Let me cite just a few examples to give you a better idea of how the reform recommendations will work. At the end of the fifth year, the $4,000 to $6,000 bracket would be reduced from 26 to 17 percent; the $8,000 to $10,000 bracket from 34 to 19 percent; the $16,000 to $18,000 bracket from 43 to 19 percent; and the $20,000 to $22,000 bracket from 56 to 25 percent.

I am sure that some of you have been resorting to rapid mental calculations as to how you, as an individual, or your businesses, would be aided by the legislation's proposals. If so, you could come up with only one answer—you would be infinitely better off, to the point where virtually all of your monetary problems could well dissolve or certainly diminish. Well, all America would share in this improvement.

Before I go any farther, I want to make one thing crystal clear. This rate reform bill should not be viewed, solely, as an antirecession measure. As a matter of fact, I intro-

duced the bill 13 months ago—long before the start of the downswing and its beginning goes back even farther because many, many months of careful study went into its drafting. And, one of its finest advantages lies in this very fact. It was conceived in the relative serenity of a period of clear-thinking, in sharp contrast to the tax proposals born of the panic and near-hysteria which seem to have come about recently because of the present situation.

There is no question that the legislation I propose will contribute vitally to business recovery, but I would be pressing for its enactment, just as strongly, if there were no recession. I would do so because reform of the income tax rate structure is long, long, overdue and I firmly believe that if the bill had become law 3 years ago, we could very well have bypassed the business reversals now plaguing us. Put differently, the Sadlak-Herlong bill comprises preventative economic medicine, the kind that builds immunity to business slumps or, at any rate, provides the ability to climb out of them quickly.

You may feel that my estimation of the beneficial effects that the legislation would bring emanates from a sort of pride of authorship. That is far from the actual case, because my confidence in the measure has far-flung support. Soon after its introduction, my bill, H. R. 6452, was complimented when my distinguished colleague on the House Ways and Means Committee—Representative A. S. HERLONG, JR., a Florida Democrat—introduced an identical bill, H. R. 9119.

But the testimonial that was most gratifying to me came during the 24-day public hearing on the Ways and Means Committee which ended early in February. Since this committee is the tax-writing body of the House, it heard testimony on all the tax proposals—either those already under consideration or new recommendations made during the open sessions.

Of the 50 witnesses who addressed themselves to the need for rate reform, more than 40 gave their whole-hearted endorsement to the Sadlak-Herlong bills. These witnesses, it should be noted, were representative of every facet of our economic life. They appeared in behalf of organized groups of small, medium, and large business enterprises operating in all parts of the Nation. No other tax legislation even remotely approached the fine record achieved by the Sadlak-Herlong bills in searching public glare of the committee hearings.

It is, of course, extremely difficult to summarize the voluminous hearing record, and to capture the full effect of the protests against the punitive tax schedules that exist today, let alone the urgency of the voices that called for prompt rate reform. I feel, however, that the following points are truly reflective of what the legislation will mean to America. It would:

1. Spark a quick recovery from the present recession, both from the fact of immediate reductions and the certainty of continuing reductions.

2. Be rapidly translated into new and better job opportunities and a renewed advance in the American standard of living.

3. Provide more, rather than less revenue, for the Government as the Nation moved forward to increasing levels of production, employment, income and consumption.

4. Resolve the tax problem of small business at its source and open up opportunities for the beginning and development of business which cannot be managed under the existing tax structure.

5. Achieve all of these benefits with a lessening of inflationary pressures since moderate tax rates would permit a higher volume of business and individual savings making economic growth less dependent upon excessive credit expansion.

The approval accorded the bills has not, by any means, been confined to the Ways and Means Committee hearing room. More than 200 business, professional, industrial and civic organizations covering every area of the Nation have passed formal resolutions of endorsement. But probably the most overwhelming commendation has come from the press and national magazines of great influence. Over 500 newspapers have run editorials recommending passage of the measure and recently—in rapid succession the U. S. News & World Reports, the Saturday Evening Post and Fortune Magazine—among others—have carried editorials strongly urging passage of the Sadlak-Herlong bills.

It is not surprising then that the measure can qualify as the American taxpayer's document.

Please understand my purpose in citing these testimonials. It is not an attempt to build up my legislative importance. It is simply a means of convincing you that the sound and realistic provisions of the bill have stood the test of exacting evaluations.

I'll turn to other aspects of the bills which I have saved until now, for better emphasis of their importance. The forward scheduling of reductions can conceivably have a very strong restraining effect on Federal administrative procedures because the Bureau of the Budget and all executive departments will be put on advance notice of the income tax share of revenue expected for the budgetary year. This should prove a welcome and efficient brake to wild and undisciplined spending.

A unique feature of the bills allows for postponement, in certain circumstances, of the application of the reductions for up to 1 year. In this way, the needs for emergency military spending could be met without the necessity of going through the time-consuming and difficult process of revoking, and later reinstating, the legislation.

When we speak of military expenditures, we refer, naturally, to the threat posed by Russia. Even though her sputniks are gone from space, too many Americans are still gazing skyward, as if it embodied the only danger of a Soviet thrust. I submit that they had better concern themselves, as well, with Russia's astonishing economic progress.

According to competent informational sources, the Soviet industrial production has grown twice as fast as ours over the past 25 years and, in another decade, it should equal 50 percent of our own whereas it is only one-third now.

And, if you think that the Russians are not deadly serious about this race to catch us on the productive front, then I refer you to the boastful pronouncement made by Khrushchev, 3 months ago, when he had less power than he now has grabbed. He said:

"We declare war upon the United States in the peaceful field of trade. The threat to the United States is not in the intercontinental ballistic missile, but in the field of peaceful production. We do not need a war to insure the victory of socialism."

While we abhor the source of the appraisal, we cannot deny the logic. Unless our economy is bolstered, if it continues to falter, there is every danger that we could be brought to humiliating defeat in the very area where we have justly been the dominant nation for so many years—the field of production.

So it is that if the domestic reasons for enacting immediate tax rate reform are not compelling enough, then the dire need for winning the life-and-death economic struggle with the Soviets should provide a clinching argument—one that may be suicidal to ignore.

As practical businessmen, you will want to know about the revenue effect of the Sadlak-Herlong bills. It can be estimated at about $3 billion a year. In times of normal, economic growth, this would be more than satisfied by the historic average of a $4 billion annual increase in revenue collections.

We are off the normal growth pattern, of course, but even if the bills incurred temporary deficit financing, I am supremely confident—as are most of the supporters of the measure—that enactment of the bills would soon prove to be the most rewarding investment this country every made. It would give the business community the psychological, as well as the economic stimulus it so badly needs and once back on the track, with the tax roadblocks removed, we'll be able to steam ahead at full speed to the attainment of a state of prosperity that will eclipse any we have known in the past.

Every Congressman is understandably hesitant about adding to the mail of his fellow legislators in Washington, but I feel that the gravity of the tax problem facing the Nation makes it incumbent on me to depart from standard procedure. Therefore, if you believe in the efficacy of the Sadlak-Herlong bills—and I do not expect you to make up your minds until you have studied the provisions with greater care—then I suggest that you let your representatives in Washington know how you feel.

Contrary to general impression, it is my considered opinion that businessmen and individuals alike are far too reticent, sometimes even backward, in making known their views on national public issues. I firmly believe that it is not only your right to express yourself but that it is your duty to do so. Our only hope, in Washington, to reflect the real views of our constituents, is to hear from them in the period when their counsel will be most beneficial.

This is especially mandatory right now because you will be able to help slice through the generalities that are shrouding the real issues involved in the tax situation and expose the specifics—the heart of the matter—that will enable all Americans to take a knowledgeable and positive stand.

I know of no finer contribution that you could make. It will be a public service of the highest order for it will aid significantly in the achievement of a tax reform program best designed to reverse the downward business trend and restore solid, noninflationary economic growth.

Tariffs on Lead and Zinc

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the April 25 issue of the Washington Post entitled "Boiling Metal" relating to recent finding by the Tariff Commission that the present tariffs on lead and zinc should be increased in order to afford adequate protection for the domestic industry.

Obviously, there is little likelihood that the Tariff Commission could have made any other finding but that the domestic industry is in distress.

The matter now is left up to the President of the United States. It is a

serious problem which confronts him, for if the recommendations of the Tariff Commission are adopted, such action will have a serious impact on the domestic economies of our friendly neighbors to the south, particularly Mexico and Peru. This will eventually have an adverse effect on our own economy as well.

The editorial points out a possible solution while at the same time recognizing the distress of our own domestic industries, by adopting a long-range approach to prevent any violent fluctuation of commodity prices in the world market.

I hope that serious consideration will be given to the adoption of such approach by stockpiling some of these items which are undoubtedly in great supply now but which may, in a short period of time, become in short supply. In this way the domestic industry can be protected, and at the same time the progress which has been made in promoting trade between the Latin American countries and the United States, as well as the implementation of our good-neighbor policy, can be substantially advanced. The adoption of this approach will also deal a lethal blow to the Communist economic offensive in the area. In our own self-interest this approach appears to be the only practical solution to the problem.

I highly commend the reading of this editorial to all the Members of the Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BOILING METAL

The Tariff Commission could scarcely have picked a less felicitous time for propounding intensified protectionist dogmas than it did in its proposals on lead and zinc which it handed down on Thursday. Members of the Commission seemed to disagree only as to whether the new tariffs on the metals should be merely harsh or altogether Draconian. The zealous Republican members urged application of the highest permissible rates of duty plus quota restrictions on imports. The Democrats were content to recommend reimposition of the high Smoot-Hawley levels of 1930. And this comes at a time when our neighbors are sensitive to the point of distraction over a mild increase in United States tariff schedules.

Only a week ago, President Carlos Ibanez, of Chile, canceled a long-planned state visit to Washington reportedly because of Chilean anger over an administration move to immediately reimpose import taxes on copper. And now the lead and zinc recommendations will inevitably invite similar exasperation in Canada, Mexico, and Peru, our chief suppliers in the hemisphere. Actually, the administration was in a difficult position in the case of the copper tax, and its position was not altogether unreasonable. But it was singularly inept to announce support of the tax a few short weeks before the temperamental 81-year-old President of Chile was scheduled to arrive. Here was an instance where better coordination might have averted a diplomatic slight from Chile that hurt the United States without helping Chile.

Fortunately, the lead and zinc proposals can still be headed off if Mr. Eisenhower rejects the Commission findings, as he has done before. Unquestionably the domestic minerals industry is in distress, and no administration could be indifferent to the plight of unemployed miners in Western States. But the remedy does not lie in making a shambles of this country's trade policy and in flinging dust in the eyes of neighbors.

One better long-rang approach would be to seek some kind of orderly way of preventing the violent fluctuation of commodity prices in the world market. Last week, Chile asked the United Nations to consider such an international plan for copper. Surely the proposal deserves sympathetic study. In the short run, it may be necessary to resort to further stockpiling or to other indirect subsidies to aid the domestic industry. This would be more acceptable than any policy which would seal off American ports, worsen hemispheric relations, and perhaps force our neighbors to turn in desperation to Communist markets.

Postmasters' Advocate and the State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. NEUBERGER. Mr. President, in the Postmasters' Advocate for April 1958 there is an excellent article entitled "Oregon." Mrs. Dorothy Ritchie of Tygh Valley, Oreg., and Hon. Neil Morfitt, of Astoria, Oreg., both postmasters in our State, provided the wealth of material that enabled the editors of this official publication of the National League of Postmasters to write this fine article. Appropriately, the piece discloses that the history of the Post Office Department contains some exciting chapters in connection with the early development of the Far West.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON

The first United States post office west of the Rocky Mountains, was established in Oregon Territory, at Astoria, near the mouth of the Columbia River, on March 9, 1847. An office at Oregon City, near present-day Portland, was set up on March 29 in the same year. It was much later that the third office in the West was established, in November, 1848, at San Francisco, Calif.

When a person wanted to write a letter, he prepared a pen by whittling a goose quill; prepared a gallnut fluid and started. Done, he sealed the missive with flour paste and waited for some traveler, headed in the general direction he wanted his message to go, and requested a favor of taking it along. There was no postal service for the pioneers.

Big business arrived in Oregon ahead of the postal service, and of more than a handful of settlers. It established its own system, with John Reed, of the Pacific Fur Co., as the first mail messenger on record. In April 1812, Reed started from Astoria for New York overland. He carried dispatches for John Jacob Astor, telling of the Astor party's arrival at the mouth of the Columbia. Reed packed his provisions, rifle, and bedding along on horseback with the dispatches in a tin box. But the Indians around Celilo (now Wasco County) grew curious about the mysterious contents of the shiny box and attacked. They knocked Reed out and took his entire outfit. He abandoned the trip. The first regular transcontinental mail route, fostered by the fur interests, was between Fort Vancouver and eastern Canada. Beginning in 1813, mail carriers left Vancouver every March for Montreal and eastern points, returning the same year with messages from the New England coast. The route was popularly known as the "express" and was used by a few scattered traders, trappers, and hunters of the Oregon country. Mail was carried by canoe, along streams and lakes, packed over portage or on men's backs, across snowy mountain passes and arid plains, exposed to the danger of Indian raids, floods, and forest fires.

As more settlers arrived in the Oregon country, and anyone planned a trip outside the community, notice was given that messages, verbal or written, would be carried as a neighborly gesture. For some 20 years this sort of mail service was all Oregon had, for short or long distances, excepting occasionally by ship around the Horn. It often took more than a year to get an answer by letter, but settlers had learned to be patient.

About 1845, when Oregon's population had grown to between 5,000 and 6,000, the need for some organized postal service became acute. As a result, in December 1845, the provisional government set up its own post office department and appointed Col. William G. T'Vault as postmaster general, with headquarters at Oregon City. Rates were established at 15 cents for one sheet of writing paper carried not over 30 miles; 25 cents when carried not over 200 miles. Newspapers went at a flat rate of 4 cents each. Typical American free enterprise became interested, and the mail-carrying business boomed. Since there was no law prohibiting it, private routes sprang up parallel to those of the government, and after some months of real competition, faced with a deficit of $100, the provisional government's enterprise was abandoned.

As early as 1845 the Federal Government had made some effort toward establishing a mail route from the Atlantic coast by ship to the isthmus and up the Pacific coast, but nothing materialized. However, in 1847 when the first United States postage stamps appeared, J. M. Shively carried the first United States mail across the plains. Shively had arrived in Astoria in 1843, had taken a land claim in what is now the heart of the city, and in 1846 had gone back East on a visit. In the mail he carried West on his return, was an order from the Postmaster General in Washington, D. C., setting up a postal system in the Oregon country, appointing Col. Cornelius Gilliam as postal agent for the Pacific coast, and designating Astoria as the mail distributing point, with Oregon City as the second post office. Although he did not realize it, Shively also carried his own appointment as postmaster of Astoria. Colonel Gilliam made David Hill postmaster of Oregon City.

Shively established himself in a cabin that had just been built in Astoria by the Rev. Ezra Fisher, and the first Oregon letters went out from there. Rates at the first United States post office establishment in Oregon were 40 cents an ounce for letters between points on the Atlantic coast and in Pacific midwest. Mail came by water, some of it around the Horn, some by way of the Isthmus of Panama, up the coast to San Francisco and from there up the coast to Astoria. The first mail in regulation United States pouches came around the Horn on the bark *Sequin*, commanded by Capt. Z. C. Norton. The service was joyously welcomed, but soon, when boat arrivals became irregular, with mails few and far between, there was much dissatisfaction.

Meanwhile, in 1848, during the Indian troubles following the Whitman massacre, Colonel Gilliam was killed. So slow were the mails from the East that for months after his death dispatches from Washington continued to arrive for him. When the United States Post Office Department finally

learned of his passing, and had appointed his successor, the central mail distributing center facility for the Pacific coast had moved from Astoria to San Francisco, and that city became headquarters for the new postal agent. He had authority to appoint postmasters for the Oregon country, and these offices were filled and vacated frequently.

In August 1948, Oregon was admitted to the Union as a Territory and the United States Postmaster General decided on an adjustment of Oregon postal rates. Letters inside the Territory were to be carried 300 miles for 5 cents per half ounce, with newspapers 1 cent each. Outside-the-Territory newspapers had to pay 1½ cents each. Letters from the East, coming by water, kept the old rate of 40 cents an ounce.

Soon thereafter the Pacific Mail Steamship Co. of San Francisco, was given the contract for carrying the mails between that port and the Columbia River, but protests were frequent because of the slowness of the mails and their irregularity. In December 1849, Oregon's territorial delegate to Congress called on the Post Office Department in Washington in an attempt to improve mail service, but got little satisfaction.

As an example of the mail service of that day, the news of the admission of Oregon into the Union as a State on February 14, 1859, did not reach San Francisco until March 10, and it took the steamer *Brother Jonathan* 5 more days to bring the news to Oregon. When the report reached Oregon City, citizen Stephen Senter rode horseback to Salem with the tidings, spreading the information as he rode along.

Oregon's mail troubles were varied until 1883, when the Northern Pacific Railroad was completed across the continent, and when connections with San Francisco were established.

The State of Oregon, much of it still practically primeval, has its peculiar postal problems today. Contrasted with the metropolitan center around Portland, on the Columbia and Willamette Rivers, is the vast terrain of mountains, forests, and wastelands. In some instances, service is almost like it was in the days of the Oregon Trail and the Lewis and Clark Expedition.

On star route 403009, Gold Beach to Agness, operation is 6 times a week from May 1 to October 31, and three times a week from November 1 to April 30. The distance is 32 miles up the famous Rogue River. The trip is made in specially constructed river boats, as shown in the accompanying picture. Special drive lines and ruders are necessary to cross the many riffles. Mail is carried to patrons along the way in the usual star route sacks. Fourteen families receive their mail in this manner. The Rogue River is the only access to this remote area from the coast.

A forest service road enters from the Powers area. The river boats carry passengers as well as mail. Some of their other duties are hauling freight, serving as an ambulance and similar necessary errands for the people in the Agness area.

Postmaster Joseph Omlin, Jr., is in charge of the Gold Beach office, and Luther Best is postmaster at Agness.

Oregon has a regional office of the Post Office Department, the office at Portland being fourth to be established in the decentralized program. Samuel G. Schwartz is Regional Director, assisted by King Cady, public relations; Robert L. Karr, operations manager; Tom Allen, training officer; John VanBuskirk, real estate officer; R. H. Pursifull, controller; Paul Beckey, accounting officer; Miller Bodell, transportation officer; Harry O. Clark, engineer; Frank Cole, personned officer; Earl Wignall, budget officer; and Arne Shelley, employment and placement officer.

Many of the better workers for the National League of Postmasters have come from among the Oregon postmasters. Although there are a few Oregon postmasters who have not yet joined the national league, most of them recognize the value of this organization to them individually and as a group, and it is expected that the others will soon affiliate and help share the responsibility as well as the benefits, at the very low membership fees.

Transportation Costs of the Nation's Food

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, April 25, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Transportation" which appeared in the National Association of Food Chains Bulletin under date of April 19, 1958.

The bulletin points out that transportation costs represent 16 percent of the family food dollar and that the annual cost of transporting the Nation's food reaches a figure equal to more than 30 percent of the amount received by the farmer for farm food products.

These statistics point out the necessity of Congress acting promptly to repeal the transportation excise taxes.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRANSPORTATION

Reduction of transportation costs is a major objective of food distributors because of the importance of transportation charges in food prices. United State Department of Agriculture figures show that transportation costs represent 16 percent of the family food dollar. The American Farm Bureau Federation reports that the annual cost of transporting the Nation's food reaches a figure equal to more than 30 percent of the sum received by the farmer for farm-food products. A specific example shows that 20 percent of the retail sale price of a can of California peaches sold in the Chicago market is made up of transportation charges.

Predictions in Washington are that some reduction in transportation costs may develop when the current temporary 3-percent transportation excise tax comes up for renewal action prior to its expiration date of June 1, 1958. This tax which was made effective as part of the Korean war emergency action will expire June 1 unless action to the contrary is taken by the Congress. A subcommittee of the Senate Committee on Interstate Foreign Commerce under the chairmanship of Senator SMATHERS, Democrat, of Florida, may recommend abolition of the transportation excise tax as a move to help the transportation system of the country. Any such recommendation presumably would be submitted to the House Ways and Means Committee where the tax will be considered in May. It is generally felt in Washington that there is more agreement on the proposal to cancel the 3-percent transportation excise tax than on most other issues. Many businessmen are reported to have expressed opinions on the subject to their Senators and Representatives. Others may wish to do so in the next 3 weeks.

Tenth Anniversary of Establishment of the State of Israel

SPEECH
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. BUCKLEY. Mr. Speaker, I am happy to join with my colleagues in honoring Israel on the occasion of the 10th anniversary of its independence.

As an American I am proud of the fact that the United States was the first Nation to recognize the State of Israel immediately after it came into being, on May 14, 1948.

It is my firm conviction that the State of Israel is entitled to all the economic and moral aid and assistance which the United States can give to her. I sincerely believe that if we help the State of Israel in its development of democratic principles of government, we are not only helping the people of Israel, but we are making an everlasting friend and ally for the United States.

It was our country which did most to establish the young State of Israel. To me, Israel is a foothold of democracy in the Middle East. A strong Israel is important to the security and welfare of the United States. Israel is an important member in the group of free countries which must fight against the threat of totalitarianism. Just as we have aided other countries by the foreign assistance program, which the United States inaugurated, so must we aid Israel develop its natural resources, expand its agricultural and industrial economy, and increase its productive capacity and facilities. Of all the countries in the Middle East, the young State of Israel stands out clearly as the most dependable exponent of democracy. The people of Israel are ready to defend democracy. Israel has always supported the principles of the United Nations in every respect.

Israel is a little guy, fighting nature, fighting enemies and trying to do a great job. This little guy needs friends. He needs friends as America needed friends during the American Revolution. This little guy saw 6 million of his brothers and sisters wiped out by Hitler and the Nazis. I tell you my fellow Americans, it would be a poor kind of America who would not admire that little guy and who would not be cheering him on in his fight against such odds.

We must continue our American policy of friendship for the young State of Israel which the United States helped to create.

We must not permit the members of the Arab League, which hates Israel, to block the road of progress of the young, democratic State of Israel. There must

be peace between Israel and the Arab States in the Middle East. A strong Israel is important to the security and welfare of the United States. Israel is a bulwark against communism in the Middel East.

I hope and pray that the dynamic State of Israel will grow and prosper and that Israel will become and always be an economic, industrial, and military pillar for the free world in the Middle East.

Essential River Study

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. MOSS. Mr. Speaker, I call attention of the Members to an editorial in the Sacramento (Calif.) Bee of April 1, 1958, relating to the urgent need for additional water storage projects in the Sacramento River Basin.

On February 24, 1958, I requested the House Committee on Public Works for a review by the Board of Engineers for Rivers and Harbors of pertinent reports on the Sacramento River and tributaries, California, with a view to determining of the plan of improvement for the river and Butte Basin should be modified at this time, particularly with respect to the proposed Table Mountain—Iron Canyon—project on the Sacramento, and possible supplemental storage on streams tributary to the Sacramento River between Shasta Dam and Red Bluff, Calif.

This proposed review action by the Corps of Engineers is concurred in by the California Water Commission, and the State of California Department of Water Resources.

As will be noted, the Sacramento Bee editorial corroborates the fact, again made obvious by recent critical floods, that Shasta Dam by itself cannot provide absolute flood control in the Sacramento Basin:

ESSENTIAL RIVER STUDY

The current rainy winter has shown the necessity of engineering studies looking toward additional water-storage projects in the Sacramento River Basin as called for in resolutions adopted in the California Legislature and pending in Congress.

Even with the outflow through Shasta Dam held to a minimum, the freshets on downstream tributaries created a flood condition on the Sacramento River which easily could have been disastrous to several communities.

Assemblywoman Pauline Davis, of Plumas County, obtained lower house adoption of a resolution requesting the State department of water resources to make studies of possible dams on several creeks between Red Bluff and Shasta Dam.

Both legislative houses approved a joint resolution by Senator Paul R. Byrne, of Butte County, calling upon the Army engineers to study possible flood-control projects in the same area.

And Congressman CLAIR ENGLE, of the Second Mountain Valley District, has prepared a resolution for the House of Representatives Public Works Committee asking the Army engineers to pursue their studies of the Iron Canyon project and possible supplementary dams on the Pit and McCloud Rivers and Cottonwood, Stillwater, Cow, Battle, and other creeks tributary to the Sacramento.

Only too plainly Shasta Dam by itself cannot provide absolute flood control in the Sacramento Basin. Tributaries upstream and downstream also need to be controlled. And in several cases this can be done profitably as well as effectively through power generation.

Abandonment of Passenger Service Between Washington and New York by the Baltimore & Ohio Railroad

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the April 25 issue of the Washington Post, entitled "End of an Era."

This editorial relates to the abandonment of passenger service between Washington and New York on the Baltimore & Ohio Railroad.

From a nostalgic point of view the editorial has a sad—a very sad ring. However, from a more realistic point of view there are three aspects which are, in my opinion, overlooked.

First, the abandonment of this service will add over 300 jobless to the unemployment rolls in the Washington area.

Second, this increase in unemployment will have a general adverse effect on our lagging economy, by causing an additional drain on unemployment and compensation rolls and loss of purchasing power in the community.

Third, Congress sooner or later will have to give serious consideration to the actuarial soundness of the Railroad Retirement Fund, which has been growing increasingly unsound because of the fact that fewer people are joining the rolls, and contributions to the fund by employees are diminishing as the years, days, and months roll on. Four hundred employees a month dropped from railroad payrolls over the past 5 years. At the same time obligations from the fund are increasing.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

END OF AN ERA

The abandonment of passenger service between Washington and New York on the Baltimore & Ohio Railroad, which takes effect Sunday, is cause for more than a little nostalgia. It is symbolic of what is happening to American railroads—in part because of automobiles, turnpikes, and airline and bus competition, in part because of overly rigid regulation, in part because of inflexible labor practices and in part because of lack of imagination and unrealistic accounting practices which have led some railroad managements to blame perhaps too many of their woes on passenger service.

What will occasion more poignant memories than even the transition from steam to Diesel power is the fact that this is happening on a segment of the Nation's oldest major passenger-carrying railroad. The B&O is the line of the Tom Thumb, and it came to Washington 123 years ago. If it was not as fast to New York as its competitor, the Pennsylvania, it was certainly comfortable and friendly. The old-time Royal Blue and its predecessors, with their string of varnished parlor cars, coaches and diner, seemed an indestructible institution.

Although there was through passenger service from the Capital to New York for 95 years, the arrangement was never one for the utmost convenience. The B&O tracks extended only to Park Junction, Pa., whence the Reading was used to Bound Brook, N. J., whence in turn the Jersey Central lines reached to Jersey City. The lack of an entrance to New York City proper required a bus and ferry trip which was time-consuming, though a pleasant and wonderful way to show the family the Statue of Liberty and Lower Manhattan.

None of this means that the B&O will not continue to be a vigorous and important railroad. Freight service north will be continued; and the famed Capitol and National Limiteds, which used to come from New York, will now originate in Baltimore. The B&O will retain its commuter service between Washington and Baltimore, and its successful new RDCs, or rail Diesel cars, will continue to provide a daylight ride to Pittsburgh. But somehow, for those who love the romance and mystery of passenger trains and terminals, things won't be quite the same.

Visit to United States by Persons From Uncommitted Nations

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. KEFAUVER. Mr. President, our young people have a lot of vision and good ideas. The optimism of youth and their confidence in our country is well expressed by a young friend of mine, Richard Kostelanetz, who attends Scarsdale, N. Y., High School. His letter, printed in the New York Herald Tribune of April 13, 1958, advocates bringing more people from uncommitted nations to see the United States. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FOR BRINGING THE WORLD ON A TOUR OF AMERICA

TO THE NEW YORK HERALD TRIBUNE:

Most experts agree that Russia is slowly but surely catching up, if not surpassing us, in many fields.

Russia can launch earth satellites; the Kremlin can give financial and technical aid to numerous so-called uncommitted nations. Seemingly, the Soviets can match us in nearly every respect but one—the standard of living which our economic freedom has achieved. And most of the world's poor want, not a philosophy, but material goods to give them a happy life.

This can be the key in America's persuading the minds of the uncommitted nations' peoples, if not the stronghold behind the

Iron Curtain itself. With an appropriation of only a fraction of Uncle Sam's expenditures for foreign aid and defense—$1 billion—the people of the United States could give 1 million of the world's people a first-hand views of America's shores.

These ambassadors could be shown America as it really exists—its cities, farms and suburbs. Surely they will be impressed with the abundance of high quality food, the efficiency of the factories, the pleasures of mass communications like radio and television, and the quality of mass-produced inexpensive American consumer goods.

When they return to their native lands, the million ambassadors could honestly tell their people what they saw. In this persuading force Russia cannot even remotely compete. In what surer way could America's example of free capitalism be depicted to the world's destitute?

R. C. KOSTELANETZ.

SCARSDALE, N. Y.

George S. Long

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I submit a copy of a resolution in memory of our late colleague, George S. Long, adopted by the DAV-Philians Social Security Organization, on March 26, 1958, at San Dionisio, Paranaque, Rizal, Republic of the Philippines. It is as follows:

RESOLUTION OF CONDOLENCE

"Whereas the DAV-Philian Social Security Organization has learned with profound regret of the death of the Honorable George S. Long, a Member of Congress from the State of Louisiana, United States of America, who was a sincere friend of this organization and of all the Filipino people; and

"Whereas the deceased was a most honest, courageous, and faithful public servant being ever mindful of the problems of the down-trodden and neglected peoples of the world, and

"Whereas he had joined with the DAV-Philians in a vigorous effort to help Filipino veterans who served in the Armed Forces of the United States during World War II and their survivors by introducing a bill, H. R. 8167, for their relief; and

"Whereas the members of this organization throughout the length and breadth of the Philippines were shocked and grieved to learn of his death: Now, therefore, be it

"*Resolved by the National Directorate of the DAV-Philians Social Security Organization in emergency meeting assembled*, That all officers and members of the organization shall, in pursuance of this resolution, manifest their sympathy and condolence to his widow, brothers, and other relatives; and be it further

"*Resolved*, That the members shall devote their prayers for the repose of his soul; and be it further

"*Resolved*, That a copy of this resolution be transmitted to the widow of the Honorable George S. Long, and that a copy thereof be spread on the permanent records of the DAV-Philians Social Security Organization."

Adopted on this the 26th day of March 1958, at the DAV-Philians Camp at San Dionisio, Paranaque, Rizal, Republic of the Philippines.

SERVANDO L. MICLAT,
National Chairman.
PEDRO M. GUERRERO,
National Secretary.

Rivers, Harbors Bill Has Too Much Frosting

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. MACK of Washington. Mr. Speaker, the President recently vetoed the river and harbor flood-control bill of 1958 because in his opinion it contained too many projects which had been inadequately surveyed by Government agencies such as the United States Army Engineers, the Budget Bureau, and the Secretary of the Army and because their recommendations on many projects were ignored by Congress.

The projects to which the President objected had a total value of about $350 million.

The projects to which he objected were 21 in number. There are about 145 projects in the bill to which he had no objection. He had to veto the entire bill, because of the objectionable projects in it, because he does not possess the power of item veto.

Congress can, if it wishes, be assured of a quick signature by the President if it will eliminate from the river and harbor flood-control bill the projects to which the President objects. Those wanting a river-and-harbor flood-control bill enacted into law this session can speedily accomplish that objective by urging passage of a clean bill containing all of the 145 projects to which there is no objection and deleting from that bill the 21 projects that are objectionable.

Concerning the veto of the river-and-harbor flood-control bill the distinguished and widely read columnist Doris Fleeson in her nationally circulated column has this to say:

RIVERS, HARBORS BILL HAS TOO MUCH FROSTING

WASHINGTON.—Any claim that the rivers and harbors bill vetoed by President Eisenhower is an antirecession measure is as phony as some of the projects listed in it.

Nor is it a fair test of the President's sentiments about Government spending to counteract the depression. The President must take responsibility for the big deficits such spending would entail. If he must accept deficits, he no doubt has other preferences about where to incur them which, in his view, would pay bigger dividends in jobs, political steam, and public confidence.

What the veto does call into question are the President's grasp of practical politics and his understanding of the development needs of the country.

There is so much logrolling in rivers and harbors legislation that the cynics tend to dismiss it merely as a congressional Christmas tree with something for everybody on it. This is true to a degree, but it is not the whole story.

MORE FROSTING

A rivers and harbors bill is the vehicle by which important, even essential, development of these prized natural resources is carried on. It emerges from Congress with some fancy frosting, but it also contains a lot of yeasty, nourishing dough in the figurative and colloquial sense of that word.

The problem for any President and responsible legislator is to get as much of the dough as possible and as little frosting.

President Eisenhower has met the problem since 1954 by vetoing two rivers and harbors bills approved by Congress, 1 in 1956 and 1 this week. This can be described as an act of political courage, since such bills naturally tend to come up in election years.

It also, in the view of many Congressmen, including Republicans, has a strong flavor of throwing the baby out with the bath. For example, flooded California has run out of authorizations in some of its river basins during the 4-year lapse in legislation.

NOT LIKELY

The President proposes that the worthy projects approved by Army engineers be put in a separate bill and the others sent to him one by one. This amounts to asking for the item veto and Congress is about as likely to give any President that as Harry Truman is to invite the Vice President to dinner.

Nor is it reasonable to expect that elected Members of Congress, especially in the House, will feel that the development of other constituencies are more important than their own. They can justly argue that if they so voted, the chances of their districts getting a new Congressman would be enhanced.

Nobody has ever pretended that the Democratic way was either cheap or superlatively efficient. Nor do Members of Congress, upon their ascension to their honored places lose the attributes common to the human race.

The President has not suggested a better way, which has a reasonable chance of success, to continue the developments which are desirable in the bills he vetoes. Conservationists are correspondingly downcast, and they come from both parties.

A conservation footnote to the 4-year lag in this field: The rivers of the Soviet Union which flow to the sea are greater than those here; the Soviets are engaged in 44 major starts on river projects and innumerable minor ones.

The Development of Puerto Rico

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, April 25, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Washington Post entitled "Fomento for Export."

The article points out the tremendous progress which Puerto Rico has made under the Commonwealth status. I highly commend its reading to the Members of the Senate, particularly those who seek some practical solution to the now uncertain status of the Territory of Hawaii:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOMENTO FOR EXPORT

In Puerto Rico, the Spanish word "fomento" brings up the many remarkable changes that have transformed the island commonwealth into a thriving industrial center. Fomento means development and the spirit it represents accounts for the upward surge in Puerto Rico's per capita income from $278 in 1950 to $443 in 1957, using current dollars as a measure. Is fomento suitable for export? Can other developing areas realistically profit from the experience of Puerto Rico in planning a program for swift economic growth? Many of the 5,000 representatives from 107 countries who have recently visited Puerto Rico may have wondered whether the Commonwealth's experience was a unique and imperfect model for the underdeveloped world.

A special staff report made by the National Planning Association provides a timely and thoughtful answer. According to Dr. William H. Stead, who prepared the study, there are no less than nine features of the fomento program which could apply to most other underdeveloped countries. Dr. Stead places special stress on the luring of private capital through attractive incentive programs as the key to large-scale development. Of course, Puerto Rico's free access to continental United States markets and its exemption from Federal taxes are major advantages for the island. But the Commonwealth's effective central planning and its ingenious system of incentives could be profitably duplicated in far corners of the globe. The NPA study again confirms what a wonderful asset the Puerto Rican experience is in a world where so many seek a democratic and effective fomento program of their own.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Tenth Anniversary of Independence of the State of Israel

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the B'nai Israel Congregation, Washington, D. C., Friday evening, April 25, 1958, at a service commemorating the 10th anniversary of the independence of the State of Israel.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A GREAT MOMENT IN HISTORY

(Address by Senator THOMAS E. MARTIN, of Iowa, before the B'nai Israel Congregation, Washington, D. C., April 25, 1958)

It is indeed an honor and a privilege, ladies and gentlemen, to be invited to address the B'nai Israel Congregation on such an occasion as the 10th anniversary of the establishment of a new nation in which you have such a vital interest. Many of you, I am sure, have relatives or dear friends in Israel. Many of you have toiled and sacrificed to help Israel become an established sovereign state and win acceptance as a full-fledged member of the community of nations. And I am sure that in expressing my own personal best wishes and hopes for the continued growth and development of Israel as a full-fledged nation, I am bespeaking the thoughts firmly fixed in the minds of all of you.

There is much justification, ladies and gentlemen, for comparing Israel's first decade of existence with the early days of our own United States of America. Both achieved their independence by struggle, by a pioneering determination to maintain that independence and freedom, by what a great wartime leader described graphically as "blood, sweat, and tears." It was exactly because of these common facets of origination, I am sure, that the United States so promptly reached out a helping hand 10 years ago, to give a lift to the them brandnew-nation of Israel, and has kept that hand busy with various forms of aid and assistance during the subsequent decade.

I personally visited the Holy Land in 1945, before it became the sovereign nation of Israel. Then, as a member of the Military Affairs Committee of the House of Representatives, on an inspection tour of United States military installations, I made a special trip to what is now Israel. While in Tel Aviv I was impressed, during my too-brief stay, by the newness and cleanliness of that city, and by the energy and industry of the Jewish people who already were building it up in anticipation of the independence which they felt certain they would soon win. So, while I have never visited the independent nation of Israel, I have seen its lands and I have seen the devotion and energy of the people who now proudly call themselves Israelis.

My point in mentioning this is that even having visited the land, I still find it difficult to conjure in my own mind a mental image of the trials and tribulations and hardships which the Israeli people must have encountered in setting up their new nation, and in trying to create in it a stable government and a stable economy. The necessity for simultaneously defending its territory against incursion from neighboring countries most assuredly has not simplified those problems.

But if I have such difficulties, I know it is infinitely more difficult for those millions of Americans who never have had an opportunity to visit any part of Israel, to picture to themselves the proud struggle and fight of that country's people to solidify their independence and to improve their national status. I think perhaps that is one reason why our American policies to help Israel arouse some opposition within our own country. We know, from reading our own history books, that we needed help from other countries to win our battle for independence, and then to solidify our independent status. We should know that if we desire to see an independent Israel, as I am sure the preponderant majority of us do, we must, as an established leader of nations, give it an occasional helping hand.

There is another point of valid comparison between the United States and Israel. We Americans proudly call our country the melting pot of all nations. Our people have come from all parts of the world; perhaps not those of us who today are Americans, but certainly our ancestors did in years gone by. But if the United States has merited the melting-pot description, as it assuredly has, Israel assuredly merits the same description. Some of its people arrived originally as refugees from the barbaric terrorism of Hitlerism or of communism. Others came from other parts of Europe, from Africa, from the Middle East, from the United States and other parts of the Western Hemisphere. On a percentage basis, this migration has boosted Israel's population more in its 10 years of existence than any other comparable population growth in any nation in history.

When Israel became an independent nation on May 14, 1948, it had a population of 650,000. Today its population is slightly more than 2 million. Considering the barren, desolate character of its land at the start, it is truly amazing that Israel has been able to absorb this 200-percent growth in the relatively brief span of 10 years. And this in a land comprising slightly over 8,000 largely arid square miles—roughly the area of our State of Massachusetts, and about one-seventh the area of my own State of Iowa, which has a population of a little under 3 million people.

Against this background, and particularly in view of the important sums Israel has been compelled to spend to maintain her military defenses, it is to be expected that she would be experiencing economic difficulties. The surprising thing probably is that she is making such major strides toward a stable and self-sufficient economy. Israel still is existing to a major degree on goods and materials from other countries, but her own domestic production is increasing markedly and her exports are becoming an important factor in paying for the goods imported from other countries. Her exports in 1957, for instance, had a total value of $135 million, of which $20 million worth came to the United States. The figures may seem small by comparison with overall world trade figures; but they are very significant in the light of the fact that during the first few years of Israel's existence, her exports were almost nonexistent. She had nothing to export then; everything she could produce went to the use of her own people, and brandnew industries and trades had to be established to produce enough extra goods so that measurable quantities could be shipped abroad.

The country still has a long way to go but it is making important strides. Her $135 million of exports last year were only about one-third of the $404 million worth of materials she imported; but it was more than twice the $59 million value of her exports only 4 years earlier, in 1953. Also significant is the fact that Israel now is able to make a serious bid for many facets of our own American markets, having sent $20 million worth of goods to this country last year. There is good reason to believe that this figure will increase substantially this year.

Israel has boosted its agricultural production several times by irrigating what used to be desert wastelands and by introducing modern concepts of farming. It has introduced industry to its urban centers in the form of hundreds of small factories and plants producing a broad gamut of goods, outstripping its Arab neighbors in becoming the industrial center of the Middle East. Its production of electrical energy, for example, has more than quadrupled since 1949. All of this, of course, is why Israel's exports are becoming an important factor in her economy.

Israel's troubles and difficulties would have been bad enough, if they had involved only the economic problems created by establishing 2 million people in a land which previously had barely supported only a few hundred thousand. But these, as we all know, were only a small part of her troubles. Superimposed on top of them, was the problem of defending Israel itself against a ring of bitterly and openly hostile enemies who were admittedly bent on stamping out the new nation's existence; who sought to conquer it militarily, and, by refusing to have any trade or other relations, to kill it economically.

It was this violent antagonism of the Arab countries which not only threatened the very existence of Israel from the outset, but made things so extremely difficult for the free world nations, including the United States, which had sponsored Israel's freedom and were trying to help it gain international acceptance as an established sovereign state. For us, it created the problem of preventing a new and struggling nation from being overrun, but without alienating the Arab nations to the point where they would fall into the Communist camp by default. Blind and unreasoning hatred, such as was felt by some of the Arab countries, is difficult if not impossible to reason with; despite all our efforts that part of the Arab world which follows the dictatorial prejudices and vagaries of Egypt's Gamal Nasser still is as blindly unreasoning in its hatred for Israel as ever, and by now has fallen under Communist influence, although maintaining a pretense of independence.

The violence and terrorism which has been such an integral part of the growth of

Israel as a nation is, of course, nothing new to the Jewish people. Violence and terrorism have been part of their history through the centuries, even to modern times; thousands upon thousands of present Israelis, who have fought or aided innumerable battles in defense of their new homeland in the past 10 years, were brought up in the tradition of Polish ghettos, of pogroms, of fiendish Nazi tortures. Establishment of a Jewish state in the Holy Land long had been a dream of millions of Zionists around the world who hoped to escape such violences; but the opposition was strong, the path toward its creation was studded with obstacles. Not until that historic day in May of 1948 was the dream of a Jewish state to become reality—and then it was a reality in which violence still could not be avoided.

In the April 1958, issue of the Hadassah Newsletter, is an interesting article by Cecil Roth, noted educator and historian and reader in Jewish studies at England's Oxford University, entitled "The State and World Jewry." One point made by Mr. Roth struck me particularly as most pertinent.

Before 1948, the article noted, there was a worldwide acceptance of the concept of a Jew as, and I quote Mr. Roth's article, "Intellectual, but unable to do things with his hands, unless it were with a needle; incapable of hard physical labor; and generally timid, unmilitary, and unsoldierlike." But in 1948, with the birth of the new nation, and I quote Mr. Roth again, "suddenly a new Jew forced himself on the attention of the western world; no less intellectual, perhaps, than before, but capable of and delighting in physical labor of the most exacting sort, and at the same time showing himself a superb fighting man." His characterization of the new Jew is so true. Only persons "capable of and delighting in physical labor of the most exacting sort" could have stuck it out in the nation and survived its initial years; any persons lacking those qualifications would have failed to survive, or would tossed in the towel and migrated on to other lands. For it was, in Israel, an era of toil and physical labor—hard, uncompromising, sweat-producing physical labor of the most exacting sort. As for the fighting qualities of the Israeli people, no one any longer can doubt them in the least. Whenever any nation with a population of only 2 million persons of all ages and conditions, can hold at bay and instill deathly fear in a surrounding ring of antagonistic neighbors whose populations total many, many times that number, none can doubt the fighting qualities and love of homeland of the 2 million. And it should be noted that Israel's heaviest defensive fighting occurred during its first year of being, when its population totalled less than 1 million people, not the 2 million of today, which makes the accomplishment even more notable.

There are those who decry these military accomplishments of the fledgling State of Israel, on grounds they demonstrate its aggressive nature. This argument I cannot accept. Had Israel not been willing to take up the gauntlet thrown down by its neighbors, and defend its people and its land against open hostility, I am confident there would have been no Israel today. There have been occasions when, I think, all of us would admit that the attitude of the Government of Israel has bordered on the truculent, perhaps on the obdurate. But I wonder what any American would have done under comparable circumstances. Again, it is difficult for persons living in this country to conceive of the difficult situation of those living in Israel. But if I may be permitted a flight of fancy, just suppose that Canada and Mexico were bigger, and more powerful on paper, at least, than the United States, and suppose that, in this imaginary case, Canada and Mexico openly proclaimed their hatred for the United States, and made known their intention of destroying the United States. Such a circumstance, of course, is sheer fantacy, and could never happen other than in a fanciful, hypothetical case. But hypothetical as it may be, if such a thing were to happen, I am sure we in the United States would become fully as truculent and obdurate in our attitude toward our neighbors, as Israel is today toward its neighbors.

The 5,000 Israelis who gave their lives in fighting to defend their new homeland during its first year of existence were imbued with the same love of country and deep desire for independent freedom as were our own American forefathers who gave their lives to prevent another foreign power from reestablishing its dominion over our American lands. It is that same love of country and yearning for independent freedom, that has caused leaders of the Israel Government to maintain an always-prepared, ready-for-anything attitude toward its Arab neighbors.

Israel, of course, has had its hotheads and its terrorists, such as those who a few days after the country had attained its independence, slew the United Nations mediator for Palestine, Count Folke Bernadotte; but those hotheads and terrorists are only a small minority, and their extravagances are as distasteful to the responsible leaders of Israel as they are to the rest of the peace-loving world. And those leaders, I am sure, desire peace and amity with their fellowman as earnestly and as deeply as do we who are convinced that the most effective way to maintain peace in this troubled world is to keep ourselves armed and strong enough to fight off any communist aggression.

No discussion of Israel and its first 10 years would be complete without at least a word of tribute to the dogged determination, the perseverance, and the indomitable courage of the valiant leaders who helped to bring about its establishment as a nation and who have played major parts in steering it through the hazardous path of its first decade. Foremost in the public eye, undoubtedly, was the gallant Chaim Weizmann, the Russian-born British research chemist who as early as 1917 was instrumental in persuading the British Government proclaim the famous Balfour Declaration, setting forth that country's objective of having Palestine established as a national home for the Jewish people, and who lived not only to see his dream of an Israel nation become reality but to become its first President. Nor can any historian overlook the scholarly, venerable David Ben Gurion, who like Weizmann was born in Russia but as a young man migrated directly to Palestine—the Ben Gurion, now 71, who as Prime Minister, has charted Israel's courses ever since it became a nation, save for one brief period of retirement. There are many others who also should be mentioned, for their contributions both before and since Israel's establishment. Most of you perhaps are more familiar with their names and their achievements than I; suffice it to say that without their contributions, Israel today might not be.

Israel is highly deserving of the good will and support our country has extended, and of the encouragement it has received from our people. I am sure the preponderant majority of Americans would join me in predicting, for Israel, a bright and permanent future and the early attainment of its goal of a real position of power and influence in the family of nations.

Feeder Airlines

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. MAGNUSON. Mr. President, during the Easter adjournment, when the Association of Local and Territorial Airlines was holding its quarterly regional meeting, in Las Vegas, Nev., a member of my committee, the distinguished Senator BIBLE, of Nevada, addressed the association on the timely subject of the successful operation of the Nation's local service and territorial airlines.

It was most fitting that on the day of the Senator's speech, Friday April 11, the distinguished Chairman of the Civil Aeronautics Board, James R. Durfee, announced the decision of the Civil Aeronautics Board to approve its first guaranteed loan to a local service airline, Bonanza Air Lines, Inc. The guaranteed loan bill, which was introduced by the distinguished Chairman of the Aviation Subcommittee, the Senator from Oklahoma [Mr. MONRONEY], and was passed during the first session, guarantees the use of new, postwar, turbojet airplanes for these small airlines at a time when financing is otherwise most difficult.

Because I believe that the address made by my colleague is so timely and definitive of the finanical problems of this industry, and that it will be of great interest to all the Members of the Senate, I ask ananimous consent to have printed in the Appendix of the RECORD the speech which the distinguished Senator from Nevada made on that occasion.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE SUCCESSFUL OPERATION OF LOCAL SERVICE AND TERRITORIAL AIRLINES

(Address by Senator BIBLE before Association of Local and Territorial Airlines, Las Vegas, Nev., April 11, 1958)

It was a little over a year ago when I first heard of the Association of Local and Territorial Airlines, now familiarly known as ALTA. As you know alta in Spanish means high, which is altogether fitting for an industry that has given height additional meaning, particularly in the last decade of the 20th century. But as you gentlemen well know, an airline—and particularly a local one—needs more than height to operate successfully.

With this thought in mind, I would like at the beginning of my remarks to dispel a popular misconception that the local airlines are the happy beneficiaries of huge Government subsidies. Only a cursory look at the financial picture of the members of your association will reveal that the small airlines, rather than enjoying great largess from a Government Santa Claus, have in fact found the path to solvency strewn with all sorts of obstacles.

While the service you provided showed tremendous gains from 1946 through 1956, it is astonishing to note that the local serv-

ice carriers together had an income during that 11-year period of only $1,850,000—and 9 of the 13 local service carriers accumulated deficits of $2,192,000.

The total income of $1,850,000, however, doesn't give the true picture—because 3 out of the 13 carriers received $1,701,000 of that amount—or 92 percent, while the remaining 10 carriers divided up the remaining 8 percent. It is also noteworthy to point out that during this 11-year period the 13 carriers realized a rate of return of only 1.43 percent on their investment.

Thus it will be seen that the claim sometimes heard that the Civil Aeronautics Board "guarantees" the local service carriers a return of 8 percent on their investment is without foundation in fact. There are 2 factors which prevent the realization of an 8-percent return:

1. If the Board's rate is established for a future, or closed period, the actual operational experience may turn out to be substantially different from that forecast by the Board; and

2. If the Board's rate determination, including its theoretical rate of return, is made for a past, or open period, the Board makes arbitrary determinations of what the carrier's expense levels should have been, thus substituting its own hindsight for the carrier's business judgment, which is necessary based upon facts at hand at the time of the decision.

The Government has never paid one dollar of subsidy for the private benefit of a local service carrier or its stockholders. On the contrary, the sole purpose of subsidy is to benefit the public, and that policy is so spelled out in the Civil Aeronautics Act.

In a recent decision, the Court of Appeals for the District of Columbia, commented on this aspect in the following terms:

"The objective of the Congress is plain. It is the maintenance and continued development of air transportation to the extent and of the quality required for the national commerce, postal service, and defense. The objective is on a grand scale. It is for the public interest. It is vital. The words used are important, because they depict with clarity a congressional policy. Moreover, the payment is to enable such air carrier to maintain and continue the development of air transportation. Congress did not put the responsibility for development of an air transportation system wholly upon Government agencies. In this statute the Congress sought to utilize the abilities and capacities of the private air carriers. The purpose of the compensation is to enable the carriers to maintain and continue the development."

The court continued, and I quote, "The need which the statute seeks to meet is not the need of the carrier for funds for its own private purposes, for its own operation or profit. It is the need of the carrier for funds to enable such carrier to carry on for the purposes depicted by the Congress in the interest of the Nation."

If responsible Members of Congress take a sympathetic view of the plight of the local service airlines it is only the natural reaction born of a desire to be fair. It is my own view that our Government has, on many occasions, dragged its feet, in considering affirmative steps to assist these airlines in remaining aloft in a financial climate that is not perpetually socked in.

Without in any way wishing to deprecate a policy of neighborliness to our foreign friends, it does seem appropriate to point out, however, that the United States Export-Import Bank has, since its founding in 1934 to March of this year, extended loans to foreign airlines, for the purchase of airplanes in this country, the staggering total of $154,645,000. This undoubtedly is good business and sound policy, but I cannot help but reflect that if similar generosity had been bestowed upon our local carriers there would today be not only profits but, miracles of miracles, actual dividends.

This is not a case of charity beginning at home, because the local service airlines do not want a handout; they want only the opportunity to provide optimum service with the reasonable expectation of a return on their investment.

The great social and economic strides made by America's smaller communities in recent years can be traced in large measure to the advent of feeder airlines. This convenient, speedy method of transportation broke the back of isolation which had been thrust upon these cities in former years.

Dedicated to and specializing in service to the smaller communities of the Nation, these carriers have opened new industrial vistas which have contributed greatly to a continuing growth and development. This ready accessibility of air travel has encouraged a decentralization of industry from the big metropolitan centers to the outlying areas. Your airlines have tied these small communities to their major trading centers and at the same time have brought about a broader based economy that benefits everyone.

Although these airlines have more than a decade of solid achievement behind them, I believe that the real development of local air service lies ahead, provided the necessary stimulus is provided on the national level. It is my hope that the Civil Aeronautics Board will continue to lend encouragement and support to the industry and will examine and reexamine the needs of the smaller communities for air transportation. There should be no faltering until the ultimate goal is reached—and that goal is a nationwide network of airlines dedicated to local service.

In striving toward this objective, it should be made crystal clear that the airlines are going to need continual financial assistance during the period of expansion and introduction of new equipment to replace those old, dependable—but certainly outmoded—DC-3's.

In the future, it is my hope and I know that it is your hope, that this investment will result in service to a network of small communities by small carriers who are not dependent upon Government support.

The prospects for this eventual situation are based on two facts:

1. The local service carriers will be able to acquire aircraft with lower seat-mile cost and greater passenger attractiveness, and

2. The estimated revenue increases with more efficient equipment offer every promise of reducing subsidy requirements at least after the initial stages of operation, together with a further liberalization of operating restrictions.

A frontal attack on the three road blocks to profitable operation—lack of modern equipment, and unrealistic route structure, and a Jenny-type rate of return method—will make the difference betwen harrowing operations and smoothly performing efficiency.

Congress has taken a forward step in passing legislation to allow air carriers to reinvest gains derived from the sale of flight equipment in the purchase of new equipment to meet the pressing needs of the times. As you men know, under previous decisions and regulations of the CAB, a subsidized carrier faced the dismal prospect of having any capital gains, realized from the sale of equipment, applied as an offset to reduce the subsidy to which it was otherwise entitled. Certainly such an inflexible and unjust rule could only work to the detriment of the carriers and to the general public as well. With passage of this remedial legislation by both Houses of Congress, it appears that another hurdle has been removed from the path of aviation progress.

When I learned of ALTA's founding in February of 1957, my first thought was to wonder if there was justification for another airline association in Washington. But it was not long before I realized that you had an important mission to fill, and as a starter you undertook the support of the Government guaranty loan legislation. I would like to take this means of congratulating you as an association, and Col. Joe Adams as your executive director, for the splendid manner in which you presented your case in behalf of that bill. As acting subcommittee chairman in the Senate, I heard several of you testify. I asked many questions as I wanted to develop a complete record. It was that record—comprising mainly of your testimony—that gave momentum to the bill on its way to final passage.

The Civil Aeronautics Board, as you know, had proposed that legislation and it is to be commended for the vigor with which it supported its enactment—despite unfavorable reports from the Departments of Commerce and Treasury, submitted under the blessing of the Bureau of the Budget. I can only add the hope that the CAB will continue in a policy of enlightenment to foster sound economic conditions throughout your industry.

Chairman Durfee has stated that the local service airlines need the boost of continued appropriations of subsidies, and he is as right as rain. It is certainly a grim paradox that despite a subsidy of more than one-third of total operating revenues, net losses are still the order of the day.

There are no easy answers to the problem, but there is a course of action that can lead to an eventual solution. This will require the teamwork of the administration, the Congress, the CAB, and each and every local service carrier.

Congress has given official recognition to the Nation's policy on civil aviation in a concurrent resolution which I introduced during this session. The resolution takes note of the 20th anniversary of enactment of the Civil Aeronautics Act of 1938, one of the sponsors being my predecessor, the late Senator Pat McCarran, who was known as the father of civil aviation. The resolution comends both the Civil Aeronautics Board and the Civil Aeronautics Administration for their sound stewardship of the act and its objectives, and urges adherence to policies which will enable civil aviation to solve its present economic and technical problems and assure the public of the benefits of a strong air transport system and civil aviation industry.

The general public should be the prime consideration in any legislation designed to strengthen the airlines industry. If you people are hamstrung by capricious regulations, if you are prohibited from operating profitably. The public will suffer in being denied the kind of service to which it is entitled and expects.

So I say to you in conclusion: set your sights to the goal ahead, continue your good work of providing the best possible service, state your case clearly and forcefully on a solid basis of facts—and it will pay off richly in terms of a more understanding Government, greater operating efficiency, a sound route structure, and—most important—a self-supporting industry.

Thank you.

Foreign Policy in the Space Age

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, April 26, 1958

Mr. HUMPHREY. Mr. President, my attention was just recently called to an impressive address entitled "Foreign Policy in the Space Age," delivered by

Edgar R. Baker, managing director of Time-Life International at the 21st Chicago World Trade Conference. In view of the serious issues of world trade and foreign aid soon to confront the Congress, I believe Mr. Baker's address has a fitting message for all of us.

I ask unanimous consent that the address referred to above be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY IN THE SPACE AGE

(Address by Edgar R. Baker, managing director, Time-Life International, New York, at the 21st Chicago World Trade Conference)

I feel deeply privileged to have been invited to address the 21st World Trade Conference this evening. And my pleasure is only slightly lessened by the imposing subject that has been assigned to me.

Earlier this week I attended the White House-sponsored meeting in Washington on the foreign aspects of United States national security. Mr. Eric Johnston and his colleagues provided those of us who were delegates with working papers. On page 1 there appeared a map which made its one and only point dramatically: Chicago is now on America's frontmost line as its most exposed major city—4,600 air miles from Moscow, 9 hours by today's jets, 5 hours by tomorrow's.

Such is one meaning and measure of the space age.

One meaning? Yes—and perhaps the least significant—for the battle for the world will not be fought with bullets or their 20th century electronic cousins, nor will it take place in outer space. Its weapons will be words and dollars and its battleground the villages and cities of Asia, the Middle East and Africa. Lenin's famous doctrine still stands: "The road to Paris lies through Peking and Calcutta"—and not through frontal military attack on the citadels of western power.

I submit to you that we live in an age of military stalemate and that it is the contest of ideas and ideals—the struggle for undecided minds—that will be decisive in the years of our lives.

The German military historian, Clausewitz, gave us the classic definition of war as "a mere continuation of policy by other means," but in a less known passage he went on to say, "the political design is the objective, while war is the means and the means can never be thought of apart from the objective."

War as a planned instrument of national policy has become obsolete, is indeed perhaps as remote today as it has been at any period since man first learned to attack his neighbors in an organized group with weapons more complicated than his own hands. I should add—but only parenthetically—that war may always come through a chain of accidental circumstances, through a local military situation in which both sides became so committed in terms of face and prestige that there could be no backing down; but it is another sign of these stalemated times that the Soviets will be at the most extreme pains to see to it that this kind of situation does not come into existence.

There ought to be no mystery as to why the threat of war has receded into the background. The principal deterrent lies in what Dean Acheson has so aptly described as "mutual terror." War has ceased to be a means to the end of a political design and has become instead a Frankenstein so overwhelming that its use in all likelihood would destroy the design itself.

There are other reasons also for believing that the Communist world, even while its ultimate objective of world conquest remains unchanged, will not and cannot risk military force as the way to that end. First there is the confirmation of Communist doctrine, not merely in the world of Lenin but also in those of his disciple, Khrushchev. After the launching of Sputnik his first challenge to the West was in the terms of peaceable economic competition and more recently he elaborated to an American visitor to the Kremlin: "We declare war upon you—excuse me for using such an expression—in the peaceful field of trade * * * We will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

It behooves us to listen carefully: This time the voice of Moscow is speaking the truth.

And then there is the not inconsiderable fact that the elite of the Communist world—the party members—have themselves acquired too substantial a material stake to risk its destruction in a single blinding flash. The introduction of the profit motive and the growth of inequality in income in the Soviet Union are too familiar to need comment. Suffice it to say that the Communist world too has developed its substantial property owners with large vested interests in the "peaceable" continuation of the present system.

And there are other deterrents that reach beyond the fear of their own destruction or the gospel of their own teachings.

There is the fact that without war they are winning the world. Not hands down, but winning. Not spectacularly, but steadily in geographical and in ideological penetration. With each passing year the erosion within the free world moves a step further and the domain of the Communist world grows larger. In these circumstances there is no incentive to war, or for that matter to negotiate or to compromise except as it preserves the time and provides the money to continue their nonmilitary aggression.

And yet we are without peace or at best in a very hot peace in which we must expect indefinitely to be engaged on three different fronts.

On the first of these the weapons are threat and bluff, extortion and political blackmail. The latest case histories are the campaign launched against Turkey a few months ago and the messages to the Scandinavian countries, West Germany and other NATO powers designed to discourage their acceptance of United States rocket and missile bases. This is a game which we will never play well. Fortunately we need not play it well, or play it at all, provided our nerves and those of our allies are strong. And, to the everlasting credit of those that have been threatened, the nerves of all concerned have all been strong, buttressed by the shield of American power.

The second front lies in the field of information and propaganda. Here we are faring very badly, indeed. Here we have permitted ourselves to be hopelessly outmatched and outwitted by the consummate propaganda masters who live in the Kremlin. Here we have become so bemused that we have permitted the world to forget or not to understand our essential basic truth: That this democracy has brought more freedom and more of the good material things of life to more people for a longer period than any other political or economic system ever devised.

Here our problem has been well posed by a young Vietnamese girl who recently wrote a letter to the editor of the Washington Post. The Post republished her letter on the front page wtih a plea to all its readers to contribute to the response to her questions. These are some of the questions that Miss Le-My asked:

Does America help us for friendly reasons or by its own interest?

Is it right that the policy of American Government is to assimilate all of the countries living under its help?

Will the Americans go home soon, or will they stay in Vietnam for 100 years?

Do the Americans know that President Diem is an American puppet, as most of the Vietnamese believe?

Do the American people know that 95 percent of the Vietnamese do not like them?

What do Americans think about the Vietnamese people? Do they consider us Negroes as in America?

It becomes evident in other parts of her letter that this young lady is friendly to America and that she herself knows some of the answers that we ourselves would like to have given. But if you find others of her questions as difficult to answer, as I do, and if you appreciate that she stands as a spokesman for countless millions of people in the newly sovereign nations, then you will understand with me how difficult is our task in this phase of the hot peace.

The tragedy of it all is that as recently as 10 years ago the United States was recognized by all of the colonial peoples as their great champion. It would be hard to find today an echo of this once proud reputation.

We shall be struggling, too, for an indefinite future on a vast economic front which stretches around half of the world. After years of dismissing Russian claims and activities as words without deeds even the State Department, even Mr. Dulles, now recognize that the Communist bloc has effectively launched a huge program of economic aid and assistance to the underdeveloped, uncommitted areas. Still comparatively small by the yardstick of what America has done in the past, the Russian effort already encompasses projects totaling nearly $2 billion in a dozen countries. "We are ready to help you as brother helps brother; tell us what you need, and we will send to the best of our capabilities, money in the form of loans or aid." This was the Soviet line at the Afro-Asian Solidarity Conference in Cairo last month, and with it was bracketed the appealing theme that the Russians welcome giving their assistance to state-owned enterprises, an adroit device both to trap the West on its emphasis on private enterprise and at the same time to build in the underdeveloped areas the state-owned, state-controlled economies where communism has its best chance for acceptance.

The questions which the non-Communist world will have put to it with increasing skill and increasing urgency in the years to come will concern the Russian motives in their political and ideological and economic programs. Does the Soviet Union plan to dominate the world by any means that seem promising so long as the risks are not excessive? And must the West maintain a position of military strength sufficient to make the risks seem excessive? The answer that the non-Communist world would give today is at once "yes," "no," and "maybe." Only in the Western Hemisphere is the answer an unqualified "yes"; only in North America and Latin America are overwhelming majorities convinced beyond reasonable doubt that world domination is the fixed end of Russian policy and that whatever moves may be made on the international chessboard are but steps in this direction. In Western Europe the answer adds up to a "maybe," with almost equal numbers on each side of the fence. This becomes particularly clear when debate revolves about specific issues such as the proposed summit meeting. All the evidence available to us indicates that large majorities in every western European country are in favor of such a conference and that substantial minorities believe that the Russians would come prepared to make important concessions.

In other areas of the world, in the areas where nearly two-thirds of the non-Commu-

nist peoples live, the answer to these questions is a ringing "no." In the uncommitted nations, great majorities have come to believe that Russia's expansion policy presents no greater threat to themselves or their neighbors than the military alliances and colonial vestigates of the United States and her allies.

This is the great threat to America and to all who believe as we do. Not the danger of push-button, hydrogen-fueled, guided-missile warfare, but the possibility that the nearly 1 billion people of the uncommitted nations, the nations in a hurry, with their minds still open as to a choice between one system and the other, with their peoples living at or beneath the subsistence level, with their revolution of rising expectations thwarted—that these nations and these peoples will be seduced or persuaded to shift the world balance of power which they now hold in their hands to the ideological, and thus eventually to the physical, support of the Communist doctrine and thus propel America to involuntary isolation.

This is the dilemma of foreign policy in the space age.

Surprisingly, there is now general agreement on this. The chorus of assent has become virtually a litany and as one of the earlier choristers, this is good music to hear, indeed. President Eisenhower's last state of the Union message gave equal importance to the need for us to remain militarily strong and to the need to assist our less privileged neighbors. In Washington on Tuesday, both Mr. Dulles and Governor Stevenson went further to give priority to the vital necessity of helping the peoples of Asia, the Middle East, and Africa to help themselves.

Regrettably, there are, as yet, no indications from Washington, from either the administration or from the Congress, that we are producing the new ideas and the new programs to match our new appreciation of the danger—and of the opportunity—before us.

I should like to present to you four proposals which, I submit, are a part of the minimum basic framework for the kind of foreign policy the United States requires to get successfully through the time of trial which lies ahead.

I would speak first of an intangible, an intangible without which all else that we may do is doomed in advance to almost certain failure.

This Nation needs to regain a sense of mission and high purpose in the formulation and execution of its foreign policy. This is the sobering responsibility of the people and of their elected and appointed representatives.

Through our history there have been many driving forces that have taken America and Americans into the world and all have had overtones of mission. The brave new worlds of Woodrow Wilson and the United Nations, the ebullient aggressiveness of Theodore Roosevelt, the Protestant and Catholic settlements in Africa and Asia, the "open door" in China—all of these premised an American role in the world based in large part upon nonmaterial considerations. In the Lend Lease Act with its doctrine of equality of sacrifice the United States laid down the most far-reaching concept of economic relations between countries the world has ever known. In the Marshall plan, which Winston Churchill called "the most unselfish act in the history of nations," America enlightened self-interest to the highest plane it has ever reached.

Today this sense of mission is gone. Our policy has become defensive and negative. Of course, we still want a better world and, of course, we still want peace and prosperity for all. But we do all too little to help others achieve those goals and we do that little so grudingly that our wine turns to vinegar in the mouths of those who drink it abroad. Some men have the gift of giving thousands and being loved; others can give millions and can win no affection. If there has been a single act of genuine human warmth in our foreign relations in the past 5 years, I cannot recall it.

We have become pessimists, too. We have permitted ourselves to become sufficiently intimidated by the growing strength and the steady fanaticism of our enemy that sometimes we seem to fear to trust ourselves or our policies in the crucible of a free contest.

We have been doctrinaire. One of our more pernicious doctrines was the idea that the great contribution that we may make to the world is a stable and flourishing economy at home. No one would argue the truth of this assertion. It is the use of it that leads to disaster. A balanced budget is not a foreign policy; it is hardly more than a fragment of a cornerstone. Now that Mr. Humphrey has retired with his haircurlers to Thomasville, Ga., we can at least hope for a more intelligent and constructive fiscal approach to the great problems of survival and salvation.

Three of the great forces at work in the newly sovereign nations are nationalism, statism and racism. All three are present in varying degrees in each of these countries. Each has a very high emotional content. In many instances we have appealed successfully to the heads of the peoples in these areas, almost never have we appealed to their hearts. To understand Africa, or the Middle East, or Asia without understanding their emotions is impossible. This we must do for it is simply not good enough to take friends where we find them. It is also necessary to make friends where they may not now exist or where the friendliness may be obscured by misunderstanding and mistrust. And this implies a sense of mission and noble purpose vigorous enough to transplant and implant our own image of the premises that men live by.

Secondly, I would propose that this country enunciate a bold, clear, easy-to-understand statement of the scope and extent of the resources that we will make available each year to help sustain the economic growth and strength of the underdeveloped areas. This contribution might well be set at a minimum figure equal to one-half of 1 percent of our gross national product. We should take the lead in urging our neighbors in the Western World to establish a similar yardstick for their own efforts and to join with us in a joint international program. In the case of the United States the annual investment would be two and a quarter billion dollars based on gross national product in 1957 and a pro rata contribution by the NATO powers would bring the total to $3½ billions, or approximately the maximum possible level of capital absorption under present economic conditions in the developing countries. These amounts should be entirely apart from whatever sums we spend for overseas military assistance or defense support programs. Likewise they should be in addition to disbursements made by the World Bank and the Export-Import Bank which are essentially normal banking loans carrying interest and requiring repayment.

Advances under this program might take the form either of outright gifts or of loans on easy repayment terms. Some of the nations which stand in the greatest need do not, as we know, wish to receive outright grants. All of the funds need not and would not represent a new burden for the American taxpayer. In the first place there is considerable scope for reducing the amounts spent on military assistance and a portion of these funds ought to be diverted to more worthwhile and beneficial long-term civilian purposes. When such diversions are added to the amount of our present economic assistance—approximately $700 million—we would already be well on the path to meeting the objective. If the objective seems ambitious or overly expensive, then let us remember how very little indeed we have done to assist the 700 million people who live in the 20 nations that have become sovereign since World War II. With the exception of a few nations—none of them large in population except Pakistan—with which we have close military alinement, our expenditures for development programs in these areas through the whole postwar period has been but $3½ billion, scarcely $5 per capita spread over 13 years.

It is essential to any such program that it be continuous and continuing although it does not follow that it need be indefinite. The nationalist goal of every one of these countries is to become self-financing in terms of their own domestic savings.

Indeed in the very long run it might well develop that a comparatively large preplanned American contribution at the outset would be less expensive in dollars than the hit-or-miss, put-out-the-latest-fire-first program we have been operating in recent years.

Next, we would do well by ourselves and by our friends—if we proceeded to sweep away the tariff walls which limit access to the American market. Some 4½ million Americans earn their livelihood from our export trade, many times the number that could conceivably be affected if this country should adopt complete free trade as its policy. The gains to America would be immense, the cost small.

And we would in all probability only be anticipating a course which will sooner or later be forced upon us by the pressure of events. The European Common Market is in being. The free-trade area which would link Britain, the rest of Europe and much of Africa to the Common Market is not now far away. It appears almost inevitable that most or all of the British Commonwealth and Empire will sooner or later ask de facto membership in the Common Market and free-trade area. At that point America is almost certain to conclude that its interests would best be served by applying for admission also so that we might then enjoy the same preferential benefits.

But why wait for the inevitable? Why not now take this giant step which would immeasurably add to our stature as a great, enlightened and respected partner in the world-trading community.

And finally if we mean what we say about our faith and confidence in the free-enterprise system and in the part that private business and private technology can play in building a better and more prosperous world, then we should adopt the administrative and legislative measures that would encourage private capital to venture in far greater volume into areas where the risk is great and the profit return uncertain.

No thinking person believes that the entire job of providing the capital needs of Africa, the Middle East and Asia can be done by private capital. There are too many roads and dams to be built, educational and sanitation facilities to be provided, communication systems to be constructed, too much infrastructure to be supplied—and nearly all of these are the natural province of government.

But there are already great areas of these economies in which pivate enterprise could operate effectively given the proper incentive and these areas will become even larger as basic public-work installations are completed and the groundwork is laid for a modern diversified economy.

The specific steps that can be taken are too familiar to require repeating here. They were outlined in detail by Vice President NIXON at the San Francisco Conference last October. We could, if anything, go even further. If the attraction of private capital to the underdeveloped areas is in the supreme national interest, then we could enact legislation completely exempting from United

States taxation all new investment in plant and in technology in these areas.

In all of these respects, it seems to me, the question is not what we can do but rather what we cannot do without. It sometimes happens, Henry Taylor said, that a man who would not hurt a fly would hurt a nation. With the best intentions in the world too many of our citizens and our representatives in Congress are unwittingly hurting a nation, this Nation, by failing to see clearly enough or soon enough how drastically our policies and our programs must change to meet the ever-changing facts of international life in this global age.

This year is the 100th anniversary of the birth of Theodore Roosevelt. This week he appears on the cover of Time magazine. And this day we Americans could have no better motto than these words of the rough rider:

"The world has set its face hopefully toward our Democracy, and, oh my fellow citizens, each one of you carries on your shoulders the burden of doing well for the sake of your own country and of seeing that this Nation does well for the sake of mankind."

Unveiling of Portrait of Hon. Herman E. Talmadge, of Georgia, at Georgia State Capitol

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Saturday, April 26, 1958

Mr. RUSSELL. Mr. President, some time ago the General Assembly of Georgia adopted a resolution providing for the painting of a picture of my colleague, the distinguished junior Senator from Georgia [Mr. TALMADGE], who is a former Governor of Georgia, and arranged to have the picture appropriately placed in the State capitol.

The exercises of the unveiling of the portrait were held on April 7 of this year. A large concourse of people, including friends and admirers of my colleague, were present. Remarks were made on that occasion by the Governor of Georgia, by the Lieutenant Governor of the State, by the Speaker of the House of Representatives of Georgia, and by the Honorable Roy V. Harris, of Augusta, Ga.

I have been unable to obtain a copy of the remarks of the governor, because they were not prepared. But I ask unanimous consent that the remarks of Lieutenant Governor Ernest Vandiver; the speaker of the house of representatives, the Honorable Marvin E. Moate; and Mr. Harris may be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

REMARKS OF LT. GOV. ERNEST VANDIVER AT CEREMONIES UNVEILING PORTRAIT OF SENATOR HERMAN E. TALMADGE HELD AT THE GEORGIA STATE CAPITOL ON APRIL 7, 1958

It is a genuine pleasure and a cherished privilege for me to preside here at a program called to honor one of the greatest Americans of this generation.

The man that we are honoring today, Hon. HERMAN E. TALMADGE, United States Senator from Georgia, is truly a man of destiny. In 1957 he began a phase of service to his State and country which all of us are sure will be written in golden letters on the annals of our time.

Only recently he was with us, serving as governor of his State, during which time he made a record that will go down in the books as one of the greatest in the history of our State.

It is with a definite feeling of pride that I look back into the political battles of the last 3 decades and review the achievements of our guest today, and his illustrious father, the Honorable Eugene Talmadge, who was the only man ever to be elected 4 times to the governorship.

It was my honor in 1948 to serve as manager of the first campaign of HERMAN TALMADGE for governor and also to serve as a worker in his second campaign when he offered for the full 4-year term in 1950.

These victories gave HERMAN TALMADGE 6 years in office, the longest consecutive service ever given by a Governor of this State.

All of us recall the magnificent record of achievement HERMAN TALMADGE rolled up in those 6 years.

It was then, after these 6 years, that the people of Georgia could best see the shape of his greatness. It stood like a high column, reaching up through over half a decade, each year mortared tightly to the next by integrity, wisdom and unselfishness.

After 2 years in private life he reentered the political arena, ran for the office of United States Senator and was elected—carrying the majority vote in all of Georgia's 159 counties.

But in all his public services HERMAN TALMADGE'S greatest contribution to his people was his resolute and courageous fight launched to preserve the principles of segregation in the State.

As Governor his battle held the enemy at bay, and he has continued his fight since becoming our United States Senator. He and the senior Senator from Georgia have continued a leadership which has thus far saved Georgia and most of the South from her enemies.

Through the counsel and leadership the people of Georgia have received, they are united as never before in the battle to protect us from the attacks of outsiders and malcontents. That determined and dauntless leadership must be continued in the years to come.

Again, I say to you that it is a genuine pleasure and a signal honor to present to you at this time, the distinguished United States Senator from Georgia, the Honorable HERMAN TALMADGE.

REMARKS OF HON. MARVIN E. MOATE, SPEAKER, HOUSE OF REPRESENTATIVES, STATE OF GEORGIA

Mr. Chairman, Governor Griffin, Lieutenant Governor Vandiver, Senator Talmadge, ladies and gentlemen, nothing said here today can add one bit of luster to the Talmadge name. It was placed high on the roll of great men by the raw courage and intelligence of the late, lamented Eugene Talmadge, who was elected Governor of Georgia for four times.

That same manner of forthrightness, courage, and ability, made known all over these United States by Eugene Talmadge, is now being emblazoned and embellished by the worthy son of a worthy sire.

The distinguished junior Senator was once a bit amazed—nonplused, might be the better word—early in his political career, by the then correct observation of an old friend of the family who said, "Herman, you are a chip off the old block." Herman smiled his most pleasant smile, but it faded somewhat when the old gentlemen completed his remarks thusly, "but you are a mighty small chip."

That observation might have been correct at that time, but Herman later proved himself a brass-bound, triple-plated, dyed-in-the-wool, full-size chip off the old block.

One sometimes wonders why any person in full possession of his faculties will sacrifice the peace and ease of ordinary life to enter the sometimes vicious and deadly contests in the political arena—from which no one has ever emerged a complete victor. Public ingratitude for a job well done has long been a byword all over the face of this earth.

Such was best expressed by a great Englishman, whose courage and firmness in England's darkest hour, saved his country from the ravages of the mighty military machine of Hitler. Yet the first opportunity the electorate had to express their appreciation for a good job well done—he was rejected by the very people whose lives and fortunes he had saved. It has been said that "a great man is he who meets triumph and disaster and treats these two imposters both the same."

It is evident to all that Churchill is a great man. After his political defeat, he charitably said that "the mark of a great people is the disrespect with which they treat their statesmen."

It is fitting and proper that this portrait of the Senator should be hung in the State capitol in company with his distinguished father. The next general assembly should provide for the hanging of a portrait of Mrs. Eugene Talmadge alongside her distinguished husband and son, both of whom have had such an important part in steering the Ship of State in the calm waters of reason and right.

If Senator TALMADGE were a resident of any State north of the Mason and Dixon Line, or if the fanatical fringe of humanity had not control of the party machinery of both the Democratic and Republican Parties, he would surely occupy the highest position in the gift of the people of the United States, and his star would shine with a brighter glitter than that of any five-star general.

On the real (basic, fundamental principles, which shape the destiny of this Nation, Senator HERMAN TALMADGE stands as firm as the rock on which the Christ told Peter he would build his Church.

When he was Governor there was no amalgamation of the races in Georgia, and such will not happen here as long as he and others maintain and continue their present course.

He has always stood firm on the Unit System which gives the rural areas a voice in the selection of candidates in the primaries.

Contrary to the ceaseless propaganda against the unit system, it is responsible in a large measure for the lack of metropolitan political bosses and machines, as well as crime-ridden government in Georgia. As long as the unit system is continued, no city political boss, with an enormous illiterate and ill-qualified bloc vote at his beck and call, can hope to be Governor of Georgia contrary to the majority wishes of the other 158 counties.

Those who seek to destroy the unit system for selfish purposes, very carefully compare the worth of one vote in Echols or Quitman County, compared with that of votes in Fulton County.

That same unholy crew is just as careful not to mention that such a system is one of the basic fundamentals on which this great Nation was founded. For example, the State of Nevada has only a population of 180,000, yet Nevada has two United States Senators. The State of New York has a population of 16 million, yet New York has only two United States Senators, the same as Nevada, the smallest State in the Union. Therefore, according to the idiotic reasoning of those who oppose the unit system in Georgia, one vote in Nevada is worth 90 votes in New York.

Senator TALMADGE has had the courage to speak his convictions in language any one can understand, of the senseless folly of the burdened taxpayers of the United States buying Cadillacs for potentates of foreign countries who revel in a more luxurious and dissolute life than the richest in America.

It is fitting and proper that this portrait

be hung while Senator TALMADGE is among the living—and may he live to see many, many more summers. But one cannot forget that Holy Writ teaches than man born of woman is of but few days and full of trouble.

When all the world was at the feet of Julius Ceasar—in the midst of a magnificent triumph accorded him by the citizens of the great Roman empire—it is told that he instructed a slave to run by the side of his chariot and repeat constantly these words: "Caesar, remember that you are mortal."

I am proud to call HERMAN TALMADGE my friend.

I am proud to have called his father my friend.

All Georgians are proud of HERMAN TALMADGE because HERMAN TALMADGE is proud to be a Georgian.

SUMMARY OF REMARKS OF ROY V. HARRIS, AUGUSTA, GA., ATTORNEY, AT CEREMONIES UNVEILING PORTRAIT OF SENATOR HERMAN TALMADGE, STATE CAPITOL, ATLANTA, GA., ON APRIL 7, 1958

Ladies and gentlemen, we are here today to unveil a portrait of HERMAN TALMADGE in the State Capitol alongside the portrait of his famous father.

The Legislature of Georgia, by an appropriate resolution, has provided for this painting and for this ceremony.

In taking this action, the legislature desired to honor one of the greatest governors Georgia has ever had. During his administration, Georgia made more progress than it has made in any given 50-year period in her entire history.

In taking this action, the legislature desired to honor one of the greatest Senators Georgia has ever sent to the United States Senate.

But, the legislature had something in mind over and beyond the fact that HERMAN TALMADGE has made a great governor and a great Senator.

For over 10 years HERMAN TALMADGE has been the spokesman for Georgia.

He has been the voice of Georgia because he more nearly speaks the sentiments of the people of this State than any other one person. HERMAN TALMADGE more nearly represents the dreams, the ideals and the heartbeats of Georgians than any leader we have produced in a long time.

He is rapidly becoming the voice of the 40 million people of the South. For a long time, the people of the South have needed a voice compelling enough to unite the people behind a leader and it is my belief that HERMAN TALMADGE is bound to be that voice.

I say this because his sentiments are more in tune with the heartbeats of the people of the South than any of our other leaders.

HERMAN TALMADGE has never flinched in standing by the people of the South. He has stood for our way of life and for constitutional government and has never trimmed and has never wavered on any occasion.

It is not necessary for me to praise him to this audience. Instead, we need his services in a broader field and for that reason, I am going to nominate him as a candidate for President of the United States in 1960.

Shipping Research

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, April 26, 1958

Mr. MAGNUSON. Mr. President, over the years much has been said, pro and con, in Congress and out, with regard to the value of, and the need for, a privately owned commercial shipping fleet to carry the Nation's foreign commerce.

Some economy-minded editorial writers and businessmen, unmindful of the sad experiences of this Nation in two world wars, and unappreciative of the millions of dollars saved this Nation in the Korean conflict alone by reason of the fact that our available reserve-fleet vessels kept ocean freight rates from skyrocketing, are ever ready to urge reliance upon foreign fleets, because they are cheaper.

An editorial in the Journal of Commerce of Friday, April 11, comments favorably upon the announcement of a research project to be undertaken in the field of ocean shipping, under the auspices of the Committee of American Steamship Lines. I anticipate much of value from the undertaking, and congratulate both the Committee of American Steamship Lines and Northwestern University, whose transportation center will conduct this needed research project.

I ask unanimous consent that the editorial from the Journal of Commerce be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHIPPING RESEARCH

(By Edward P. Tastrom)

The announcement from Northwestern University that its transportation center will put the spotlight on United States-flag shipping in an attempt to evaluate its importance to the Nation's economy is welcome news and a constructive development.

This is one phase of the shipping problem that never has been fully and intelligently probed. This may come as a surprise to some in an age where market research and industry impact studies have been undertaken from time to time by most major segments of the business world.

Possibly one reason has been the complicated nature of the business since shipping is a service industry dealing with all other types of industries and subject to special problems of its own in the field of transportation such as United States Government foreign-trade policies and direct competition from foreign carriers.

Without minimizing the importance of a merchant marine for national-defense purposes, this has often been overstressed in the past at the expense of detailing the commercial value of a strong merchant fleet.

The new survey should go a long way toward spelling out by verse and chapter exactly where the commercial value of our shipping lies. There is little doubt in our minds that the real impact of shipping will come as a surprise to many people, some of whom are inclined to view our economy as starting and ending on the coastlines.

As Alexander Purdon, director of the Committee of American Steamship Lines, whose organization is supporting the center's research program, points out, "America's ability to wage a cold war on the economic front is just as important as its ability to fight an all-out or conventional war using military weapons."

The statement observes that, with only 6 percent of the world's population, ours is the world's greatest trading nation, and the American economy represents almost half the economic activity outside the Communist bloc.

What shipping contributes to maintaining and strengthening this economic position should make a highly informative study.

The Supreme Court of the United States

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, April 26, 1958

Mr. ERVIN. Mr. President, on April 25, 1958, the Greensboro Daily News, of Greensboro, N. C., published an editorial entitled "America Needs No Platonic Guardians," which comments upon the all-too-frequent tendency of the Supreme Court to substitute the personal notions of its members for the law of the land. This editorial is worthy of the attention of every American who believes that courts should stick to their judicial knitting and leave the making of laws to legislative bodies.

For this reason, I ask unanimous consent that the editorial be printed in the appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICA NEEDS NO PLATONIC GUARDIANS

Comments from the South about the wisdom of the United States Supreme Court are automatically suspect in learned circles of the North, but it is more difficult to brush aside serious criticism by men of the stature of Judge Learned Hand and Prof. Edward S. Corwin, of Princeton University.

These two distinguished pillars of judicial wisdom have been sounding off lately in language which, at a minimum, should shock the 9 men in black.

Judge Hand goes back to the famed Brown school desegregation decision to make his most penetrating observations in a new book published by Harvard University Press—a series of lectures delivered at that institution in honor of Justice Holmes.

Judge Hand does not question the precedent of judicial review which, although not anticipated by the founding fathers, certainly was a necessary evolution. But he does step down hard on the lack of restraint manifest in the use of that concept. The high court, he feels, has become a "third legislative chamber," originating new law and usurping powers allotted to the legislative and executive branches of Government.

Specifically, Judge Hand cannot understand why the high Court, in the Brown decision, did not recognize the existence of section 3 of the 14th amendment "which offered an escape from intervening, for it empowers Congress to 'enforce' all the preceding sections 'by appropriate legislation.'"

This aspect of the 14th amendment has not been mentioned prominently, if at all, by the high Court.

Judge Hand observes:

"I cannot frame any definition that will explain when the Court will assume the role of a third legislative chamber and when it will limit its authority to keeping Congress and the States within their accredited authority. Nevetheless, I am quite clear that it has not abdicated its former function, as to which I hope that it may be regarded as permissible for me to say that I have never been able to understand on what basis it does or can rest except as a coup de main."

This is weighty judicial language, but it has an explicit meaning for men learned in the law, coming from one of the most distinguished judicial minds still in business today. Judge Hand does not offer vituperative criticism of the Court, now widely heard across the Nation on many subjects, some far removed from racial integration. But he does wryly note that "for myself it would

be most irksome to be ruled by a bevy of platonic guardians, even if I knew how to choose them, which I assuredly do not."

This is mild language compared with the sharp criticism of Professor Corwin, of Princeton, widely known for his liberal views and once a candidate for the high Court in the time of Franklin Roosevelt. Professor Corwin writes in a letter to the New York Times:

"There can be no doubt that on June 17 last the Court went on a virtual binge and thrust its nose into matters beyond its competence, with the result that in my judgment at least it should have aforesaid nose well tweaked.

"Its holding in the Watkins case, in which it claims the right to recast congressional resolutions authorizing committee investigations, is quite irresponsible and indefensible, interfering as it does with the great primal power, as inheritance of the Mother of Parliaments, as Inquest of the Realm. * * *

"Equally irresponsible was the Court's holding in the Yates case on the same occasion. This practically repealed the Smith Act, although a year earlier the Court had held in the Nelson case, that the act repealed all State antisedition acts, the total results being to leave the country exposed to unjustifiable propaganda urging the right to revolution."

What is the remedy, Professor Corwin asks, for this vicious nonsense? It is not to enact a stupid, impractical curtailment on the Court's general powers, such as advocated by Senator JENNER'S dangerous bill. It is rather to pass, in Professor Corwin's judgment, "a declaratory act of Congress assertive of the correct reading of the Constitution on the points involved in the abovementioned cases."

Since Judge Hand and Professor Corwin have rendered these judgments, the Supreme Court has handed down yet another batch of significant opinions, some containing the most violently opposed viewpoints voiced on that august bench since Justice Jackson's feud with Justice Black in 1946. The Court is split by 5–4 margins, with confusing language and equally confusing logic.

It seems about time for the learned Justices to take another good look at some of the basic precepts of the Constitution under which they supposedly operate. Certainly, the Court should interpret the law, but it should learn judicial restraint, desisting from stepping into the realm of a third legislature or assuming the role of platonic guardians. This, as Judge Hand wisely observed, is not the role envisioned for the United States Supreme Court.

Pace-Setter Humphrey

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Pace-Setter HUMPHREY," which appears in the issue of the New Republic for April 28, 1958. The editorial heralds the vision and foresight, particularly in the realm of foreign affairs, of the able junior Senator from Minnesota [Mr. HUMPHREY], who is one of the most eloquent and articulate persons in American public life today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PACE-SETTER HUMPHREY

HUBERT HUMPHREY, who was once dismissed by a lady columnist as a "gliberal," is busily proving himself on issue after issue to be one of the most impressive Members of the United States Senate. In foreign affairs especially, he has become a pace setter for his party. He deserves particular praise for the persistent manner in which his Disarmament Subcommittee has brought out into the open for debate the crucial issue of whether or not a reliable detection system is possible in any ban on nuclear test explosions. Here, and elsewhere, HUMPHREY is identifying himself with controversies which are more often than not shunned by his colleagues as too risky politically.

Last week, he again noted that a China policy that accepts Communist China's existence is a prerequisite to disarmament. He reminded a TV audience that the Soviet Union staged a nuclear explosion in the 9-kiloton range within Chinese territory and argued that "if you are going to have a truly effective disarmament agreement of major proportions you must include within it Red China." For years he has advocated greater attention to India, and in his proposal for a $900 million loan program in 1958 and 1959 he did not duck the fact, as others have, that ample aid to India funds can come only through appropriations by Congress.

It was HUMPHREY who protested on the morning after the French raid on Sakiet-el-Youssef that United States Corsairs had been improperly used in violation of mutual security commitments. Since his visit to the Middle East in May 1957, it has been HUMPHREY who stressed the need for a Middle East economic development authority. And he is continually prodding the administration to use our agricultural surpluses on a larger scale as a means of assisting countries in the Middle East and Asia.

The Senator is perhaps best known for the pro-civil-rights stand which first placed him in the national spotlight at the 1948 Democratic Convention. To his own Minnesota constituents he may appear primarily as a fighter for retention of farm price supports and as a grimly earnest Cassandra who appears daily on the Senate floor to cite evidence that the recession is worse than the President will admit. He turned up last week as the chief advocate of pending humane slaughter legislation.

The Scandinavian Political Scene

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, April 26, 1958

Mr. HUMPHREY. Mr. President, in these troublous times, it is good news to know that the Scandinavian Nation continue to put accent on peace. One of the outstanding editorial commentators of the Midwest, Mr. George L. Peterson, of the Minneapolis Star, has written a very informative article on the Scandinavian political scene.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCANDINAVIAN NATIONS PUT ACCENT ON PEACE
(By George L. Peterson)

Is Scandinavia becoming neutralist in the cold war between East and West? That was the interpretation in some quarters after Norway and Denmark made it clear at the recent NATO meeting in Paris that they wanted no atomic stockpiles or missile-launching facilities on their territory.

Nikita Khrushchev indicated a similar interpretation a week ago in a message to Danish Premier H. C. Hansen praising Denmark and Norway for their opposition to new American weapons on their soil. He followed this message in a few days with a warning. He told a Stockholm newsman that Russia would not respect the neutrality of Sweden and Finland if missiles were launched against the Soviet Union from Denmark or Norway.

Premier Hansen, who serves as his own foreign minister, said in a New Year's broadcast to the nation: "Certain voices have been heard speaking of neutrality in connection with our stressing the need of negotiation and relaxation of tension. There is no basis for this. Our foreign policy, which is founded on our membership in the United Nations and NATO, is unchanged and unshaken. We have solemnly confirmed our responsibilities toward those two peace-loving international organizations."

After his return to Oslo from the Paris meeting, Norwegian Premier Einar Gerhardsen said that Norway's future stand on weapons bases "will necessarily depend on world developments. Not least will Soviet policy have a decisive influence on the defense policy of Norway and its NATO allies. If we are heading toward a period of international relaxation there will, of course, be no question of changing our policy of refusing admission of foreign forces on Norwegian territory, except in case of attack or when threatened with attack."

The Norwegian most closely associated with NATO has been Halvard Lange, Foreign Minister. He was 1 of the 3 wise men named in 1956 to chart future policies for NATO. He has championed the Organization at home, but the other members of the Social Democratic government haven't been as enthusiastic in their support of NATO as Lange. Nor has the public, though Lange himself is one of the most respected figures in public life.

Norway is a strong supporter of greater economic cooperation among the Scandinavian nations. Erik Brofuss, governor of the Bank of Norway, has been urging that a Nordic customs union be set up by Sweden, Denmark, Finland, and Norway. The economic committee of the Nordic council, meeting in Sweden in November, recommended that a decision on the customs union be delayed until there was further discussion of the proposed European free-trade area.

Scandinavia as a whole entered 1958 with a number of economic misgivings. In Norway the gross national product gained 3.5 percent in 1957, about the same gain registered in each of the 5 preceding years. Private as well as government investment continued strong and there was virtually no unemployment. But at the end of the year prices were softening for important Norwegian exports and services—wood, pulp, and ocean-freight rates.

In Sweden the gross national product gained 3 percent in 1957, against a 2 percent gain in 1956. Industrial output began dropping in the last quarter of 1957 and unemployment increased. But the generally strong economic position of the country was shown by immigration figures—17,000 more persons moving into Sweden than were moving out. The arrivals came chiefly from other Scandinavian countries to fill job openings.

Denmark, which has one of the most tightly controlled economic programs in free Europe, kept prices and employment stable during 1957. But there was no improvement in industrial production. More labor troubles threaten in 1958. Finland, which also has been penalized by long and costly strikes in the last few years, is beset by new—or perhaps it is more proper to say continuing—financial problems. The Finnmark was devalued last year, exports increased and imports dropped. So the balance of trade situation improved considerably. But unemployment and inflation still are serious problems.

In Iceland, 1957 was marked by another increase in trade with Soviet Russia. Russian purchases from Iceland (mainly fish) totalled 156 million kronur (about $9 million) in 1955. Last year they were 220 million kronur. Russia was ready to buy even more Icelandic fish if this seafood had been available. Icelandic imports from Russia increased from 172 million kronur in 1955 to 260 million in 1957. Trade with the United States fell in the same period and this country now is second to the Soviet Union in both export and import business with Iceland. Some members of the Icelandic Government are urging even closer ties with the Soviet world.

Elsewhere in Scandinavia trade and other connections with the United States and the West remain strong. But the most evident note in Scandinavian foreign policy is the strong desire for peace. At what price that peace may be purchased is a question which Scandinavia seems to leave to other nations.

Transfer of American Vessels to Foreign Registry

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. MAGNUSON. Mr. President, as many Senators will recall, I have consistently opposed the policies of the Federal Maritime Administrator with regard to the transfer of vessels from United States registry to any of the so-called "runaway" foreign flags. Despite my opposition, such transfers have been authorized in large numbers during the past few years.

Now the shoe seems to be on the other foot. Owners who transferred are now petitioning to have their foreign-flag vessels redocumented under the American flag, because cargoes are scarce in the world market, and these owners see a better chance for survival under American registry, where the cargo-preference legislation offers assurance of opportunity to share in at least 50 percent of Government financed coal and grain shipments.

A timely and pertinent editorial, from the Journal of Commerce of recent date, points up this situation quite neatly. Entitled "The Wayward Fleet," it cites some facts that should be of real concern to the responsible executive department officials. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WAYWARD FLEET
(By Edward P. Tastrom)

There is something rotten in Denmark, to quote from Hamlet, when ships can transfer away from American to foreign flag registry during hard times, and then blithely come back to American flag operation when the reverse of the coin shows.

Yet this is precisely what has been happening recently. Several ships in the United States tramp fleet were permitted to transfer to foreign flag operation a few years ago after industry representations were made in Washington that the tonnage available was excessive in the light of cargo offerings. The arrangement agreed upon permitted a United States tramp operator to transfer up to half his tonnage to a foreign flag, to secure the benefit of lower operating costs.

Now a different set of conditions prevails. Due to the workings of Public Law 480 providing for the disposal of surplus farm products abroad, and the requirement that 50 percent of such cargo be moved in American ships (if available), United States flag tramps today can command a far higher price than prevails in the world market for similar cargo.

Indicative of the price spread are some recent fixtures.

A number of United States flag tramps have obtained up to $10.15 per ton for moving coal from Hampton Roads to Spain in an aid program shipment, while foreign flag vessels have been appreciating less than $4 for comparable trips. Similarly, United States tramp tonnage has been chartered for approximately $17 per ton to move grain from the Gulf to Turkey. Foreign vessels have secured $6.20 for similar voyages.

Actually the law is costing the taxpayer money because of the way it is being operated. This provides for offsetting any cargo moved on foreign ships with cargo moved on similar type Americans. Thus, if a foreign tramp gets a P. L. 480 cargo, the next lot must move on an American tramp. The same rule applies to movement on liner services.

This has resulted in some weird developments. There are cases reported where ships on liner service, going out only partly loaded, have been unable to obtain aid cargo because a United States tramp ship under the offset arrangement had preference. Usually the rate paid the tramp ship was considerably higher than the liner service was ready to quote for the business. In one instance, reported from a reliable source, the tramp cargo moved at about $10 a ton more than the liner service quotation.

With the United States tramp fleet reduced to small numbers as aresult of foreign transfers, and with P. L. 480 shipments continuing at a high level, it is not hard to understand why some of those who "bowed out' 'a few years ago are now scurrying back.

The Maritime Administration evidently foresaw something like this happening, for it ultimately abandoned free transfers and required any owner desiring to go to foreign registry to agree to build an equivalent amount of American flag tonnage in a United States yard and also ruled that the transferred ship could not again be re-registered without MA consent.

Thus the barn door was finally closed and could be opened only if some tangible value in the way of support to American merchant shipping was to be offered.

Any system that permits the free flag transfer back and forth of shipping, in response to economic or other advantages as they arise, is not only unreasonable but makes a mockery of any nation's efforts to assist and encourage the development of its merchant marine.

The "Third Man" at the White House

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article written by the able columnist, George Dixon, which appeared in the Washington Post and Times Herald of March 26, 1958, regarding Mr. Robert Gray, assistant to the President.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "THIRD MAN" AT THE WHITE HOUSE
(By George Dixon)

So rapidly and unobtrusively that few outside Washington have yet grown aware of it, a 36-year-old college professor has become the "Third Man" at 1600 Pennsylvania ave. Robert Keith Gray has been elevated to a double role never entrusted to one man before. He not only screens all the White House patronage, but all of President Eisenhower's appointments.

His surname describes him. This prematurely-gray young man is listed only as a secretary. But he has six secretaries working for him. In an average 10-hour-a-day, 6-day week, they weed out as many as 600 seekers after Presidential favors, and more than 300 applicants for audiences with the President.

Only D. W. Eisenhower and Sherman Adams wield more power in the White House. Unless Ike or "Sherm the Firm" intervene, which is not often, no one gets to see either a job or the President without the blessing of the gray Mr. Gray.

Thomas E. Stephens has just been reappointed as the President's "appointments secretary," but Gray still has charge of the screening.

The ex-prof works like a beaver, even if a curious lady who lives across the street from him entertains other ideas. The young bachelor dwells alone in a tiny remodeled house at 1415 27th Street in Georgetown. Directly opposite, at 1412, lives Mrs. Susan Clegg.

A squib appeared in the paper the other day that a White House limousine calls for Mr. Gray every morning promptly at 7:15. Mrs. Clegg telephoned me, unsolicited, to set this important issue straight. She said the limousine called for her influencial neighbor at 7:15 all right, but that he seldom gets into it before 7:30.

For all his professional background, Gray has a delicate sense of humor. He informs friends he has a swimming pool in his garden and invites them to make use of it when the weather gets warmer. The "garden" is about 10 by 10 and the "swimming pool" is a small well, about four feet in diameter. Mr. Gray explains:

"It will hold about two very friendly people."

The "Third Man" has a remarkable history. After attending Columbia and Harvard he returned to his native city, Hastings, Nebr., as a teacher at Hastings College. After that he taught at Carleton College, Northfield, Minn., and went from there to the University of Southern California as a professor in business administration.

At the University of Southern California he conceived the unprofessorial notion that if he could teach business he could also practice it. He returned to Hastings, talked to some

moneyed friends into putting up cash, and ventured into the warehousing business. It mushroomed. Now he has 13 profitable warehouses in Nebraska, Iowa, and Minnesota.

One who observed his astounding success was Secretary of the Interior Fred A. Seaton, who also comes from Hastings. Seaton mentioned him to Ike, who mentioned him to Sherm, who induced Gray to take a furlough from warehousing and join the White House secretariat. Gray was assigned to assist Sherm with patronage, then put in charge of it, then—when Bernard Shanley quit as appointment secretary last November 5 to run for Senator from New Jersey—he was quietly handed Shanley's job too.

The Present Economic Adjustment

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. HRUSKA. Mr. President, in recent months we have had many explanations and many prescriptions for the treatment of the so-called recession and economic conditions. We have heard in the Chamber as well as in committees the opinions, explanations, and other comments of experts, near experts, the great, the near great, and the not so great.

I believe the experience of the Senator from Nebraska, like that of his colleagues, in receiving various letters from time to time from ordinary businessmen, who have to deal with business problems as they find them, is perhaps very revealing and very helpful. I received such a letter yesterday from C. R. Thomas, of Fairbury, Nebr. Among other things he says with reference to his particular line of business is this:

> Our auto industry appears to be the worst hit. A bill to eliminate the excise tax on cars should be speedily introduced and either passed or killed, and preferably killed. The uncertainty of this tax is hurting the industry.

There are other thoughts equally as sound as this particular one, Mr. President, and I therefore ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

> WESTERN AUTO ASSOCIATE STORE,
> *Fairbury, Nebr., April 23, 1958.*
> Senator ROMAN L. HRUSKA,
> *Washington, D. C.*
>
> DEAR SIR: The present economic adjustment came about through overproduction.
>
> Time, and time alone will cure it.
>
> Governmental tinkering with the economy may ease the pain temporarily, but is like giving a narcotic for a bellyache, when a dose of salts is needed.
>
> A tax cut, with increased defict spending, may be a palliative, but definitely is not a panacea, and furthermore, since savings accounts are increasing rapidly, it would appear that the individual's savings from lowered taxes would probably go into such accounts.
>
> On top of this, the man who has no income is the one who needs the help, and our most starry-eyed dreamer has a difficult case to prove that he would benefit, except by the most roundabout way.
>
> Our auto industry appears to be the worst hit. A bill to eliminate the excise tax on cars should be speedily introduced and either passed or killed, and preferably killed. The uncertainity of this tax is hurting the industry.
>
> Much of our trouble is psychological and while many people have spendable money they are hanging on to as much as possible, and waiting to see what will happen. Governmental handouts will crystallize their belief that we are in for some tough times. To be sure, we will have some adjustments to make, but unusual governmental spending will simply cause people to hold on to their cash with a fiercer grip.
>
> Yours,
>
> C. R. THOMAS.

Congress Is Getting Things Done

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. PROXMIRE. Mr. President, most of us had an opportunity, earlier this month, to spend a week or 10 days with our constituents. For me, it was an extremely useful and helpful experience.

The fine record of performance that has been achieved by Congress so far at this session, in large measure due to the diligent and aggressive leadership of both Houses of Congress, is widely appreciated and heralded in my State of Wisconsin.

In a recent editorial, Wisconsin's daily newspaper, the Milwaukee Journal, paid a fine tribute to the performance of Congress. The Journal editorial, which is entitled "Congress Getting Things Done," begins as follows:

> If you meet your Congressman (Senator or Representative) at the plant gate, supermarket, or front door this week, you may wish to salute him with: "Nice job so far."

The Journal goes on to spell out just what is the record that justifies its pat on the back for Congress.

Mr. President, I ask unanimous consent to have the remainder of the editorial printed in the Appendix of the RECORD.

There being no objection, the excerpt from the editorial was ordered to be printed in the RECORD, as follows:

> For, while you may disagree with some things that the 2d session of the 85th Congress has done since January, you must admit that it has worked hard and at an unusually fast pace. Usually Congress dawdles until after the Easter recess. This one hasn't. Some of its major work is finished and much of it is started.
>
> The work done list includes an emergency housing bill, special tax treatment for insurance companies, special defense construction measure, debt limit boost, establishment of committees to deal with outer space problems, and a price freeze on farm supports (vetoed by the President). On the way to becoming law are bills to speed highway building, raise postal pay and rates, and improve rivers and harbors.
>
> Committee hearings are well under way on foreign aid, reciprocal trade, presidential disability and unemployment compensation liberalization. Appropriation bills are much further advanced than at a comparable time in other sessions.
>
> Why the special sense of urgency this year? Congressional Quarterly, a Washington research agency, terms it "the triple threat of sputnik, recession and fall elections." One thing is certain: Worried Congressmen want to get home as soon as possible to start on their campaigns for reelection.

Economic Conditions in Arizona

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. GOLDWATER. Mr. President, several days ago I started submitting for inclusion in the RECORD articles written by John C. Waugh, of the Christian Science Monitor, and sent forward two. I suggested that I would present for printing one article a day for 5 days.

The articles show the phenomenal growth of the economy in my State of Arizona. They show the Southwest as one of the bright spots in the whole United States. In view of the continuing sounds of gloom from the opposite side of the aisle, and in a desire to be helpful to my colleagues, and give them a little cheer over the weekend, I decided to put the other three articles in the RECORD this morning. Therefore, I ask unanimous consent, first, to have printed in the Appendix of the RECORD an article entitled, "Arizona Heralded as Industrial Oasis," from the Christian Science Monitor of February 20, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> ARIZONA HERALDED AS INDUSTRIAL OASIS
>
> (By John C. Waugh)
>
> PHOENIX, ARIZ.—Arizona is being hailed as a new industrial oasis.
>
> Almost out of nowhere, like a mirage, light industry and manufacturing have come to this chunk of the great American desert. In just a few short years manufacturing has become the State's big money winner.
>
> In 1956 it generated an annual income of some $400 million. When all the 1957 figures are in it is expected to soar beyond that.
>
> Ten years ago it accounted for only $117 million. Decidedly more substantial than a mirage, it now challenges mining as the State's chief economic bulwark.
>
> A decade ago most Arizonians would have considered this impossible. The State traditionally has had three economic favorites—mining, agriculture, and cattle.
>
> This does not mean that Arizona is suddenly an industrial state. It just isn't. Industry here is still in swaddling clothes. It doesn't dominate the economy. It just presides as temporary chairman. But its future looks as bright as the desert sun.
>
> FOOTLOOSE FIRMS WELCOME
>
> Arizona, experts agree, will never become a haven to heavy industry. It doesn't have the raw materials for this. It is too far from the major market places of the Nation and transportation is still too costly.

But such new industrial breeds as electronics—the light, footloose industries that produce low-bulk, high-value products—these are the light of Arizona's budding industrial life.

This State's romance with industry really began less than 10 years ago. People were beginning to swarm into the State in the great mass migration west following World War II.

Lewis Haas, alert, articulate manager of the Phoenix Chamber of Commerce, tells the story well.

INDUSTRY SOUGHT

"It became evident," Mr. Haas points out, "that we could not possibly support this burgeoning population with our traditional economies—agriculture and mining. These were apt suddenly to diminish. We couldn't control them. They couldn't be relied upon to offer any possibility for increased employment which a soaring population demands. So we turned to industry."

State and local groups began putting out welcome mats. And industry began to come. In the 10 years since 1947, 200 new factories have sprung up in Arizona, making available 25,000 new industrial jobs.

The State legislature eased several tight tax laws. Now, for instance, industry can store its in-transit products tax free in Arizona. This is turning Phoenix into a busy distribution center, not yet a major one, but a growing one.

Several farm machinery companies, for example, have located warehouses here and many Los Angeles firms have opened local branches in the area.

FUTURE SCANNED

Duncan McRuer, terminal manager of Watson Bros. Transportation Co., Inc., in Phoenix, believes Arizona's future as a distribution center lies in supplying small cities and towns, particularly in Arizona and California. Lying as it does in the shadow of Los Angeles, he hardly thinks that Phoenix will soon, if ever, become a major distribution hub.

Though Arizona's industrial boom is impressive it still lags behind the Nation generally.

"While the national average of persons employed in industry is 34 percent," Dr. L. W. Casaday points out, "Arizona's industrial employment is still under 20 percent. So, you see, we have a long way to go yet."

At the same time, Dr. Casaday, director of the Bureau of Business Research at the University of Arizona, in Tucson, indicates that mining in Arizona employs 6.5 percent of the workers. Mining nationally employs only 1.8 percent. This points up the continuing importance of Arizona's traditional economic foundations.

The Federal Government, together with a handful of major companies, has made Arizona what it industrially is today.

The largest single industrial employer in the State is the Air Force-owned Hughes Aircraft Co. plant in Tucson. It employs 4,700 persons and produces the air-to-air Falcon guided missile.

In 1954, the Army established its electronics proving ground at Fort Huachuca near Tucson. Even before that the electronics industry had begun moving into Arizona. Now, electronics is unquestionably Arizona's industrial pride and joy.

Motorola, Inc., now has three big electronics plants in Phoenix. General Electric has established its computer division here. Sperry-Rand Corp., Goodyear Aircraft Corp., and Kaiser Aircraft and Electronics Corp. all have converged on the Phoenix area.

SATELLITES ATTRACTED

These companies, in turn, have attracted and are attracting satellite industries. But, again, in perspective, even the electronics industry is comparatively small compared to that in other States.

"There is more total electronics activity in Camden, N. J., than we have in our entire State," notes Bernard Mergen, manager of the Arizona Development Board. "But remember, we started from nothing, and not long ago either."

Arizona industry still is tied heavily to defense and the Federal Government. Two of Motorola's three plants are involved in military electronics. If Fort Huachuca was to close its gates there would be trouble. But in this day of the big armament race, this is considered highly unlikely.

LAYOFF MADE NEWS

Tucson is so industrially dependent on the military that when Hughes Aircraft laid off 700 workers late in 1957 it became 1 of the 10 top local news stories of the year.

Arizona does face industrial problems. A solid industrial future calls for wider diversity and less dependence on the Government. Arizona's two queen cities, Phoenix and Tucson, both are pushing in this direction, with Phoenix enjoying considerably more success so far than Tucson.

Mr. Mergen and his development group are deeply anxious that industry move into the smaller Arizona towns, many of which have been industrially bypassed in the "boom."

But industrial development of this State is moving steadily forward. The oasis is growing industrially greener every day.

Technical Assistance Programs

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, April 26, 1958

Mr. HUMPHREY. Mr. President, an interesting article entitled "U. N. 'No Strings' Aid Plan makes Daily Global Gains," written by J. Avery Joyce, recently was published in Labor's Daily.

The article justly appraises the initiative of the United Nations and the international labor organizations in technical assistance programs being conducted in many of the underdeveloped countries of Asia.

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. "NO STRINGS" AID PLAN MAKES DAILY GLOBAL GAINS

(By J. Avery Joyce)

UNITED NATIONS, N. Y.—Throughout the 19th century, while the main energies of the United States were being devoted to the opening up and consolidation of its own west, the frontiers of the British Empire were being pushed deeper and deeper into the backward areas of Africa and Asia. Belgium, France, Holland, Portugal, and, later, Germany, were also in the race for new territories and new markets, though the lion's share throughout was obviously Britain's.

The general pattern was everywhere the same. Not only the surplus cash of Europe, but the brains and skills of Europe's engineers and technicians, administrators and organizers went into the global enterprise.

The balance sheet of empire, both commercial and military, has been drawn up and appraised many times. Yet today, the radically different background of world relationships which has emerged during the 2d half of the 20th century has not impinged on the antiquated minds of those political leaders and national legislators who still envisage the rest of mankind as pawns or dupes in the dangerous and outmoded game of promoting rival economic or strategic empires. It was Einstein who declared shortly before his death: "The advent of the atom has changed everything but our modes of thinking."

Fortunately for human survival, however, another pattern is slowly making itself felt across the earth. The basic moral issue which challenges men of good will today is whether they are seeking to split the world still further by devising rival schemes of so-called foreign aid—which are becoming more and more suspect everywhere—or to bring the world together by backing the cooperative enterprises which the ever-expanding agencies of the United Nations are promoting for the world commonweal, irrespective of race or creed, politics, or ideology.

In fact, a new type of "U. N. man" is coming into the world picture—whether by origin American or European, Asian or African—a type of man whom other peoples welcome and respect as a friend and partner, as a coworker and world servant, a man who comes to them openly and honestly, without strings, and who represents not the selfish interests or dubious defense policies of some foreign government, but the solidarity and oneness of the human race.

Hardly a day passes without fresh and tangible evidence coming to hand of how this new international pattern is succeeding in country after country. But for the U. N. and its specialized agencies, these emergent lands would have no alternative than to succumb, sooner or later, to the mutually hostile and disruptive dollar and ruble imperialisms which now threaten them from both West and East, under whatever altruistic guise they masquerade.

Take the important question—very important indeed to the economy of many Asian countries, still in the early stages of independence—of the growth of cooperatives and of handicrafts. Here the International Labor Organization has already blocked both Communist penetration and capitalist exploitation by providing essential assistance in the development of new industries, in Afghanistan, Burma, Ceylon, Malaya, and the Philippines. It also did much in 1957 to develop and improve techniques in small-scale and handicrafts industries in Afghanistan, Ceylon, and Thailand.

WORK IN BANGKOK

In Afghanistan, for example, hand-loom weaving experts are now training skilled weavers to operate small village shops as demonstration and extension units, so that existing rural weaving crafts may be converted into a modern and more productive hand-loom industry. In Ceylon another expert has just completed the first phase of his work on a power-loom weaving project to serve as a model for other parts of the island, and a second export has been requested by the Government. Other exports are now in Ceylon assisting in the development of the coconut fiber industry.

In Bangkok, an ILO specialist is helping to improve designing and marketing of crafts in general and, in particular, bronze and silverware, wood carving, lacquerware, earthenware, and paper-umbrella manufacture. Another expert advises the government on development of a mechanical-cordage-processing industry. A third expert is applying new technique in design of lacquerware products. Two handicrafts experts are also participating in activities at the United Nations Educational, Scientific, and Cultural Organization's Fundamental Education Center in Ubol, Thailand. Their work will show its results for many years to come.

The undertakings in this field are going ahead so well that the ILO is preparing a handbook describing techniques of organization and management in small-scale industries, designed primarily for use as a training manual in underdeveloped countries, but which will soon be in use in many countries all over the world. This is the kind of dignified aid these countries need.

Productivity is, of course, the foundation of any sound national economy. So the ILO has sent its productivity experts to work closely with the governments in India, Ceylon, Hong Kong, and Pakistan. Requests for demonstration projects in improvement of productivity have also just been received from Burma, Malaya, and Thailand. In fact, it is as much as the ILO can do to keep up with the increasing demands being made upon it—and on so ridiculously small a global budget, i. e., under $10 million for the current year. Less than Brooklyn is paying for repairs to its racing stadium. The facts speak for themselves.

In India, for instance, ILO experts are now assisting the National Productivity Center in Bombay in its training programs. In Calcutta, last year, a project for engineering industries obtained the participation of nine firms; in the Coimbatroe area, a training project was undertaken for the textile industry; and, in Madras, 300 persons participated in six courses. One of the ILO experts concentrated his efforts during 1957 on helping to improve productivity in workshops of government transport services.

And so this story of the triumph of genuine mutual aid could be repeated over and over again.

How different is this kind of cooperative world from the fragmentated world of our grandfathers? None of the pernicious drives or incentives of old-style empire building are to be found here—drives and incentives which, by their very nature, led to the two world wars, and which, if not eradicated in time, will assuredly lead to the inglorious end of our one world.

Can it be that, at this moment of gravest peril, the common people of the West and the East alike will see the light? Will proclaim the peacemakers, instead of the warmakers? Will follow the men of faith, and not the men of fear?

Administration Is Dragging Its Feet on Civil Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. PROXMIRE. Mr. President, one of our most fundamental and deep-seated national problems is that of providing equal rights for all our citizens, without discrimination on account of race, religion, color, or politics.

The assurance and practice of equal civil rights for all citizens is important for many far-reaching reasons:

It is, first of all, the God-given right of every individual to be given equal status before the law.

Second, it is the right of the Nation to expect from every citizen the full potential contribution he can make to its security, its economic strength and progress, its cultural standing and achievements, and its political processes. No citizen who is the victim of discrimination can achieve his full potential value to our national interest. Discrimination results in a waste of talent, spirit, and energy—assets that our country cannot afford to lose.

Third, it is absolutely essential to our moral standing before the people of the rest of the world.

It is now more than half a year since Congress enacted the historic civil-rights bill of 1957. That bill left a great deal to be desired. I wish it had gone much farther in protecting the rights of all citizens. But it was a tremendous step ahead. It was a fine and promising start. It was a forward step that can make tremendous progress inevitable—and quickly.

Unfortunately, the benefits that could be achieved through this new civil-rights law are being frittered away by inaction. President Eisenhower exhibited none of the diligence and energy that were displayed by Congress, in the exercise of his responsibility to appoint the Commission members and its staff director. Unfortunately, now that that has been done, the appointment of the latter has run into unfortunate delay, in connection with Senate confirmation of the nomination.

This matter is very well explained and discussed in an editorial which recently was published in the Milwaukee Journal. I ask unanimous consent, Mr. President, to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMISSION ON CIVIL RIGHTS STILL INACTIVE AFTER 7 MONTHS

The much heralded Commission on Civil Rights still is in no position to do the job for which it was named—and 7 of the 24 months it has to work have passed.

At the moment it is the Senate which is holding up the show. Gordon M. Tiffany, named staff director of the Commission by President Eisenhower, has been approved by a Senate judiciary subcommittee. But the Senate went home for its long Easter vacation without acting on Tiffany. As a result he has an unofficial position and can't organize a staff.

This is only one of a long series of delays. President Eisenhower showed little urgency in naming the Commission or a staff director. When the first Chairman picked by the President declined to serve, there was a long wait before a new Chairman was named.

The tragedy is that vital time is being lost at a period when the Commission should be doing its major work if it is to have a report ready by September 9, 1959. The main job of the Commisison is to investigate the right to vote. There will be only one nationwide election during the Commission's life—and that is the congressional election this coming fall. Voters are registering for that election in many States right now. Alabama will hold its primary next month.

Without a staff or an official director, the Commission can do little but sit on its hands. Certainly it can do no fieldwork—and it is down in the voting precincts and the local registration offices where most of its work must be done.

It was considered quite an administration triumph to get the civil-rights bill passed. It's a shame to see an opportunity for constructive guaranties of civil rights slip past because of lack of urgency and inaction.

Resolution for Benson's Resignation Based Upon Sound Precedent

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. YARBOROUGH. Mr. President, the resolution that the junior Senator from Wisconsin [Mr. PROXMIRE] and I submitted in this body, urging this Senate to declare it to be the sense of the Senate that Secretary of Agriculture Ezra Taft Benson should resign, is a resolution based upon sound precedent.

In the Texas Observer, issue of April 25, 1958, an independent-liberal weekly newspaper published in Austin, Tex., there is a list of some of the successful precedents for such resolution. In each of the three cases listed there, of the Secretary of Interior in President Taft's Cabinet, the Secretary of the Navy (Teapot Dome Secretary) in President Coolidge's Cabinet, and the Secretary of the Treasury in President Hoover's Cabinet, the Cabinet officer did resign before the Senate could act.

The farmers of this country deserve a new Secretary of Agriculture now.

Mr. President, I request unanimous consent that the article "Ralph versus Benson: Precedents" from the April 25, 1958, issue of the Texas Observer, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RALPH VERSUS BENSON: PRECEDENTS

WASHINGTON.—When Senator RALPH YARBOROUGH (with Wisconsin's WILLIAM PROXMIRE) asked the Senate to resolve that President Eisenhower should ask for the resignation of Agriculture Secretary Ezra Benson, he was following successful precedents.

In 1911, after charges had been brought against Interior Secretary Richard Ballinger (of the Taft Cabinet), a Senator introduced a resolution declaring that there was evidence to show Ballinger was "not deserving of public confidence and that he should not longer be retained." The Senate took no action on the resolution, but soon thereafter President Taft accepted Ballinger's resignation.

In 1924, after the Teapot Dome scandal broke into public view, Senator Joseph T. Robinson, of Arkansas, offered a resolution saying: "It is the sense of the United States Senate that the President of the United States immediately request the resignation of Edwin Denby as Secretary of the Navy." The Senate agreed to this resolution.

President Calvin Coolidge bridled, saying "no official recognition can be given to the passage of the Senate resolution relative to their opinion concerning members of the Cabinet." However, a few days later, Denby resigned and Coolidge accepted the action.

In 1928, Senator Cousens of Michigan offered a resolution with 9 condemnatory clauses and this language: "It is the sense of the Senate that Andrew W. Mellon should resign as Secretary of the Treasury." This resolution was buried in the Banking and Currency Committee.

But it was not long before President Hoover appointed Mellon ambassador to Great Britain.

The Yarborough resolution, offered last week, listed 16 reasons why Benson should resign. Among other things, YARBOROUGH said Benson had "incited dissension, created ill will, and stirred up economic civil war between producer groups of different commodities." He said Benson had carried out a propaganda campaign to turn consumers against farmers and farmers against union labor. He said Benson has tried to force REA cooperatives to allow private power interests to operate their plants and wanted private power companies cut in on Government loans to REA's for generating and transmission facilities. Benson also, said YARBOROUGH, wants to wreck the rural telephone co-ops, the FHA, and the family farm.

The resolution was attacked in the Senate by Republican EVERETT DIRKSEN, of Illinois, and in Texas by a 1957 YARBOROUGH opponent for the Senate—Atorney Thad Hutcheson, of Houston.

Growth Challenges Arizona

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. GOLDWATER. Mr. President, we in Arizona are really grateful to my colleagues in this body and our colleagues in the other House who daily rise and profess that there are depressions in their States. We are grateful to them because as industry in those States hear speakers from their States, or read what they say, they quickly turn to the Southwest to look for a place where people are not afraid, where people are not looking to the Government for help, where people grab their own bootstraps and pull real hard. As a result our people have contributed to the greatest economic growth in the whole United States.

In fact, as was shown by an article I had printed in the RECORD the other day, we have had the greatest first quarter in the history of Arizona, from an economic standpoint. In connection therewith, I ask unanimous consent that there be printed in the Appendix of the RECORD another article, entitled "Growth Challenges Arizona," which appeared in the Christian Science Monitor on February 21, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GROWTH CHALLENGES ARIZONA

(By John C. Waugh)

(Some of the problems confronting a mining and agricultural area like Arizona when industrialization begins to mushroom and population soars are discussed in the fourth article of this series.)

PHOENIX, ARIZ.—Growth has brought to Arizona new residents, new potential, and new problems.

The new residents number 35,000 a year. The new potential is industry. The problems are plentiful.

What is happening in Arizona is by now a familiar phenomenon in the American West. It has been happening and is happening in California. It is happening to a lesser degree in New Mexico and Nevada and throughout the Southwest. To see Arizona grow is to see the direction in which the entire area is moving and the problems that bestride its course.

Experts expect to see Arizona's population grow to 2 million by 1975, maybe even to 3 million. They see an unlimited industrial potential now that light industries, such as electronics and textiles, have established a foothold here.

There is an old story in Arizona that when you first sink a well into the ground you don't have to drill very far to strike water. But soon you must dig deeper. Then deeper. And therein lies a problem.

Water is gold in Arizona. Leading Arizonans believe there is enough water in the State to take care of nearly unlimited light industrial and urban growth. This is considered particularly true as water-thrifty urbanization spreads out more and more into the waterlapping farmlands.

This is happening at a rapid rate around Phoenix where Arizona is doing most of its growing.

WATER SHORTAGES NOTED

Many smaller towns, however, such as Flagstaff, which is the booming railhead for the new Glen Canyon Dam construction, have serious underground water shortages. Throughout the State generally the water table is steadily dropping.

The real water crisis is taking place down on the farm. Arizona currently is caught up in a desperate court fight with California over 3.8 million acre-feet of Colorado River water, which it says it must have if the State is to save its agriculture. Agriculture has been and still is one of the foundations of the Arizona economy.

In growing, Arizona has bumped up against money problems. People close to industry in the State insist that there is not nearly enough local capital to take care of all their needs.

CAPITAL NEEDED

"Arizona would grow 25 percent faster than she is right now," one leader insists, "if industry could get all the capital it wanted from Arizona banks. As it is now, we have to go out of State to borrow most of our money."

Bankers admit that in any boom there is bound to be a shortage of capital. "We can't advance unlimited money," one banker points out. "We have a legal loan limit. But we think we have been able to keep pace pretty well."

Arizona banks are indeed flourishing. The Valley National Bank and the First National Bank of Arizona have branches all over the State. The Valley National is the largest banking system in the Rocky Mountain region. And the First National has doubled in size in only 6 years. In the last 6 months of 1957 its deposits alone jumped to $51 million.

GROWTH CENTERED IN CITIES

Arizona's greatest growth has been centered around its two largest cities, Phoenix and Tucson, Maricopa County, dominated by Phoenix, has been absorbing half of the State's total population boom.

This has posed great civic problems. Phoenix is a picture of a city in dynamic motion. Headed by an energetic young mayor, Jack Williams, it has been planning far ahead. In July 1957, the Phoenix electorate passed a whopping bond issue of $70 million for long-range capital improvement. "This still has people gasping for breath," says one Phoenician.

City officials here think the clear-cut passage of the huge bond issue reflects the confidence the people have in the future of Phoenix. It decidedly reflects a basic change in the thinking and attitude of Arizonians.

"In 1950," says Ray W. Wilson, city manager of Phoenix, "we couldn't have passed a $10 million bond issue, let alone 1 for $70 million."

TUCSON LAGS

Tucson has lagged behind Phoenix in many ways, as most Arizona leaders see it. But Tucson city officials now are mapping a $41 million development program which, if passed, would be tantamount to Phoenix's own $70 million plans. Tucson's central business district blossomed spectacularly during 1957 with a multimillion-dollar building program.

Change sticks out all over in Arizona. Where once the economy rested between two basic pillars, mining and agriculture, it now is in better balance, resting with one heavy foot on light industry. Where 10 years ago lizards crawled under droopy mesquite in the outskirts of Phoenix and Tucson, there now are modern shopping centers.

If there is any unbalance left in Arizona, aside from that naturally formed by an exploding population, it is industrial overreliance upon the Federal Government and its military effort. But Arizonians are actually aware of this unbalance and are taking steps to set it aright.

SPECULATION SOARS

A land boom has sent land speculation soaring almost out of hand, particularly around Phoenix and Tucson. The State land department frankly admits that it faces a grave problem in trying to properly conserve the State's land and mineral resources and utilize them to the best advantage in the onrush of rapid growth. An oil and gas boom is threatening to break out any day on State land. This would foster new, frantic problems.

There still remains the problem in Arizona of spreading the wealth that growth is bringing. Phoenix and Tucson have been the principal beneficiaries and are bursting at the seams. For them there appears to be no end of growth in sight. Other smaller cities, notably Yuma, Flagstaff, and Prescott, also are booming. But other Arizona towns still sit in the traditional desert quiet, relatively unruffled.

Two Arizona counties, Mohave and Yavapai, actually have declined in population over the past few years.

Arizonians frankly admit that if they are going to be fat and prosperous they would like to be fat and prosperous all over.

Regulation of Roadside Advertising in Mexico

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. NEUBERGER. Mr. President, the able junior Senator from South Dakota [Mr. CASE] has brought to my attention a very interesting article in the Christian Science Monitor of April 22, 1958, which describes the manner in which the names of candidates in presidential elections in Mexico are brought to the attention of the electorate by signs painted on mountain peaks throughout the country. The article points out that 25-foot high letters painted on canyon walls, white rocks laid out in the form of letters on forested slopes, or whitewashed signs on stones along river banks take the place of election billboards south of the border.

This amusing story, written for the Monitor by Marion Wilhelm, was of dual interest to me because of my long-standing legislative efforts both in the field of billboard control, and in the field of the control of election campaign methods.

I have often stated that the use of billboards by political candidates in an election is not likely to be very informative

to the voters, and I thus have not used election billboards in my own campaigns. Mexico has been deserving of much credit and emulation as one of the countries that has reserved its highways in the open country from the billboard blight; but I regret that, through the Christian Science Monitor, the campaign managers of our political candidates will now have learned of the resourceful techniques adopted by their Mexican counterparts to get along without election billboards. Now that, with the powerful assistance of the able Senator from South Dakota, we have succeeded in enacting at least a modest step toward billboard regulation along our own cross-country highways, I would be dismayed if this were to lead to the transfer of campaign messages to our own hillsides, mountain crags or forest slopes.

Nevertheless, I am indebted to my colleague from South Dakota in bringing this dismaying prospect to my attention, and in spite of my misgivings about giving it circulation, I ask unanimous consent that the amusing article from the Christian Science Monitor be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEXICO CANDIDATE NEVER OUT OF SIGHT

(By Marion Wilhelm)

MEXICO CITY.—What's in the name of a politician? In Mexico, it is the other way around—what's the name on?

If it is on the mountain tops, it is almost certain he is going to be President.

The name on the mountain peaks in this presidential election year is López Mateos-Adolfo, and Mexican politicians have spent millions of pesos putting it there, not to mention on virtually every adobe wall, thatched roof, and field rock visible from a highway.

By July 6, election day, López Mateos or ALM will be household jargon everywhere across the Republic, even if the house is a mud hut perched on an isolated cliff.

IN MOST REMOTE SPOTS

The Indian working his vertical cornfield in the precipitous highlands can look out across the lonely ridges of the Sierra Madres and see the name painted in white letters 25 feet high on the sheer wall of a canyon.

He might run across woodchoppers laying out glistening white rocks in a sloping pine forest. In the jungle, chicle gatherers find the name slashed on tree trunks or whitewashed on stones along riverbanks.

From modern highways crisscrossing the mountains and valleys, the gigantic signs make counting cows and burros (also plentiful) an outmoded time passer.

BEWILDERING DISPLAY

On a 70-mile trip through wild mountains north of Mexico City, the writer counted well over 200 testimonials to the presidential candidate—"Pueblo de Hidalgo con López Mateos," "Mujeres de Hidalgo con ALM," "Mineros del Estado con don Adolfo," "Maestros con López," "Campesinos pro López," "Los Otomi con López," people, women, miners, teachers, farm workers, Otomi Indians of Hidalgo State all with Señor López Mateos.

The candidate, until 3 months ago virtually unknown to the mass of Mexicans, can even see his name from the air as he flies around the country to campaign.

Teh extraordinary mountain-painting campaign, which changes names every 6 years with the Presidential succession, is accomplished almost entirely without billboards. Except within city or village limits, billboards are not allowed in Mexico.

Most of the paint—white for mountains and fields, red or black for roadside walls—flows freely from business, labor, or government groups and bigwigs and lesser fry looking for jobs and other favors from the powerful political party which has won every presidential election in Mexico since the revolution.

Why does the Partido Revolucionario Institucional bother? As a bewildered tourist said after motoring down from the border, "If that's some kind of new soft drink they're selling, I'd sure like to buy stock in the company."

Did This Really Happen in the United States of America?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, April 26, 1958

Mr. PROXMIRE. Mr. President, concern has been expressed over the recent incident concerning the deportation of William Heikkila under circumstances that were unfortunately reminiscent of practices in Communist and Fascist countries.

It is true that subsequent information about this case has done much to explain if not to vindicate the action of the United States Immigration Service officials. But nothing can erase the bad flavor which their clumsy and heavy-handed treatment of this case has left with us—and unfortunately with too many of the other people of the world.

There is one most basic and fundamental difference between our American way of life, which we share with other free peoples, and the way of the totalitarian dictatorships, whether they be Communist or Fascist or any other kind of absolutism. That difference is that our system is a system of law and equal treatment for all under the law. Regardless of the merits or the standing of the individual who is accused, regardless of how loathesome his acts may be, how dangerous he may be to our life and property and national security, he must be fully protected in his right to due process of law.

This fundamental distinction between the American way and the way of tyrants is splendidly portrayed in editorials from three great Wisconsin newspapers—the Capital Times, of Madison; the Milwaukee Journal, and the Milwaukee Sentinel. I ask unanimous consent, Mr. President, to have these editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the Appendix, as follows:

[From the Milwaukee Journal]

THIS ISN'T RUSSIA

The decision by the immigration service to bring William Heikkila back from Finland was the least it had to do. It doesn't allay one bit of the alarm that must be felt over the kidnap deportation in the first place, which the service still claims was legal.

Who Heikkila is isn't important. He happens to be an admitted ex-Communist, born in Finland while his naturalized American parents were visiting there, never naturalized himself. The Government has been trying to deport him for 11 years, and finally won an oral decision April 3. The formal order had yet to be drafted and approved, with a hearing set May 2.

On April 18 a West Coast immigration functionary got impatient, had Heikkila nabbed off the street and spirited to Canada by air. Heikkila's attorney immediately got a court order to bring him back, but his captors took him on to Finland anyway. The failure promptly to respect that order is the only error the service admits.

But how about the gestapolike seizure without due process, with absolutely no authority to show for it, with no formal deportation order yet issued, much less in hand? That can't be waived aside as a technicality, on an assumption that the order was sure to follow. It is not for police—or immigration officers—to take legal process into their own hands, and mold it to their convenience—in Russia, yes, but not here.

Irksome and even senseless as some legal technicalities may seem, they are vital to be observed when a man's rights and liberty are at stake—and we stress, it could be any man's rights and liberty. The Justice Department (of which the Immigration Service is a part) must repudiate the whole affair, kidnapping and all, and give assurance—shocking as it is to find need for it in America—that it will not countenance terrorism in its ranks.

[From the Madison (Wis.) Capital Times]

DID THIS REALLY HAPPEN IN THE UNITED STATES OF AMERICA?

This happened in the United States of America in the year of 1958:

A man by the name of William Heikkila was leaving his place of employment in San Francisco when officers of the United States Immigration Service seized him. Without giving him a chance to set his affairs in order, to pick up a change of clothes or say goodbye to his wife, he was hustled across the Canadian border, put aboard a plane and deported to Finland.

Mr. Heikkila is the child of naturalized American citizens. He came to this country when he was 2½ months old. In the depression years of the 1930's he allegedly joined the Communist Party. For 11 years the Immigration Service has been trying to deport him and has been stopped in the courts.

So the Immigration Service, going further than even the Russian secret police would dare to go, took the law into its own hands.

It matters not that the Immigration Service has admitted its error and that Heikkila will be brought back to San Francisco. That such a thing could happen in the land of the free is horrifying.

As Federal Judge Edward P. Murphy of San Francisco said:

"This smacks of the Gestapo, rack and thumbscrew."

The officials responsible for this should be among the unemployed immediately.

It should be noted that the administration under which this appalling treatment of a defenseless person occurred is the same old one that yawns away revelations of corruption, influence peddling and looting of the public domain. The men responsible for the moral atmosphere in Washington today fit naturally into the role of those who abducted Mr. Heikkila.

[From the Milwaukee Sentinel of April 25, 1958]

AS WE SEE IT: BUNGLED

The highhanded procedures followed in the deportation case against William Heikkila, a native of Finland but nearly a lifetime resident of the United States, stirred up a king-sized sense of outrage in this country.

When the Immigration Service arrogated unto itself the final disposition of a matter still pending in the Federal courts, it was making its own law and was doing a bungled job of it.

In the ordinary course of events, the Heikkila case would have attracted little interest and less sympathy. He has had admitted Communist affiliations. He has lived nearly half a century in the United States without becoming a citizen. The judgment of the Immigration Service that the country would be well rid of him has not been lightly arrived at and cannot be lightly dismissed.

But when immigration officers seized him on a San Francisco street and spirited him out of the country, without notice to his wife or attorney, with less than $2 in his pockets, and with not even a change of clothing, offense was given to the sense of justice of people who never before heard of William Heikkila and who normally would care nothing about him.

People totally without sympathy with communism hate to see human beings pushed around and the American people particularly hate the pursuit of Gestapo police tactics against anybody, including aliens and Communists.

The only good thing in this deplorable matter is that the Immigration Service was quick to reverse itself and was big enough to do so. But the country is still interested in knowing how and why such a stupid thing was done in the first place and a congressional investigation into the whole affair is strongly indicated.

History of Coast and Geodetic Activities in Alaska

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. JACKSON. Mr. President, the Arctic Club of Seattle, Wash., on March 7, 1958, honored the United States Department of Commerce Coast and Geodetic Society and its representatives at its traditional Alaska-night dinner.

The program for this event contained an excellent history of Coast and Geodetic Survey activities in Alaska, prepared by Read Adm. H. Arnold Karo, Director, and Capt. Emil H. Kirsch, Seattle district officer, United States Department of Commerce Coast and Geodetic Survey, which I request be printed in the Appendix of the RECORD.

There being no objection, the history was ordered to be printed in the RECORD, as follows:

COAST AND GEODETIC SURVEY ACTIVITIES IN ALASKA

EARLY HISTORY

Explorations in Alaska in the 18th and 19th centuries held the interest of adventurous explorers of two continents. The French, Spaniards, English, and Russians all sent expeditions to this great coastal area of the North American Continent. American seamen and trappers pushed northwestward primarily in pursuit of all kinds of fur-bearing animals. The lucrative fur trade also sent the Russians across the Urals and Siberia into the present Alaskan Territory, which at that time was called Russian America. These early explorers gathered considerable information about the coastline and areas along the navigable rivers.

Prior to 1725, the year of Vitus Bering's first expedition, this portion of the American Continent was a blank space on our maps. After 1725 dim outlines began to appear in this blank space, and maps containing some detail were gradually developed. It was not until Bering's return from his second expedition to America, in the fall of 1741, that the fog-shrouded Aleutian Islands were discovered. The exploration and mapping of the coastline of Alaska by the Russians continued throughout the period of their occupation and was supplemented by information obtained from English, French, and Spanish explorers. The earliest significant contribution by the United States was made by the North Pacific expedition in 1855.

UNITED STATES ACQUISITION

The work of the Coast and Geodetic Survey in Alaska began with its purchase from the Russians in 1867. At that time no accurate surveys were available and the Russian charts were made up of crude sketches giving only a general idea of the configuration of the coast and harbors. During the first 20 years or so of our ownership of the Territory, survey work was confined to selected localities chiefly for the purpose of tying together various sketches made by the early explorers.

In the summer of 1867 George Davidson, an assistant in the Coast Survey, accompanied by three men made an extensive cruise of Alaskan waters in Revenue cutter *Lincoln*. This party made numerous observations and as a result of the summer's cruise charts were prepared of Sitka Harbor, St. Paul Harbor, Kodiak Island, and Captain's Bay on Unalaska Island. The first two coast pilots of Alaska were published by the Coast Survey between 1869 and 1883. From the year 1867 to 1882 the Survey compiled and published numerous charts of Alaskan waters, based principally on the earlier surveys made by the United States Navy and English, Russian, French, and Portuguese explorers. Much of the early fieldwork was utilized to tie in some of these fragmentary and scattered exploratory surveys in order that nautical charts could be published for the principal waterways of the inland passage.

The first continuous survey work by the Coast Survey was started in 1882 when the steamer *Hassler* was sent north under the command of Lt. Comdr. H. E. Nichols. The steamer *Patterson* was assigned to Alaskan waters in 1882, and for the next 15 years fieldwork consisted mainly of charting only those channels and harbors used by the Navy and the very limited commercial shipping.

THE GOLD RUSH

In 1898 the rush to Alaska by way of both the Lynn Canal and the Bering Sea resulted in such an increase in commercial activity that the demand for surveys in this area became imperative. Although motivated primarily by the feverish search for gold, which had been discovered near Juneau and in the Klondike, other factors soon entered the picture, making for an unprecedented commercial boom throughout most of the Territory. Copper deposits were discovered in various remote regions; the salmon industry was developed; and the Alaskan Railroad was started.

During this period Coast and Geodetic Survey operations in Alaska were greatly expanded and from the years 1900 to 1915 nautical charts of the area were produced in rapidly increasing quantities. These charts served to meet the urgent requirements of the greatly expanded sea travel to Alaska brought on by the lure of the golden sands of Nome.

CHARTING THE ALEUTIANS

Surveys of the Aleutian Islands were first undertaken in 1901, when the Coast and Geodetic Survey ship *Pathfinder*, assisted by the *McArthur*, was assigned to survey the principal passes through the islands which were used by commercial vessels going to Nome and St. Michael. Accurate topographic surveys of the islands were made showing their relation to each other, but the surveys of the water areas were of a reconnaissance nature. From 1901 to 1925 fragmentary information was furnished from time to time by the United States Navy, United States Fish Commission, and the United States Coast Guard. In April 1925, a Coast and Geodetic survey reconnaissance party composed of 2 officers and 2 men was organized to determine the feasibility of making comprehensive surveys of the Aleutians. This party was equipped with radio-longitude apparatus, magnetic instruments, a theodolite, a tide gage and level, and general hydrographic and topographic instruments. They sailed from Seattle, Wash., on the 15th of April on the Coast Guard cutter *Haida*, arriving at Unalaska on April 26.

From April 26 to September 23, 10 islands, including Attu, and 17 bays were visited using Coast Guard cutters, local schooners, and commercial steamers for transportation. Reconnaissance surveys were made at each stop as weather permitted. From the 1st of May to the 1st of September only 6 nights were clear enough to permit astronomic observations. When the reconnaissance party returned to Seattle they submitted a recommendation to the effect that present commercial demands in the Aleutian Islands would not justify the heavy outlay of time and expense which would be required to accomplish a comprehensive survey of that area. Little was it realized at the time that in less than 20 years this chain of islands was destined to play a vital role in the strategic defense of North America.

Because of the increase in commercial shipping in southeast and central Alaska between 1925 and 1933, most of the activities of the Coast and Geodetic Survey were concentrated in that area, and it was not until the spring of 1934 that comprehensive surveys were undertaken in the Aleutian Islands by the ships *Discoverer* and *Surveyor*. Work on this project was started in the vicinity of Unimak Pass, which extends 900 miles from the Alaskan coast almost to Siberia.

SURVEYING IN ALASKA, 1920–40

During this period the Coast and Geodetic Survey continued operations in Alaska to provide navigation charts of the Territory's 34,000 statute miles of tidal shoreline. The survey fleet operating during the early years usually numbered six or more vessels. General small-scale charts were prepared for practically all of Alaska's coastline, with special attention given to the complicated channels and small bays of southeastern Alaska from Dixon's Entrance to Cape Fairweather. Nautical charts were produced from the surveys of Prince William Sound, Cook Inlet, Bristol Bay, and Norton Sound. Both triangulation and hydrographic surveying were undertaken on Kodiak Island and the south shore of the Alaska Peninsula.

As travel increased to Alaska, wire-drag surveys were made of the main waterways of southeastern Alaska and the principal harbors used by ocean-borne commerce. From these surveys, large-scale nautical charts were prepared and published for the rapidly expanding maritime traffic. Triangulation was extended in a continuous unbroken line from Dixon's Entrance through southeastern Alaska, around the north shore of the Gulf of Alaska into Cook Inlet, Shelikof Straits, and south shore of the Alaska Peninsula to Unimak.

WORLD WAR II

Most of the normal operations of the Coast and Geodetic Survey in Alaska were sharply curtailed during World War II. Survey ships were assigned to naval operations and personnel were either transferred to the armed services or used directly on wartime mapping and charting activities.

The *Oceanographer*, *Hydrographer*, and the *Pathfinder* became official ships of the United

States Navy. Armed for combat, they were engaged in specialized military surveying operations. The *Pathfinder* made an enviable record while on two surveying missions in the southwest Pacific. For her excellent work in furthering the war effort, the ship received commendations from Admirals Nimitz, Kincaid, and Halsey. The *Hydrographer* led the fleet of Navy ships when they entered Attu for one of the most decisive battles fought in the Aleutians.

The *Explorer*, the *Surveyor*, the *Derickson*, the *E. Lester Jones*, and the *Patton*, all of which had seen extensive Alaskan duty, were placed at the disposal of the Commander of Naval Operations in Alaska. All of these ships were deployed in the same Alaskan waters where they had operated during peacetime, and made significant contributions to our national defense.

POSTWAR AND PRESENT ACTIVITIES

Triangulation of Pacific coast controlled surveys with those of Alaska was undertaken during the early years of World War II and completed in 1945, thus establishing a coordinated network of continental triangulation based on the North American Datum adopted in 1927. There was an urgent demand for large-scale topographic maps for use in planning adequate defense installations in Alaska, and accurate geodetic surveys had to be made before mapping could get underway. This accelerated program for establishing geodetic surveys in Alaska resulted in 3 or 4 field parties being sent to Alaska each year through 1955.

Most of the work has been done during the short summer season, but the most rigorous part of the project, the extension of control along the north Arctic coast from Point Hope to Demarcation Point, was done during the winter months. Tractor-drawn sled trains carried men and supplies across the frozen, barren tundra-covered lowlands adjacent to the Arctic coast. In former years transportation was by water, packhorse, dog sled, or on foot. Nowadays men and supplies are moved by cat train, cub plane, and helicopter. The cost of operation has multiplied many times, but the area covered by the survey operations has kept pace, so that the unit cost is no different today than it was 30 or 50 years ago.

The arc of triangulation of the Arctic coast of Alaska from Point Barrow to Demarcation Point on the Alaskan-Canadian boundary was finally closed during the summer of 1953. This arduous task along the last unsurveyed coast of the United States required almost a decade of intensive work by field engineers of the Bureau's Arctic party. Great ingenuity, technical ability and courage were displayed by members of the party, consisting of about 80 officers and men, including observers, computers, engineers, electronic experts, and mechanics. Recently a spur has been extended up the Colville River to Umiat, which was ultimately carried along a north-south axis and connected with the main Alaskan control south of Brooks Range. Additional arcs westward of the Colville River arc were surveyed in 1955.

The nine-lens camera developed by the Coast and Geodetic Survey is particularly adapted to surveys in the Aleutian Islands and along the western and northern coasts of Alaska where the establishment of control is an expensive and hazardous undertaking. The area covered by a nine-lens photograph is 16 times greater than that of a single-lens photograph, and adequate mapping can therefore be accomplished with one-fourth the number of control stations. The Coast and Geodetic Survey is responsible for topographic mapping of the Aleutians west of 165°, to be accomplished in conjunction with its nautical charting and geodetic work. These maps are required for military and civil use, and will become an integral part of the National Topographic Series.

Surveying operations in Alaska have required special planning and coordination, in keeping with the overall objective of the Coast and Geodetic Survey to extend basic surveys along the coastal waters and into the interior. The more accessible areas have been surveyed in considerable detail, but rigorous work is in prospect for future seasons in remote areas characterized by difficult terrain and dangerous coastlines. The rapid expansion of coastwise and transpacific commercial shipping has given new emphasis to the programing for the great task that lies ahead. The requirements of the Armed Forces in preparing for national defense have added further impetus to the expansion of surveys in Alaska.

Concurrent with the greatly expanded postwar geodetic work, the Coast and Geodetic Survey has increased hydrographic survey operations, particularly in the Aleutian Islands, Prince William Sound, along the south shore of the Alaska Peninsula, Bristol Bay, and the Bering Sea. Modern survey ships assigned to the Alaskan work since the war include the *Explorer*, *Pathfinder*, *E. Lester Jones*, *Pioneer*, *Patton*, and the *Derickson*. Offshore hydrograph work has been greatly expedited by the use of the electronic position indicator (EPI), an adaptation of war-developed shoran.

The detailed shoreline of Alaska measures 34,000 statute miles and borders on three major bodies of water—the Pacific Ocean, the Bering Sea, and the Arctic Ocean. Our tidal program, therefore, is of great importance. Precise knowledge of the rise and fall of the tide is essential not only for vertical control of surveying and mapping operations, but also for marine navigation, for engineering projects associated with the development of coastal property, and for studies of changes in the level of the sea. Our tidal operations have been greatly expanded and, in addition to the maintenance of existing stations, many new stations have been established. Observations thus obtained make it possible to predict the time and height of tides in all of the harbors of Alaska.

GEOMAGNETISM AND SEISMOLOGY

Although not so widely known as the Bureau's work of surveying the charting in Alaska, our geomagnetic activities in that region are considered invaluable to basic research in this highly specialized scientific discipline. Alaska is partially situated in the auroral zone, an area of highly geomagnetic activity, and 3 of the Bureau's 7 permanent observatories are located there—at College, Sitka, and Point Barrow. In these observatories the strength, direction, and changes of the earth's magnetic field are measured and recorded continuously. After these field data have been processed and evaluated they are available for incorporation in magnetic charts and for distribution to other scientific institutions.

As the principal American operator in geomagnetism for the International Geophysical Year, the Coast and Geodetic Survey has established an elaborate network of temporary observatories in Alaska. One outstanding installation, of particular interest in scientific circles, is the Nelson Differential Magnetograph in operation at College. This highly complex series of instruments was developed within the Bureau for the purpose of comparing the variations in the magnetic field as recorded simultaneously at three different locations. The geomagnetic data obtained from this installation and our other Alaskan observatories represents a significant contribution to the International Geophysical Year.

Of the 4 stations making up the Seismic Sea Wave Warning System, one is located at Sitka and another at College. These are operated in conjunction with our magnetic observatories. When an earthquake occurs off the shores of the Aleutians, and there is danger of a disastrous wave striking the Hawaiian Islands or the west coast of the United States, an alert is immediately sent out from the stations in Alaska to the other stations making up the warning network. An alarm is flashed as rapidly as possible to areas likely to be affected. This warning service from Alaska protects the lives and property of Americans thousands of miles away, and has on many occasions saved communities from the sudden disaster of seismic sea waves.

Arizona Plans Big as Boom Rolls On

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. GOLDWATER. Mr. President, it is becoming very obvious, as we listen to the sounds of depression, that the only place the depression is really in effect is in States in which Walter Reuther has unions. We in Arizona have unions, but our unions are sensibly run. They do not make demands upon management which they know management cannot fulfill. So union leaders pay attention to the work of running a union. Therefore, the union members in Arizona are well off. Our leaders in Arizona are more concerned with wages and hours than they are in control of a political party. So our unions are well off, as is all of Arizona, as evidenced by another article which was published in the Christian Science Monitor on February 24, 1958, entitled "Arizona Plans Big as Boom Rolls On," which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARIZONA PLANS BIG AS BOOM ROLLS ON

(By John C. Waugh)

(Dynamic changes that come with industrialization of a long-standing mining and agricultural area point up need for judicious planning which is discussed in the fifth and final article of this series on Arizona and its postwar economy.)

PHOENIX, ARIZ.—"The trouble is," complained Mayor Jack Williams, "I just can't plan big enough."

"None of us can," replied Banker George V. Christie. "The important thing is to plan well."

Thus, neatly epitomized in a brief luncheon encounter between the mayor of Phoenix and a prominent vice president of the First National Bank of Arizona, are the two major challenges facing the Nation's youngest State:

Plan big and plan well.

Arizona stands in the full gale of a boom that is sweeping the American West. From a population of 616,000 in 1946, it has grown to one of more than a million. Lured by a climate literally bursting with sun, new people are pouring into the State at the rate of about 35,000 a year. Arizona is 1 of the 2 fastest growing States in the Nation.

New industries and new developments are coming in, filling and pushing out into areas around Tucson, that were once desert.

STATE AT CROSSROAD

The boom has rolled on virtually unchecked since the end of World War II. Now Arizona finds itself at a critical crossroad.

It must ask itself where it is going.

"This," says Lewis Haas, "is a $64,000 question."

It will fall to leaders like Mr. Haas, manager of the Phoenix Chamber of Commerce, to supply the answer.

He has one: "We are not at all interested in catapulting toward an undisclosed end," Mr. Haas insists. He drives to the core of Arizona thinking when he says that "Arizona must be selective."

Mr. Haas means that when Arizona attracts new industry it must attract the right industries—light, high-value, low-bulk industries—which draw and employ high-salaried, high-class people.

This, in view of Mr. Haas and undoubtedly in the view of Mr. Christie, Mr. Williams, and others, as well, means good, careful, future planning. Up to now, Arizona, Mr. Haas admits, has been long on attraction and somewhat short on planning.

POPULATION CHALLENGE

The immediate challenge as outlined by Mr. Haas is to effectively absorb a burgeoning population and all the industry and change it brings and still keep Arizona a place of beauty and a place of utility. And quite importantly, Mr. Haas holds, Arizona must maintain its traditional, informal way of life.

Nor is that all. All the mundane problems that plague the booming West from Los Angeles to Albuquerque, N. Mex., are magnified here. There is the problem of educating the exploding population, planning sewers and utilities, providing housing, solving transportation problems—in short, growing up right.

Major cities in Arizona are scrambling to meet these problems. Some, notably Phoenix, have shown that they already are beginning to think big.

A look ahead to 1975 sees Arizona having at least a million more people than it has today. That is about double the present population.

This means all sorts of things. It means that 200,000 more jobs must be hewn out in the Arizona economy. It means that more industry is bound to come in. It means that the boom that is changing Arizona so fast will, if anything, accelerate.

ARIZONA'S ROLE GROWS

As Arizona grows, its role in the West grows with it. About 35 trucklines now empty into and out of Arizona. Two new nonstop flights—one to Salt Lake City, the other to Denver—have opened up new northern trade areas. The State is an important railhead for the Southern Pacific and the Santa Fe Railroads.

Arizonians see their State becoming at the same time more independent and yet more important as a regional trading area and a strong hinterland for the west coast.

Manufacturing and tourism are the new economic prodigies of this State. Both are in comparative infancy and being assiduously groomed to grow.

Electronics looms as the industry of the future. It is the type of industry the State is searching for and getting. Textiles is another industry Arizona would like to see more of. Garment factories recently have opened in Casa Grande, Mesa, and Glendale.

CLIMATE BIG ATTRACTION

Climate, of course, is Arizona's ace in the hole.

Time and again major electronics firms such as Motorola, Inc., and General Electric have found that, given a choice, something like 100 out of 101 engineers would rather live in Arizona than anywhere else.

Evidence of the Arizona desire to maintain the traditional way of life is seen in the way it makes room for industry. Motorola's two big plants out on McDowell road in Phoenix are ultramodern, eye-pleasing buildings set in the middle of growing residential areas. Arizona aims to assimilate industry, not isolate it. The great industrial complexes of the East are unknown here and probably will always remain so.

The flavor that still pervades the State is that of the free-and-easy West. Stetsoned cowmen wearing black boots still clomp down the busy Phoenix sidewalks.

This pleases the Arizona eye. It is undoubtedly a good omen to men like Lewis Haas, to whom the Arizona way of life is so important. It shows that the State, at least so far, has been able to lasso a boom without losing its Stetson.

Anatomy of Recession—V

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, April 26, 1958

Mr. PROXMIRE. Mr. President, the first obligation this Government owes the people of America in this economic slump is a clear-eyed, straightforward examination of the economic facts of life in America. What economic measures the Federal Government should adopt, indeed, whether the Federal Government should adopt any economic measures at all, should depend on the economic facts.

One of the most dangerous aspects of this slump is the unfortunate tendency for many leading Americans who should know better to attempt to talk our way out of our economic difficulties by putting the rosiest possible construction on the facts of economic life.

A flagrant example of this kind of futile bootstrap hoisting is the argument that has been made for many weeks now that the economy is working its way into a healthier situation because American industry is reducing its inventories. The point of this theory of course is that this reduction in inventories is certain to result in the near future in an upsurge in the economy as depleted inventories are replenished.

That this picture of an economy in which inventories are on the verge of replenishment is a totally false picture is pointed out brilliantly in an article by Mr. B. D. Nossiter in the Washington Post and Times Herald. Mr. Nossiter makes the crucial point that while it is true that inventories have been falling steadily in recent months, the important fact is that they have been falling less rapidly than sales. Inventories are only significant in relation to sales. Mr. Nossiter points out that the inventory-sales ratio, far from improving over the past several months, has been getting steadily and dramatically worse. Inventories have been getting bigger in relation to sales. There is more of a tendency, not less for businessmen to curtail their buying now, because their inventories have become bigger, in relation to the one significant guideline which directs the American businessmen's increase or decrease of inventories.

Mr. President, I ask unanimous consent that this article by Mr. Nossiter be inserted in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANATOMY OF RECESSION—V
(By B. D. Nossiter)

RATIO OF INVENTORY CUTS TO SALES DISTURBING

The speed at which businessmen have been slashing their inventories has inspired some of the belief that the recession is touching bottom. But a telltale relationship—that between inventories and sales—is shaking the confidence of some economists.

In the first 2 months of this year, inventories were reduced at almost a $9-billion yearly rate. This was more than triple the cutbacks in the final quarter of 1957. It meant that firms were both producing less and sharply trimming orders to their suppliers.

The faster these stocks of goods on hand dwindle, the optimists reason, the sooner the process must stop, or at least slow down.

But if a businessman's sales are dropping faster than he is drawing down his inventories, he will try to quicken the pace of stock cuts.

Sales shrinking faster

Unpublished Commerce Department figures show that this has been happening. Despite the liquidation of inventories, sales have shrunk at a faster rate.

This shows up in inventory-sales ratios, numbers that play a decisive role in determining production and purchasing. This ratio is the value of inventories at the end of a month divided by that month's sales. The bigger this number, the greater is the impetus for more inventory reductions.

For example, a manufacturer sells $5 million widgets in January and has $10 million worth in his warehouse at the month's end. His inventory-sales ratio is 2. The next month, he holds down purchasing and production to shave his stock to $9 million. But if he sold only $3 million, his ratio has increased to 3. This will spur him to deeper inventory cuts.

For all business this ratio of stocks to sales was 1.66 in January. But in February, it rose to 1.72. A year earlier it was only 1.56. In manufacturing, where the heaviest stock cuts were made, the stock-sales ratio, at 1.79 in February 1957, was 2.01 in January and 2.05 in February this year.

Difficulty in hard goods

Hard-goods manufacturers have had the most trouble pulling inventories down to a happier relationship with sales.

For every big industry grouping in durable goods the ratios grew between January and February and were well above a year ago. For the group as a whole, the ratio increased from 2.09 in February 1957 to 2.42 in January and 2.52 in February.

Here's how these stock-sales ratios expanded in the same periods for some industries: Primary metals, 1.66, 2.19, 2.43; electrical machinery, 2.15, 2.36, 2.40; motor vehicles, 1.39, 1.74, 1.79; stone, clay, and glass, 1.53, 1.95, 2.14.

For soft-goods makers the inventory sales number was unchanged in the early 1958 months, although it was higher than a year ago. Textiles, oil, chemicals, and rubber suffered the biggest rises over the year; food and tobacco manufacturers worked their ratios down.

Durable-goods gains

At both wholesale and retail, durable-goods sellers accounted for all of the February worsening in inventory sales relationships. The wholesale ratio grew from 1.11 in February 1957 to 1.18 in January and 1.20 in February this year. At retail, the figures were 1.47, 1.46, and 1.51.

Retail food stores gained sales faster than stocks. But auto dealers' ratios jumped from 1.30 to 1.55 to 1.75. Smaller increases showed up in furniture and appliance outlets and the lumber, hardware, and building-materials group.

The striking difference between all soft- and hard-goods lines—lumping manufacturing, wholesale, and retail together—appears in this comparison: Over the year the durable-goods ratio worsened by 22 percent; for nondurables, less than 3 percent.

New Jersey Takes Lead in Broadening Educational Program of Teachers' Colleges

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the New Jersey State Board of Education is taking steps to broaden the educational program of New Jersey's 6 teachers' colleges, and even last year declared that "recent changes in the curriculums of the teachers' colleges have made their eventual transition to multipurpose colleges possible and perhaps inevitable." At that time the board recommended further curriculum changes to include more courses offered in general colleges.

This change and the necessary enlargement of the facilities at the six colleges would, I think, be the ideal solution to what many educators say is one of New Jersey's chief school problems: the shortage of general colleges in the State. This shortage forces many of New Jersey's students to go to other States to complete their education.

Mr. Speaker, I was deeply impressed also by something Adlai E. Stevenson told some 10,000 teachers at the convention of the Florida Education Association recently. He said that if the Nation's schools have become too soft and have put too much emphasis on the frills, it is only because the people have brought it about by their own way of life. The New York Times reported that he said, "We put the no-shift automobile ahead of abolishing the two-shift school."

Mr. Stevenson recommended that Congress set up a joint committee on education and a council of educational advisers to the President, and require an annual report by the President on the status of education. These are excellent suggestions and, if carried out, would make a decisive contribution to education in this country.

I include here 2 articles from the Courier-Post of Camden, N. J., and 2 articles from the New York Times:

[From the Camden (N. J.) Courier-Post of April 24, 1958]

COLLEGES IN PROCESS OF CHANGE

New Jersey's six teachers' colleges are no longer to be known as such.

By order of the State board of education they will simply be called "State colleges" from now on.

The change, for the present, is merely in the interest of simplification. State Education Commissioner Raubinger says the new names do not reflect a change in the principal function of the colleges, that of preparing teachers. At this time admissions will continue to be limited to applicants with this purpose.

Yet the name change probably does forecast a more drastic change to come in the near future, when the function of the six colleges will no longer be limited to schooling new teachers. Last year the State board said that "recent change sin the curriculums of the teachers' colleges have made their eventual transition to multipurpose colleges possible and perhaps inevitable." The board recommended further curriculum changes to include more courses offered in general colleges.

If the teachers' colleges do become general colleges, it will be in keeping with the trend of the times. Strictly teachers' colleges are disappearing all over the Nation. They aren't exactly closing their doors. Rather, they are opening them to other students besides those who expect to make teaching their career.

Early in the century there were more than 300 teachers' colleges in the United States, and they comprised one-third of all institutions of higher learning. Now there are only about 100, and they are only one-twentieth of all the colleges.

Missouri and Colorado are two States that have recently changed the names of their teachers' colleges and remodeled them into general, liberal arts colleges.

Only 23 percent of all new elementary school teachers and only 18.4 percent of new high school teachers now come from teachers' colleges, a recent survey by the National Education Association showed. Dr. Ray C. Maul, assistant research director for the NEA, says, "There's a growing realization today that the effective preparation of teachers depends on broad general education."

An unnamed eastern educator was recently quoted by the Wall Street Journal as saying, "Teachers colleges have done a remarkable amount of harm to United States education, and it's wonderful to see them fade away." He said they have overemphasized methodology at the expense of regular academic subjects, produced a generation of undereducated teachers, and also discouraged many able persons from entering the profession.

While the specialized teachers colleges are fading out, liberal arts colleges are taking up the slack.

"Many liberal arts institutions now are rediscovering teacher education after having completely defaulted in this area for many years," says Dr. Philip H. Coombs, secretary and research director of the Fund for the Advancement of Education. "At the same time, teachers' colleges are in the process of becoming general colleges. Thus, a new synthesis is emerging—one which will enormously improve the caliber of teaching in the United States."

If these men are right, we can view the metamorphosis of the teachers colleges without alarm. What is more to the point, so far as New Jersey is concerned, is the fact that if and when the teacher colleges are transformed into general colleges it will probably be a great deal easier to get additional funds for them.

A bond issue of $76½ million for the teachers college and for various divisions of Rutgers has been proposed this year, but its prospects are dim. A year or two from now, if the teacher colleges become liberal arts colleges, the public might be induced rather easily to accept it.

The change, and the necessary enlargement of the six colleges facilities that would follow, might be the ideal solution to what many educators say is one of the State's chief school problems. That is the shortage of general colleges in New Jersey, forcing many students to go to other States to complete their education.

Though there is debate over how great this problem is, there is no doubt it exists. Conversion of the teacher colleges, together with adequate funds to follow through, could not only give the State all the college facilities its own students need, but enable it to invite others to come here.

[From the Camden (N. J.) Courier-Post of April 19, 1958]

NEW JERSEY EDUCATORS: COLLEGE HEADS LASH CRITICS OF TEACHERS

MONTCLAIR, April 19.— The presidents of New Jersey's six State teachers colleges have teed off on critics of teacher education who charge there is too much emphasis on how-to-teach courses and not enough of what to teach.

The presidents, meeting at Monclair College Friday, said in a statement: "Teacher education today is placing more emphasis than ever on scholarship and on the liberal arts."

"On the other hand," the statement continued, "it seems unwise and dangerous in these days to suggest that children be taught by teachers who do not have the benefit of current scientific information on how children think and learn, and how knowledge can best be presented."

REPLY TO SERIES

The statement came in reply to a series of articles in a national magazine which attacked teacher education for being too much concerned with education courses, and too little interested in other courses.

The statement said "this certainly is not true." It was signed by Michael B. Gilligan, president of Jersey City State College; Dr. Thomas E. Robinson, of Glassboro State College; Dr. E. deAlton Partridge, of Montclair State College; Dr. Eugene G. Wilkins of Newark State College; Dr. Marion E. Shea, of Paterson State College, and Edwin L. Martin, of Trenton State College.

"The trend in our colleges has steadily been toward more liberal arts education for teachers, with greater emphasis on the subjects they will teach," the presidents said.

MORE GENERAL EDUCATION

"That is the trend in almost all professional training, including medicine, engineering, law and journalism. Whenever preparation has been lengthened, it has usually been for more general education, not for the addition of how-to courses.

"Teachers educated in our colleges use at least two-thirds of their time for general education, and take as many courses in their major subjects as a liberal arts college would require.

"Within the limits of time available, our present teachers colleges achieve a reasonable balance betwen professional preparation, a broad education and thorough knowledge of one or more specialized fields which our students expect to teach."

[From the New York Times of April 25, 1958]

EDUCATION PUT FIRST IN STEVENSON PLEA

MIAMI BEACH, April 24.—Adlai E. Stevenson said tonight that education must have priority over all other civilian wants if the Nation was to survive the East-West struggle.

The former Democratic presidential candidate urged Congress to make a declaration of national education policy as it did—for the economy—in the Employment Act of 1946.

Mr. Stevenson told some 10,000 teachers at the convention of the Florida Education Association that education and employment are on the same level as far as national interest is concerned, both as to the number of persons affected and the long-term character of the issues presented.

Mr. Stevenson also recommended that Congress set up a joint congressional committee on education and a council of educational advisers to the President, and require an annual report by the President on the status of education.

If the Nation's schools, he said, have become too soft and have put too much emphasis on the frills, it is only because the people have brought it about by their own way of life.

"We put the no-shift automobile ahead of abolishing the two-shift school," he said.

He also said that the Nation had put too much emphasis on the bricks and the mortar of education rather than on the human side.

[From the New York Times of April 18, 1958]

EDUCATORS REPLY TO SCHOOL CRITICS—SPEAKERS AT MIAMI PARLEY CHALLENGE CHARGES THAT UNITED STATES SYSTEM DECLINES

(By Leonard Buder)

MIAMI BEACH, April 17.—The Nation's schools, which have come under mounting criticism in recent months, received strong support today at the annual meeting of the National School Boards Association.

While acknowledging weaknesses that must be corrected, several speakers asserted that schools were far better than criticisms had indicated. Some took issue with charges that American schools were inferior to those in other countries.

A strong defense of American schooling came from Dr. Lawrence G. Derthick, Federal Commissioner of Education. He said "Our best schools are unsurpassed anywhere in the world," but admitted that "unfortunately, we have poor schools, too."

CHALLENGES CRITICS

He challenged a criticism that fundamentals have been thrown overboard or rejected in American schools.

"Most boys and girls are learning the three R's and a great deal more," he said. "Tests made in various parts of the country show that students today rank better in many subjects than did their predecessors," he added.

"In the last 30 years, he added, public high school enrollment in general science, biology, chemistry, physics and basic mathematics courses has increased 74 percent, compared with an enrollment rise of 75.8 percent.

"Such facts certainly do not seem to bear out the charges of a radical decline in attention to the basic courses," he commented.

Everett N. Luce, association president, called on school board members to exercise leadership in developing understanding and support for the democratic concept of universal public education.

If they fail to do so, he warned, many critics of education now being heard may poison the progress we have made over 200 years in developing the best system of education for a democratic nation.

Regarding recent comparisons of American and Soviet education, Mr. Luce, said: "Why should we even for a moment consider an educational system that is designed to meet the needs of the State, not the individual?"

School boards must not overlook the need for improvements, he advised. He cited a general need "to toughen up the academic work and not be afraid to allow students to face the challenge of failure."

A message of greeting from President Eisenhower was read to the convention. The President said "our national security depends upon a strong and democratic system of universal public education."

More than 3,500 educators are attending the conference, which ends Saturday.

Self-Styled Educational Experts Blame Our Schools for All Our Political and Military Failures in the Missile and Satellite Field

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, since the Soviet Union launched an earth satellite last October, the Nation has been deluged with suggestions for revising American education. Somehow, self-styled educational experts in all parts of the country have concluded that the political and military failures which caused us to lose our superiority in the missile and satellite field should be blamed on the American school system.

Operating on this assumption, it has been suggested that a crash program of scientific education would close the gap that may exist between American missile prowess and Soviet achievements. Dr. Anne Hoppock, assistant director of elementary education, is one of those clear voices that has been raised against these dangerous assumptions. She has very wisely pointed out the dangers of any sudden departure from America's traditional concept of educating the whole man. Dr. Hoppock has very justly taken issue with those who would blame America's teachers and students for the failure of political and military leadership. I urge the Members to read her very fine address, delivered on March 26, 1958, before the National Department of Elementary School Principals in Philadelphia, Pa. I include her fine speech here as part of my remarks:

NO TIME FOR PANIC

(By Anne Hoppock, assistant director, elementary education, New Jersey State Department of Education, national department of elementary school principals, Philadelphia, Pa., March 26, 1958)

My topic is No Time for Panic. Now it may be no time for it, but we've had it. When sputnik soared into space and in a glare of publicity the first Vanguard fell, something unpleasantly like panic resulted. In a public beating of breasts and a bering of souls we expressed our fear and hurt pride to the world. Then came the inevitable scurry to place blame. Actually Russia's first in satellite launching did not result from lacks in our school system nor from strengths in the Soviet school system. But something had to be blamed and the public school was the safest scapegoat. A report on education in the Soviet Union was issued, widely misinterpreted, and overnight Russian education, this prime instrument for the preservation of totalitarianism, was hailed for its quality. Over a nationwide hookup, from the highest office in the land, came the suggestions that parents and board members in every community investigate their schools.

Now the people who prior to sputnik, had been damning public education, moved in from the wings to the center of the stage. They show little concern that our children are housed in basements and firehouses, jammed into overcrowded classrooms, operating on double or triple shifts, taught by undertrained and underpaid teachers. They just hold forth eloquently about the failure in education and the failure of the schools. They're right on hand with advice, and don't charge a cent for it. Lay it on, make it tough, speed it up, cut out the nonsense, stop fooling around with social adjustment, close the carnival, return to the basic subjects, segregate the potential leaders from the dolts and ditchdiggers. Particularly intensify the teaching of mathematics and science. Departmentalize the elementary school in order to train budding mathematicians and scientists. Pay mathematics and science teachers more. Put millions into scholarships and subsidies. Standardize the 48-State-school systems by means of a nationwide system of examinations. Take education out of the hands of professional educators, rants that crusading history professor, and put it under the direction of a national commission of physicists, chemists, mathematicians (and, of course, historians). Occasionally the proposals meet head on. Some accuse us of gearing teaching to the average and neglecting individuals. At the same time our friends in the Ford Foundation spend millions to show that masses of children crowded into an auditorium with plenty of TV monitors, can all be fed, electronically, exactly the same fare at the same time.

How shocking in this age of science to find how many presidents of universities, scientists, historians, admirals, novelists, news analysts are behaving so unscientifically. Without reference to the science of human development and learning, without firsthand knowledge of what goes on in public schools today, with inaccurate data, in short, without valid evidence, these self-appointed advisers make their sweeping generalizations.

One must assume that some who destructively attack our schools are careless or misinformed rather than deliberately destructive. We cannot afford to overlook the fact that some public statements are deliberately distorted by those who refuse to use the facts. The shameless telecast at the Alhambra High School with its silly emphasis on coeducational cooking is a case in point.

In this regard, let me call your attention to the strange similarity in the attacks on the schools which appear with remarkable regularity in the "big" media. It can hardly be an accident that the line is the same on many nationwide telecasts, in Time, Life, the U. S. News & World Report, in the elaborate brochures of the Fund for the Advancement of Education, and in the testimony of special pleaders in Washington. No less strange is the complete absence, during the past 3 years, of viewpoints which run counter to this line.

This is no grassroots movement. Those of us who make it our business to find what parents—all of the parents—are thinking, know that the vast majority of them believe in their schools. Sometimes they are critical and sometimes they are justified. But, in the main, they want the same broad, soundly based education for their children that the best of our profession wants. One wonders

how long they can keep a balanced point of view in the face of this widespread campaign to destroy their faith in the public schools.

LET'S TAKE A STAND

This brings me to the theme of this afternoon's meeting. No Time for Panic. I believe it is no exaggeration to say that a battle is being fought which will determine the course of elementary education for many years ahead. If this battle is lost, and with it the gains we have made during the past half century, it will not be because the majority of parents are convinced by the critics. It will be becaues we in the profession temporize and compromise, because we give up and give in. It will be because we abdicate the professional responsibility that has been assigned to us.

So I say to us all—now is the time to rally our forces and take a stand. Let's take a stand—in our professional organizations, at home in company with the teachers and the parents of the children, through available channels of communication with all the people of the community.

Our schools have not failed. Tell the people that they are being deceived when they are told that the schools have failed. Tell them that our American public schools are the best in the world. Our schools serve more children longer than schools anywhere in the world. Educators from the far corners of the earth come to study our educational system and seek our help in improving their own. Our schools have helped weld this Nation into a united people free of rigid class barriers. They have produced an amazing level of literacy. They have helped make possible our high standards of living, our advances in science including such lifesaving "firsts" as sulfa drugs and Salk vaccine. They have had much to do with keeping alive in America the sturdy spirit of freedom. Tell the people that much remains to be done (and always will) to discharge well that subtle, complicated, holy task of helping young human beings to grow and learn. But alert them to the danger that the critics, in their zeal to reform, may destroy; that the crusade to remake may force our schools down dreary blind alleys of wasted effort.

I have been saying, let's rally our forces and take a stand. In taking a stand, we have solid ground under our feet. I suggest that this solid ground consists in the purposes of the American elementary school, in our tested knowledge about growth and learning, and in what we know about how schools improve. In the time I have left, I shall discuss the stand I believe we can take in the light of these three—the purposes of the school, knowledge of growth and learning, and the intelligent processes of school improvement.

WHAT ARE OUR ELEMENTARY SCHOOLS FOR?

First, let's review the purpose of the elementary school in America. Now, when we are urged to ride off at full gallop in several directions, we'd better ask where we should be going. What do we believe to be the compelling purpose, the unique role, of the elementary school?

When I say "believe" I mean believe passionately with a sense of personal commitment so strong that it guides our decisions and determines our courses of action. I mean a commitment so strong that it helps us to take an unpopular stand. I do not refer here to those high sounding statements of purpose which are enunciated in speeches and then sold out when the going gets hard. I am talking about deep convictions which are so strongly rooted in our philosophy of living that integrity requires us to live by them.

As for me, I believe that the purpose of the elementary school is to help every child—every child—to be at the age he is, the best person he is capable of becoming. It is to help the children to live now and in the future as intelligent, contributing, democratic citizens of a nation belonging to a family of nations. There's nothing new in this. Perhaps it sounds a little trite. Perhaps it looks a little shopworn. But I implore you, if it does, pick it up and rub off the tarnish of lipservice and neglect and see it for what it is. It is democracy's charge to our schools, based upon the Judaeo-Christian concept of the uniqueness and preciousness of each human life, and the essential brotherhood of man.

Holding to this belief regarding the basic purpose of elementary education, we can surely take a stand.

ALL CHILDREN ARE WORTH EDUCATING

We can deny that some children are more worth educating than other children on the assumption that they will make a greater return to society. We can insist that our resources of time, effort and money to be used to provide quality in education for every child. We can point out that all children have gifts, all have a right to develop them, and that the gifts of all are needed to give balance and richness to our communities and our Nation.

LEADERSHIP IN A DEMOCRACY

Holding this belief regarding the purpose of the elementary school we can repudiate the idea of educating an intellectual elite to lead the unqualified masses. In this country we do not seek leadership by a qualified elite over the masses of the unqualified. Leadership of the kind we desire does not reside in a few. It is found in many human activities in humble as well as in high places. Remarkable intelligence or outstanding academic achievement alone does not assure that a person will become an effective leader of other people. Other qualifications are important, among them the ability to communicate with, and be sensitive to the needs of all the people concerned. Certainly it is reasonable to suppose that leadership of the kind valued in a democracy cannot be developed if those who are to learn it are separated from the group in which it is to be exercised. Burton Fowler, in a speech at the Harvard summer session last summer, talked about values to be sought in educating children of unusual intelligence.

In our eager quest for gifted pupils, I hope we shall not overlook the fact that a gifted pupil is also a giving pupil. According to my definition, character is caring intelligently for other people and I cannot attach much importance to an intellectual who is devoid of character; nor can I conceive of character without social responsibility. I am sure that in the main it is true that we have failed to challenge the ability of many of our intellectually ablest pupils, but let us not make the mistake of thinking that such rare birds are going to be trapped solely by hard work, I. Q.'s and examinations. In striving for excellence in the academic achievement of our superior students, I see no reason why we should throw overboard the balance of values, the new and richer curriculums for which we have been striving for the past half century. Let us not make the gifted student another one of those fads, for which American education is supposed to be famous. Experimentation should not be stifled by extermination. The Quaker use of concerns means exactly this, caring intelligently about a condition, a need, or even an idea that may involve human welfare.

Bonaro Overstreet has expressed such a concept in beautiful simplicity. "I do not ask of any man alive that he know all the answers. I only ask a great caring—an honest and humble caring about what happens to human beings and their hopes. And that I ask as much of myself as any other. Help us to make sure that no individual is ever forgotten. That is my prayer for the students we call superior."

THE STATE FOR THE CHILDREN

If we hold to the central purpose of elementary education, we can certainly resist a trend which we might label the children for the State. The admiration expressed in some quarters for Russian education, for example, see last week's Life magazine, is alarming. An educational program designed to help each child develop his gifts will help make our Nation strong. But when we approach educational planning from the standpoint of the good of the State rather than of the individual, we are moving toward totalitarianism. We are moving in this direction when we "toughen up" and "speed up" the program beyond the readiness of the children involved. Education for the state in Russia is reputed to be speeded up and tough. But at what price? For example, of every 1,000 first graders for whom schools are available, only 125 survive to complete the 10-year school. This is a mortality of rate more than 87 percent. It's time to paraphrase a famous phrase and say, "What is good for the children is good for America." We must not offer up our young, like lambs for the sacrifice, on the altars of our national pride.

The basic purpose of elementary education says to us: Keep and strengthen the elementary school as the workshop, the laboratory of democracy. Keep its curriculum broad based, so that gifts of many kinds can reach fruition. See the wide range of differences within it not as a necessary evil, a thing to eliminate by testing and sorting and segregating, but as a most important educational resource. Here is the elementary school the Nation provides its most intensive and widespread opportunity for children of different backgrounds and abilities to respect, appreciate and help one another. Here a cross section of the community's children learns to formulate common purposes and plans, to use many kinds and levels of contributions in carrying out the plans, and to share satisfaction in the outcomes they have achieved together. Our democracy is rich and strong because of the diversity within its unity. Rather than narrowing the range of differences in classrooms in order to get what looks like efficiency in teaching we might better think, as some of us do, how to broaden the range of differences in age, backgrounds, and kinds of abilities in order to achieve better the purposes of education in a democracy.

WHAT DO WE KNOW ABOUT GROWTH AND LEARNING?

Second, let's take a look at what we know about children and learning, from research and from years of living with children in the elementary school.

We know a great deal about children and learning. We may not know as much history as the historian, or as much science as the scientist or as much mathematics as the mathematicians. But we know, or should know, more than any one else in our communities about how children develop and learn and the kind of learning environment they need.

There is an assumption being assiduously promoted in some circles that educators are quacks and crackpots, that modern practices in education are a result of ignorance and prejudice. You who are students of education, keeping abreast of research in human growth and learning and in allied fields, know that we do not have to apologize and defend the change and growth that has steadily taken place in our good elementary schools. These changes are based upon the slow, steady accumulation of knowledge, growing from research and experimental study.

TIME TO GROW

For one thing, we know that children, in moving from birth to adulthood, go through an orderly, predictable pattern of growth

and development, that this takes its foreordained time, and that it cannot be speeded up. Man's inventive genius has resulted in some fantastic changes but it has not so far changed the facts of human development. Children still must have time to grow. We push and drive them at their peril and ours. No national emergency justifies the exploitation of children.

When we apply the "time to grow" concept, we have a basis for taking a stand. We can resist moves to rob children of their childhood. We can look critically at proposals to enter intellectually able children in school earlier than other children, to deny them the creative experiences of the kindergarten in order to get them into symbols and abstractions, to hurry them into high school and college earlier. We can say that the elementary school is not a preparatory school for the high school. We can resist pressure to move high-school subjects down into the elementary school so as to allow the college to move its subjects down into the high school.

Education must help children assimilate the culture. Large bodies of knowledge and skill are developing in some fields. But no good purpose is served in forcing upon young children large doses of subject matter or drill of a kind they cannot understand and use.

We must tell our people what this means. For example, we can lead them to question foreign language teaching in the elmentary school in communities where children have no opportunity to use a second language and can learn it only as a kind of trick or game.

We can tell our people that science was introduced into the elementary curriculum 75 years ago and that in good elementary schools children were exploring their natural and physical environment long before sputnik went into orbit. But the elementary school isn't the place to train scientists. We can pass on Glen Blough's good advice which is, in effect, "Let's not worry about keeping up with the Russians. Let's just keep up with the children."

Time to grow and time to live. We adults sometimes seem like the rabbit in Alice in Wonderland, hurrying madly along crying, "I'm late, I'm late." How can we harmonize the shocking incidence of mental illness and heart disease, our stomach ulcers, and our tranquillizers with pressures to drive the children, expressed in demands—"speed it up, toughen it up, pile on the homework, less play—throw out the frills. We and the parents of the children must remember the importance of time to grow and time to live.

TEACHING ISN'T TELLING AND TESTING

We know other significant facts about children and learning. We know that learning is goal seeking. We know that learning takes place in many active ways. We know that real learning is learning to act. We know that a child learns best when he is helped to see himself as worthy, valued, loved. We know that the teacher-child relationship is crucial. We know that when teachers are able to employ sound principles of learning, great power to learn is released. Knowing these things we deplore the fact that in some schools, teaching is still perceived as pouring in, that the curriculum still consists of Slavish adherence to textbooks and workbooks, that individual needs are neglected, and that a premium is placed upon the passive following of directions all day long.

Those of us whose knowledge of learning impel us to operate elementary schools as purposeful, active, reality based, friendly communities of children are appalled by so-called experiments to introduce mass methods of teaching—by telling—as represented by television teaching.

A TALKING PICTURE OF A TEACHER

I spent 2 days recently in a county where teaching by TV, financed by the Fund for the Advancement of Education and equipped by the electronics industry, is in its second year. I sat in classrooms from the first grade through high school and watched teaching by telling in reading, number, social studies, and art in the elementary school, core in the 8th grade and geometry in the 10th grade. I saw passive, and frequently apathetic children, total dependence upon the lecture method, classroom teachers playing a minor and ineffective role, in the junior and senior high school large numbers of children herded together with TV monitors spotted about the place. More pitiful than anything else was the inactivity of the children. They watched and listened. In the communication arts, they spoke not a word; in the graphic arts, they were given models to copy. The TV teachers asked all the questions and answered them; they made all the plans and carried them out; they created all the demonstration materials and demonstrated them. In short, they robbed the children of all opportunities to learn through active participation.

We were told that outstanding teachers had been chosen to become TV teachers. If so, one can hypothesize that good classroom teachers do not necessarily become good TV teachers for never have I seen poor teaching so widely disseminated at such great expenditure of time and money. It was tragic to see these TV teachers working so hard in their studio vacuums, not able to see how children were responding, not able to adapt to individual needs, hopefully shooting their arrows of pedagogy into the air.

Although this particular project has received much favorable publicity, we were told that after 1½ years of operation, plans for evaluation are still to be formulated. Evaluation by qualified persons should be forthcoming. I do not believe that we can assume that evaluation by the electronics industry is either informed or wholly disinterested. Until there is evidence to the contrary, I think we can take a stand that no talking picture of a teacher, no flickering shadow on a screen, can take the place of a good teacher working with a reasonable number of children in a well-equipped classroom.

We have yet to face up to the question of what television can do that a teacher cannot do, or that the available wealth of films, records, trips, and other audio visual aids cannot do. Probably, television has a unique role. But I, for one, am convinced that it cannot be used to solve the teacher shortage without doing serious damage to our schools. And let us not assume that such mass methods as TV and teacher aids are necessary to solve the teacher shortage. There will be enough teachers when we make teaching sufficiently attractive.

We have been talking about using what we know about teaching and learning.

HOW WASTEFUL NOT TO USE WHAT WE KNOW

Why repeat the mistakes of the past?

Take for example, the demand for more homework. Research evidence shows that there is no significant relationship between time spent in home study and pupils progress and achievement.

Take the proposal to departmentalize the elementary school in order to employ specialists in science and mathematics. We went through this at the beginning of the century. On the basis of this experience we have moved away from departmentalization in the elemntary school, a trend which has reached into the high school. Study of the research shows that departmentalization has not been proved to be superior at any level of the public school system.

Take ability grouping which is now being promoted as a way of meeting individual needs, particularly of bright children. Ability grouping was a fetish from 1920 to 1935. We have been moving steadily away from ability grouping in the elementary school. There is no adequate research evidence to support ability grouping and some evidence to show it is least effective for bright children.

Take testing. We seem about to go all out for systemwide, statewide, nationwide testing. During the scientific movement, we learned a great deal about the use and misuse of tests. We know now that tests can be useful to a teacher or a school staff as one of many ways of assessing status and need. We know that indiscriminate use of tests limits the curriculum to the narrow range of what tests can measure and promotes memorizing, cramming, and teaching by telling and testing. We know the damage to children in the misuse of tests. For example one board of education, spurred on by a report on acceleration from the Ford Foundation, issued a directive that group tests of intelligence should be administered and all children of a given I. Q. and beyond should be accelerated a year.

HOW DO SCHOOLS IMPROVE?

Third, let's look at what we know about how schools improve.

Let's be clear about the need for school improvement. No school is perfect. No school stays good unless it is continually in the process of improving. Some schools are poor. The question is, How do we make them better? How do we build instead of tearing down? What are the lines along which we must move?

WE HAVE TO SPEND MORE MONEY

Let's say again for the record, we have to spend money. We know that many children will continue to be sold short in this country until we build more classrooms, reduce class size, purchase more learning materials, educate more teachers, bring teachers' salaries to a level where good people can be recruited. A Federal program designed only to shore up mathematics and science at the secondary and college level is like putting a fancy roof on the barn while the foundation crumbles.

THE STAFF LEADS IN SCHOOL IMPROVEMENT

Money is necessary but in itself it will not produce good education. School improvement requires professional know-how. We are becoming aware that the individual school is the basic unit of curriculum improvement and that the principal and the staff, with the help of the children and the parents, are the prime improvers. Thus the curriculum of the school is developed to meet the particular needs of the children and the neighborhood.

This concept of a school-created, continuously improving curriculum requires us all—teachers and principals, and others involved—to perfect new skills. We must learn the processes of on-the-job curriculum improvement—to study the status and needs of children; to identify points at which the curriculum needs strengthening; to select, test, and evaluate procedures leading to improved learning. Because curriculum improvement is a cooperative process we must learn satisfying, productive ways of working together.

Evaluation is important in this process of school improvement. I hope we can learn to use it increasingly well as an integral part of curriculum planning. Let's not be pushed into using it just to show the critics we're not as bad as they say we are. For if we do we will be missing evaluation as it has been misused in the past. The consisted in reducing the complex personal elements of teaching and learning to a checklist, used once over lightly by a visiting committee to arrive at rating of good, poor, or terrible. This kind of evaluation is operation dead end.

An intelligent, reasoned process of curriculum improvement takes time as well as professional know-how. Crash programs may be appropriate for missile production, but not for teaching children. Nor, to mix a metaphor, can we stir up a curriculum as

we would a cake, with an extra cup of homework or science or discipline to get the quantity or flavor demanded by the public before next week.

A FINAL WORD

Someone has said that the greatest danger of our times is the danger of losing our humanness. I take this to mean that we are in danger of becoming diminished in stature as reasoning creating, self-respecting, loving, difference-making, human beings. Life is becoming increasingly impersonal. Many people work at jobs which make little demand upon their intelligence and creativeness. As leisure increases so do temptations to use leisure in the passive consumption of other people's products. Through mass media we are told what to think and encouraged to be just like the Joneses only more more so.

We live daily with situations which shame and threaten our humanness—food surpluses spoiling while famine stalks the earth, the frustrating conditions which produce juvenile crime, the southern Little Rocks and northern Levittowns. And who among us is not filled with despair to think that our most urgent goal seems to be to make more, and more deadly weapons than our cold-war enemy? Having poured into this goal fabulous resources of money and brains, diverting them from humane uses, what do we have? Only weapons so horrible that we dare not use them lest we reduce our world to a radioactive ash heap.

Leonard Wibberley, author of Take Me to Your President, wrote about the threat to our humanness in a syndicated column called the Challenge of Outer Space.

"I do not doubt for a moment that, within the decade, mankind will invade the moon. But what concerns me is the kind of man who first disturbs with his ponderous feet the dust of the lunar landscape. Will he be merely a highly trained calculating machine, putting his trust in his knowledge of science and mathematics or will be be in addition to this, a rounded human being, skilled in technicalities as he must be, but conscious of and humble before, the great questions of creation, of life's miracle and death's mystery? Will he take with him but a few volumes of scientific works with which to ward off the black cold of spacial solitude? Or will he carry with him that love of beauty, which is love of truth, which is love of God, which is the foundation stone of civilization?"

Let's go home from here dedicated to the proposition that we will do no good for our children by moving in what I can think of only as a dehumanizing direction. This dehumanizing trend is represented for me by such words as segregation, departmentalization, acceleration, standardization, regimentation, automation.

Let's go home resolved to make our elementary schools a place where each child counts for something where he respects himself and finds himself, where he develops some compelling interests, where he begins to see himself as his brother's keeper, where he learns to live values which will help him find his way in this time of value conflicts. Don't segregate him; bring him into closer human sympathy with his fellows. Don't departmentalize and fragment; help him to experience the wholeness of learning and living. Don't accelerate; give him time to explore his world in depth and breadth, to think with and feel with and use the content of his curriculum. Above all don't automate, for this is the way to produce a terrible travesty of the thinking, creating, contributing human beings we want our children to become.

Let's go home with a renewed determination to exercise leadership in the interests of children, even if this means living dangerously. No battle for democracy is more crucial than this one to keep the elementary school a place where democracy lives and, with each new generation, renews itself.

Mostly Sweat

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. GOLDWATER. Mr. President, for 30 or 40 years now, the Arizona Republican, one of the leading daily newspapers in Arizona, has been holding a pioneer's reunion for those who came to Arizona before 1890. This year they were addressed by Mr. Bert Fireman, who not only is one of the State's leading newspaper reporters, but also is recognized as being one of the outstanding historians of the Southwest.

At the meeting, Mr. Fireman addressed the pioneers of Arizona on the subject Mostly Sweat. He recalled to their minds that what it took to build the West was not the six-shooter, not the drunken cowboy in the saloon, not the honky-tonk girl at the honky-tonk piano, but God-fearing people who were honest and who believed in work.

I ask unanimous consent that Mr. Fireman's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MOSTLY SWEAT

(Remarks of Bert Fireman at Arizona Pioneers Reunion, Phoenix, Ariz., April 12, 1958)

Mr. President and pioneers, I warmly appreciate the invitation I received to speak to the pioneers reunion this year. It is my first appearance at one of these delightful gatherings. Until Senator GOLDWATER explained to you how he happened to attend the first reunion, I was not clear myself how I happened to stay away all these 34 years. BARRY explained that your first reunion was held at Riverside Park and that he went there to go swimming at the opening of the swimming season. There is the difference between the Senator and myself. He was a city boy and probably had the dime it cost to go swimming in those days. I was a country boy living out in the boondocks, so I missed your reunion. I went swimming in one of our irrigation canals.

I am sorry that I am not eligible for membership in your association. I came to Arizona when I was 4 years old, but I can say that I have grown up with our State. I refuse to accept the idea that anybody who has been here 5 years and already has a $10,000 mortgage on record is a pioneer. I prefer the idea that the real pioneers of Arizona are those who lived here before coolers were invented, and were hardy and sturdy enough to survive those really hot years. Anybody who slept in his backyard because the house was an oven—and I'm sure that includes everybody in this audience—knows exactly what I mean.

Those of you who came to Arizona before 1890 or were born here don't have to explain or worry about your qualifications as pioneers, as I do. I feel sorry for anybody, however, who has to listen to young squirts like me talk about pioneer days.

My mention of days when summers were really hot around here—before science and refrigeration changed them for the better—brings me to the title I have been chosen for this little discussion with you, "Mostly Sweat."

Most of the progress Arizona has made was due to the sweat of the explorers, the trappers, prospectors, soldiers, cowmen, railroaders, farmers, merchants, and others who built it. Lately, the tourists who have been coming here in increasing numbers to enjoy our winter sun have made their contribution along this same line, for they come to enjoy a good sweat under the sun while snow and ice covers their homes in less-favored areas.

Let us begin this discussion with an examination of Arizona history, to see if the facts of our development bear out my theory that mostly sweat built Arizona.

We can start with Captain Alarcon, who in 1540 led an expedition that sailed up the west coast of Mexico to the Colorado River. His purpose was to accompany Coronado's expedition that was moving overland in search of the fabled Seven Cities of Cibola. Alarcon's ships carried supplies for Coronado's men and were supposed to carry back the treasure that the Conquistadores believed would be found in Arizona. They were to be disappointed, but nevertheless in the summer of 1540 Alarcon reported that he found the native Indians of Arizona carrying little scrapers to wipe the abundant sweat off their bodies. And they sweated aplenty as they willingly helped to pull Alarcon's boat up the Colorado River. From descriptions and distances given it appears that they went as far as Ehrenberg. Failing to make contact with Coronado, they turned back.

Father Kino—that greatest of the missionaries in our history—came 151 years later. He used no word as inelegant as sweat in his diaries and journals, but accounts of his travels make it plain that sweat and scratches from cactus were part of the burden he patiently bore in bringing Christian salvation to the Pima and Papago Indians who welcomed him to the deserts of southern Arizona.

Seventy-five years later Father Garces explored along the Colorado River, visited the Hopi Indians in northern Arizona, and built a mission at Yuma. He extended the good works started by Father Kino in building the original Mission of San Xavier del Bac, near Tucson. Then he died a martyr's death on the Colorado. There was sweat on the good padre's brow as he carried the light of Christendom to far corners of Arizona.

James Ohio Pattie and his father trapped the Gila and San Francisco Rivers for beaver soon after 1825. For a while they lingered among the hospitable natives at Yuma. They found beaver hunting hard work. They sweated for every pelt taken, and they were in a cold sweat most of the time for fear the Apaches might take their pelts or scalps, even though scalping was not an Apache characteristic.

Old Bill Williams came soon afterward. This most romantic of Arizona's mountain men and guides sweated in his buckskins as he trapped the streams of Arizona and stole horses down in Sonora. His profuse sweat made his buckskins oily, dirty, and smelly, but it did not reduce the importance to Arizona of his early explorations.

In 1846 the Mormon battalion crossed Arizona in the most remarkable military march in American history. I am sure that proud descendants of those foot-weary, sweating volunteers are in this gathering today, and they have every right to be proud of the battalion's accomplishments. It was faith, courage, determination, hope for a better life for their families and for their people, the Mormons, but still mostly sweat that sustained them on that magnificent march across the desert to help in the conquest of California.

The road they built during their march, which came to be called Cooke's Road, was followed by the Argonauts in the gold rush that followed soon afterward. And what do the accounts of those early journeys made by the gold seekers tell us? Did they have Indian troubles? Yes, some; but only a few. Hundreds of wagons passed safely for every one that suffered from Indian raids. This was in the period before the Apaches were aroused to hatred of Americans. It was a dry journey, the roadway often moistened only by the sweat of the struggling travelers. They sweat to lead or drive their oxen. They sweat to cross deserts and ford such streams as there were. They sweat to find and cut feed for their animals. They sweat to hunt food to supplement the rations they carried. They sweat to fix their wagons and sweat to follow the trail to the next precious waterhole.

The Civil War followed in a few years. Troops were withdrawn from Arizona to New Mexico to meet a Confederate drive toward Colorado. For the first time Indian outbreaks became a major issue in Arizona. Slaughter and strife followed the Apaches' mistaken notion that they had driven the whites from Arizona. Killings were frequent. Travelers, miners, and settlers died in the relentless flood of Apache attacks. But a few pioneers stuck it out. Pete Kitchen was outstanding among these. He stuck to his farm on Potrero Creek down in the Santa Cruz River although his Opata Indians had to stand guard around the clock and carried rifles on their plows. Meanwhile Charles D. Poston hurried to Washington to lay the problem of Indian uprisings before President Lincoln and the Congress, and he succeeded in obtaining Territorial designation for Arizona.

The Joseph Walker party came into Arizona exploring for riches. They had a few brushes with Indians, but most of their effort was devoted to hunting for gold, building cabins, finding food, finding water, digging in the Hassayampa River and Lynx Creek for pay dirt. Their lot was mostly a matter of weary toil and sweat, and most of them failed to make fortunes.

The Territorial party arrived in Arizona and soon Prescott was being built. More sweat. Those early settlers of Prescott and the pioneer farmers in the Verde Valley had Indian troubles of increasing intensity. They found that the Indians would attack them while they were busy with the hard work it took to win the wilderness. The Indians would attack while they were cutting timber, plowing, digging ditches, mining—while the white man was sweating.

A string of military posts was established across Arizona to protect the settlers. Ask the old soldiers among you about the romance of a soldier's life on the frontier. Yes, a few of them saw Geronimo and Victorio. Some even fired at hostiles sometime or other during their service. But during the long years of the Indian wars thousands of soldiers were stationed in Arizona who never fired a gun in anger. A soldier's life was mostly drudgery. It was a matter of endless patrols, of cutting hay, shoeing horses, hunting lost mules, building posts, standing watch, and always sweating it out until that happy day when his discharge would come through.

Then followed the days of the big cattle spreads, of mining development, of permanent setlement in the farming valleys, of railroad and highway building. All these things meant more sweat for the pioneers.

This was a harsh land. It was hot, dry, and roadless. The Indian danger always existed, but actually it was a lesser difficulty than the endless struggle against the elements. It was a life of work and toil and sweat that was required to win homes in the West.

The miners single-jacked into rich ledges and many poor ones.

Woodcutters scrambled over rugged hills to cut down forests to feed the boilers at mines and the stoves in homes.

Watercarriers hauled water on the backs of burros or built pipelines or flumes to bring water from mountain springs to towns and mills.

The teamsters' and hostlers' life was not an easy one with long wagons hauling supplies or ore. The necessities of life had to be imported from California or from as far as Guaymas in Mexico by pioneers like Senator GOLDWATER's grandfather.

The Upper Gila Valley was first occupied by charcoalmakers engaged to cut mesquite trees and burn charcoal for the smelters at Clifton.

The Salt River Valley was settled by the Swilling party to raise grain, sweet potatoes, and vegetables for the soldiers at Camp McDowell and the new thriving mining camp built up around the Vulture Mine near Wickenburg.

The dambuilders toiled in sand and mud, hauling willows and rocks to rebuild the crude brush dams that spring floods destroyed.

The farmer fought sand, gophers, and jackrabbits.

Cowboys had to overcome drought, disease, and long distances to market stock as well as outlaws and Indians. Ask any cowboy among you—and there are a great many in your ranks; ask him if he spent more time digging postholes and stringing barbed wire (or bob wire, as he probably calls it) and treating sick and cut cattle than he did at rodeos in town or in twanging a guitar. He'll tell you the truth—a cowboy's life was hard work, lots of sweat.

The homesteader, the farmer's wife, the merchant, laborer, sanjero, miner, miller, roadbuilder, teamster, woodcutter soldier, cowboy—these are the men and women who built Arizona—and they did it mostly with sweat.

Now for a moment let's look at the terrible thing Hollywood and TV have done in distorting the history of the West.

Today Gunsmoke, Tombstone, 26 Men, Sheriff of Cochise, and Wyatt Earp are among the most popular cowboy shows that are seen and heard on every television set. They have displaced Hopalong Cassidy, Lone Ranger, and Cisco Kid, which were the favorites a very short time ago.

The change has been mostly in the titles, not in the plots. There has been little change in the ugly, unjustified misrepresentation of true western life contained in such shows. The plots are still trite, distorted, and misleading. They do a great disservice to the true history of the West.

These plots are always about the same. There is a good man and a bad man. Usually the good man rides a white horse or wears a white hat. The bad man by the same standard must wear a black hat or ride a black horse, and if he doesn't do that he simply doesn't shave.

These TV cowboy movies constantly abuse the facts with that old malarkey about the sheepmen and the cattlemen being at war. They say that sheep and cattle won't drink at the same waterhole. How absurd. Your Vice President Lou Charlebois, sitting here on the stage, told me just a little while ago that he has been running sheep and cattle on the same range for 50 years.

Usually the villian is represented as a banker, a merchant, or the sheriff, as characters who generally were respected and honored in Arizona for their important part in the community life. Whether they are deliberately subversive or just plain stupid I don't know, but the Hollywood hacks who write these shows and produce them seem to ignore the basic, truthful facts of western history.

Now, I do not deny that such things happened in isolated cases. There have been many exciting, romantic, and humorous episodes in the colorful history of our State. I do not even object to these narrations so long as they are done truthfully, honestly, and with reasonable and proper explanation that violence and bloodshed were not approved and were never condoned in pioneer Arizona. Most of our people have always been law abiding.

I might remind you that much of the basic colonization work in Arizona was undertaken by two great religious groups, as church-supported action. Both the Catholic and the Mormon churches have always stood for decent things in family and community life. Their good work should not be so grossly misrepresented. It is a criminal distortion.

Hollywood writers have many warped views of history.

By glorifying badmen, they set a bad example for our young people.

They corrupt children's sense of true historical values.

They encourage gunplay by overemphasizing its importance and frequency. In the last year here in Arizona more than a dozen persons shot themselves and required hospital care by practicing the kind of quick-draw nonsense that is played up in movies and TV shows.

They give the impression that violence was the everyday pattern of life in the West rather than the acts of hoodlums, gangsters, underworld characters—and that the actions of this small group was not approved by the vast majority of the population.

They don't tell you that two churches were built in Tombstone the same year as the fight at the O. K. Corral.

They don't tell you that Wyatt Earp owned a gambling joint and lived with a lady of the night while posing as a pious disciple of law and order.

They don't tell you that most of the men in Arizona and in Tombstone even, in the eighties, didn't carry guns—except to shoot rattlesnakes, hunt for food, and if cowboys to kill some critter that might have broken a leg. In fact, much of the Tombstone trouble was caused by the very local ordinance that prohibited the carrying of firearms in the town. That was the direct cause of the fight between the Earp crowd and the Clanton boys.

They don't tell you that the good people of Arizona despised the likes of Curly Bill, Blackjack Ketchum, Johnny Ringo, and Pearl Hart.

They don't tell you that the Ten Commandments, good citizenship, church membership, charity toward those who were unfortunate, that family ties, and love of country were the solid principles upon which Arizona was won from the wilderness and became prosperous.

I must tell you what I believe about Arizona history.

I believe a callus on the palm of an unknown woodcutter was more important in Arizona's development than a notch on Wyatt Earp's gun.

I believe the shovel was a lot more important than the six-gun.

I believe the church was more important than the gambling hall.

I believe that an immigrant's wagon being ferried across the Colorado River on the trail from Utah to Arizona was more important than a stagecoach robbery anywhere.

I believe the tiny wisp of smoke from a prospector's fire on the desert was more important to Arizona's development than all the gunsmoke at the O. K. Corral.

And I believe that when BARRY GOLDWATER's grandfather opened a sack of beans because some miner was hungry, that was more important than when another "bucket of blood" opened on Whisky Row in Prescott or Brewery Gulch in Bisbee.

I am convinced that the true values of American life have not changeed through the years although there are marked differ-

ences in the particular obstacles and problems faced at different times.

Americans still seek opportunity. That's why pioneers came West 175 years ago, and that's why lots of people are still coming out to Arizona to live today.

Americans still love their homes, their families, and their country. That's why you and your parents fought for a place under the sun. That's why you stood up against Indian dangers, against bad men, and why you so willingly fought when you were needed in the Armed Forces in our Nation's war against external enemies. That's why your grandsons are in uniform.

Americans still believe in private initiative and private enterprise. That's why rugged pioneer types went into remote corners of Arizona, despite dangers and a harsh nature, to face the challenge that each man finds within himself. This is a challenge to stand on his own feet, to make his own way, to find his own destiny. This is the true pioneer spirit, but it is a spirit I am sad to say some of our people have lost in seeking the paternalism of government instead of opportunity to better themselves.

Americans have supreme faith in the principles and freedoms that have been sustained in the West and demonstrated so remarkably by pioneers.

I wish the movies and TV shows would present this side of western history.

I salute you for coming here for these delightful gatherings with your old friends, and I grieve with you that each year there are fewer who can return. I salute you for listening to me so patiently, for your long life, for your contribution to Arizona's development, and mostly for the sweat you contributed as your part of our State's splendid pioneer heritage.

Sputniks Versus Economiks

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. MARTIN of Iowa. It is my sincere conviction that if the underdeveloped countries are to realize the benefits of modern science and technology and improve their standards of living, they must develop private enterprise patterned along the lines of our own highly productive economy. Many people forget that the United States was an underdeveloped country but a few generations ago.

While there are many proposals constantly before the Congress to appropriate funds through public agencies, the advancement of the underdeveloped countries requires techniques which only private enterprise can bring. One of the most significant actions our Government has taken was the approval of United States participation in the International Finance Corporation. It is a unique agency in that it supports private enterprise efforts throughout the world. It has been unusually successful under the inspired guidance of Robert L. Garner, its president.

Mr. Garner believes:

That the United States Government could properly give a substantial impetus to the export of our private enterprise, if it would accept that this is a vital factor in the national welfare and security:

1. A positive policy to encourage investment abroad by American business and capital.

2. Development of tax incentives—a more effective stimulant than guaranties.

3. Farm support of the rights of American business operating abroad.

4. Restraint in giving financial aid to governmental enterprises in the fields suitable for private business.

Mr. Garner showed how we can further enhance the role of private enterprise in economic development in an address delivered at the Fourth Annual National Military Industrial Conference at Chicago on February 18 of this year. I ask unanimous consent that his address entitled "Sputniks Versus Economiks" may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPUTNIKS VERSUS ECONOMIKS

(By Robert L. Garner, president, International Finance Corp.)

The launching of the sputniks into outer space obviously represents another major breakthrough in this accelerating scientific age.

It is a dramatic demonstration of man's infinite capacity in the area of physical matter.

What it will mean—in military, political and scientific terms—is being appraised or guessed at by others far more competent than I.

MAN STILL EARTHBOUND

However, I am confident that it does not mean escape from the basic facts of life and the problems inherent in human nature, in man's emotions, character, hopes and fears, and in the necessity to earn our bread if we are to eat it. Not on the moon or in stellar space will we get away from the principles of nature, of morals and ethics, of economics.

Long before sputnik, scientific advances had far outstripped man's progress in political, social and economic organization, in self-knowledge and discipline, in wisdom and judgment. Now as he spreads his range beyond his own planet, man needs ever increasing strength and wisdom to manage the awesome powers he has created.

This is one of the challenges of sputniks.

Another challenge comes because this and other parallel triumphs of science are in the hands of the Russian Communists, and thus available for their hostile purpose.

THE OPPOSING CREEDS

It is never time wasted to review the nature of the Communist challenge.

Communism holds that since science can change the material world, it can change human nature. Put another way, communism asserts that a free individual is no match for the problems of today, and that man is only free when he relinquishes his self-identity to the state. Thus Communist society is to produce a superhuman being.

Communists believe that they alone understand the laws governing society, and that this knowledge gives them the power and right to change all society and all human nature and to control them both.

Communists realize that they cannot succeed in this purpose until all economic, political and social systems that deviate from their own have been destroyed.

This is their creed.

Set against it, a creed appropriate for us has been well stated by Dr. Albert Schweitzer.

"Man's ability to be a pioneer of progress, that is, to understand what civilization is and to work for it, depends on his being a thinker and upon his being free. He must be the former if he is to be capable of comprehending his ideals and putting them into shape. He must be free in order to be in a position to launch his ideals out into the general life * * * material and spiritual freedom are closely bound up with one another. Civilization presupposes free men, for only by free men can it be thought out and brought to realization."

Thus two opposed and mutually exclusive ways of life confront each other—and the struggle embraces every physical, intellectual and moral activity.

The men and organizations who have been responsible for this series of military industrial conferences have shown full awareness of the all-inclusive nature of the conflict and of the need for mobilizing all our effective forces, public and private.

The particular role of commerce and industry in this struggle is being discussed here from a variety of viewpoints. I have been requested to talk about some of the factors external to our country which affect business and how business may affect and influence them.

Our inescapable concern for what happens beyond our shores rests first on the fact that the threat to our security comes from abroad through Russian communism. We must therefore concern ourselves with the rest of the world.

BUSINESS AND THE HOME BASE

But since we need a secure home base and internal strength as a first essential, I wish to make a few comments on one aspect of the role of business at home.

I deeply believe in the vigor and creative power of competitive free private enterprise. It is the economic expression of the freedom of men to struggle, to achieve, to capitalize their individual capacities and talents. It gives play to the competitive spirit, which induces the maximum endeavor. It is consonant with and equal to the other great freedoms, which can only endure along with it.

It has been inherent in our traditions and accomplishments. As developed in this country the system of private business has, more than any other economic system, multiplied production and divided the benefits widely among the people.

But like every other type of activity it has its faults and shortcomings.

I would say that perhaps its most obvious failing under present conditions is its too narrow view of its functions and its responsibilities.

By instinct and tradition the businessman concentrates his life on his own job and his own business—his output, his sales, his balance sheet and profits for the current year. He generally finds little time for the longer future and for attention to the political and social trends, which he does not see as immediately impinging on his operations. This attitude is understandable, but is it adequate for today?

The successful businessman has been forced to recognize that technical changes are rushing upon him and has accepted the necessity of looking far forward and through research and development preparing for what is ahead.

But few of them are taking equal account of the changes taking place which bear heavily on the very survival of the system of private capitalism.

Business has not accepted and acted upon the responsibility to take a lead in preserving and strengthening the foundations on which our type of free enterprise rests.

Business has not effectively explained and sold to the American people what it is and how it operates; what part it has played in

the life of the Nation; and the unique benefits it has produced for our people as a whole.

While producing and selling its individual products, it has permitted the radicals, the doubters, those lured by the glib professions of socialism and statism of various forms, to sell their ideas largely unopposed.

The result—Americans by and large take for granted the benefits our system has produced, but for lack of understanding allow the termites to eat away at its underpinnings.

And now that it is clear that communism centers its fire on the United States—and in large part because this country represents the most successful example of capitalism—it becomes doubly a matter of self-preservation that business shall devote major efforts to rally the forces of public opinion more solidly in support of this essential sector of our freedom.

Perhaps business needs in its organization a vice president for American ideas—to devise effective means of presenting the free enterprise system in layman's language—to its employees, in its communities and into the educational system—and to give support to others who are engaged in similar endeavor.

But words contrary to deeds lack conviction and business must live as well as proclaim its virtues and faith. The businessman who runs to government for special favors for protection against legitimate competition and who tries to stand on the feet of government instead of his own, can well do more hurt to the system by which he lives than can its enemies.

BUSINESS IN A DEVELOPING WORLD

If American business can see the vital issues now involved and accept the job of meeting them squarely at home, it might also be aware of similar implications to its future in developments abroad.

The concept of a secure fortress America, standing alone in a hostile world, and merely guarding our territory agaisnt foreign threat, is recognized as no longer a feasible basis for military planning.

Strategically we have been forced into attempting to organize collective forces around the world. Such success as has been achieved in this has depended upon the confidence of our allies in our sustaining strength. Recent developments have no doubt shaken this confidence, and it is obviously vital that we demonstrate our ability to maintain at least a military stalemate with the Russians on land, at sea, and in both the near and distant reaches of space.

But increasingly we need to seek other than military means to strengthen and unify all the forces which may potentially be on our side.

It is clear that the Communists have recognized that the less-developed countries, with the greatest reserves of raw materials and some 1,250,000,000 people, are crucial in the future balance of power, and they are concentrating their utmost efforts in diplomacy, propaganda, trade, credits, and arms to gain influence over them.

We cannot escape the necessity of giving equal importance to developments in these areas, and to the means by which we may affect them to our mutual benefit.

For it is not realistic to envision that we can be secure economically, or in the maintenance of our political freedom and our way of life, if we should be surrounded by a world which has yielded through nonviolent pressures to Communist control of physical resources or has become convert to its ideology.

It is obvious that maintenance of the vitality and strength of our economy—a basic foundation of our power—is an essential factor in our influence abroad, both with our friends and our enemies.

The intangible qualities of firmness, calm in the face of danger and confidence in ourselves will, of course, be of inestimable weight in making our influence felt.

TO THE OFFENSIVE

But beyond these necessities, we need positive programs, not merely defensive countermeasures. I shall make some comments regarding policies and actions in the economic field wherein I believe we can achieve tangible long-range benefits.

Great programs of Government aid have not succeeded widely in winning steadfast friends or stalwart military allies. We have learned that we cannot sway peoples' ideas, loyalties, and interests with money alone. Nor has financial assistance succeeded in the less developed countries in producing conditions of economic progress and political and social stability, which are the best inoculants against communism.

Our attempts to sell the concepts of freedom and democracy, and the fact that they have enabled us to prosper greatly, have not sufficiently convinced these peoples that they should adopt our ways of life. Apparently these appeals are too vague, too far removed from their traditions and habits, so they cannot instinctively relate these things to themselves.

I have over the past decade been attempting to evaluate the factors which are most likely to fortify peoples against the blandishments or threats of communism.

Here and there religion, whether of Christ or Mohammed or Buddha, will set up some barrier; in a few countries long contact with the Russian bear makes them wary. Elsewhere strong nationalism and fear of all foreign influence plays its part, but little of the underdeveloped world has ever experienced Russian rule, only western domination. People tend to shun the aversion known; to ignore the unfamiliar peril.

So I conclude that for a solid and enduring resistance to communism to be built up in the developing countries, we must look most hopefully to creating conditions where more and more people have a decent economic stake in the present and opportunities for the future.

Such conditions can only be based on economic growth, through which there will be more and better jobs, offering a chance for the willing and able to improve themselves, to develop a satisfactory standard of living, to acquire property, to own a business—in other words, building up a middle class, which gives solidity to a society. There need be fields of endeavor opening up in which those of special abilities can find outlets for their diverse talents and ambitions, and for capital to find profitable employment and make its contribution to progress.

I am convinced that these conditions can most likely be created through development of private business—the sort of dynamic force to which we have given play in this country. This aspect of freedom, its meaning and its results, can be made tangible and evident to other peoples.

And it is in aiding to the spread abroad of such a free enterprise system that I see for American business an opportunity—and also a responsibility—which can contribute to our national interests and security.

On grounds of profitability there are the new economic frontiers with resources and markets to be developed. They contain minerals and other products which increasingly we must have to feed into our industries. Our enterprises need to develop the new customers which by the millions are potential in these growing countries. In all ages the frontiers have offered high rewards for the bold and imaginative, with risks aplenty it is true. Americans have always been ready to take such risks and on balance have reaped good harvests, and the spirit of pioneering is still in our blood.

Added to these purely economic interests, American business should realize the wider significance in terms of our national interests, which can result from its operations overseas.

Good business planted and spread among the peoples of the great frontiers can do more to cement them to our ideals, to identify their needs and interests with ours in the fight against communism than can actions and money of governments.

Recently a visitor from a Latin American country put it to me this way, "Governments come and go, the people remain." Aid to governments is too often based on immediate political objectives which do not contribute to sound economic growth. The flow of private experience and capital is much more likely to build on people and produce more dynamic and lasting results.

Through the spread of private business we can spearhead an offensive against communism, in place of trying to counterpunch against its blows.

Last year at this conference I suggested that the United States Government could properly give a substantial impetus to the export of our private enterprise, if it would accept that this is a vital factor in the national welfare and security. I shall briefly outline them:

1. A positive policy to encourage investment abroad by American business and capital.

2. Development of tax incentives—a more effective stimulant than guaranties.

3. Firm support of the rights of American business operating abroad.

4. Restraint in giving financial aid to governmental enterprises in the fields suitable for private business.

We can continue to hope that our Government will get around to doing these things.

But let us be thankful that American business retains the freedom to take the initiative in throwing its weight, its vitality and its creative talents into the struggle to maintain the integrity of its foundations at home and to help build up abroad interests which will be on our side in the contest with communism.

In closing, I will illustrate two extremes of points of view which are not uncommon with regard to the problems which I have been discussing.

An important businessman, head of a great and profitable company whose products all come from overseas to be marketed in this country, remarked recently to a friend of mine, "I can't understand why Bob Garner and his associates in IFC and the World Bank waste their efforts in trying to develop these foreign countries. They will never get their money back. My company operates abroad on a straightforward business basis, we buy and sell and make a profit—and that's that."

Very simple, very direct, very much in line with traditional business thinking. But if Communists get a grip on the countries which supply the goods of this man's trade, he will have no business. And, as he knows, they have not been idle in his territory. It may be that in ignoring the broader issues he is not being as hardheaded and practical as he thinks.

Another viewpoint was expressed in a letter I recently received. The writer, also in business, asked why I spend my time in promoting the development of private enterprise in the less developed countries, when the overwhelming problem is to prevent war, which would destroy us all. That is the job I should be working at.

My reply was that I know of nothing I can do more useful in preventing war, or the equally dreadful prospect of a Communist-dominated world, than what I and my associates are attempting in IFC—to help spread the benefits of sound private business.

As sputniks represent a breakthrough in science, so we need a breakthrough in the area of economic development. I propose

that this can best be attained through directing to the task the intelligence, drive, and power of American private enterprise.

This is a weapon of which we, not the Communists have command.

Alaska Statehood and Conservation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 28, 1958

Mr. PELLY. Mr. Speaker, under unanimous consent, I insert for printing in the Appendix of the RECORD a letter expressing the Wildlife Institute's concern that there is not an adequate safeguard in the Alaska statehood bill for the protection of our wildlife resources.

I am seeking to get the Congress to meet that objection; and, since the statehood bill should come to the floor very shortly, I take this means of urgently soliciting the cooperation and support of my colleagues on behalf of an amendment to accomplish this purpose.

The letter follows:

WILDLIFE MANAGEMENT INSTITUTE,
Washington, D. C., April 25, 1958.
The Honorable THOMAS M. PELLY,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PELLY: In reply to your telephone inquiry, the conservationists definitely do not think that the Alaska statehood bills pending before the House Rules Committee contain adequate safeguards for the future management of the invaluable fish and wildlife resources of the Territory. In fact, under the publicly denounced Alaska Senate bill 30, which became a law last year without the Governor's signature, the stage is set for complete domination of the new fish and game commission by the commercial interests and resource users immediately upon statehood.

Let there be no misunderstanding concerning the position of the conservation organizations. They do not think that it is within their purview to take a stand on the matter of statehood; nor have they ever asked that the administration of the resources be retained by the Federal Government for a period of 5 or 10 years. As explained over the telephone, the conservationists have made it clear that the administration of those resources can go to the new State immediately upon positive assurance that the interest of the general public is protected by the adoption of an equitable system.

There obviously is some objection to that portion of the proposed amendment suggested by certain conservationists which would require Congress to approve the certification of the Secretary of the Interior. That objection could be overcome by the following, which would satisfy the many people who are insisting upon a protective amendment:

"*Provided*, That the administration and management of the fish and wildlife resources of Alaska shall be retained by the Federal Government under existing laws until the 1st day of the first calendar year following the expiration of 90 legislative days after the Secretary of the Interior certifies to the Congress that the Alaska State Legislature has made adequate provision for the administration, management, and conservation of said resources in the broad national interest."

Congressman PELLY, the millions of conservationists in Alaska and in all of the States are indebted to you for working so tirelessly to protect the life-sustaining resources and basic economy of Alaska and the Nation. They must rely upon you and the other conservation-minded Members of Congress to see that proper safeguards are included in any statehood legislation.

Sincerely,

C. R. GUTERMUTH,
Vice President.

The Unemployment Situation

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an editorial from Saturday morning's Washington Post. This editorial states succinctly what I have maintained all along: First, that the current recession and the failure of the unemployment insurance system to meet the problems caused by it necessitate quick action by the Congress. Second, that this action should not merely be a response to an immediate need but should embody permanent improvements in the unemployment insurance system.

Mr. President, the Congress will have a great opportunity when the unemployment compensation legislation comes before it. I hope that the Senate will be able to consider this legislation in the very near future.

I do not wish to take the time of the Senate further to expound the serious deterioration which has occurred in the unemployment insurance system. Since last September, almost 1 million jobless workers have exhausted unemployment benefits. In January, the number exhausting benefits was 147,000; in March the monthly rate had jumped to 191,000. We can expect another tremendous increase during the month of April, and I am afraid that a similar situation will obtain in the following months.

As I have pointed out to the Senate on previous occasions, the benefit levels in many States are far below that which reasonable men would agree is necessary to keep a family going when the breadwinner, through no fault of his own, is unemployed. I submit that if the Senate does not act at this session of Congress to solve the emergency problem caused by the current unemployment crisis and simultaneously make permanent improvements in benefit levels and duration of benefits, so as to forestall this kind of crisis in the future, it will have failed America's working men and women.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 26, 1958]

INSTEAD OF A DOLE

If Congress is prepared to break down the historic patterns of the unemployment compensation system in the fashion proposed by the House Ways and Means Committee, why does it not then consider some much-needed permanent improvements? We had felt that the justification for the comparatively timid emergency measure proposed in this field by the administration was that it would not arouse the opposition of diehard States-righters and thus had a fair chance of swift enactment. But the House committee offers a program that completely ignores not only State responsibilities for the financing of unemployment benefits but also State standards of eligibility and of amount and duration of assistance.

The President reportedly is prepared to veto the House committee's measure because of its disregard for State standards. But the more serious objection to it is that the projected special Federal assistance to all jobless persons, even though temporary, would not be linked to Federal or State payments into the unemployment compensation system. This is what makes the House bill a dole.

The President's plan involves repayment by the States of special Federal unemployment help geared to State standards. We have doubted that it would work quickly enough to provide the additional floor under consumer income which the present economic situation requires. We have also wished that the glaring inadequacies in coverage and in duration and amount of benefits could be permanently remedied at this time by the adoption of uniform standards for unemployment benefits.

Nearly any type of aid for the unemployed would be better suited to the spotty nature of the present economic difficulty than most other antirecession measures. The House committee proposal, like the President's more modest plan, regrettably does not address itself to the basic inadequacies and inconsistencies of the State benefit system. Unsatisfactory as it is, the House proposal would be better than nothing; and the President will want to take a close look at the alternative before deciding resolutely on a veto.

Congress could avoid this dilemma, however, by more constructive action in the first instance. If it can enact the proposed House bill, surely it can do something better. Legislators ought to concentrate on a bolder measure of permanent improvements in the unemployment compensation system—but a measure that retains the traditional insurance concept, with payments by employers to sustain the costs.

Curbing Supreme Court Powers

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Curbing Supreme Court Powers," written by David Lawrence, and published in the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CURBING SUPREME COURT POWERS—ISSUE HELD REACTION TO JUSTICES' VIEW OF FUNCTION, NOT INSTITUTION ITSELF

(By David Lawrence)

Will the Supreme Court of the United States be required to return to its original

role—to serve solely as a judicial institution? Will a majority of the present Justices give up their evident determination to change the Court into a third legislative chamber?

The fight in Congress at the moment centers on a move to enact legislation which would spell out in detail the limits of the Supreme Court's authority to pass upon certain kinds of cases.

Congress, under the Constitution, may by law specify to a certain extent what type of cases the Supreme Court may consider for decision. Many observers think none of the pending bills will be adopted at this session. But the fight is only beginning. Many groups of citizens throughout the Nation are taking up the issue because it is felt that public opinion has not yet been alerted to the usurpation practiced by the present Court.

An effort is being made by critics of the pending legislation to imply that the Court, as an institution, is under fire. On the contrary, it is the activity of those who have perverted the Court's original purposes and judicial functions which has brought on the controversy of today.

When as eminent a man in Congress as the veteran from Wyoming, Democratic Senator O'Mahoney, asks that every judge be required to swear specifically in his oath that he will not participate in any decisions that "knowingly alter the Constitution"—a procedure which a Senate subcommittee now requires before confirming new judges—it indicates a belief that something is wrong with the attitude of the present Justices toward the Constitution. Their decisions apparently reflect a feeling that they may sit on the bench for life and legislate without regard to constitutional precepts of the past.

Senator O'MAHONEY, it will be recalled, was one of the leaders in the crusade against the late President Franklin D. Roosevelt's effort to influence the decisions of the Supreme Court by appointing six extra Justices who, it was assumed, would decide cases as he wanted them decided. The Wyoming Senator was in the forefront of that movement against usurpation, and he is logically concerned with the usurpation of power by the Court itself today.

Unfortunately too many people have been misled into believing that the sole criticism of the Court now is due to the fact that it disregarded law and precedent in deciding the desegregation cases on psychological rather than on legal grounds. Putting aside these cases, however, there are many other decisions of a far-reaching nature which, if unreversed either by Congress or the people, will make the Supreme Court a "third legislative chamber." This, by the way, is the phrase used by Judge Learned Hand, the distinguished judge, now in retirement, who formerly sat on the United States Circuit Court of Appeals in New York and won a nationwide reputation for the soundness of his judicial decisions. In a series of lectures at the Harvard Law School, he recently exposed the erratic trend in the Supreme Court decisions of today.

The present Supreme Court has ignored the Constitution in many cases. Though the Constitution, for instance, says that Congress and the judiciary are coordinate and independent institutions, the Supreme Court has undertaken to tell congressional committees what subjects they may investigate and what questions are pertinent to an inquiry—as if there were any limit on the right of Congress to get information on which to base laws or new amendments to the Constitution.

The Supreme Court has also told the States they cannot decide who shall or shall not be admitted to practice law or how to set up tests of qualifications of experience and character before issuing a license to an applicant.

The Supreme Court has undertaken, moreover, to hamper police officers in interrogating persons accused of crime and to interfere with prompt efforts at finding the guilty persons. Confessed rapists and murderers have recently been released by order of the Supreme Court because the police didn't formally arraign a suspect within a short time after he was picked up. Police officers claim they need time to sift the innocent from the guilty.

The Supreme Court has given professed Communists a break by declaring that Congress has no right to say by law that persons joining organizations which advocate the overthrow of our Government may be punished. The Court says, in effect, it must be proved that the individual Communist has engaged in specific action aimed at the immediate overthrow of Government. He can preach treason but can be prosecuted only if treason is successful in its effect on other persons.

These are but a few of the aberrations of the present Court. The country has not yet waked up to the dangers of the Court's unprecedented rulings. The pending bills designed to limit or restrict the jurisdiction of the Court constitute the beginning of a prolonged battle to stop the usurpation of legislative power by the present Supreme Court. It may take years to win the fight, but the struggle will increase in intensity as the public learns what's at stake.

It is not the Court as an institution, but the mistaken attitude of a majority of the Justices as to what the Court has a right to do, which is the basis for the growing demand that the powers of the present Court be curbed. It's not the proper use, but the abuse, of the judicial function which is at issue.

The Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Talmadge Plan," from the April 25, 1958, issue of the Savannah Morning News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TALMADGE PLAN

By what no doubt amounts to no more than a pleasant coincidence, Senator HERMAN TALMADGE has proposed a farm program which embraces several of the points recently propounded by the Morning News.

In brief, Senator TALMADGE would do away with all price-support loans and acreage controls, and set the farmers free to plant as they please and sell their products on the open market.

Then, as a substitute for present price-support loans, the Senator's plan would bolster farm income by direct payments to growers of cotton, corn, wheat, rice, peanuts, and tobacco, with this reimbursement covering the difference between open market prices and a parity level to be set at either 90 or 100 percent of fair earning power.

Since there is no sentiment whatsoever in Congress for ending the subsidies paid either directly or indirectly to other industries, agriculture cannot be expected to go it alone and Government aid must be continued.

But certainly the farmer should be freed of the bureaucratic controls which dictate the crops he may plant and the amount of them, and the Talmadge plan would do this.

The Senator is also confident that his proposal would cost less than the present program, with payments being restricted to the individual farmer's share of the domestic market for his crop. There would be no subsidy on products sold for export.

At 90 percent of parity, Senator TALMADGE estimates his plan would cost a maximum of $1,644 million a year, while at 100 percent of parity the cost would be a top of $1,806,400,000. The savings to taxpayers over the present support loan scheme would be between 2 and 3 billion dollars a year.

The farm problem has had Congress in a cold sweat since the end of the Korean war, but aside from the Soil Bank program devised by Secretary Ezra Taft Benson, no new remedy has been advanced. Now a Georgian who knows farmers and their difficulties has presented an idea which reinstates the principle of freedom, and it is to be hoped that it is substituted for the current subsidy, which has been justly condemned by Senator TALMADGE as a miserable failure.

Permanent Status for Hungarian Refugees

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. PROXMIRE. Mr. President, the heart of America responded to the heroic fight for freedom waged by Hungarian patriots against their Soviet oppressors in the fall of 1956. Unfortunately, there was not a great deal that we could do to help. But we did welcome refugees from Hungary. We took them into our communities, and many of them have come to be as much at home in this land of immigrants as people who have been here all their lives.

Now we have a chance to regularize the status of our refugee friends by allowing them to become permanent residents and eventually American citizens. I believe that such a step should be taken and should have overwhelming support.

Mr. President, I ask unanimous consent that an editorial entitled "Welcome Confirmed," which appeared in the Washington Post and Times Herald for April 26, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

WELCOME CONFIRMED

The welcome extended by this country to the refugees who came here after the heroic Hungarian uprising of 1956 was a warm one; but it was incomplete. The refugees were admitted on parole, as an emergency device. This meant that they had no permanent status, could not become citizens and were subject to deportation at any time. Now, happily, the House Judiciary Committee has given its approval at last to a bill authorizing them to become permanent residents and eventually, if they wish, citizens of the United States. We congratulate the committee—and, in particular, Representative FRANCIS WALTER who last year opposed regu-

larization of the refugees' position—for moving this needed measure forward.

The Hungarian refugees, some 32,000 in number, came here in flight from Communist oppression and in search of freedom. Obviously they cannot return to the land of their birth, now under the heel of the Red army. They deserved the welcome accorded them as refugees; and now, as immigrants, they deserve the hospitality of what has come to be, for most of them, their adopted land. They are of the stuff that built America both physically and spiritually. We hope that Congress will act promptly to complete a measure dictated alike by justice and by generosity.

Rockefeller Bros. Fund Panel Recommendations on the Economy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. WILEY. Mr. President, I have been pleased to note the enthusiastic reaction in Washington and elsewhere in the Nation for the exceedingly constructive recommendations which were made last week by the Rockefeller Bros. Fund report on the United States economy.

Important as its tax suggestions, in particular, are, they should not lessen our appreciation of the overall breadth and depth of all the other suggestions in the study, for the report is a strong and stimulating exposition of America's overall economic future, of the intended growth of our economy in terms of real increases in the gross national product, in productivity, and in standards of living.

The very concept of reports from the Rockefeller Bros. Fund is to be applauded, because here are private individuals serving in the best possible way in a public-spirited capacity.

One may not agree with all of the recommendations made by the panel. The very nature of the broad recommendations almost inevitably results in dissent on the part of experts, especially in so highly complicated a field as America's tax system. Nevertheless, one cannot but admire these civic-minded men and women for devoting their efforts so long and so well to these objectives. The Rockefeller brothers themselves are to be congratulated, as are all members of the panel.

I, for one, was particularly impressed that one of the recommendations was for a thorough overhaul, from top to bottom, of our tax system. This is a recommendation which I have long recommended, particularly through the Wiley bill for a Hoover-style Federal Tax Commission.

I send to the desk the text of an editorial praising the report; it is from the Wednesday, April 23, issue of the Milwaukee Journal.

As an indication of the expert background of the members of the panel—and, of course, this report, like any other, is no better than the caliber of those who help to write it—I include a summary, from the New York Times, which sets forth the affiliation of each of the distinguished panel members. Mr. President, it is good to read the judgment and findings of such able persons. Many of them have lived lives of adventure in fields of development in this country.

I ask unanimous consent that these two items be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

AN OPTIMISTIC CHALLENGING REPORT ON THE ECONOMY

It would be unfortunate if the Rockefeller Bros. Fund report on the American economy were considered only another plan for countering the current recession with a tax cut.

The report does make recommendations for dealing with the present business decline. But it goes much further than that. It lays down a broad program for America's economic and social future, geared to even greater economic growth than the Nation has experienced in the recent past.

The spirit of the report is optimistic and challenging. It holds, that by our own efforts, as individuals and through Government, we can master economic forces, rather than be the victims of them. It voices faith in the dyanmism of free enterprise, yet it concedes to government the important role of creating a climate to make growth possible.

The panel which spent a year's time preparing the report was not made up of starry-eyed dreamers. Heading it was Thomas B. McCabe, president of the Scott Paper Co. and a former chairman of the Federal Reserve System's board of governors. Other members included Devereaux C. Josephs, board chairman of the New York Life Insurance Co.; William F. Butler, vice president of the Chase Manhattan Bank, and Arthur F. Burns, former economic adviser of President Eisenhower, along with Anna Rosenberg, wartime assistance secretary of defense for manpower; Eugene Rostow, dean of the Yale law school, and Lester B. Granger, executive director of the National Urban League.

These and other panel members did not agree on all the recommendations. They were in general accord, however, on major proposals and goals. And basic to all is that the economy needs to be expanded in the next 10 years at a rate of 5 percent a year rather than at the 4 percent rate of the last 10 years.

One senses from the report that the panel looks upon the recession as something to be ended quickly so that the Nation can get back on the road of economic growth. The recession cures it recommends are an immediate Federal tax reduction, public works that can be quickly begun and quickly finished, better bargains and new products from businessmen, easier credit, temporary Federal unemployment insurance supplements.

The recommendations for the more distant future are even more challenging and far ranging. They include a thorough tax overhaul (with emphasis on capital accumulation for expansion), stimulation of competition, a farm program that makes sense, a single Department of Transportation, more vigorous urban-renewal activity by all levels of government.

Specifically, the report recommends doubling the expenditures for education, social insurance, and health in the next 10 years. It also points out that the economic growth it envisions would finance the defense expansion which another Rockefeller Brothers Fund panel recently recommended.

The Rockefeller Brothers Fund has no official standing, and recommendations of the panel are not going to be accepted as doctrine by any private or public agency. The report should be of immense value, though, as a stimulant to economic thought and, perhaps, to economic action.

THE ROCKEFELLER PANEL

Following are the members of the Rockefeller brothers' fund panel that prepared the report on the economy:

Thomas B. McCabe, president, Scott Paper Co., and former chairman, Board of Governors of the Federal Reserve System; chairman.

Arthur F. Burns, president, the National Bureau of Economic Research and professor of economics, Columbia University.

William F. Butler, vice president, economic research department, the Chase Manhattan Bank.

Lowell T. Coggeshall, dean of the division of biological sciences, University of Chicago, former special assistant for health and medical affairs, Department of Health, Education, and Welfare; president Association of American Medical Colleges, and president, American Cancer Society.

J. Norman Efferson, professor of agricultural economics, and dean, College of Agriculture, Louisiana State University.

Lester B. Granger, executive director, National Urban League, Inc.

Devereaux C. Josephs, chairman, New York Life Insurance Co.

Dexter M. Keezer, vice president, McGraw-Hill Publishing Co. and director of economics department.

Franklin A. Lindsay, consultant, McKinsey & Co., Inc.

Joseph A. Livingston, financial editor, the Philadelphia Bulletin; former economist, Business Week and War Production Board.

Stacy May, economist.

Roswell B. Perkins, Debevoise, Plimpton & McLean; former Assistant Secretary, Department of Health, Education, and Welfare.

Anna M. Rosenberg, public and industrial relations consultant; former Assistant Secretary of Defense for Manpower and Personnel.

Eugene Rostow, dean, Yale University Law School.

J. Cameron Thomson, chairman of the board, Northwest Bancorporation.

Frazar B. Wilde, president, Connecticut General Life Insurance Co.

Bayles A. Manning, associate professor of law, Yale University; secretary.

Plight of the Railroads

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Plight of the Railroads: A National Crisis," published in the New York Herald Tribune of April 24, 1958. I commend this to the attention of every Senator, because it is a very comprehensive editorial, which points out the urgent need of the Congress taking some immediate action with respect to the railroads.

I also ask unanimous consent to have printed in the Appendix of the RECORD

an article entitled "The Railroad Problem," written by George E. Sokolsky, an emient columnist, and published in the Washington Post of today; also a thoughtful and thought-provoking editorial entitled "First Aid for the Rails," which was published in the Washington Evening Star of Saturday, April 26, 1958.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

PLIGHT OF THE RAILROADS: A NATIONAL CRISIS

No other single national asset is more vital to the security and the future growth of the United States than its 221,000 miles of railroads, the largest system in the world.

Were enemy paratroopers dropped to destroy it, the Army would be called out to prevent it.

Nevertheless, it is now being destroyed, just as effectively as if paratroopers were demolishing it:

Its roadbeds are not being adequately maintained because most railroads are losing money and their plight grows worse.

Its antiquated rolling stock is not being replaced and modernized nearly fast enough.

Although the country is growing by leaps and bounds, rail passenger service is being constantly decreased. Service, which could be vastly improved with speedy, modern equipment, instead is deteriorating. Much of the equipment now in use ought to be junked.

Why has this situation come about? There are many reasons:

Railroads operate under a system of regulation created when they were a monopoly, when 77 percent of all goods moved by rail. This regulation system is obsolete. Far from being a monopoly, railroads have already been outstripped by trucks ($11 billions of revenues in 1956 to $8.7 billions for railroads) and their other chief competitors (pipelines and barges) are growing at much faster rates.

The United States has no real national transportation policy, but only a hodgepodge of overlapping or conflicting policies (CAB for air, Maritime Commission for Water, ICC for trucks and buses). Railroads are forbidden to merge, or to own competing services. Their rates are frozen.

They are saddled with wartime excise taxes (10 percent on passengers and 3 percent on freight) which are discriminatory.

They maintain needless duplications of facilities, parallel trackage, etc., which an efficient integration would consolidate. The outmoded monopoly philosophy of regulation prevents this.

It is high time the Nation got "cracking" to create a modern transportation system which keeps pace with the growth of the country. If not we will shortly be in the position of strangling ourselves and our economy.

Tuesday, Secretary of Commerce Weeks sent Congress a program for railroads which would be of great help if adopted. He asks up to $500 million in short-term loans to help the railroads modernize their facilities, and up to $200 million for new freight cars. He seeks authority for the ICC to curtail money-losing passenger and commuter service in interstate commerce. He seeks to eliminate unfair competition from private truckers, and from agricultural truckers who are exempt from regulation.

All this is needed.

But much more is needed.

What is needed, above all, is the creation of a national transportation policy. Here are some of the urgent needs for such a policy:

It should combine all the regulatory agencies into a single Department of Transportation.

The entire concept of regulation should be changed. Instead of being based on the obsoleted concept of monopoly, it should be aimed at creating the maximum possible growth and efficiency.

Mergers, instead of being forbidden, should be encouraged. Transcontinental rail networks, east-west and north-south, should be encouraged, integrating many needless duplications of facilities.

Railroads should be allowed, as in Canada, to engage in other forms of transportation. For example, much of the long-distance truck hauling could be done more efficiently by loading the trucks themselves onto flatcars, using tractors only for delivery at the other end. Instead of trying to compete with barges at less than cost, railroads should be able to transfer cars to barges where water is the most economic route.

A genuine, national transportation policy would take as its basic concept the fact that Government must take whatever steps are necessary to maintain modern, efficient rail transport. Other nations do it by government ownership (and many of them have done it with Marshall plan funds). If the United States can spend billions on getting into outer space, surely it can afford an adequate system of getting from city to city.

Three concepts are necessary:

Federal funds—which go into building airports, highways for trucks, and dredging rivers for barges—must also maintain railroad rights-of-way as vital to national defense. The investment can be recaptured through ton-mile or other taxes. But it must be assumed as a national necessity.

A revolving fund of capital must be created to provide the modern passenger and freight equipment necessary to keep abreast of national growth. Such advances could be repaid by railroads on a long-term, low-interest basis.

To keep commuter service from breaking down, quasi-public transportation authorities, with power of tax exemption, should be encouraged to take over such services, leasing existing trackage from private carriers (the New York Central has advocated this).

To repeat—America cannot let its rail transport system fall apart.

To do so is a form of national sabotage.

An adequate railway system is absolutely indispensable, as World War II proved, to national defense.

Without it, a growing nation faces economic strangulation.

Let's quit strangling ourselves.

Let's put the railroads on the track—on new tracks, with new wheels.

THE RAILROAD PROBLEM

(By George E. Sokolsky)

The President's proposal to aid the railroads by a $700 million loan, with certain other alleviations of their difficulties, is, of course, a makeshift, emergency solution to a pressing problem. The railroads have been kept in such a noncompetitive bondage by the Interstate Commerce Commission that they are today, so far as passenger services are concerned, outpriced in competition with airplanes, buses, private automobiles, etc. Because wages and prices on the railroads are absolutely controlled, as are all the terms of employment and the methods of operations, no railroad in the United States has been able to operate on a business basis, certainly since World War I when the Government took over the railroads. In a word, the railroads have not been free to meet progress and they show it. True, they have substituted the diesel for the locomotive, but that has not solved any great fundamental problem.

The air services usually enjoy terminal facilities which are paid for out of public funds. On the other hand, the railroads have to maintain all their facilities at their own expense. It is true that many railroads received enormous concessions when they were started, but that was long ago and does not affect the present situation at all. A railroad has to maintain a costly right-of-way, a more costly roadbed. The airlines fly in the free heavens and the protective services (beams, etc.) are maintained by the Government of the United States out of taxes. Buses and trucks use public roads, paid for by the taxpayer and maintained and kept in repair by the taxpayer. These advantages have grown up as new means of transportation developed and no important steps have been taken to permit the railroads to keep themselves in a competitive position. In fact, the Interstate Commerce Commission, which was established to keep the railroads competitive, has actually served to make them noncompetitive and bureaucratic. A new idea usually finds desert soil in this enterprise because so many authorities have to be consulted and it takes them so long to reach a decision.

The railroads are still valuable in wartime; they are absolutely essential for the mass movements of men and materials and could not be abandoned on the assumption that the alternate means of communications will serve.

Therefore, what is most needed is an overall study of the entire transportation system of the Nation by some capable body such as Herbert Hoover developed in his various task forces. The object would be to analyze the position as it is today; to equate values; to produce more equity among the different means of transportation; to make public inequities in taxation and offer some solution concerning them; to disclose hidden as well as public subsidies for all transportation services; and, on the whole, to make sure that our means of moving human beings and goods are not antiquated and obsolescent and bound by redtape and senility.

On a recent train trip from New York to Miami Beach and back, our train consisted of cars of varying vintages, so that passengers, paying the same fare, enjoyed unequal facilities. This is absurd in any business. I rode in a Rock Island pullman which the Florida East Coast Railway had not bothered to paint over to look like its own equipment. Returning to New York, we came in more than 2 hours late, although the weather was excellent.

If the railroads wish to give up first-class travel, they should make an announcement to that effect. Otherwise they are accepting additional fare without providing customary additional services.

All this needs to be studied, impartially, with a view toward restoring the primary means of transportation of the country.

FIRST AID FOR THE RAILS

There probably is no economic magic by which all the troubles of the railroad industry could be eliminated and its good health restored and assured. In recent years, the transport industry has become increasingly competitive and subject to entirely new economic factors. Air and highway carriers have skimmed off most of the potentially profitable passenger travel while a certain percentage of freight hauling that once was largely monopolized by the rails likewise has been diverted to other carriers. In addition, as Secretary of Commerce Weeks wrote to the Senate transportation subcommittee, there have been some ill-advised practices of management and some harmful, long-standing governmental policies. His recommendations for congressional action are directed at correcting some of the latter as well as offering some near-term financial assistance.

In the latter category, the Secretary has proposed that the Government guarantee a $500-million loan program by which the railroads could borrow for capital improvements other than rolling stock, and a $200-million loan program for purchase of freight

cars. In the area of Government policies, Mr. Weeks recommended that rate-making standards be revised, that the Interstate Commerce Commission be given enlarged jurisdiction over curtailment of services, that restrictions be tightened against marginal "private carriers" and that there be clarification of the "agricultural exemption" provisions of the Interstate Commerce Act. The most significant omission from the administration proposals—and the one most disappointing to the railroads—was the hoped-for recommendation that current excise taxes be lifted or at least modified.

The Senate subcommitte has been studying the railroad problem for several months and has, in fact, considered favorably the type of aid proposed by Secretary Weeks. Chairman SMATHERS, Democrat, of Florida, describes the recommendations as sensible and constructive and said the subcommittee will report soon. While some persuasive arguments have been made for lifting the excise-tax burden—and the administration does not preclude that possibility in the course of a general tax revision—it may be wiser to go on at once with the less controversial remedies and to give the rails the benefit of first aid as quickly as possible.

Twenty-fifth Anniversary of the Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. NEUBERGER. Mr. President, as part of its own 50th year of publication, the Progressive magazine has featured in its issue of May, 1958, the 25th anniversary of the Tennessee Valley Authority

Approximately, the leading article has been written by the illustrious senior Senator from Alabama [Mr. HILL], whose name is indelibly associated not only with good works in the field of human health and care, but also with the establishment of the Tennessee Valley Authority. LISTER HILL is the only surviving member of either the Senate or the House who also served on the Conference Committee, which produced the final version of the TVA legislation in 1933, a quarter of a century ago.

The title of the article in the special TVA issue of the Progressive by the senior Senator from Alabama is "TVA—Democracy in Action." Because LISTER HILL's article is so informative, so thorough, so lacking in extreme statements or political partisanship—all characteristics of our good friend, Senator HILL, I ask unanimous consent that it be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TVA—DEMOCRACY IN ACTION
(By Senator LISTER HILL)

I

Twenty-five years have passed since the historic legislation creating TVA was enacted, and a new generation of Americans has grown to maturity. A generation is time enough to test the truth of an idea and the strength of a concept. It is also time enough for people to forget what life was like before that concept was built into our Nation's life.

An anniversary is a time for remembrance and for recognition. It is a time for reappraisal. For me TVA's arrival at the quarter century mark is a moment of special poignance, and of peculiar obligation. My obligation to remember and to reappraise is a deep and personal one, for I was one of the sponsors of the legislation which created TVA, and of all the members of the Conference Committee appointed to adjust the differences between the two Houses in 1933, I am the only one who is today a member of the Congress, I am the only one who has had the privilege of participating year by year in legislation affecting TVA, first from my seat as a member of the Military Affairs Committee of the House, later as a member of the Appropriations Committee of the Senate. Alone of all the witnesses when the President signed the act in 1933, I have seen the dreams we wrote into the statute become reality. Dreams of a better future, of a widening economic opportunity for the people, and faith that a new kind of agency of government could help to provide it—all these are captured in the charter we wrote for TVA.

This is a good time to tell the new generation why TVA was established, and what it has accomplished. Once more a troubled world is reminded that vision is required lest the people perish, and that the great imperative of government is to offer hospitality to dreams and then to find ways to translate them into effective works. It is a good time to give to every American a sense of pride in the vitality and the strength of TVA, and to explain, if we can, why this Agency has been able to survive attacks and neglect, why it continues today valiantly planning for the future, its spirit unbroken, facing its relentless adversaries with courage, faithful to the vision written in its statute.

It is important for the new generation to know that this dream of the unified development of all the resources of a great river basin for the people's benefit was not born out of sectional interest nor parochial concern. It was born because statesmen from the Great Plains, from the mountain West, and the industrial East, saw this Nation as one and indivisible, and knew that the country they loved and served would be strong only as each region grew in strength. The great and indomitable George Norris, of Nebraska, was the leader in the Congress. A valiant band worked with him. TVA is shaped in their image, indelibly marked with their integrity, their moral purpose, and their vision of a Federal program which would never forget the people for whom it was enacted. Its survival, its growth, its strength today is their memorial.

Let me remind this new generation what life was like in the region when TVA was created. There was a great river, its tributaries rising high in the mountains of North Carolina, Tennessee, and Virginia. It flowed south through the foothills of Tennessee, turned west to meander across the sun-baked fields of Alabama and of Mississippi, swung northward to meet the Ohio in Kentucky, then to join the mighty Mississippi on its course to the gulf. It was a moody and inconstant river, changing from season to season, an angry flood in spring and winter, a sluggish trickle in summer and autumn when shoals and sandbars held it almost useless for navigation. In flood and in drought, racing or heavy with summer's langour, in every season the river was dark with the precious cargo it carried—the fertile soil of the valley, to be wasted in the sea.

II

For generations that soil, the priceless heritage of the people, had washed away. This was an agricultural area, one of the oldest in the Nation, an area of small farms, growing the cash crops for which the climate was ideal but which left no cover to protect the ground as it lay, bare and unfrozen, helpless against the pelting winter rains. Once majestic forests had been denuded, a sacrifice to avarice, to ignorance, and to hunger. So the rains were unimpeded. They took the soil to the river, and the river carried it to the sea, and every year the brown scars of erosion grew wider and deeper over the landscape. Every year more farms were abandoned. Every year fewer jobs became available, and the youth of the land was exported along with the soil and the timber. Every year the people had less hope and less faith in the future. In 1933 the people of this region had an average income of only 45 percent of the national average, in spite of the wealth of resources with which nature had endowed it.

This was the region before TVA. This was the problem facing the Congress. And a heritage from World War I provided an opportunity. Then, when German submarines had halted the shipments of nitrates from Chile, the Government had built facilities for munitions production at Muscle Shoals in northern Alabama, and construction of a dam across the Tennessee was begun to supply the power required for operation of the nitrate plants. The war was over before the project was completed, and Congress had to decide what to do with the idle properties. The general assumption was that the properties were surplus to the Government's requirements, and should be sold. To most people the question before Congress in the early twenties was relatively simple—how to dispose of the properties most advantageously.

In the beginning only a few men had the vision to see that the properties were not surplus to the needs of the Government at all, that they were an asset which could provide the beginning of a new approach to an old problem. The fight, first to keep those properties in the hands of the Government, and then to devise a method to promote their effective use, went on for more than a decade. I came to Congress in the midst of that debate, and I shall be forever grateful that I have had a part in this great struggle throughout my whole career in public service. Twice bills to provide for Government operation of the properties at Muscle Shoals were adopted by the Congress. Twice they received a presidential veto. It was not until 1933, under the dynamic leadership of Franklin D. Roosevelt, that the statute creating TVA was approved by Congress, the properties at Muscle Shoals were turned over to the new agency, and the President who had expanded the scope of the original proposals with his vision and his dreams signed the enabling legislation. A great concept started along the road to realization.

Twenty-five years have passed since that day. Today the Tennessee River is no longer a menace and a problem. It has been put to work for the people. A series of majestic dams has transformed it. Now a chain of lovely lakes; its bars and shoals have vanished, and commerce moves in stately sequence over a modern water highway. Last year more than 2 billion ton-miles of freight was carried on the river, in contrast to less than 33 million ton-miles which moved, mostly in short hauls, in 1933. Grain comes down from the upper Mississippi; oil and sulfur move up from the gulf; automobiles, trucks, steel, and coal are carried for unloading at thriving river ports on the Tennessee. From the Great Lakes to the gulf the products of other regions come to new markets in this valley, and the river serves the people.

The new generation has grown accustomed to the interregional exchange of goods. And

it is spared the terror of floods. Today the people know that, when the rains come and the water rushes down in angry torrents, the same dams which control the river to create a navigation channel will stand watch through all the days and all the nights of peril, silent guardians of their safety. This is the only United States river so controlled; the only river where, under a single management, a whole system of dams and reservoirs can be mobilized in harmony to protect the people and their property.

The new generation has never known what it was like before TVA, how anxious watchers gathered on the river's banks, how desperate families moved their household goods to the hills. They do not know how often this uncertain river held the lives and health and well-being of the people in jeopardy.

The new generation does not know what life was like before transmission towers rose high from the valleys and mountains to carry the lines that bring to the people power generated at these multipurpose dams and in gigantic modern steam plants built by TVA. It was a different kind of region then. In 1933 there were only 225,000 residential electricity consumers in the entire area where power from TVA now reaches more than 1,300,000 domestic consumers, and they used small amounts of electricity in their homes and almost none at all on their farms. Only 3 percent of the farms, just a few near towns or cotton gins, were connected for electric service. All over the region the countryside was dark at twilight. Today more than 95 percent of the farms use electricity in their homes and in their barns.

The river is serving the people throughout its length today because of the act of Congress which created TVA. That is not all. The forest resource is coming back, the cycle of devastation reversed. Since TVA began, almost half a billion pine seedlings have been planted and are growing to maturity. Slowly the scars of erosion are healing. Where acres were brown and barren, now pastures lie green beneath the sun and the landscape is more beautiful, the land more productive.

III

Today this region has started the long road back to robust strength and abundant productivity. This is a record for every American to view with pride. There is nothing like it anywhere. This is the record which profoundly moves me as I recall the day when TVA began. This is the record which makes me salute the management of TVA on this anniversary. For in this region their performance has outstripped our dreams. This does not often happen. Every legislator grows weary with awareness of great concepts which grow meager in execution, of noble ideas corrupted in administration. TVA is different. The new generation should find out why. I cannot give a simple answer, but I believe that part of the magic lies in the kind of statute Congress drafted. We did a better job than we knew.

We were uncertain, as we strove to create this new agency to deal with old problems. Reluctant rivers had been improved for navigation from the beginning of the Nation. The problem of vanishing resources had been with us a long time. But always rivers and resources, problems and opportunities had been considered piecemeal. In TVA we tried something new and bold. The heart of the great concept lies in the fact that for the first time in the history of Federal legislation Congress accepted the unity of nature. In this one river basin the interrelationship of land and water, of trees and pastures, of men and nature, received statutory recognition. This was a more startling innovation than it sounds. For then and now the traditional organization of the Federal establishments divides responsibility for the resources of a river and its basin among a dozen bureaus and departments, each with a single purpose, a different head, working under separate statutes. We gave TVA responsibility to inaugurate a total program committed to the full development of all Nature's resources for all the people.

At the same time we tried to build a bulwark against the steady tide of centralization. Even then we knew too many decisions were made in Washington on the basis of papers and reports; too much was decided by remote control. The experts were too far from the problems, the administrators too far from the people. So we told the Board of TVA to make its headquarters in the region, close to the work to be undertaken. We made it an independent agency, corporate in form, removed as far as possible from centralized control in Washington. We gave the power of decision to the men in the field.

We wanted TVA to be efficient, and we accepted the basic principle of modern management, still rarely recognized in Government. We gave authority commensurate with responsibility and we determined to judge by results. By law we freed the agency from the rigidities of the classified civil service. We told the Board to select its own employees, but barred for all time political considerations in appointments. We authorized the Board to buy or condemn the land and the equipment required in its program, and to sell whatever proved to be surplus. They could enter into contracts, and sue and be sued.

All those characteristics have proved to be essential—the unified approach, the location in the region, the accountability which is the counterpart of independence, the stern rejection of political manipulation. All have been vital to TVA's success. But greater than any one of those, I believe, is the fact that somehow the overriding purpose of the statute was clear on every page. It was clear in the legislative history of more than a dozen years. These administrative innovations were not to be ends in themselves, nor were the projects and the programs they would facilitate be objectives in themselves. Every undertaking was seen as a means to widen the economic opportunity and promote the well-being of the people. That is of course the ultimate objective of every Government program, but the purpose for which projects are built is too often obscured by the projects themselves. Construction becomes an end in itself. Somehow, in some way, some ingredient in the formula we devised for TVA has kept the overriding purpose sharp and clear. Every report from TVA reveals it. It is clear every time a witness from TVA testifies before a committee of the Congress. It accounts for the notable efficiency and the high morale of the staff of TVA. They never forget the purpose of their labor.

It was an act of faith when, after so many years of effort, Congress placed the destiny of this new agency in the hands of the three men chosen for the Board. That faith proved to be contagious, and early in its history TVA took the steps which have made the people of the region a part of the great program. It mobilized their energies for a total assault on the forces of resource devastation. It was an act of faith in the people when TVA rejected such alluring proposals as the recommended purchase of great tracts of forest land, all abused and some abandoned, in order that a gigantic program of reforestation might be inaugurated on Government-owned land. It was an act of faith when TVA declined to begin the acquisition of vast acreage of worn-out crop land that it might be devoted unhampered by the need to support farm families, to experimentation in the application of the new fertilizers to be produced at Muscle Shoals. It chose the slower, the harder way. TVA determined that the people who in the period of their private ownership become trustees of the Nation's resources should themselves take part in the program.

A new epoch in Federal administration began. The experts got out of their offices, away from their papers. They went to the people, and the people joined them in a great demonstration program. Farmers joined and showed their neighbors what would happen to the land and to their incomes as they began to use the new kinds of fertilizers produced by TVA as tools to change the management of their farms. Owners of woodlots and forest joined. Slowly the demonstrations spread over the Valley and farther—demonstrations in tree planting, in selective cutting, in sawmill operations; demonstrations in fertilizer use, in new farming practices, in the development of recreational areas.

Today the average income of the people has risen from 45 percent to 63 percent of the national average. There are more jobs for the new generation. There are jobs in cheese factories and in poultry processing plants because the land has been turned from soil-exhausting to soil-conserving crops. There are jobs in the forests products industries, 50,000 of them, because tall trees stand on land that was barren in 1933, and the people plant and they plan for a stronger forest resource in the future, investing their private funds in their faith. Last year alone new private investment in wood-using industries in the valley reached a total of more than $43 million.

There are new kinds of jobs in new manufacturing establishments. There are jobs because of the development of the magnificent recreational resource which has already attracted private investment of more than $60 million, as TVA has divested itself of area after area, and turned over to the people, for public and private development, the land adjacent to the beautiful man-made lakes. In this region, as nowhere else, the people have participated in a Federal program inaugurated to promote their well-being. They have taken risks. They have had faith. They have shared the dream.

The people have had a major part in the development of the great regional power system. With the exception of direct sales to agencies of the United States and a few large industries, TVA is a wholesaler of power. Today 151 distribution systems with a total investment of almost $600 million deliver the power to the consumer. All are locally owned and managed, two privately owned, the rest rural cooperatives or municipal systems. In contracts with TVA these distributors agree to charge the rates established to promote abundant use, and to dispose of revenues in such a way as to achieve the objectives in the statute. In the beginning their participation in the program was an act of faith, too, for when TVA's resale rates were announced in 1933 no one knew what revenues those rates would provide. The experts of the private companies serving the area said the people would not use the power the dams would produce. The people of this region have proved them wrong. The high use, low rate pricing policies which the private power companies had been too timid to risk turned out to be sound. At low rates, the volume of sales did rise, and increased revenues resulted. It was a demonstration that the public interest could be served without the financial ruin predicted by the private power companies.

IV

I am proud when I survey the financial record of TVA. My colleagues of 1933 would be proud if they could know that from the beginning, revenues from power sales have covered all the costs of operation, including depreciation, and in addition have provided

for the Government, the owner, a return which has averaged 4 percent on the investment. I am proud to know that over $400 million from proceeds has been reinvested in the system, enhancing the Government's investment without requiring appropriation, and that $240 million has been paid to the Treasury in cash. But I am proud that TVA has never forgotten why it was created. It was created to serve the people, all the people of the United States, to demonstrate what happens to a region and to a power supplier when power is used as a tool to develop the economy of a region, to raise the standard of living of the people.

TVA was not conceived as a military project. But today TVA is in the forefront in the development of atomic weapons, missiles, vital light metals, and new chemicals. Almost three-fourths of TVA's power output goes to defense and defense-related industries. More than half—a staggering 30 billion kilowatt hours in 1957—goes to the Atomic Energy Commission plants at Oak Ridge and Paducah. These plants alone use twice as much electricity as New York City, and more than is used by all the homes, businesses, and industries in each of 41 States.

The triumph of TVA is not recorded in the excellent financial reports, or in its contributions to the Nation's defense. It is recorded in the homes and farms of the region—in the installation of stoves and washing machines, refrigerators and freezers, milking machines, pumps, water systems, and hay driers. It is recorded in the increased use of electricity by the people, not only in the region it serves but all over the Nation. The symbol of TVA is not a balance sheet, no matter how impressive. The symbol of TVA is revealed when the lights go on at nightfall all over the region. They shine from barns, and kitchens, and parlors, deep in the coves and high on the hillsides.

When President Roosevelt sent his special message to the Congress urging prompt enactment of the TVA legislation, he said, "If we are successful here we can march on, step by step, in a like development of other great natural territorial units within our borders." We have been successful here. While we have not yet marched on to the creation of other valley authorities, we are moving step by step in the improvement of Federal administration of resource development. TVA has had an important impact on other Federal programs. I hear echoes of TVA when plans are now submitted to the Congress on a river basin basis, when coordinating committees are established in the field as the central agencies of Government and try to achieve the shadow of the unified appproach without the substance. I see a trace of TVA when the potential recreational value to the people is included in the benefits expected to be realized from construction of new Federal projects, and small watersheds are brought to our attention.

I note with satisfaction improvement in the land-purchasing procedures of some Federal agencies as they adapt TVA experience to their requirements. I am aware of better personnel practices as a result of TVA's development of its independent merit system, and I see modest efforts to follow its pioneering in the adoption of effective and honest procedures of collective bargaining. I see the results of TVA's achievements when I read the advertisements of the fertilizer companies, as they begin to provide the farmer with new and better plant food for his land. I find it in the lowered rates for electricity charged by private companies today.

The spirit of TVA echoes around the world. I heard the echo from India, from Iran, from Uganda, and from Wales. Everywhere, as freemen plan their future, they know their destiny depends upon the effective development of all of nature's resources for the benefit of all the people. To them, TVA is a pace setter and a symbol of hope. Its past is open for examination and for analysis. Its future lies in the hands of the new generation.

Impact of the Recession on the World

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. SMATHERS. Mr. President, there was published in yesterday's New York Times an article entitled "United States Recession: Its Impact on the World." A portion of the article had to do with the suffering of the people of Latin American by virtue of the economic depression which the United States is experiencing.

I hope that before we take up the foreign aid program Senators will acquaint themselves with conditions in Latin America, and learn how those conditions are worsening by reason of the depression, which we are suffering in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES RECESSION: ITS IMPACT ON THE WORLD

The economic recession in the United States which began about 9 months ago has been watched with anxiety by foreign countries. New York Times correspondents were asked to assess its effects abroad. Their reports indicate that its primary impact has been on countries that supply large amounts of raw materials. To date, industrialized nations have not been seriously affected, but there is fear that a prolonged depression, cutting imports by both the United States and the raw materials countries, would in turn affect the manufacturing nations. The correspondents' reports follow.

LATIN AMERICA SUFFERS

RIO DE JANEIRO, April 26.—Relying on the export of commodities for the bulk of its income, South America for the most part is deep in economic crisis in a backwash of the United States recession.

Because of the decline in prices that began last year and the drop in demand in the North for a number of commodities produced on this continent, many Latin American Republics have run out of hard currencies. The consequent lessening of the capacity to import and the imposing of import controls have in turn raised the cost of the foreign goods that are vital to South America. The inflationary nightmare is more pronounced than ever.

As an example of currency depreciation due to insufficient exports, Brazil's cruzeiro was quoted at the end of this week at 126 to the United States dollar compared with 69, 9 months ago, and everything points to a continuing downtrend. Chile and Peru, which are primarily producers of nonferrous metals, are receiving a double impact; not only are their overseas sales decreasing in value and volume, but the United States, anxious to protect its own mining industry, is threatening them with increased customs duties that could knock much of the Chilean and Peruvian copper, lead, and zinc off the market.

So great is the dependence on the exporting of commodities that no domestic measures can make a serious dent in the crisis. Most of the governments are looking to Washington for some form of aid so that economic crises do not deteriorate into social and political troubles.

The Soviet Union, taking advantage of the situation, has indicated that it may try to move into the picture by promising to take South American commodities in exchange for Soviet equipment and other goods. In the face of present difficulties, there is a growing receptivity toward such possible deals.

Remarks of Harry A. Bullis on Trade Agreements Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. THYE. Mr. President, Mr. Harry A. Bullis, chairman of the board of General Mills, made some introductory remarks as chairman of the morning plenary session of the National Conference of Organizations on International Trade Policy, at Washington, D. C., on March 27, 1958. I think they were timely and appropriate, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

WE CANNOT AFFORD NOT TO HAVE A TRADE AGREEMENTS PROGRAM NOW

(By Harry A. Bullis)

(One of the country's leading businessmen stresses essentiality of reciprocal trade to well-being of all our major economic sectors and cruciality to our foreign policy in introducing the case for continuation of our reciprocal trade agreements program. Mr. Bullis denies present recession offers any oppositional grounds since it is largely concentrated in durable goods production where we are especially efficient, and where we have our important export power.)

The reciprocal trade agreements program of the United States has now more than become of age. The law was passed and approved initially on June 30, 1934. Agreements made under it have now been in effect for more than 21 years. The program has served the interests of our people very well.

In these uncertain times, which are marked with difficulties in securing true world peace, the nations of the free world should bear in mind Benjamin Franklin's admonition that they "had better hang together, or they will hang separately." We, in the United States, do not have the margin of strength which can allow us to be indifferent to the needs of our allies. Rather, we must strengthen and enlarge all trade and economic bonds that may bind us together more firmly. History has amply demonstrated that the destinies of nations follow the course of trade.

CRUCIALITY TO FOREIGN POLICY

Thus our reciprocal trade agreements program is a crucial matter. It has become a cornerstone in our foreign policy. It is our evidence that we intend to work, united and devotedly with the free world, to develop a margin of economic strength over the Communist world. We cannot go it alone, nor can our allies prosper without us.

In the years since the mid-1930's, we have accomplished a great deal with our foreign trade policy. Taking the period since the

end of World War II, we have increased our imports from about $6 billion to almost $16 billion. Similarly our exports have increased because, as the record shows, when other countries are able to sell more of their products in the United States, they buy that much, and more, from us.

ESSENTIALLY TO OUR ECONOMY

It is my conviction that a renewal of the Trade Agreements Act for a period of at least 5 years is essential to the wellbeing of all major sectors of our economic life. To that end, it must contain sufficient authority for tariff reduction, so that meaningful negotiations with other countries will be possible. Furthermore, I am convinced that not only is a continuance of this reciprocal trade program essential to each of these sectors, but that without it, our total economy will suffer in its capacity for growth.

There are those who will say that extension of the act must be opposed because of the present economic recession. However, the present recession is largely concentrated in durable goods production where we are especially efficient and where we have our important export power. Therefore, in this period, the continuance of our foreign-trade program becomes particularly urgent. While our general exports have fallen to some degree in recent months, we are fortunate that our business dip has not yet been more seriously reflected in the economies of our trading partners abroad.

We need only look back to the period following the enactment of the Tariff Act of 1930 to realize that restricting our imports in a period of recession makes certain the spread of recession around the world. We all know what that implies for our exports.

CANNOT AFFORD NOT TO PASS BILL

We need this Trade Agreement Act because we need our exports, particularly now. We should fight to the limit any claims from any quarter that we cannot afford a trade agreements program in a period such as this. The fact is that we cannot afford not to have a trade agreements program now.

In our consideration of a forgein-trade policy in the total national interest, we have proposed a discussion of that policy in terms of its effect on the major sectors of American economic life. We know that the value of a trade policy to the Nation is the sum of its values to each part of the economy. We shall deal specifically with the reciprocal-trade program as the principal expression of our trade policy and as its operating instrument. We shall look at it from the point of view of agriculture, of industry, of the consumer, of the effect on our total domestic employment, and finally, examine its relation to foreign investment.

There Will Be No Depression

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. DEROUNIAN. Mr. Speaker, the address of the Vice President of the United States, at the annual dinner of the Bureau of Advertising, American Newspaper Publishers Association, given in New York on the evening of April 24, 1958, analyzes this Nation's position today in a sound and sensible way. Every citizen should read it and give careful thought to the statements contained in it. Under leave to extend my remarks, it is herewith recorded in the Appendix of the RECORD:

In recent months Mr. Khrushchev has thrown down a bold and boisterous challenge to the United States in the area in which we have considered ourselves unbeatable—the productivity of our economy. He has said:

"We declare war on you in the peaceful field of trade.

"You are not being threatened with ICBM's but with peaceful competition in consumer goods.

"We will prove the superiority of our economic system over yours.

"Your grandchildren in America will live under socialism."

And just 3 days ago in Moscow, in speaking to the American Ambassador of the Soviet Union's economic achievements, he said, "Look out, Mr. Thompson, we are stepping on your tail."

This statement would seem to be a presumptuous boast when we consider that the United States today produces almost three times as much as the Soviet Union. But these sobering facts must be kept in mind:

The Soviet economy has made formidable strides in the first 40 years of the U. S. S. R.

The Soviet economy is growing faster than ours.

The Soviet Union, because of its autocratic control over its people, can concentrate its lower productive capacity in those areas of the world struggle which will best serve its objective of world domination.

Finally, we must recognize that economic competition between the free world and the Communist world may well decide the world conflict.

The position we must take, therefore, is clear.

We are well ahead of the Soviet Union economically today.

But the only way to stay ahead is to move ahead.

We cannot afford to stand still.

Our Nation's security requires that the American economy produce as efficiently and as abundantly as possible.

In this context let us examine the characteristics of the current economic downturn in the United States and the actions which may be justified to reverse it.

Let us first dispose of two fallacious appraisals of our present economic situation.

To those who claim that we are headed for a great depression, the answer is that the present economic downturn is under no circumstances comparable in character to the depression of the 1930's.

In 1929 literally millions of people were dealing with inflated and imaginary values.

The economy then did not have the cushioning effect of certain social welfare laws and monetary policies which are available today.

We can state this one conclusion categorically. There will be no depression in the United States. This is true both because of the basic strength of our economy and because it is backstopped by the determination of the national administration to use every proper governmental action to stop a prolonged recession and to help stimulate early resumption of a high rate of economic activity.

Mr. Khrushchev's claim that our economic downturn is proof of the inherent weakness of a free economy is another conclusion which will not stand examination.

A normal economic system, just like a normal human body, does not and should not run at full speed at all the time.

There are times when it must slow down so that needed changes can be made and bad habits and faulty practices corrected.

If these needed changes are made, the system will be stronger at the end of the corrective period than before it began.

In examining the characteristics of the present slowdown we find that it is a result of some normal shifts in the economy, plus some bad habits that got out of hand in recent years.

Let us look at one development which can be characterized as a normal shift.

We emerged from World War II with a great many wornout plants, too small for our growing population, and obsolete in terms of current technology.

There was a rush to expand and modernize.

As a result, in many cases, capacity has outrun current demand.

The inevitable consequence has been, therefore, a slowing of business investments in new plants.

Such changes as this are normal. They reflect change and growth in a free economy. They give us no cause for concern.

But there are factors which contributed to the downswing which stem from evils which should be corrected. If they are not corrected, our economy will not be strong enough to meet the challenge presented by the Communist world.

In this category we must place inflation at the top of the list.

Inflation robs the aged of their savings.

It is an automatic pay cut for those on fixed salaries.

It is a tax on life insurance policies.

It leads to consumer resistance and rebellion.

It would be a mistake to try to stimulate economic activity without also trying to cure inflation. Otherwise, in the action we take to combat our present troubles, we are simply buying more trouble later on.

A related evil is the cost-price squeeze on business. While business profits were relatively good on the whole last year, a disturbing note was that many firms reported higher volume and lower earnings.

There was talk of profitless prosperity.

This type of squeeze usually leads to postponement of planned business expansion.

It means that something is radically wrong when, with all of our new plants and processes, costs go up rather than down.

When we examine the reasons for skyrocketing costs, we discover a third major weakness which contributed to the present economic downturn.

We have been getting soft in a period of easy sales. Many businesses have enjoyed a seller's market for 15 or 20 years.

That means that almost an entire generation has not known the discipline of persuasive selling and adequate service. We have become a nation of order takers, rather than salesmen.

The same can be said of our work habits. The current joke about substituting a work break for a coffee break was not just conjured out of thin air.

Wage increases not based on increase in productivity became the rule rather than the exception. Consequently, even with all of our improved plants and modern processes, productivity did not rise as expected, and in some instances even declined.

This brings us then to the problem at hand. What should Government policy be with respect to the present recession?

We should not interfere with normal change. But we must help to correct the evils of inflation, profitless prosperity, and low productivity. The correction of these evils will be a powerful stimulus both for business investment and consuming buying.

We must, however, be vigilant in distinguishing between normal changes and corrections and the spiraling downswing that feeds on itself. If there are substantial signs that a decline may snowball, then Government must step in and stimulate the economy.

But normal corrective action is the preferred choice; massive intervention should be used only as a last resort.

Let us examine the actions the Government has taken up to this time in the light of these principles.

We have recognized that changes in our economy are inevitable, but that human suffering which may occur as a result of such changes should be alleviated as much as possible.

That is why the administration has asked the Congress to provide Federal aid to the States in extending the coverage of unemployment compensation where the benefit period has expired.

We have accelerated normal Government spending for those things we need, and we have directed that spending where possible into areas where economic dislocation has had its greatest effect.

We have expanded the supply of credit, having in mind the necessity for caution because of the continuing threat of inflation.

We hope that these actions will be all that will be required to give the economy the help it needs. There are substantial indications that this may be the case.

I realize that there are some traditional economists who contend that under no circumstances should the Government do more than it has. They say that we should let the economy go through the wringer if necessary so that it can rid itself of its unhealthy characteristics.

But let us recognize once and for all that the time is past in the United States when the Federal Government can stand by and allow a recession to be prolonged or to deepen into depression without decisive Government action.

Since the days of the great depression, the Government has developed a vast capacity in many areas to break a slide and to stimulate the economy. We no longer accept the finality of the operation of blindly cruel economic forces where millions would be left without work, without the ability to feed, house, and clothe their families.

In addition to the human and economic costs involved in such a situation, there are international costs which almost exceed comprehension.

When the editors from many of the great newspapers abroad visited Washington last week, one of the questions asked most often was whether we were going to have a depression in the United States and what the prospects for recovery were.

Every time the United States economy suffers even a slight shock there are reverberations in the economies of free nations throughout the world.

A major or prolonged downturn in the United States would have catastrophic effects on not only our own country but on our friends abroad.

The greatest gainers from such an event would be Mr. Khrushchev and his cohorts in the Kremlin.

This brings us to what further action by the Federal Government might be considered if necessary to stimulate an economic recovery.

Two courses are generally debated—a massive new Federal spending program, and a tax cut.

I believe that there is no question but that the use of massive spending for new Federal activities to combat the current recession should be rejected.

Acceleration of spending on existing programs can have the relatively quick effect the economy needs at this time. But by the time spending on the massive new programs which are being urged as antirecession measures began to make itself felt, the economy would already be on the way to recovery on its own, and the new spending would only contribute to more inflation.

Another objection to new spending programs is that they would have an inevitable tendency to make Government larger and stronger, and private enterprise smaller and weaker. It is significant to note that in the Senate alone 9 bills labeled as antirecession measures call for $38 billion in new spending over the next 5 years.

As the President put it very bluntly when I was discussing the problem with him last week, the recession should not be used as an excuse for adopting massive new spending programs of the type that would give little, if any, stimulation to the economy at this time.

Such programs should be approved only if they meet the test of qualifying as a proper function of the Federal Government.

We must also be on guard against what appear to be relatively small new programs, because by nibbling away we will eventually find we have ballooned our way into a massive spending program. That is why the President's veto of the pork-barrel rivers and harbors bill was justified, and why similar bills of that type should receive the same treatment. A spending binge now can only lead to a hangover of debt and inflation later.

This leaves us with the other alternative—the tax cut.

As I have stated previously, I believe that, if further action should be required to stop the downturn and stimulate an upturn, a tax cut, rather than spending, is the fastest, the best, and surest method to accomplish this result.

However, a tax cut will not do the job unless it is the right kind. It must be designed to put money in the hands of investors and job creators, as well as consumers.

It will not do the job if it is used simply to provide a popular political handout in an election year. It can succeed in its purpose only if it is designed to stimulate more production and more jobs for the American people.

In considering what further action the Government should properly take to stimulate the economy, we must bear in mind some fundamental principles:

If the economy can come through the present downturn without additional massive Government intervention on either the tax front or the spending front, this would be desirable because of the inevitable deficit that either of such actions would bring.

Our objective must be for our economy to be stronger when it comes out of the present situation than when it went in.

Too great reliance on the crutch of Government support will leave the economy with the same weaknesses at the end of the recession as it had at the beginning.

We must not act in a way which appears to solve our present problem but which undermines our future growth.

There is too much of a tendency in some business quarters to say let the Government bail out the economy.

Government can help but the primary responsibility for recovery must be assumed by American business and labor, and the other vital forces which make up the private sector of the American economy. As Dr. Arthur Burns said in Chicago last month, "There is nothing wrong with our economy that could not be corrected by vigorous business enterprise."

What is the responsibility of business in the present situation?

We have heard a great deal of talk lately in which the American people are urged to buy. This is sound, but a necessary counterpart for such a program is that American business must recognize that this is a buyer's market and act accordingly. New products, increased advertising, lower prices can have a dramatic effect on consumer psychology.

In this connection, I was interested to note that several publishers to whom I talked in Washington observed that their national advertising was down as much as 40 percent in the first quarter, while their local advertising has held up reasonably well.

I can think of no more shortsighted action than this on the part of national advertisers.

The very people who have most at stake in the survival of our free economy should be betting on its growth rather than hedging on its possible failure.

America's labor leaders also have a great responsibility in the present situation.

The labor leader has a responsibility to fight for the best interests of labor union members.

Obviously union members would like to have higher wages.

But they also want jobs.

When higher costs price their product out of the market, they are out of a job.

Wage increases which are not based on increased productivity mean higher prices, lower sales, and fewer jobs for union members.

A round of this type of wage increases would inevitably have a depressing effect on the economy at this time.

The restraint I ask is in no sense antiunion.

On the contrary, what we need is a return to the wage policies that have been traditional in the American labor movement. The pattern of spectacular competitive wage increases leading inevitably to higher prices is relatively new in American labor. It arose after 1946 because of special postwar conditions.

It is time to return now to the healthier, sounder approach which made American labor the greatest trade union movement in the world.

Let us return now to our basic premise.

The American economy is sound.

The practices which are bad should be corrected.

The Government stands by to cushion a downturn and to stimulate an upturn but always with the primary responsibility for maintaining the sound dollar which is the only foundation on which real economic progress can be based.

I would not want to conclude my remarks without a word of faith.

We hear much today of the great strength of the Soviet Union. I have never been one to discount this strength. It would be fatal to underestimate it. But in recognizing the threat of the Communist revolution, let us not forget the promise of the American revolution.

Those who have doubts as to the dynamic strength of the American revolution need only look beyond our great accomplishments in the past to some of the new economic frontiers we have before us.

It has been estimated that in the next 10 years America needs to spend:

Twenty billion dollars for electric power.

Twenty-two billion dollars for hospitals.

Thirty-one billion dollars for public and private schools.

The almost astronomical amount of $250 billion for residential and nonresidential construction and urban renewal.

To meet these domestic needs, together with the increasing costs of our programs for national security, we should set as our goal not the present rate of growth of our economy of 3 percent but the higher rate of 5 percent recommended by the Rockefeller report. This would project an increase in our gross national product from $434 billion today to $707 billion in 1967.

This goal to some may seem unrealistic.

It will never be achieved if we adopt a stand-pat, status-quo attitude toward our economy.

It will never be attained if we wrap it in a socialistic straitjacket.

It will be achieved if we face the future with vision, determined to tap all of the great resources which are at our disposal.

Government must play a substantial part in achieving these goals.

Our tax system must be revised so that it will encourage rather than curb new initiative, ingenuity, enterprise, and energy.

Small business must be encouraged and stimulated so that it can continue its invaluable service of pumping new blood and new ideas into our free enterprise system.

We must recognize and develop the full potential of millions of our fellow citizens who are now denied adequate opportunity for education and employment because of their minority position.

We must follow the President's leadership in developing a new program for agriculture rather than adopting the unworkable political approach of freezing America's farmers in an obsolete rigid system which can only lead to a dreary cycle of surpluses, controls, and depressed farm income.

We must have vision to develop an enlightened and far-reaching program for foreign trade if we are to have adequate markets for the increasing production of our growing economy.

But recognizing as we do that Government has its part to play, we must never forget one fundamental principle: What distinguishes the American Revolution from the Communist revolution is that we believe the most productive source of national progress is private rather than Government enterprise.

All of our Government policies must, therefore, be designed to encourage and stimulate individual Americans to make their maximum contributions to the realization of the Nation's potential. This can be done only in a climate of freedom of enterprise.

We have no doubt whatever as to the soundness and resiliency of our free enterprise system. As in the past, we expect to come out of the present recession with a stronger and more robust economy which will exceed in production the historic records made during the past 5 years.

Our answer to Mr. Khrushchev then is that we accept his challenge for economic competition, confident of the outcome where free men are pitted against slaves.

But in the great tradition of our own American Revolution, we hasten to add that the American dream is not to conquer the world but to defend the right of any people to be independent of foreign domination; not to enslave men but to free them.

We challenge the Communist world to compete not only in the economic sphere but in justice, in mercy, in kindliness, in respect for the things of the spirit, in real concern for the welfare of the poor and the unfortunate of the earth.

We offer total peaceful competition with supreme faith and confidence that we shall win.

Arnold Palmer Paid Tribute at Reception

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 26, 1958

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to commend Arnold Palmer on his recent victory in the field of professional golf. My home district is very proud of this young man from Latrobe, Pa. He has earned a national reputation for proficiency in the game of golf and for clean, upright, truly American sportsmanship. It has been my pleasure to watch this young man move up from his high school days in Latrobe to receive the highest honors in this field of endeavor.

Along with my personal congratulations, I also add to the RECORD the following editorial from the Greensburg Tribune-Review of April 19, which emanates from the county seat of my district:

ARNOLD PALMER PAID TRIBUTE AT RECEPTION—LATROBE COUNTRY CLUB HONORS MASTERS WINNER

Arnold Palmer, of Latrobe, one of golfdom's great stars, was honored last night at a reception at the Latrobe Country Club. His father, M. J. "Deacon" Palmer, is golf pro at the club.

The husky 28-year-old golf star just recently captured the famed masters golf tournament in August, Ga. His earnings following that great victory soared his total to the top in professional golf, $19,833.33.

The Latrobe Country Club, where Palmer was feted last night is a familiar spot to Arnie since he grew up in Latrobe and has since built a home for his family just adjacent to the golf course.

Last evening's reception and dinner were attended by many of the members of the country club who are lifelong friends of Palmer and who represent most of the industry and civic organizations in Latrobe.

The proud businessmen and civic leaders of the borough shifted Palmer from titleholder to shareholder by making him a shareholder in some of the town's largest industries.

M. W. Saxman, president of Latrobe Steel Co., said, as he presented Palmer and his wife with shares of Latrobe Steel stock, "Arnie has been a great ambassador of good will for our community and for the industries of Latrobe. We want him to know that we appreciate, not only his mastery in golf, but his wonderful sportsmanship and consideration off the course as well."

Other heads of industry who made presentations of shares of stock to Palmer were: J. P. Gill, president of Vanadium-Alloys Steel Co., and J. M. Underwood, president of Vulcan Mold & Iron Co.

H. S. Saxman, president of the club and longtime friend and adviser to Palmer, presented, on behalf of the Latrobe Country Club members, shares of stock in Wilson & Co., owners of Wilson Sporting Goods Equipment Co., whom Palmer represents.

The masters' winner, in talking to the Tribune-Review last night, said that he had not entered the Kentucky Derby Open, which is now being played, due to other commitments, but has entered the famous "tournament of champions" field that starts Thursday at Las Vegas, Nev.

This article, I am sure, testifies the high esteem held for Arnie by our citizens.

President Garcia of the Philippines Will Be a Most Welcome Visitor

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. MARTIN. Mr. Speaker, the press has announced the forthcoming state visit of the Honorable Carlos P. Garcia, President of the Philippines, on the invitation of the President of the United States. He is to be in Washington on June 17 and will be the guest of our Government.

I am sure our people are happy to know that President Garcia has accepted our President's invitation and that we will have the opportunity to extend to him our country's hospitality. I have no doubt that he will receive a warm and cordial welcome as the recognized leader of a brave and valued ally in the Pacific.

Such is the unique relationship between the United States and the Philippines that a state visit such as that of President Garcia assumes an importance we cannot fail to recognize. Not only because politically our country and the Philippines were united for more than 40 years, but also because of the record of loyalty to freedom and democracy of the Filipino people since their independence, a visit by the head of state of that nation deserves our special attention.

We have received the leaders of many nations, and have been glad to welcome them and hope we have strengthened our friendships. We will with great pleasure receive in June this year the representative of a people that stood by us in our darkest hour during the Second World War, a nation that never wavered in its loyalty to our ideals, a people that never hid its colors and always proclaimed courageously its stand for democracy and freedom. He comes as a real friend and associate.

What has also won our abiding admiration and respect is the consistent stand of the Filipinos against communism. They have fought it with a determination that is an example not only for the free world but especially for the uncommitted in that part of the globe. And their leader, whom it will be our privilege to receive as our honored guest in June, Preisdent Garcia, had the statesmanship and the courage to sign a law outlawing the Communist Party from the Philippines.

President Garcia, during the Second World War, won high praise from Gen. Douglas MacArthur for refusing to collaborate with the enemy. He was with the Filipino guerrillas in the hills of Bohol, offering civilian resistance so heroic a heavy price was put on his head. He could have accepted the offer to work in Manila as a puppet official, but he chose to risk his life in defense of his principles and throughout the entire enemy occupation he was with the forces of resistance, suffering with them all the privations and sacrifices of living in the mountain fastnesses as hunted animals.

The Filipino people have elected him as their President during a difficult period in world history. The Philippines is facing economic problems of great magnitude, as a result of the present world recession. President Garcia can be assured of a sympathetic hearing and a genuine desire on our part to help. The Filipinos are entitled to our every consideration, for theirs is a republic that was born under the protection of our flag, and they have lived up to our highest expectations, upholding courageously our democratic ideals and way of life. Let it never be said that we do not know how to recognize the loyalty of

friends who have been unwavering in their support of the United States.

The Filipinos are meeting their problems in a most creditable way. As an evidence of this, I wish to quote an editorial of the New York Journal of Commerce of April 18, 1958, which analyzes the financial position of the Philippines and shows how President Garcia has inaugurated an austerity program that is beginning to pay off. What the Philippines need is development loans, and the editorial explains this in a telling manner. The editorial follows:

[From the New York Journal of Commerce of April 18, 1958]

STRESSES IN MANILA

Encouraging signs have appeared on the Philippine economic horizon of late.

After reaching a low of $136 million in January, the Philippine international reserve has recovered to $152 million. A favorable balance of $13 million is expected to show for the first quarter of this year. To all appearances, the heavy pressure on the government is easing somewhat.

This attests, among other things, to the effectiveness of the austerity program instituted last year amid much adverse criticism. It brought about a further tightening of credit control and cut import allocations and government borrowing for economic development projects.

As a result, Manila has been able of late to remove some of the most painful of these curbs. Specifically the monetary board has eliminated many of the restrictions imposed in its much-criticized Central Bank Circular No. 79, and has canceled the cuts it imposed on import allocations, a series of high cash-deposit requirements on certain import letters of credit and its prohibition on loans for the import of nonessential consumer and producer goods.

All this, recently reported by Ambassador Carlos P. Romulo on his return from Manila, is to the good, and it is to be hoped that it will ultimately signal more to come.

The fact is, however, that the Philippine Republic's economic troubles are far from over. Some staples, including rice and corn, are still in sufficiently short supply to keep alive the threat of inflation. There is also a strong possibility that foreign exchange receipts will drop with the decline in sugar shipments after May or June.

On top of this is the fact that loans aggregating $20 million from two United States banks, on which payment has already been extended for 6 months, must be met before June 30. In the circumstances, Ambassador Romulo says, "It will not be possible for the central bank to provide exchange for the import of machinery and equipment for new industries, especially if a portion of the raw materials they would have to use would have to be imported."

So despite the silver lining which has begun to appear along the economic clouds over Manila, prospects are for more unemployment, a further contraction of reserves, and possibly more austerity unless assistance is forthcoming from abroad—primarily from the United States.

This is the framework in which President Garcia's forthcoming visit to this country must be viewed. It is no secret that when he arrives here in June he will be seeking loans from the United States Government and private capital to further Philippine economic development—one argument being, as explained by Ambassador Romulo, that without outside help it will be difficult for the central bank "to provide exchange for the import or replacement of spare parts of machinery and equipment required by established industrial plants."

President Garcia's reception in Washington is thus likely to mark a crucial milestone in Philippine economic policy.

Few of the many countries seeking financial help from Washington deserve a more sympathetic reception that the Philippine Republic.

It is not only a matter of the steadfastness with which the Filipinos have stood by us in grave periods of international stress, though that is certainly a factor too important to be overlooked, President Eisenhower, and those of his associates with whom Mr. Garcia will be conferring, should also take into consideration the fact that the Philippine Government has tried hard to meet the worst of its problems from its own resources, even though its efforts have necessarily led to much tightening of belts, painful measures and a good deal of unpopularity among local freespenders.

A major problem still facing Manila is that of providing more employment for its growing labor force by getting its economy gradually into better balance. This country has given it considerable help in this direction up to now. But more help is needed, and when President Garcia arrives in Washington early in June, we hope he will be given every reasonable facility in obtaining it.

President Garcia recently made the announcement in Manila and published in the United States press that he is keeping Gen. Carlos P. Romulo as the Philippine Ambassador to the United States despite a major reshuffle in the Philippine foreign service. This is an action that true friends of the Philippines in the United States welcome wholeheartedly. It shows that President Garcia's appointments are based not on narrow partisan politics but strictly on competence and integrity, qualities which General Romulo has shown in the performance of his duties and which have endeared him to the American people. In the United States Congress where he is a highly esteemed former colleague, General Romulo has countless friends and admirers. He has earned our high regard and respect for the persistence and ability with which he has constantly fought for the best interests of the Philippines. No nation is better represented in Washington than the Philippines, and the Filipino people should be proud they have in General Romulo a diplomat and statesman who has gained world recognition and who in the United States is held in the highest esteem.

We will welcome President Garcia with open arms. We admire him as a leader whose record of patriotism is unsullied, whose work as a statesman is a credit to his people, whose opposition to communism is as courageous as it is uncompromising, and whose loyalty to the democratic way of life he showed in the darkest days of the Second World War when to fraternize with the enemy was the comfortable way, and to resist and fight was to court death.

I am happy, Mr. Speaker, to be able to pay this tribute to the head of state of our valiant ally in Asia, President Carlos P. Garcia of the Philippines.

Address by Mrs. John G. Lee, Retiring President of the League of Women Voters

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. PORTER. Mr. Speaker, during the past week the League of Women Voters of the United States held their 23d national convention in Atlantic City. This militantly nonpartisan organization has worked intelligently and effectively to produce constructive legislation for many years. During the last 8 years the league has been headed by Mrs. John G. Lee, of Farmington, Conn., who presided over her last convention last week. She is a woman of rare insight, and I feel that her remarks to the convention are worthy of the consideration of my colleagues and I include them—with portions deleted which deal particularly with internal procedures—as follows:

TEXT OF SPEECH BY MRS. JOHN G. LEE, PRESIDENT, LEAGUE OF WOMEN VOTERS OF THE UNITED STATES, APRIL 21, 1958

The theme of this convention is new dimensions. These words suggest that we as Americans and as members of the League of Women Voters must break away from the limitations which have bound us; that the length, breadth, and depth of human experience is evolutionary; that old ways, old views may not satisfy the needs of today; that new visions must be sought. Life is on-going, as Professor Whitehead put it once—"the process is itself the actuality." It seems fitting at this time that we review the process which has brought us to the present for here we will find the experience and the values from which the future will be shaped.

* * * * *

One of the curious things I have long noticed about the League of Women Voters is its inherent ability, which has been demonstrated time and again, to reflect quite accurately the climate of the Nation as a whole. If you examine league history, I have a theory that you will find the league usually slightly ahead of the great mass of public opinion and yet within itself containing the currents and crosscurrents which represent public attitudes. Often, the league serves as a sort of barometer which indicates the weather just over the horizon. I shall give you neither chapter nor verse, but a few bits and pieces and hope you will put them together.

For 14 years the league has spent considerable time and energy in an effort to reach what has been called the mass of men possessing a minimum of bite and taste. We have tried to sell the league idea to all manner of women regardless of their natural bites and tastes. We have provided a sort of cafeteria designed to tempt all tastes, but not necessarily to satisfy any real hunger. We have persuaded ourselves that everyone has a natural instinct to be a good citizen and that we can successfully cultivate this instinct by doling out sugar-coated pellets of information which can be taken in monthly or bimonthly doses guaranteed not to upset anyone's digestion or blood pressure.

There is a place for this assuredly, but in our eagerness to be all things to all people we have permitted it to overshadow other requirements of a fundamental character.

I submit there is an illusion here, too, because it creates the false impression that informed and active participation of citizens in government is a simple skill to be acquired with little effort. Furthermore, we are deluding ourselves because we really do know that the exercise of civic responsibility is not an instinctive virtue universally shared.

* * * * *

There is no possible way to surmount the complex difficulties our extraordinary civilization has developed other than by terribly hard and intense application of our minds. Surely there is no dichotomy in a society which nurtures a representative democracy and cultivates a climate conducive to intellectual achievement. The two standards must be joined—dare I say—under Old Glory.

Chief Justice Holmes in his inimitable way put the matter engagingly: "The main part of intellectual education," he said, "is not the acquisition of facts, but learning how to make facts live. * * * All the fact collectors who have no aim beyond their facts are one-story men. Two-story men compare, reason, generalize, using the labors of the fact collectors as well as their own. Three-story men idealize, imagine, predict; their best illumination comes from above, through the skylight." In the league we need 1, 2, and 3-story women, but let us develop more and more 3-story women working under the skylight.

In the Nation's hurry to advance our scientific capacity, we must take care not to lose sight of our ultimate goals. We must see the truth in Andre Siegfried's words, "The essential aim of civilization is not technical progress or output or equipment, but man himself." To achieve an equilibrium will be difficult. There is a need to know all that can be found out about nuclear physics, pure and applied science of every kind; there is an equally pressing need to know in the wide and deep realm of the humanities: literature, the arts, philosophy—where mankind's true values are to be found.

All of this can be seen in precise and practical terms. There is much we, as individuals, can do about it; there is a vitally important contribution which can be made by each local league.

What shall be the aims of our public schools? How shall our education needs be financed and administered? These questions will be decided in each community. There, too, rests the ultimate decision as to the respective responsibilities of the various levels of government. I suspect in time a certain degree of acceptance will be granted the notion that in many areas of our lives the National Government must play an increasingly important part since so many of our interests and problems are national in scope and concern.

We Americans have a penchant for setting up a new commission or institution and appropriating special funds whenever we face an emergency. Seldom do we see a more proficient utilization of what is already at our command as a first requirement. Additional expenditures will not necessarily change old attitudes and it is surely in the realm of public attitudes toward education and educators that a right-about-face is acutely needed.

Surely our salvation lies not in being able to annihilate Russia, nor in remaking the world into our own image. It lies in our capacity to advance human life and thought. It lies in our ability to operate a form of government demanding the highest degree of sophistication, maturity, restraint, and skill. In brief, it is required of us, as Americans, that we not only train ourselves, but that we be educated.

We need to know the difference. The decision lies in the hands of individual citizens each in his own community. Again, there is something vital each one of us can do in our own hometown to assure our progress toward this goal.

I have often thought that one of the most useful contributions the leagues can make in this area is to facilitate a desperately needed political education. I do not mean this as it applies to adults alone, but as it might be incorporated into our educational systems. The league has made little, if any, impact upon this aspect of education and serious consideration should be given to ways of extending its service.

We find that more often than not even the college graduate, who becomes a new member, must receive through the league an elementary education in practical politics. Yet through the mechanics of politics our destiny as a Nation is determined. When we talk of the need to develop great numbers of scientists, let us remember the crying need for political scientists, for broadly applied political education, for the skills to develop political judgments; for only thus will we avoid shortchanging our future. The league is needed to help attain a balance.

* * * * *

You are about to debate and decide upon a program. I have often found that I cannot feel strongly partisan about any of the subjects you might choose so long as they are in the vanguard of American political thought. If they have this quality they will have vitality and they will be geared to carrying out the purpose of the league. There are three areas I want to mention briefly, however, which in my judgment need a little special attention: Integration, metropolitan development and United States foreign policy. I shall not even remark upon how far we have come in our present program commitments since this is all adequately covered elsewhere.

First, I want to make clear once again my profound admiration and respect for those who are operating leagues of women voters where racial tensions are running high, especially in the South. It is well for us to realize that racial conflicts are as old as man; they will not be solved today or tomorrow; if at all, it will be in the distant future, for the history of evolution indicates surely that man is his own worst enemy.

This then is a universal problem and the particular aspect of it with which we are plagued today is national in character. Industrial expansion and population growths and shifts are bringing changing patterns in American life to the farthest corners of the Nation. It is impossible for the League of Women Voters to ignore the problem of integration; it would be disastrous, in my opinion, for the league to become directly involved in it. While I realize there are grounds for apprehension in my discussing this subject, I believe it is important for all of us to understand where the league stands and why.

The first principle of government which the league supports is this and I quote: "The principles of representative government and individual liberty established in the Constitution of the United States." This statement establishes the authorization for the adoption of current agendas. The concept inherent in it prohobits a current agenda item favoring segregation; it would permit a current agenda item supporting integration. But the League of Women Voters of the United States has not adopted an item under this authority and therefore has no position on the integration issue.

I would like to remind you of the statement on membership which appears in our national bylaws: "Any person who subscribes to the purpose and policy of the league shall be eligible for membership. The membership of the league shall be composed of voting members, associate members, and members at large."

I have attended membership meetings all over this country and I have seen in every State of the Union evidence that those who subscribe to the league's purpose and policy do so regardless of race, color, creed, or sex.

The history of the league has revealed time and again that under certain circumstances an indirect approach in seeking solutions for public problems may be more effective than a direct attack. Furthermore, in promoting citizen participation in government the league is more concerned with the political development of the individual than with a specific issue.

It follows then that the league must choose its program with this ultimate objective in mind. This is not to say that the league should avoid conflict; it is to say that it is wise to avoid issues which are divisive in character when it is evident that the league will be unable to make a constructive contribution to the solution of the difficulty. In the present integration conflict, it is clear that activity in this field would handicap, possibly destroy, the league's ability to make its own unique contribution to the political life of the Nation.

It seems to me, the leagues in the South, where the pressures are greatest, have pursued the only tenable course. Slowly but surely and almost invisibly you have worked to provide for the strengthening of representative government. You have worked unobtrusively and undramatically to better conditions, a little here, a little there, and each improvement, no matter how small, has removed a source of tension.

Americans, and particularly perhaps the League of Women Voters, are impatient by nature and prefer direct action. Yet the democratic process is tedious and deliberate and requires infinite patience, tolerance, and maturity. It demands an atmosphere in which understanding can be developed, adjustments and compromises can be made. To my mind, the league's greatest contribution under the present circumstances, and I do not underestimate the crisis quality of today's situation, is to continue to work in every possible way in each community to strengthen the understanding and the application of the values of the great concepts on which this Nation was founded.

* * * * *

One of the best statements I have read describing our national objectives is put forth in the Millikin, Rostow book, A Proposal, Key to an Effective Foreign Policy. I want to quote it to you.

"The fundamental task of American military and foreign policy," they say, "is to maintain a world environment for the United States within which our form of society can continue to develop in conformity with the humanistic principles which are its foundation. We must physically protect our country; but the protection of American territory is essentially a means to a larger end—the protection of our still developing way of life. We have a major and persistent stake in a world environment predominantly made up of open societies; for with modern communications (and this word must include missiles) it is difficult to envisage the survival of a democratic American society as an island in a totalitarian sea." Millikin and Rostow also comment that "the art of American statesmanship is to formulate courses of action which in specific settings harmonize abiding American interests and abiding American ideals."

In short, they are saying, I think, our national efforts, military and political, must go forward together to assure independence and human liberty and must create a world climate in which threats to our way of life become minimal.

This, let us assume, is a reasonably satisfactory description of the objectives of our foreign policy. It is quite conceivable that free traders and protectionists alike, for example, would support such a statement. The rub and seemingly interminable differences of opinion occur at the next point: that is, when we try to hammer out a policy designed to achieve these ends. Here we become involved in all manner of different attitudes, conceptions, and judgments. Here, too, the league comes in, since it offers an opportunity for people of varying points of view to find areas of agreement through examination of the facts and free discussion.

I was impressed with a comment I read in regard to the value of discussion. It was put this way: "Discussion is the chief device for letting all the voices, the stray, the wonderful, the bewitched, and the prophetic get their chance and make their gifts to the future." We have heard in the league, as in the Nation, the wonderful and the prophetic making their gifts to the future and sometimes, alas, we have mistaken them for the stray and the bewitched. We need perhaps to sharpen our hearing.

Moreover, we have found in the league, through long experience, that each voice starts out singing a different tune, but that through much practice a commonly accepted theme evolves—and this we call consensus.

Through the years we, the American people, have demonstrated by and large a rare capacity to grasp and build on the great new concepts which have emerged during this most turbulent of all centuries. We have committed ourselves to the principle of international cooperation. There is less need for the country to examine this proposition again than there is need to know better how to implement it. The United States has conceived of or underwritten such bold and unparalleled experiments as the United Nations, the Marshall plan, NATO, mutual security, to name only a few.

There is need now to cultivate amongst Americans attitudes and judgments which will assure us of balanced progress toward our goals as we proceed into the irresistible and inscrutable future. It is imperative that we acquire an attitude which will make it possible for us to resist the temptation to criticize or place blame on a segment of the society. That is to say, there is no use in blaming business or labor or one or the other political part or the Congress or the Administration.

Criticism we must have; it has been said that "an age that had great critics was a great age"; but the searching criticism that is needed must be directed toward the society as a whole rather than to a part of it. This attitude will be increasingly difficult to maintain as we move deeper into an election period, but I believe the League of Women Voters has a particular and vastly important role to play in this regard.

It has been pointed out over and over again that when a society slows down it falls into a decline. Lack of progress, in the sense that the fundamental objectives of a society are not being earnestly pushed, deprives that society of the vitality that gives it life. Has this happened to us? It is safe to say not yet, but we can observe some ominous danger sign. Great prosperity with cultivates complacency is one; the fact that scientific and technical advances have outstripped advances in our institutions or government is another; our delay in recognizing the worth of intellectualism is still another; our reluctance to accept certain realities existing in the world today is one more.

These things demand of us a shift in contemporary values, a return to the fundamentals, a vision of new dimensions. A high level of individual prosperity is less important than a sense of national mission; politics as usual deprives us of our ability to meet new needs; educators and intellectuals are of more value to the national welfare than cigarettes and chromium fins. The Nation could not exist half slave, half free; a similar choice faces the world. These and many other realities must be taken into account, privately and publicly.

It is not a question, I repeat, of the worth of our ideals or principles; they are as sound as ever; it is a question of how well we carry them out in our individual daily lives and in our public affairs. I venture to say, too, this is less a matter of leadership than it is a matter of our own determination to weld a whole out of the parts that make up the Nation. In the days ahead I fear that our habitual mudslinging election techniques will tend to deepen the divisions between us. This could be calamitous. I hope the league will do its utmost to counter it by promoting the kind of objective approach to great problems which unites rather than divides, which develops judgment rather than passion.

I have mentioned our reluctance to see the realities of the world as they exist and I would like to comment on this further. It is necessary, of course, to base our foreign policy on realism—that quality which Lester Pearson describes as involving a duel vision, both sight and insight. There are several matters upon which we have been guilty of ostrich-like attitudes; we have buried our heads in the sand and seem to pretend certain things don't exist.

For example, I do not belive we can afford to count on either the destruction or the complete containment of Soviet-Russia; nor do I think we can sit around and hope for another Russian revolution. This does not make sense. We would better accept the U. S. S. R. for what it surely is—a powerful and skillful antagonist, a dynamic and growing influence in the world.

Americans, perhaps because of their incurable optimism, tend to lose sight of one of the fundamental facts of life without which we cannot deal successfully with the Soviet Union, namely, that international communism is a revolutionary movement; by its very nature a revolution seeks to destroy the existing order. We must take into our calculations that communism does not change its basic objective, which is to destroy western civilization; this has been officially stated again and again by the Communist leaders.

Furthermore we must make a concerted effort to understand Communist-inspired motivation and behavior. This is perhaps our hardest task since everything in our heritage and tradition makes it almost impossible for us to accept as real the convolutions of Communist thought and strategy. Yet we have witnessed the Kremlin calling black white and getting away with it. We have seen how communism has perverted the words peace and democracy. This baffles and frustrates us; the deviousness and deceptiveness of this procedure put us at a frightful disadvantage; we are kept off balance and unprepared, which surely is what is intended.

A revolutionary movement, communism in particular, has no honor or loyalty other than to its purpose. It takes advantage of every opportunity to advance its cause; it creates tensions by its very nature, and reduces them only to gain advantage. It is this quality which makes negotiations, agreements and settlements with the Soviet Union so exceedingly difficult and treacherous. Understanding these factors and developing strategy designed to cope with them successfully is a matter of life and death in a nuclear age.

It seems to me there is 1 hope and 2 main lines we can fruitfully pursue. The hope is twofold: that a middle class will emerge in Russia which will cause a modification of aggressive revoluntionary communism and that the competition for intellectual supremacy in the sciences, which has advanced so dramatically within the Soviet Union, will develop inevitably a climate which will be conducive to a certain amount of intellectual freedom. Freedom of any kind surely will penetrate and weaken totalitarian control. A people who have achieved material and spiritual advantages tend to conserve them. Thus it seems possible that the evolution of a middle class and intellectual freedom of sorts may occur and will force the Kremlin in time to take a less militant and revolutionary posture. We should advance this development by every means within our power.

For example, I personally believe it would have been to our interests had we originally opened, rather than closed, more doors in the United States to Russians as a counter move to the Kremlin's restrictions on American travel within the Soviet Union.

The two main lines we may fruitfully pursue are these: (1) The development of unity with our allies; (2) an identification in the minds of men everywhere in the United States and the Western World as the true champions of mankind.

As for the first of these, unity with our allies is an essential condition for our own survival. We can ill afford a Suez or a Tunisia. We can afford to take the risks and to pay the price required of us in an effort to establish political, economic and military unity with our allies and full participation and sharing in common objectives. While military strength is of prime importance, we must place a high value on political and economic cooperation. Firepower may be used to destroy our world or paradoxically to prevent man from destroying himself; yet human progress will be built with ideas, not with military hardware.

The second main line is a far more subtle and difficult one to establish, but one in which our background gives us a special competence. We must build an image in men's minds that establishes western civilization as the true champion of the aspirations of humanity. Here we must seize the initiative. If mankind is responsive to a nonviolent but still revolutionary spirit, we surely can supply the motivation and shape the behavior, not necessarily in our own image, but within the wide and deep frame of reference of our historic experience. Let us have confidence in our capacity to deal on the open market of ideas and to match any nation's gift to humanity.

Another line which converges on both of those I have mentioned and offers us limitless access to the spirit of men everywhere is in sharing our economic and technical wealth and skills. I need not tell you of the importance of trade and aid. They are to my mind supreme examples of the tools and the skills we have in our hands which are best designed to prevent the awfulness of war. In so much of our current reading we find impassioned pleas for new and bold ideas and leadership.

I submit we need these less than we need to use and expand what we already have and know: broad and generous foreign aid and technical assistance programs, domestic, and international measures to expand world trade, recognition of the values of consistency, durability, and longevity in our domestic and foreign policies. More of us need to know better the intrinsic value of these tools in shaping the kind of world we want; some of us will have to make hard personal sacrifices in order to support the overall interests of the Nation as a whole. Leadership of whatever quality it may be cannot succeed without popular response support.

Perhaps one of the most significant and hopeful developments in this country which should be noted in this context is the increasing number of private groups which are devoting themselves to long-rage study and recommendations on many matters of public

policy. The contribution of such groups as the Rockefeller Brothers, Committee on Economic Development, National Planning Association, Council on Foreign Relations, the American Assembly, and the universities are beyond partisanship and price. This is a unique, invaluable, and new sort of leadership.

I have often wondered whether or not this Nation has reached a point of maturity which will enable it to develop a sort of sustaining philosophy in regard to its purpose in the world at large. I am not sure we have, but I think we had better hasten the process. We cannot exist for ourselves alone, nor can we maintain high prosperity in economic isolation. We have been stirred to greatness in times of crisis and calamity. It is another thing altogether to accept and sustain voluntarily a global responsibility for the development of other free societies.

Yet we could well see this as our purpose in the world, as our destiny. This could provide us with a spiritual quality which would lift us out of ourselves, give our own experiment deeper meaning and provide us with the dynamic vitality that will be true to our traditions and heritage and promise. We must not become so absorbed in our desire to conquer outer space that we fail to reach for new dimensions in our own inner space. The pursuit of liberty, equality and justice is still a mission uncompleted. For most of mankind these are revolutionary ideas; they are ideals universally cherished, still unrealized.

I hope so earnestly you will make the most of your opportunities as leaders in the development of public understanding in one or more of these areas. I have, of course, only skimmed the surface and treated the general instead of the specific. It is up to you to weigh and balance and choose the exact points at which your effort may reap the greatest harvest. I trust you will neither underestimate the power of your influence nor the need to exert it. In many ways I believe the Soviet Union's challenge has delivered America from herself and that in a very real sense, as was said so eloquently long ago, "a great destiny is ending, a great destiny is beginning." I want to see the League of Women Voters at the core of this great emerging destiny, pulling its full weight for all it is worth.

In conclusion, I would like to remind you again of the theme of this convention, New Dimensions. No doubt this phrase calls up as many different images in our minds as there are individuals here. Some of us will think of science and technology and perhaps view with apprehension the constantly changing pattern of our lives caused by their swift advancement. Some of us will see in our mind's eye the political scene, a picture puzzle indeed, of shifting and increasing intricacies and imponderables. Some of us will catch a glimpse of economic and social horisons, expanding and extending beyond the powgr of human imagination to define. Some of us surely will have a sense of man's universal aspirations and the infinite hope that the spirit of humanity will find guidance and expression. Perhaps some parts of all these will run through every mind.

The dominant thought in my mind is that new dimensions refers to you and to you and to all the other 128,000 members throughout the country. It is the genious of the League that it brings to each and every one of us new dimensions in knowledge, in understanding, in freedom; new dimensions in capacity and even in fulfillment. This is the real reward the league holds for us; this is its true greatness; this is the very stuff of which democracy is made. We talk of informed and active participation of citizens in government. These are dry words indeed; yet if we have eyes to see and hearts to feel we know that in these words lie the values and the power to bring new dimensions to the lives of individual human beings wherever they may be.

Eight years ago in this place words were spoken which I in turn can say to you with all the depth of feeling and meaning these years have brought to me:

"And who knoweth whether thou are come to the Kingdom for such a time as this."

Summary of Replies to a Questionnaire

EXTENSION OF REMARKS
OF

HON. JOHN R. PILLION
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. PILLION. Mr. Speaker, on March 1, I sent 110,000 questionnaires to every household in the 42d District of New York. A memorandum of the issues relating to the questions was also sent. It outlined the facts and arguments pro and con.

A total of 10,350 questionnaires were returned. This large return indicates a keen and healthy interest in our public affairs on the part of the people of this district. I was gratified with the large number of valuable and sound suggestions contained on the questionnaires.

The tabulated results follow:

QUESTIONNAIRE

PAY TV

Do you believe pay TV would produce better programs than are now available? Yes, 1,675; no, 7,690.

Do you believe that pay TV should be restricted to transmission by wire which does not compete for the present free TV air channels? Yes, 7,107; no, 1,729.

Do you favor pay TV on an experimental basis using some of the existing free TV air channels? Yes, 1,317; no, 7,873.

Do you believe that the NBC, the CBS, and ABC television networks have a monopoly that is contrary to the public good? Yes, 2,408; no, 6,547.

NATURAL GAS BILL

Do you favor the exemption and modification of Federal control over gas prices as proposed under H. R. 8525? Yes, 1,778; no, 7,427.

POSTAGE RATES

Do you favor a 4-cent letter rate with substantial increases for second-, third-, and fourth-class mail? Yes, 3,325; no, 2,943. Or do you favor a 4-cent local letter rate and a 5-cent nonlocal rate, with substantial increases for second-, third-, and fourth-class mail, with $175 million set aside annually for modernization of equipment? Yes, 3,133; no, 3,236. Or do you favor retaining the present 3-cent letter rate and to increase rates for second-, third-, and fourth-class mail so that each service fully pays its costs? Yes, 4,564; no, 2,451. Or do you favor retaining present postage rates without any increase? Yes, 875; no, 4,663.

POSTAL WAGES

Do you favor a 7½ percent plus $240 annual bonus, averaging about $500 a year, for postal employees? Yes, 2,290; no, 2,512. Or do you favor a 6 percent annual pay raise averaging about $260 a year for postal employees? Yes, 4,150; no, 1,497.

RECIPROCAL FOREIGN TRADE ACT

Do you favor the Administration's request for a 5-year authority to reduce import tariff rates by 25 percent? Yes, 1,876; no, 2,876. Or do you favor an extension of the present act authorizing a reduction of import tariff rates by 15 percent over another 3 year period? Yes, 2,176; no, 2,332. Or do you favor no extension and no further reduction of import tariffs, leaving tariff rates at their 1945 to 1953 levels? Yes, 3,656; no, 1,485.

UNEMPLOYMENT AND RECESSION

Do you favor a substantial program of additional military spending (about $5 billion) now? Yes, 2,657; no, 2,936. Or later, if business does not improve? Yes, 1,940; no, 1,674.

Do you favor a substantial program of public works (about $5 billion) now? Yes, 3,098; no, 1,949. Or later, if business does not improve? Yes, 2,311; no, 1,038.

Do you favor a tax cut by increasing tax exemptions to $700 now? Yes, 4,929; no, 1,351. Or later, if employment does not improve? Yes, 1,510; no, 1,456.

Do you favor a flat 5 percent tax cut? Yes, 1,995; no, 3,104.

Do you favor a corporation tax reduction from the present 52 percent? Yes, 1,790; no, 4,491.

MISSILES

Do you believe that $3.8 billion recommended for missiles in 1959 is: (a) about right, 4,398; (b) not enough, 2,298; (c) too much, 1,202.

Do you believe that the proposed military expenditures of $39 billion for 1959 is: (a) about right, 4,048; (b) not enough, 1,532; (c) too much, 2,123.

Do you favor a program to construct shelter in cities against possible attack to be financed by the Federal Government? Yes, 4,068; no, 4,397.

SUMMIT MEETING

Do you believe that the United States should negotiate with the Soviet now regardless of our lack of position of strength, regardless of the lack of an agenda and regardless of what the prospects of success may be? Yes, 1,786; no, 6,370.

Do you believe that an unsuccessful meeting might increase the tensions and prospects of war? Yes, 4,787; no, 3,239.

Do you believe that a summit meeting should be held on the best possible terms and trust our officials to fully safeguard our interests? Yes, 6,035; no, 2,353.

STATEHOOD

Do you favor statehood for the Territories of Hawaii and Alaska now? Yes, 4,339; no, 3,867

Or would you prefer to delay statehood until (a) communistic influences in Hawaiian politics is eradicated and (b) legislation is enacted which would apportion membership in the United States Senate on some equitable population basis for States hereafter admitted or (c) require Alaska and Hawaii to consent to less than two United States Senators under article V of the United States Constitution which provides that States may consent to less than equal suffrage (2 Senators) in the Senate? Yes, 4,667; no, 1,752.

FOREIGN AID

Do you favor maintaining foreign aid at the present rate? Yes, 2,398; no, 5,160.

Do you favor substantially reducing foreign aid with a program for more efficient administration? Yes, 6,414; no, 1,352.

Do you favor terminating all foreign aid? Yes, 1,051; no, 6,368.

Do you favor ending military aid and continuing economic aid? Yes, 1,976; no, 4,756.

Do you favor limiting foreign aid only to those countries who are military allies and receive no aid from the Soviet? Yes, 5,361; no, 2,405.

MISCELLANEOUS

Should Congress enact laws to protect welfare and pension funds under union control? Yes, 8,179; no, 767.

Do you favor added construction of irrigation projects while the United States Government engages in buying surplus agricultural products? Yes, 2,398; no, 5,500.

Do you believe that a Presidential disability law should be passed now? Yes, 6,922; no, 1,820.

Do you believe that Red China could be persuaded to sever her close relations with the Soviet on the basis of her conflict interests in the vast mineral resources and agricultural lands which the Soviet controls in Siberia on the borders of Red China? Yes, 2,892; no, 4,415.

Would you support a drastic curtailment of Federal services and grants-in-aid in order to balance the budget and also expand our national defense? Yes, 4,676; no, 3,375.

Do you favor a baalnced budget regardless of defense needs, unemployment or curtailed services? Yes, 1,682; no, 6,886.

The Hoax in the Summit Game

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an article which appeared in the April 11, 1958, issue of U. S. News & World Report entitled "The Hoax in the Summit Game." The author, Robert Strausz-Hupé, is a professor of political science and director of the Foreign Policy Research Institute at the University of Pennsylvania.

THE HOAX IN THE SUMMIT GAME

(By Robert Strausz-Hupé)

It is almost certain that, sometime this year, the western heads of government will meet with the leaders of the Soviet Union. As we are heading toward another summit, we may ask ourselves the question: Why are we going, and what may be reasonably expect to find at the goal of our journey?

The idea of a summit conference this year originated with the Soviets. All along, the United States Government has been cool toward the idea of a full-dress meeting which, in the full glare of world publicity, would bring face to face the leaders of the great democracies and the rulers of Soviet totalitarianism. And this with good reason.

The letters addressed by Nikolai Bulganin (then Premier and spokesman for Nikita Khrushchev, but recently demoted) to President Eisenhower and the heads of allied governments, were not confidential documents. They were intended for publication. They were missiles of propaganda warfare rather than notes of diplomacy and aimed at public opinion outside of the Communist bloc.

Since the Communist rulers do not tolerate free discussion at home, their propaganda campaign for a summit conference is being waged—like all cold-war battles—upon the territory of the free world. If they intended, by a show of willingness to talk terms, to further divide public opinion in the democracies, they have succeeded brilliantly. The Soviets, having maneuvered the western powers into agreeing to a summit conference, have scored a victory in that same cold war which they started 10 years ago and now propose to settle by a few days' polite conversation.

It is the prodding of their domestic critics rather than the arguments of Soviet rulers which impels the western governments along the road to the summit. For this reason, if for no others, the West cannot hope to win at the diplomatic game to which they were invited by the Soviets. The dice are loaded. The Soviet negotiators are free agents; their western counterparts are not. The Soviets need not worry as to whether the conference will be barren of concrete results. The western leaders will be loath to return emptyhanded and to disappoint the hopes, however ill-founded, of their peoples.

The pitfalls of a summit meeting are not matters of conjecture. In 1955, the President of the United States and the Premiers of France and Britain met with Messrs. Khrushchev and Bulganin at Geneva. No substantive agreements were reached. The communiqué, jointly issued by the conferees, ticked off the issues which the conference had discussed—and had failed to settle. These issues were European security and Germany, disarmament, and the development of contacts between East and West.

The heads of state agreed that (1) a close link existed between the reunification of Germany and the problems of European security, and that the German question and the reunification of Germany by means of free elections should be carried out in conformity with the national interests of the German people and the interests of European security; (2) they would work together to develop an acceptable system for disarmament; and (3) personal and cultural exchanges should be stepped up.

After nearly 3 years, only the last agreement in principle has been implemented. With respect to the two other matters—the German question and disarmament—no progress has been made. Thus the concrete results of the widely touted meeting boiled down to little more than a travel arrangement between the United States and the Soviet Union.

The ink of the Geneva communique was hardly dry when the Soviets launched their first probing thrust at the Middle East. Czech arms shipments arrived in Egypt. This move did not elicit an energetic western response, for the spirit of Geneva had numbed the reflexes of the Western Powers.

Thus reassured, the Soviets intensified their campaign for the subversion of the Middle East. To the western peoples, the Geneva Conference seemed to mark a step toward peace and a step away from the brink of total war, for there was, as President Eisenhower put it, "no alternative to peace." For the Soviets, the Geneva Conference was a maneuver in the cold war which set the stage for a flanking move into the Middle East, the unguarded rear of the North Atlantic Treaty Alliance.

If great expectations are being attached now to a second summit meeting, they must be based on considerations other than those warranted by the net results of the first.

Their leaders have made it clear that the Soviets do not wish to be reminded of the agreements reached at Geneva. The Soviets now refuse to talk about German unification by means of free elections. They insist that this matter must be the subject of a dialogue between the West German Republic and the German Democratic Republic, that is, the puppet regime of Soviet-occupied East Germany.

This narrows down the discussion to disarmament. Aside from the often-repeated Soviet proposals for the cessation of nuclear tests, the problem, as the Soviets see it, is the prohibition on the stationing of nuclear missiles in a zone consisting of Poland, Czechoslovakia and Germany, and the withdrawal of foreign forces from the European continent. In brief, the Soviets are prepared to talk at the summit about the liquidation of the North Atlantic Treaty Organization defense system as a quid pro quo for the withdrawal of Soviet forces to the east of the Polish border.

In 1955, President Eisenhower commanded at Geneva not only the virtually unanimous support of his countrymen but also the respect of America's allies. The United States was at the height of its power; the retaliatory capabilities of the Strategic Air Command were not in doubt; and the Communist bloc was still shaken by the reverberations of the great Stalin scandal and the commotion over Stalin's succession.

Yet the fruits of Geneva had turned sour before the end of 1955. Germany remained divided; the Soviets kept on developing their strategic air and missile power; and Communist propaganda and weapons moved unhindered into Egypt and Syria.

Is it reasonable to expect that the prospects for a summit conference are brighter now than they were at the high noon of American power? The Soviets have closed the technological gap; all of Europe is within the range of Soviet guided missiles—no matter whether they are stationed to the east or west of some imaginary line drawn across the Pripet Marshes. And the Soviets have added several potential bases inside the Western defense perimeter—Egypt and Syria—to their already vast holdings of European and Asian real estate.

The fiber of western determination has not grown stronger. The British Labor Party, counted a sure winner in the next British elections, clamors for not only a general disarmament agreement but also for the suspension of patrols by aircraft based in Britain carrying hydrogen bombs and all physical steps for basing missiles in Britain before another round of negotiations with the Soviets. France is being bled white by the Algerian war, and all throughout the West a growing chorus of politicians, journalists, and academics is calling for further concessions to the Soviet point of view.

Since 1955, there has been a massive deterioration of the West's bargaining position. Every sign points to another summit conference turning into a diplomatic Waterloo for the western alliance.

The best course for the United States is to keep clear of summits. Should we refuse therefore to negotiate with the Soviets? Of course, we should do nothing of the kind. As a matter of fact, we have been negotiating with the Communists for a long time. All diplomatic contacts connote the readiness to negotiate; the exchange of diplomatic notes is a form of negotiation. These last 10 years we have been exchanging diplomatic notes with the Soviets at a furious pace. On all important issues we know, beyond a shadow of misapprehension, the position of the Soviets. They know ours.

There is available for everyone's inspection a long series of conferences with the Soviets. Mr. Roosevelt negotiated, at Washington, with Mr. Litvinov the diplomatic recognition of the Soviet Union in 1933. During World War II, we conferred with the leaders of the Kremlin at Moscow, Teheran, Yalta, and Potsdam. After the war we conferred, on the heads-of-state and foreign-ministers' level, with the Soviets at Paris, London, Berlin, and Geneva, and in the United Nations at New York.

The Soviets proceeded to observe the provision of the agreements reached at these various places whenever they were self-enforcing; they violated the rest. In not a single instance did the Soviet leaders display their eagerness to evacuate territories that they had won by conquest. The only notable exception is Austria, and in this special case the Soviets appear to have yielded chiefly because they hoped that their show of reasonableness would induce the Germans to reject the NATO pact.

If any lesson can be learned from 25 years of negotiating with the Soviets, it is that they respect force. They are prepared to modify their stand whenever the prevailing power relationships make this advisable or necessary.

The Soviet barrage of proposals for negotiations, beginning with Bulganin's letter to President Eisenhower in November 1956 leaves no doubt of what the Soviets are prepared to negotiate about: a rollback of western military power in Europe.

Now, it is possible to conceive of arrangements under which the forces of the United States and the Soviet Union could be withdrawn from their present position and a zone be created between, let us say, the Dnieper River and the North Sea, where no foreign forces will be stationed. It should be noted, however, that such an agreement would have to satisfy a condition on which the United States cannot yield.

In the minds of men everywhere, United States foreign policy is associated with two principles, namely, the right of national selfdetermination and democratic process. We have so strenuously avowed our devotion to these principles that we must submit to being judged by the measure of our adherence to them. If the Soviet Union agrees that all peoples between Russia's national borders and the NATO countries shall choose their respective national governments by free, direct, secret, and popular vote, the conditions of a far-reaching agreement on a European settlement would have been met.

Is it likely that the Soviets will agree to the liquidation of Communist puppet governments in Eastern Europe and their replacement by democratic governments presiding over sovereign states? If this question can be answered in the affirmative, then we are justified in hoping that we can obtain, through negotiations with the Soviet Union, peace with honor and security. If it must be answered in the negative, then negotiations with the Soviet Union, although they might lead to the solution of some fringe issue—as, indeed, they have done in the past—will not bring us nearer to peace in our time.

To the contrary, in the light of past experience, such negotiations will be likely to redound to the Soviets' benefit and weaken our position in Europe. In sum, a flexible foreign policy—flexible is a euphemism for soft—is unlikely to wring from the Communists those concessions which our rigid foreign policy has thus far failed to obtain. It is likely to lead to a global Munich.

KREMLIN'S AIM: A BUFFER ZONE

The aim of Soviet diplomacy is no enigma: to remove Western pressure upon the most sensitive part of Soviet anatomy, namely Eastern Europe. What Algeria is to France, Eastern Europe is to Russia: a running sore that will not heal and threatens to infect the body politic of the occupying power. The Soviets seek to insulate this area of disturbance within the Communist orbit by the creation of a buffer zone consisting of neutralist and collectivist states, interposed between democratic freedom and totalitarian domination.

The Soviets once they have secured their weakest flank and smothered the rebellious spirit of the East European peoples beneath the blanket of neutralism, will be free to turn their undivided attention to the struggle for the Afro-Asian world.

Among the West's many illusions, none is more pernicious than that we can best the Communists by peaceful competition for the minds and hearts of the uncommitted peoples. Will the contest over the minds and hearts of the uncommitted peoples prove decisive in the conflict between ourselves and the Communists? Of course, it will not.

If Asia were to go Communist, the West at bay would be no longer a figure of speech about things to come; the domain of freedom would have shrunk to one-fifth of mankind. But we cannot hope to defeat the Communist threat to Asia by compromises in Europe on the terms proposed by the Soviet Union.

At present, the Soviet economic offensive in Asia relies largely on industrial exports from East Germany and Czechoslovakia. Without their control of the productive capacity of Eastern Europe, the Soviets could not render economic and arms assistance to their Middle Eastern friends and Red China and concentrate their own industrial resources in the military sector.

A deal on the neutralization of Germany as suggested by Bulganin would bring the Soviets within sight of their most cherished European objective: the control of the Ruhr, industrial heartland of Europe.

Once Germany has been drawn into the Soviet orbit, the Soviet economic drive in Asia would be nourished by the resources of the technologically most advanced country in Europe. The Soviets do not expect to attain this goal tomorrow. For the time being, they must content themselves with milking their European satellites for the benefit of their Asian clients—which is one reason why they have not the slightest intention to relax their grip on East Germany and Eastern Europe.

Important as it is for us to stay ahead of the Soviets in the competition for the Asian markets, we cannot hope to block the Communist penetration of Asia by economic efforts—nor, for that matter, can the Communists defeat us by building steel mills in India and highways in Afghanistan. The basic problems of Asia cannot be solved either by us or by the Communists. They were created by developments which antedate the conflict between democracy and communism by several hundred years.

These developments were set in motion by the impact upon ancient and stagnant civilizations of a young and vital civilization; namely, that of the West. The improvements in hygiene, transportation, and administration, wrought by the West, triggered a huge expansion of Asian population. How to keep economic productivity growing in order to feed a vast addition of hungry mouths—this is the burning question confronting virtually every Asian government.

Soviet or American economic aid, even were it many times larger than its present size, cannot effect any substantial alleviation of Asia's population problem. That problem can be solved, if it can be solved at all, only by the Asians themselves, through initiatives of their own. Its magnitude severely limits the effectiveness of foreign intervention, economic or pedagogical.

To admit this fact is not to argue against American assistance in forcing the most rapid economic growth compatible with the underdeveloped countries' resources. In all cases, such assistance is justified by the claim of human suffering upon our generosity, in some cases, it is also good business and good politics. But when this line of reasoning is stretched to mean that American economic policies toward the uncommitted countries, bold and expensive as they may be, can achieve a decisive change in the balance of power between the Soviets and ourselves, then we are asked to reckon without the West's fundamental dilemma in Asia.

No one can reasonably hope for more than that southeast Asia, India, and a goodly part of the Middle East will not go Communist. At best, these lands will maintain their present, ambiguous posture vis-a-vis the two blocs. In the foreseeable future, they cannot be expected to side with us against the Communists. The maintenance of the Asian status quo will be no mean achievement of western statecraft. The West can thank its stars if it manages to hang on to its remaining strategic and economic stakes in the rimlands of Asia.

SOVIET STRENGTH IN ASIA

For geographical and historical reasons, the position of the Soviet Union on the Asian continent is strong, and that of the West is weak. The Soviets enjoy the strategic advantages of geographical proximity and the continent's inner lines of communications. The Soviets do not have to live down hundreds of years of colonial history; the West is burdened by the many real—and the many more imagined—wrongs that its colonial rule inflicted upon native peoples.

The United States, because of its close affinities with Europe, can never hope to cleanse itself, its fervent anticolonial professions notwithstanding, of its "imperialist" guilt by association. True, in every Asian land we have friends who credit our good intentions and are awake to the menace of Communist imperialism. Unfortunately, only in a few countries do they control the government, and even there they do not always represent the sentiment of the masses. There is much useful and necessary work for us to do throughout the underdeveloped and uncommitted world. But we must look elsewhere for a favorable terrain upon which to carry the offensive against the Communist citadel.

The most favorable terrain for western strategy in the protracted and irreconcilable conflict between democracy and communism in Eastern Europe. There, in contract with Asia, the historical currents are running against communism, and the West enjoys natural advantages which do not beckon it elsewhere. For the great majority of the satellite peoples—Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, and East Germany—communism and Soviet rule are unspeakable abomination. This has been so for a long time. The risings in Poland and Hungary revealed that neither police terror nor brain washing can cow forever a people that once had known freedom.

UNREST INSIDE RUSSIA

More important still, the masses of Russia are restive. They are not immune to the spirit of rebellion that has risen in Eastern Europe. The rule of the Communists, despite their more liberal pose and prestige successes such as sputnik, is not as firmly implanted upon the peoples of Russia as they would like us to believe.

The Communists have good memories: It was only by a hair's breadth, and thanks to the incredible blunders of the Nazis, that Communist rule was saved, during World War II, from the wrath of its own people who, when the Germans first advanced toward Moscow and Kiev, were ready to welcome them as liberators.

It is no wonder that the Communists want us to measure our strength with them in Asia—and to relax our pressure in Europe. If the West can be induced by propaganda, intrigue, and negotiations to withdraw from central Europe and to dissolve NATO, the Communists will be able to consolidate their position where, notwithstanding their formidable military posture, they are now vulnerable, and to reinforce their position where the West is now weakest and can never hope to score decisively against communism, namely, in Asia.

The Communists would like to achieve this end without war. They hope to succeed through propaganda, intrigue, and negotiation. These methods are comparatively safe and cheap. They are particularly effective when applied to the western democracies in peacetime. More violent pressures, such as open attacks in the style of the Korean war, are apt to arouse the western democracies' fighting spirit, whereas more subtle techniques of conflict, such as a peace strategy, alternating with steppedup political war-

fare and subversion, are favored by the democracies' apparent inability to close ranks against all but forthrightly military threats.

Even with the best will in the world, the Soviets can, at the next summit conference, contribute little to the alleviation of world tensions. They cannot help us, were they so disposed, to solve the problems of Asia, for these problems—the pressure of population upon inadequate resources and deep-seated antiwestern resentments—are insoluble, at least for the foreseeable future.

On the other hand, the Soviets have created for themselves problems in Eastern Europe which, too, defy solution. Soviet domination has aroused the implacable resentment of the great mass of peoples in the European satellite states. The Soviets will always be plagued with the threat of rebellion.

Conceivably, the Soviets might wish to get off the lid and withdraw within their own borders. Yet Soviet evacuation of Eastern Europe would bring down the firmly structure of Communist puppet governments and destroy the myth of communism forever. The Soviets cannot extricate themselves from their East European dilemma except at prohibitive cost. In any case, we cannot solve this problem for them—even were we so oblivious of our own interests and professed ideals as to connive in keeping Eastern Europe under the Soviet yoke.

There is not a single major political problem to which another summit conference can find, even with good will on both sides, a practical and honest solution—and good will has never been forthcoming from the leaders of the Soviet Union. There remains the possibility of an agreement on arms control and reduction, for the ban on superweapons is a technological rather than a political question. Yet the question must be asked: Is a summit conference required to ratify an arrangement that exists in fact although it has not been committed to paper?

It is a foregone conclusion that, in another war, the United States and the Soviet Union will seek to abstain from the use of those superweapons which are as dangerous to the user as to his intended victim. The hotly debated question of inspection will probably soon answer itself: When both sides will have space observatories they will be able to inspect each other's territories to their hearts' content.

This will give neither side complete security, for even the closest inspection might not furnish more than a few minutes' warning against a surprise attack. Even the most effective ban on superweapons, solemnly agreed upon by the western allies and the Soviets, would not bring the world one step closer to the termination of the cold war.

The Soviets have made good their penetration of the Middle East without firing atomic weapons or, for that matter, one shot of old-fashioned gunpowder. Would an agreement banning nuclear testing or on inspection have affected significantly the incursion of Soviet power in Egypt and Syria? Evidently, it would have not.

The best we can hope of a second conference at the summit is that it will demonstrate the absurdity of trying to reconcile the outlook and aspirations of free peoples with the implacable power urge of the Communists. Were this to be the outcome, the price of another summit conference, in terms of expectations raised and dashed, might not be too high.

PROSPECTS FOR WORLD PEACE

Bleak as are the prospects for a grand settlement between the Soviets and ourselves, they do not justify Western defeatism. There have been shifts in the balance of power, most of them unfavorable to our side. Yet none of the Soviet advances, political and technological, have been decisive. The Soviets are the last to think so. The grip of our power on the perimeter of the Soviet empire has not been broken. If it had been, the Soviets would not seek to relax it by diplomacy and propaganda. As long as the facts of power politics persuade the Soviets that they have more to gain from conferences than from battles, the prospects for world peace will remain about as bright or as dim as they have been ever since communism emerged as an aggressive force. The Lenins, Stalins, and Khrushchevs come and go; communism remains.

The obstacle to a lasting settlement of international conflict is not the arms race or the division of Europe or the troubles of the Middle East, but communism itself. Conference or no conference, the cold war will continue, and the end of the protracted and irreconcilable conflict between democracy and totalitarianism is not in sight. For the West, the watchword is still what it has always been—build its strength, preserve its unity, and keep its powder dry.

National Guard Must Be Preserved To Serve the Nation

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. EVINS. Mr. Speaker, I am sure it is not necessary for me or anyone else to remind the Congress of the great contributions the National Guard has made to the defense of our Nation. Its record of glorious performance is written indelibly in our military history; its availability on short notice to defend the Nation in emergencies has more than once confounded the plans of those who have fomented wars against us. Nor is it necessary for me to point out that the National Guard represents the traditional American way of preparing ourselves and our citizens for the defense of our Nation, the citizen soldier has always been the Nation's best weapon and the National Guard has been the mechanism which has trained and mobilized that weapon.

We recognize that with changing military objectives, strategy, and new weapons, the National Guard as well as the other elements of our defensive forces, requires modernization and modification from time to time. And as we all know, the Congress is considering a plan for such a modernization of the National Guard in the light of the problems of atomic and missile warfare. This plan is, in part, at least a response to repeated requests by leaders of the National Guard itself for such modernization. And certainly, all of us will welcome any plan which will make our citizen soldiers and the National Guard more effective guardians of our Nation's security. But the plan requested by the Secretary of the Army goes far beyond this aim and proposes a reduction in force and units which, to be blunt, cannot escape the suspicion that it is intended to cut the National Guard down to a size more to the liking of those who have never loved the National Guard. I am particularly disturbed, Mr. Speaker, because under the proposed reorganization it would be the smaller units in the smaller communities which would be discontinued. I do not desire to make comparisons as to whether our best soldiers have come from the cities or the rural areas. Our history has fortunately proven that whether they come from metropolis, town, hamlet, or farm our citizens make magnificent soldiers when properly trained. But I cannot forbear pointing out that Sgt. Alvin C. York was the most outstanding hero of World War I and was a small-town product. Certainly it would be neither fair nor prudent for the Nation to make it difficult for less populated areas of our Nation to make their contribution of trained citizen soldiers to our defense.

In any event I am sure my colleagues will desire to give the plan to modernize the National Guard extremely careful scrutiny. In this connection, Maj. Gen. Joe W. Henry, the Adjutant General of Tennessee, has prepared a memorandum on the proposed reorganization. General Henry has an outstanding military record and under his guidance and direction the National Guard in Tennessee has made notable progress. His analysis of the reorganization plan will, I am sure, prove to be of much value to my colleagues in their consideration of this vitally important matter and accordingly I request unanimous consent to have this memorandum printed in the Appendix of the RECORD. The memorandum follows:

MEMORANDUM ON PROPOSED REORGANIZATION AND REDUCTION OF THE TENNESSEE NATIONAL GUARD

INTRODUCTION

The purpose of this memorandum is to bring you up to date on the current status of the proposals which directly effect the strength and effetciveness of the Tennessee National Guard. As you know, the Department of Defense proposes:

1. A conversion of our units to conform to the pentomic concept of warfare.

2. A reduction in personnel of the Army National Guard of 40,000 officers and men as proposed in the President's budget for fiscal year 1959.

3. A reduction in units featuring the elimination of six National Guard divisions plus several hundred existing operational, combate, and combat support nondivisional units.

I shall proceed to discuss these proposals seriatim.

THE PROPOSED REORGANIZATION

The Army National Guard has repeatedly requested that the Pentagon permit the application of the Pentomic concept to its divisions. We must streamline, modernize and refine our organization to give the guard the powerpacked, mobile and flexible organization indispensable to survival on the battlefield and to provide a balanced force. We are convinced, however, that this can be achieved within the framework of the present Army National Guard and without loss of a single unit. (Conversions, redesignations, etc., of course, would be necessary.)

THE REDUCTION IN PERSONNEL

Nationwide, the fiscal year 1959 budget will force a further reduction of 40,000 in the Army National Guard, cutting it from a high strength of 434,000 in April 1957, to a low of

360,000 in fiscal year 1959. Present strength is about 400,000, a figure to which we were forced to reduce.

On the State level, it would reduce us from 11,730 on June 30, 1957, to a low of approximately 10,577 in fiscal year 1959. Present strength under curtailed recruiting as of March 31 is 11,124.

While we have made every effort to avoid any semblance of criticism of the Reserve, one cannot escape some observations by way of comparison. It is insisted, for example, that the Reserve too is being reduced, and so it is, from an authorized 300,000 to 270,000, but the Reserve has only approximately 240,000 members. Therefore, where we are losing warm bodies, they only lose on paper and even under the reduced authorization, not only will they not lose, they will have about 30,000 vacancies. The effect of these cuts would be to:

1. Reduce some of our units to the point where effective unit training would be impossible.

2. Seriously reduce the combat capability of the only immediate callable Ready Reserve the Army now has available.

3. Place an undue restriction upon the opportunity for a young man to participate in National Guard activities and thereby fulfill his military obligation.

4. Force us to discharge substantial numbers of officers and men who have placed their faith in us, with a resultant loss of retirement benefits and other privileges.

5. Adversely affect the national defense effort.

6. Adversely affect the performance of our State mission.

THE REDUCTION OF UNITS

This is the more serious of the three problems and is in addition to the troop structure reorganization and the personnel reduction.

The Regular Army, apparently because of the emphasis on guided missiles, supersonic aircraft, earth-girdling satellites, and other Buck Rogers-type gadgets of destruction, has mothballed 4 of its former 10 divisions, leaving a net of 15 at present.

Significant it is that Russia, notwithstanding her sputnik successes and her superiority in the satellite field, has not seen fit to mothball any of her 175 divisions.

The guard today has 27 divisions (21 infantry and 6 armor).

We lose six of these divisions.

Again it is significant that the Army has placed a veil of secrecy on this proposal.

It is generally believed—although the Pentagon refuses to confirm or deny this—that the guard will lose approximately 30 percent of its company and detachment size units, which would reduce that number from 5,437 to about 3,806.

On a State level this would reduce us from 140 company and detachment size units to 98.

It is the Guard's position that slashes in the Regular Establishment should be offset by a buildup in the Reserve forces, to the end that he active Army, the National Guard and the Reserve, when taken as a whole, will present what we know as a balanced force.

The Guard insists that reductions in the Guard and Reserve, made concurrently with reductions in the Regular Establishment, violates this time-honored balanced force concept.

As Gen. Maxwell D. Taylor, Army Chief of Staff, phrased it in testifying before the Brooks Subcommittee of the House Armed Services Committee in February 1957:

"Really we should view our Army as a combination of the active Army and the two Reserve components. As one goes down the others should go up."

We agree.

Again we are forced to odious comparisons with the Reserve.

As aforesaid the Guard has 27 actual divisions, all operational.

The Reserve has 10 nominal infantry divisions, 12 replacement training divisions and 3 maneuver area commands. Under the proposal the Reserve would lose 4 of its divisions.

The smallest guard division (the 45th Infantry Division of Oklahoma) is larger than the largest Reserve division.

Guard divisions are self-sufficient, accomplishing their own administration, training, and logistical backup, while Reserve divisions must depend almost entirely upon the Active Army for their administration, training, and logistical support.

The guard has on hand vast quantities of arms and equipment while the Reserve has little or no equipment.

The guard, for the most part, is housed in armories and has a vibrant, well-planned State-supported program for the completion of its construction requirements, while the Reserve facilities are, for the most part, nonexistent.

A comparison of the state of training between the guard and the Reserve divisions is impossible since this is a closely guarded secret.

Some 2 years ago, Hanson W. Baldwin, military analyst of the New York Times wrote an article in which he said, in part:

"The condition of the guard is in startling contrast to the lean and hungry look of the Army's Reserve, as presented by the Pentagon in congressional testimony."

The loss of one guard division (any) cuts deeper into the Nation's defense structure than the loss of any Reserve division.

It is the guard's position that if 10 divisions are to be deleted from the troop structure, sound planning, duty to country and honor of profession demand the establishment of reasonable criteria to the end that the 10 least effective divisions, whether guard or Reserve, be eliminated.

The Pentagon planners should peruse the parable of the talents.

THE 6-MONTHS TRAINING PROGRAM

At the last annual meeting of the Adjutants General Association, Secretary Brucker appeared before our group and gave assurance that the Army would accept every man the National Guard sent to it for 6 months' training and that they would be sent at a time they wanted to begin training. He further pledged that no quotas or similar restrictions would be imposed.

I feel impelled to state parenthetically that Secretary Brucker is an honorable man and has been a friend of the guard, but he too is answerable to the civilian masters in the Pentagon who saw fit to cut the foundation out from under him.

For after we had relied upon this assurance and after the memorandum of understanding forced by the Brooks subcommittee was signed, and after the guard had sold the program, the Department of Defense imposed strict fund limitations and forced the imposition of firm quotas, with the result that the present input is not, and cannot be, sufficient to maintain the strength of the Army guard.

The President's budget for fiscal year 1959 permits only 22,000 6-month trainees. Eighteen thousand of these will enlist in fiscal year 1958, but train in fiscal year 1959. This permits only 4,000 new enlistees, whereas we need 45,000 to maintain enrolled strength of 400,000.

You will bear in mind that the Guard is now permitted to enlist only prior service personnel, obligated reservists and those who agree to take 6 months active duty for training.

Yet the latter category is so limited that we can send only about one per company in fiscal year 1959.

The veteran, as a rule, is not interested in further military service.

The obligated reservist is difficult to recruit. In a large number of cases the distance to the nearest unit precludes his enlistment, moreover, experience indicates that few desire to participate in Guard or Reserve activity.

Incidentally, Tennessee led the Nation last year in the recruitment of obligors.

GENERAL OBJECTIONS TO PROPOSALS

In addition to the foregoing specific objections to these proposals, there are some general objections; among them are:

1. There is little or no escape from a conclusion that this is but a backdoor approach toward federalization of the Guard and building up the Reserve at the expense of the Guard.

2. There remain those who dislike the Guard, because it is an arm of the State with which they must share control.

3. States rights is heavily involved.

4. The whole proposal is shrouded in undue secrecy and it is a fact that the Pentagon has declined to forewarn and forearm the guard by stamping a secret label on the entire transaction. Their strategy seems to be to ambush and lie in wait, as they view all efforts to ferret out the details of this nefarious scheme hatched in the hollow of a log, as being an effort to compromise the security of the Nation. The States have a vested interest in the guard and a right to know. Surely the governor of a sovereign State cannot be denied that information which is readily available to the ruling caste in the Pentagon. After all they have no monopoly on patriotism.

TENNESSEE'S PARTICIPATION IN THE FIGHT AGAINST THESE PROPOSALS

Our participation has consisted primarily of the following:

1. The adjutant general has made repeated trips to Washington to confer with other adjutants general and military leaders.

2. The adjutant general, the commanding general, 30th Armored Division, the president of the National Guard Association of Tennessee, and the immediate past adjutant general have conferred in Washington with every Congressman and Senator from Tennessee and without exception they have rallied to our cause.

3. On Sunday, January 12, 1958, the senior commanders and staff officers of the Tennessee Army National Guard were assembled in Nashville and briefed.

4. The National Guard Association of Tennessee has been briefed fully, both by the adjutant general and the presidents of both the State and national associations.

5. An extensive publicity campaign has been carried out.

ACTION OF THE BROOKS SUBCOMMITTEE

On March 4, 1958, after hearing testimony from representatives of the Department of the Army, the National Guard Association, the Adjutants General Association, Members of Congress, the American Legion, and a number of governors, the Brooks subcommittee of the House Armed Services Committee unanimously adopted a resolution, the pertinent parts of which are as follows:

1. That the strength of the Army National Guard be maintained at 400,000.

2. That spaces be provided for 48,000 6-month trainees.

3. That the Army be directed to proceed with the development of plans for a revised National Guard troop basis, coordinating the same with the States. (Incidentally, the Governor must agree to deactivation of units under the law.)

4. That sufficient appropriations be provided to maintain the strength of the Army Guard as above set forth.

PRESENT STATUS

It is understood that the Secretary of the Army will soon approve a revised troop basis for the Army National Guard, directing the

elimination of 30 percent or approximately 1,700 federally recognized units, of which Tennessee must lose its fair share.

This plan is not acceptable.

Based upon the law and on the Brooks subcommittee resolution, which later was adopted by the full House Armed Services Committee, the proposed troop basis, when approved by the Secretary is only a starting point for further negotiation between the Army and the several States.

The Secretary of the Army will address the annual conference of the Adjutants General Association which convenes in Phoenix, Ariz., on April 14, 1958. The Adjutant General and the commanding general, 30th Armored Division, as well as others will be present for this conference.

The Secretary of Defense has been invited to appear before the annual meeting of the Conference of Governors in Miami in May.

You will be kept informed of any further developments.

JOE W. HENRY, Jr.,
Major General, Tennessee National Guard, The Adjutant General.

Report of J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial in the Los Angeles Examiner of Wednesday, April 23, 1958, concerning the recent annual report of Federal Bureau of Investigation Director J. Edgar Hoover:

THE HOOVER REPORT

In his annual report on the operations of the Federal Bureau of Investigation, Director J. Edgar Hoover makes a comprehensive accounting of the tremendous job this vital agency is doing in the prevention of crime and in providing safeguards for the security of the American people in the fields of subversion, sabotage, and espionage.

But he makes a major point of another phase of this whole matter of law enforcement that spells out the basic difference between the police concepts of a free society, such as ours, and the authoritarian state, such as that of the Communists.

Mr. Hoover repeats on this occasion as he has done so many times in the past, that "the fight against subversion and betrayal from within is a relentless struggle." But he emphasizes that in pursuing this objective, the Bureau is forever mindful of one important fact—that it is an investigative agency, not a prosecuting arm of Government.

The great pride of the Bureau, and of Mr. Hoover as its Director, is not that it has examined the loyalties of more than 1 million people during the past year, but that many of these investigations resulted in the complete exoneration of the persons involved.

The most complete and absolute compulsions under which the Bureau operates are these, as Mr. Hoover enumerates them, that: "No infringements upon the rights and privileges of the people can be tolerated • • • investigators must work as diligently to establish innocence as to identify and apprehend violators of the law."

In other words, the law-abiding and loyal citizen has nothing to fear from the highest police agency in the Nation, and instead looks to it confidently not only for security of his person but for the defense of his integrity as a human being.

The Communist and totalitarian police states would fall apart if compelled to work within the limits of humanity and common justice that are inviolable under the FBI and its dedicated Director.

Mr. Hoover's annual report leaves the American people with a profound sense, not of security from crime and subversion alone, but of the infinitely greater form of security that emerges from a way of life safeguarded against police tyranny.

Law enforcement that seeks the proof of innocence as zealously as it pursues the proof of guilt is too little known in the world, and that we have it in America is our good fortune and our strength.

Views on the Current Economic Problem

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. ARENDS. Mr. Speaker, I commend to your careful reading the statement issued by the board of directors of the Illinois Retail Merchants Association. Mr. Harlan Hegener, of Bloomington, Ill., is chairman of the board.

That we have been experiencing an economic recession no one denies, and we must take cognizance of it. But I deplore the atempts being made, and largely for political purposes, to exploit this situation to the extent of creating a hysteria that inevitably leads to ill-advised action.

This statement expresses the views of the Illinois retail merchants, and I believe the views of every thinking person, as to great need for temperate words, thought and actions in dealing with this economic problem.

I especially call your attention to the comment of Mr. Hughston McBain, chairman of the board of Marshall Field & Co., in an address he made last January before the business and political leaders in Chicago.

The statement follows:

APRIL 22, 1958.

To the Illinois Delegation in Congress:

The board of directors of the Illinois Retail Merchants Association, meeting in annual session in Springfield, Ill., on April 17, directed me to send you this statement covering the reactions of the Congress and of political and economic leaders to current business conditions.

The board also instructed the undersigned to relay to you the following opinion, which it firmly believes represents the thinking of the vast majority of the people of the State of Illinois and the Nation.

I. The current status of our economy does not present a condition which lends itself to cure by hysteria.

II. Temperance on the part of Congress will do more to restore public confidence in the economy than the distortions created within the economy under the delusion that economic stability can be created by an extravagant use of public funds.

III. America will best be served by a temperate Congress which will give the American economy a full opportunity to solve its own problems in the traditionally sound manner characteristic of a free economy; of an economy striving for economic and moral greatness instead of immediate panaceas resulting in future socialization.

As a substantiation of our conclusion we add, herewith, what we consider a most concise summary of the operation of a free economy:

On January 24, 1958, Mr. Hughston McBain, then chairman of the board of Marshall Field & Co., speaking to the business and political leaders of Chicago, made this pointed comment:

"In the world of economics, as in the natural world, what goes up, comes down. Each new generation, of course, thinks good times can go on without end, and, to be honest, over extends itself, out of sheer optimism and exuberance. That is good—it's youthful, it's enthusiastic, it's a desire for a good life—but just a bit foolish.

"Because some where along the line, business must level off, must pause to consolidate its gain, must even fall back a bit in order to correct any excesses.

"And while it is naive to think that prosperity is never ending, it is equally foolish t despair at the slightest setback. Because, just as good times cannot last forever, harder times are always temporary, too.

"And perhaps even sillier than faith in good times forever, is the belief that the economic life of a nation can be managed • • • that the peaks and valleys can be completely leveled off.

"Those who believe that Government can outlaw fundamental economic laws and can legislate corrective measures are deluding themselves. The idea of legislating the economic law of supply and demand is hogwash.

"Even one of our top Federal economists said recently: 'The business cycle simply reached its peak and began to subside and all the king's horses and all the king's men, not to mention all the economists, politicians, amateur tinkerers, and easy-money experts, could do absolutely nothing about it.' You and I know he is right."

The board of directors of the Illinois Retail Merchants Association has unanimously approved this policy statement and recommends your thorough usage of all of it in resisting the experiments to allegedly improve business which are before you and which are probably yet to come.

National Guard Should Be Kept Strong

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. ENGLE. Mr. Speaker, this week a number of the adjutant generals of the Army National Guard are in Washington to protest the Department of Army's announced plan for the National Guard and the Army Reserve.

In broad terms, the Army's plan calls for the elimination of 6 National Guard divisions and more than a thousand nondivisional units—one-third of the present Army Guard; for the elimination of 4 Army Reserve divisions; and for the reduction in the aggregate national strength of the Army National Guard from 404,000 to 360,000. In the State of California alone this will mean a loss of approximately 80 company size units and

the elimination of over 2,000 officers and enlisted men.

The Army's plan represents a serious threat to the vigor and stability of our first line of defense.

Maj. Gen. William H. Harrison, president of the National Guard Association, has declared that:

It is ridiculous to pretend that we are modernizing our Reserve forces by cutting them by one-third; that it is sheer pretense to maintain that utter and complete elimination of strong, well-officered, well-manned, well-trained, and well-equipped National Guard units is a progressive step.

In February of this year full hearings on this matter were held before Representative OVERTON BROOKS' Armed Services Subcommittee. Both sides were given a conscientious hearing. And when the hearings were concluded the full committee unanimously adopted resolutions supporting an Army Guard strength of 400,000 and an Army Reserve strength of 300,000. Furthermore, the resolutions called for sufficient funds for an input of 55,000 nonprior servicemen into 6 months' training, and directed that the revised troop basis for the Army National Guard be developed with the approval of the States and Territories.

Yet the Department of the Army is obstinately sticking to its plan.

The National Guard has been accused of bucking modernization of our defense forces. The facts tell a different story. The record plainly shows that the National Guard is eager to keep pace with the fast-moving world of modern warfare. The National Guard has been accused of being motivated by sentiment and tradition in opposing the Army's plan. The guard, it is true, abounds in tradition. But in deploring the Army's proposals it is motivated by the very sound and realistic conviction that it makes no sense to cripple our first line of defense while our potential enemy continues to build its military strength.

The House Appropriations Committee is now considering the Department of the Army's recommended budget cuts for the National Guard and the Army Reserve. It is my earnest hope that the committee will think twice before supporting these budget cuts. It is my hope that in considering a disarmament move on our part the committee will not fail to keep in mind that no announced plans for disarmament have been heard from our potential enemy.

Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. SMITH of California. Mr. Speaker, under date of April 20, 1958, I received a letter from Hallie N. Nicholson of Pasadena, Calif., submitting the signatures of 103 persons who reside in or are adjacent to my congressional district, urging passage of the Langer bill, S. 582. Pursuant to the request of Mrs. Nicholson, notation to this effect is being made in the CONGRESSIONAL RECORD.

American Legion's Program To Aid Unemployed Veterans

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article featured in the April issue of the Pennsylvania Legionaire which outlines the American Legion's 13-point program to aid unemployed veterans:

LEGION HAS 13-POINT PROGRAM TO AID UNEMPLOYED VETERANS

WASHINGTON, March 28.—A 13-point program to assist unemployed veterans has been proposed for implementation through the 17,000 posts of the American Legion.

The proposals call for a close understanding with labor groups, employers, and other organizations or individuals who are interested in employment for veterans.

Endorsement for the program was given at a meeting called at the Legion's Washington office by National Commander John S. Gleason, Jr., at the request of J. Edward Walter, chairman of the national employment committee of the Legion's national economic commission.

"With close to a million veterans of World Wars I and II and the Korean conflict now unemployed, an effective program on a communitywide basis with each Legion post participating actively, has become an essential necessity so that the veterans of our Nation may be assured that everything is being done to assist them with their employment problems. I am therefore calling on all department commanders of the American Legion to support these proposals," Commander Gleason declared.

Department Commander John W. Collins termed the program as a forward step by the Legion to meet the effects of the recession on veterans and their families.

Many of the employment problems which are common to veterans may be answered if they are properly identified and if an honest and energetic effort is made by those responsible for solving them especially in hard-hit Pennsylvania, Collins added.

NATIONAL EMPLOYMENT PROGRAM

Following are a few things which can be done to assure the post employment officer of some degree of success in his efforts:

1. Frequently visit the nearest State Employment Service office and become acquainted with its services and responsibilities.

2. Get to know the veteran employment representative, the local office manager, the representative who is in close touch with labor unions, the personnel who handles employers' orders for help and who make the selection and referral of applicants to job openings, the man who contacts employers and the counselors who assist veterans having unusual difficulty finding or holding jobs.

3. Make it a regular requirement to discuss veterans employment problems and labor market conditions at all post meetings.

4. Determine and inform members in need of employment if other members, who are employers, need workers.

5. Make available to the membership current information about jobs available in the area. This information can be furnished or obtained by your State employment service. If veterans seem to qualify, send them to the employment office for final determination and referral if qualified.

6. Make sure that all veterans in need of employment are referred to the nearest State employment office immediately to register for employment and any other service pertaining to employment that they may need and which the post does not know how to provide.

7. Where possible, suggest to employers that they should list their employment needs with the Employment Service and if possible, notify the post service officer.

8. It is suggested that you appraise the advantage of and inform members of opportunities for employment in other areas outside of the locality. The Employment Service has information on jobs in all parts of the United States. Many Federal positions are available to veterans. Advise them to check with local Government establishments such as post offices which carry civil service openings.

9. Keep your veterans advised through your service officer or other Government representatives of available training under VA regulations.

10. Keep familiar with laws and regulations affecting veterans' preference in Government work and regarding reemployment rights.

11. Work with all community industrial groups and organizations attempting to bring new industries in the area.

12. Work and encourage the acceptance of such programs as employ the handicapped, older workers groups, and other worthwhile work programs.

13. Above all, maintain a close understanding with labor groups, employers, and other organizations or individuals who are interested in employment for veterans.

Law Is a Force

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of an editorial which appeared in the April 28, 1958, issue of Life magazine and is entitled "Law Is a Force":

LAW IS A FORCE—AND LAW DAY REMINDS US HOW MUCH IT CAN DO TO MAKE A PEACEFUL WORLD

In Soviet Russia, May 1 will be the same old holiday, dedicated to the world proletariat. In the United States this year it will be dedicated to quite a different abstraction. By presidential proclamation, May 1 is Law Day. The President asks us to reflect not only that law secures our freedom as American citizens, but also that "the rule of law in the settlement of international disputes would greatly enhance the cause of a just and enduring peace."

Which of the two abstractions is more potent? The idea of a militant proletariat has

raised communism to tyrannical power over nearly a billion people. Against its noisy banners, the idea of law seems feeble and vague. Much more tangible western weapons—billions of dollars, arsenals of H-bombs, tireless diplomacy—have failed to win us the kind of world in which freemen can feel safe.

But the idea of law is more venerable than any of these weapons, and perhaps more powerful. It was a force in human affairs long before the proletariat was invented. It has been a force since the time of Hammurabi and Confucius, of Moses and Solon, of Cicero, Grotius, John Marshall. It is the "bond of civil society" (Cicero) and the basis of all honest government. It is the means of justice; and justice, says the Roman axiom, is the way to peace.

Lawyers have dominated United States politics since the framing of the Constitution. But in recent years too many of them, preoccupied with law as a mere livelihood, have neglected its grander lineaments and wider potential. The observation of Law Day is part of a crusade to correct this myopia. Says the crusade's leader, Charles Rhyne, new president of the American Bar Association: "The need for law in the world community is the greatest gap in the growing structure of civilization."

THREE VAST FIELDS

How then does one go about filling this gap? Where can law be extended among the nations?

First, take the vast field of business and economic relations. Conflicts here were recently thought to be the cause of wars. Yet within the free world large areas of economic conflict have been brought under treaties since the war. Chief Justice Warren has declared: "We can reasonably resolve that this whole field will be subordinated to peaceful procedures during the next 25 years." Why not the next 10? Due process has many wider economic applications. An obvious example: let the United States ratify the Organization of Trade Cooperation. A less obvious one: let the United States adopt the plan of German Banker Hermann Abs for a magna carta of international investment and property rights. This would be a treaty among freedom-loving countries setting standards of how governments should behave toward other people's money, and vice versa.

Second, there is the equally vast area of international disputes over personal rights and wrongs. Many of these are "justiciable" under existing international law; yet the world court, their natural forum, is virtually unemployed. It would soon come to life if more governments, including the United States, would support and use it. Able lawyers have also urged a system of regional or other subsidiary international courts and arbitration tribunals. One lawyer, Luis Kutner of Chicago, has even proposed a treaty to internationalize the right of habeas corpus, that cornerstone of Anglo-Saxon liberties whose lack still brutalizes so many of the world's jails.

But third, there are those disputes of "power politics" that engage the prestige and fears of proud nations. These great clashes, loud or muffled, echo regularly through the U. N. The U. N. is a dubious source of law, having been born as a league of victors rather than an instrument of justice. Yet whenever a U. N. decision is respected by the disputing parties, the idea of due process is fortified. It was fortified when Britain, France, and Israel accepted its Suez cease-fire, as it was weakened by Soviet defiance over Hungary.

LAW AND THE SHERIFF'S POSSE

The obvious imperfection of the U. N., made glaring by the H-bomb, has turned many law-minded logicians into advocates of world government. All laws need enforcement; peace needs the enforcement of an international government and police force; so runs the syllogism. (For an impressive recent example, see World Peace Through World Law by Grenville Clark and Louis B. Sohn.) But logic alone does not make world government feasible or even desirable. Nor is force the whole definition of law.

"May it not be," asks Dean Roscoe Pound, "that universal law must precede the universal state which will undertake to put any required force behind it?" What Pound calls a general body of recognized principles of adjusting relations and regulating conduct already exists in scattered, unmatched and incomplete form among the nations of the free world. It wants only the will and work of devoted lawyers and statesmen to turn it into a true legal order. As for force, that too exists among law-minded governments; it should not be impossible to mobilize it behind the rules on which we are already agreed.

"The sheriff's posse lurks behind every rule of law," said Pollock. But behind the posse lies still a greater force—the force of reason and consent. There have been many bloodless revolutions in the growth of law. The story of Sir Edward Coke, so well told by Catherine Drinker Bowen in her prize-winning The Lion and the Throne, is one such. When he declared, "The King is under God and the law," Coke made the King furious; but his doctrine held. It permanently tamed the arbitrary power of the British Crown and established the supremacy of law which is still the glory of the American political system. Our own John Marshall made a similarly peaceful revolution: by the unarmed force of legal reasoning, he turned a confederation into a Nation.

TRAGIC NEGLECT

Law is a system of rational, peaceful, and agreed procedures for settling disputes. An established system presettles and therefore prevents most disputes by its own clarity. Stone by stone, the firm habit of due legal process can be pushed into the anarchic marsh of international relations. To reduce even minor areas of dispute reduces the risk that one of them might lead to war.

John Foster Dulles is a great international lawyer. Both he and the President have frequently proclaimed their devotion to law as the means of peace. How tragic, therefore, that the United States Government in its time has done so little to implement this devotion and give a lead to the crusade which the bar itself is now launching. There is a hunger and thirst for the rule of law throughout the thinking part of the world. Said Tom Paine, "An army of principles will penetrate where an army of soldiers cannot." To promote the principle of justice through law is not merely powerful propaganda; it is a work natural for Americans toward a goal which we share with the whole human race.

"Temporary" Becomes "Forever"

EXTENSION OF REMARKS

OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. McVEY. Mr. Speaker, under permission to extend my remarks in the RECORD, I should like to include an editorial from the Chicago Daily Tribune entitled "'Temporary' Becomes 'Forever'." It has been a matter of much concern to many of us that programs which have been undertaken on a temporary basis have later become permanent practices of the United States Government. This is especially true of the foreign aid spending program, which was supposed to have completed its purposes at the end of a 4-year period. We are now told by the Secretary of State that it may need to go on forever. The foreign aid spending program has already cost us more than $120 billion when interest charges are included. This is a large percentage of our Federal debt, and the responsibility of meeting it will fall pretty largely on our children and our grandchildren. The editorial of the Chicago Tribune is a very timely exposition of what happens in this country to many of our temporary programs. The editorial follows:

TEMPORARY BECOMES FOREVER

Secretary of State Dulles told the Senate foreign relations committe Monday that foreign aid is with us forever. He offered a few dim prospects of relief, hinging on disarmament "negotiated in good faith" by the Communists, or provided that Ameriacn private investment flowed to the aid of underdeveloped countries. But, by and large, he expected the annual bill for handouts to increase rather than diminish.

It is one of the wonders of the age how Government programs instituted as temporary measures of relief soon come to be represented as permanent and indispensable. Foreign aid is one of them.

The origins of the idea lie with the late Mr. Roosevelt's plan to pay the bills of Britain and her allies in World War II. This giveaway was labeled lend-lease and was likened by Roosevelt to lending a gorden hose to a neighbor whose house was on fire. Of course, the hose was to come back, and so was the money and war material lent or leased. The United States was to count upon either return of the original article or "repayment in kind or property." After $51 billion went out, practically nothing came back.

The Greek-Turkish aid project was launched by Mr. Truman in 1947 to save those countries from an imminent menace of communism. Dean Acheson, then Undersecretary of State, said he "hoped" that Greek aid would succeed in 15 months. Will Clayton, Undersecretary of Economic Affairs, was even more optimistic. His opinion was that a year would suffice. Eleven years after both countries are still collecting.

The seed for what was to become the Marshall plan was planted by Acheson in a speech in Mississippi. The idea was taken up by Secretary of State Marshall in another speech at Harvard University in June 1947. The program as originally projected was to run 4 years and the total outlay would be in the neighborhood of $17 billion. By 1952 the program of economic relief for Europe would have produced its effect and European nations would then be enabled to maintain their trade balances with the United States without the protective devices of controlled trade.

But it turned out that this temporary program was also destined to be permanent. The United States, 6 years after the date Marshall aid was supposed to terminate, is still engaged on a large scale program of economic assistance, and to this it has added an even more costly program of military aid.

"In my judgment," said Secretary Marshall in his sales talk, "the proposed program in 4 years should make possible sustained economic recovery in Western Europe."

But soon the Truman administration was appealing for military handouts to supplement economic assistance. Mr. Acheson

started out asking only for an interim appropriation. Thereafter, he said, Congress would be "free to do what it considers wise and best about the matter." Secretary of Defense Louis Johnson chimed in that the military aid appropriation would be self-limiting. He would have been more frank to say self-perpetuating.

And now comes Mr. Dulles to tell us that all of these temporary, self-limiting burdens are to be considered permanent. The American people have been made the victims of false labeling and misrepresentation in official advertising. Spending programs of limited duration have become unending. But Secretary Dulles may be wrong about their being with us forever. They may be with us only until we go broke.

The American Merchant Marine: Significance of the Steamship "United States"

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. BONNER. Mr. Speaker, there is scheduled to be considered on the floor of the House this week a bill, H. R. 11451, reported from the Committee on Merchant Marine and Fisheries.

This bill would authorize the construction in American shipyards of two fast, modern passenger liners specially designed for operation in the transatlantic and transpacific trades, respectively. It is important legislation on a vital subject. I hope all Members will find the time to give it his most careful thought.

This country has learned bitter and costly lessons in national emergencies several times in this century. With intent to avert repetition of past mistakes, the Congress has firmly established our national policy to maintain and develop for the national defense and our foreign and domestic commerce an American flag merchant marine composed of the best equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel.

The steamship *United States* is the unparalleled exemplar of that policy, so it was with much interest that I read a powerful and convincing address delivered by Rear Adm. Halert C. Shepheard, USCG—retired—before the United States Power Squadrons at New Haven, Conn., on January 9 of this year.

Speaking of the steamship *United States*, he said:

> Although American science is being challenged in space pioneering, it still is a world leader in many fields and I am going to give you but one example of that leadership.

He points out how that great ship proves we have the know-how, but cautions that unless further such steps are taken to modernize our merchant marine we will once again find it to be the weakest link in our national defense.

Mr. Speaker, Admiral Shepheard's distinguished career in the public service and his many outstanding contributions to the American merchant marine, and the cause of merchant-marine safety, eminently qualified him to speak with authority and command the attention of all. Under unanimous consent I insert in the RECORD his recent speech on merchant-marine safety and the significance of the steamship *United States*, as follows:

MERCHANT MARINE SAFETY

(Address by Rear Adm. Halert C. Shepheard, U. S. Coast Guard, retired)

Commander, ladies and gentlemen, I have followed the growth of your fine organization, the United States Power Squadrons with keen interest since its inception back in 1914. The waters around Boston, where as a boy I gained my experience in the handling of small craft, was also the scene of activity leading to the founding of your organization. Having spent the best part of my career in the promotion of safety afloat, you and I have much in common. For the aims and objectives set forth in your proposed constitution, which fall in two parts—one aimed to enhance safety afloat, the other to stimulate interest in activities which tend to the upbuilding our our Navy, Coast Guard, and merchant marine. For those outstanding objectives in the national interest, I salute you.

Although American science is being challenged in space pioneering, it still is a world leader in many fields and I am going to give you but one example of that leadership.

I am here to talk about the steamship *United States* as a great transatlantic passenger liner and as a tremendous weapon of national defense. This ship is living proof of what the combination of American industry and wise government can accomplish when a challenge is offered and the opportunity presents itself to do what has never been done before.

This country of ours is never to be sold short. In its comparatively short history, this country has, on many occasions, escaped disaster and emerged triumphant by accomplishments which seemed miraculous to many, but which seemed probable to a majority of our people, because their frontier spirit kept pace with the challenge they faced. The steamship *United States* is an example of that spirit.

The ship was planned from the beginning for quick conversion into a fast troop transport, capable of travelling 10,000 miles without stopping for fuel or supplies at an unprecedented speed. It is so strongly built as to be able to withstand several times the shock which would destroy the ordinary ship, and is so constructed, that burning it is a practical impossibility.

As I continue you will see that the steamship *United States* not only aids our national defense by providing swift and safe transport for our troops in times of national emergency, but that it also provides the ultimate in safe transportation in times of peace. The mention of a few great maritime disasters clearly indicates the advisability of such high safety standards.

Bear with me while I turn the clock back and refresh your memories of a few historic disasters at sea.

In April 1912 the British ship *Titanic* set sail on her maiden voyage. When in mid-ocean, this new queen of the seas plowed against an iceberg of tremendous proportions at full speed, and, in less than 3 hours, went to the bottom taking a toll of 1,517 lives.

On a calm night in 1914 the British ship *Empress of Ireland* collided with a collier in the St. Lawrence and sank in 15 minutes; 1,012 passengers were lost.

In November 1928 the British passenger ship *Vestris*, outbound from New York to South American ports, capsized when off the Virginia Capes, taking a toll of 110 lives.

Many of you recall the loss of the *Morro Castle* as she was returning to New York from Habana in September 1934. The captain was found dead in his cabin the night before the ship's scheduled arrival in New York. The passengers, unaware of his death, continued their gala last night's celebration. As the party ended, and the guests retired, that most dreaded of all catastrophes of the sea overtook the ship. Fire broke out, and in a very short time it was completely out of control.

When I boarded the smoldering hulk by breeches buoy at Asbury Park, the check of passengers and crew showed 124 lives lost. At the stern of the ship, partly burned shoes lay neatly in pairs in mute evidence of the suffering and the tense last moments of those unfortunates driven into the sea by the heat. They had chosen the easier death.

These are but a sampling of the great peacetime marine disasters prior to World War II. During the war there was the British troopship *Rohna*, which was carrying United States troops and a few Red Cross workers. She suffered air bombing in enemy action but went to the bottom only after the hull had been holed and fire broke out. Over 1,300 lives were lost. Another British troopship is reported as having sunk in 1 minute and 40 seconds, taking over 1,400 lives. Both of these disasters are war casualties declassified several years after the war at my request, so obviously they were not publicized and therefore did not attract public attention.

A disaster at sea occurred about a couple of years or more ago when the British passenger ship *Princess Victoria* sank in the Irish Sea with the loss of 133 lives.

The dramatic collision of the *Andrea Doria* and the *Stockholm* is another case fresh in the minds of all. A fine, relatively new ship, built in accordance with the latest international convention, sank after damage apparently less than she should have been able to withstand. She sank with heavy material loss and heavy loss of life. That this loss of life was not much worse was due only to fortuitous circumstances and superb action on the part of other ships and seamen in the vicinity.

The lessons learned from disasters such as these are numerous.

The loss of the *Titanic, Empress of Ireland, Vestris*, and now the *Andrea Doria* focus attention on the matter of subdivision—otherwise known as watertight compartmentation—the design feature often permitting the survival of the ship from collision, torpedoing, or other hull damages causing flooding. Today, as in the case of all major safety matters, the subdivision and stability standards applied to American ships, and particularly to the steamship *United States*, are the highest in the world.

Hidden behind the *Titanic* tragedy was a shipboard fire. Unknown to the passengers, this brandnew ship was on fire from the day she sailed from Southampton on her maiden crossing. Her officers and crew knew it, for they had been fighting the fire below—and who knows but that the anxiety caused by that fire was the basis for the high speed with which the ship was plowing the seas in complete disregard of the warnings that icebergs were in the vicinity.

I mention this fire factor because from the time of the Phoenicians fire has been one of the hazards of the sea most difficult to overcome, so the development of fireproof and flameproof materials used in connection with the construction of the steamship

United States is one of the most thrilling accomplishments in the history of American industry.

In many instances the specifications for materials used in the construction and adornment of this ship called for a higher degree of fireproofness than had previously existed. It therefore became necessary to develop new materials and new fireproofing techniques in order to meet the specifications.

One example of this is paint. Most of the leading paint companies of the country, on reading the specifications, threw up their hands in despair and walked away saying such a paint was impossible to produce. Yet, persistent industry solved the problem.

When the construction of this ship was begun, there was no suitable method of fireproofing textiles—such as curtains and furniture upholstery—but the rigid specifications laid down for the steamship *United States* brought about the the development of an entirely new process.

Added problems were presented in connection with wood deck coverings, padding for seats and chairs, also for boyant material for life preservers. These problems were solved and are but a few of the examples of the ingenuity of American industry in developing entirely new materials to meet a need.

It is true that the high standards of safety applied to the construction of the steamship *United States* as compared to the use of obsolete wooden construction and flammable fittings of the past do add to the cost of the ship, but a mere moment's reflection clearly shows this additional cost is justified. Large passenger ships lost by fire from about the time of the loss of the *Morro Castle* due to other than war action, include the *Georges Phillippar, Atlantique, Paris, Champlain, Normandie, Bremen, Milwaukee, Monarch of Bermuda, Kron Prince Frederick, Empress of Canada,* the lake ship *Noronic,* and others.

Insofar as marine safety is concerned, we may be justly proud of our progress. As a matter of fact, we should swell with pride at the mention of this safest and greatest passenger ship ever built—the steamship *United States.* She represents the very highest advances yet reached in naval architecture. In speed she has outclassed the best. In carrying capacity she is equal to anything afloat.

Ships under the American flag incorporating the general features of the steamship *United States* would give the word safety a broad meaning—not only regarding the safety of the individual transported but the security of the Nation. Bills have been introduced in this Congress to build another superliner equivalent to the *United States* and a superliner for the Pacific. Unless such steps are taken to modernize our merchant marine we will once again find our merchant marine the weakest link in our national defense.

I am not here to recommend the financial incentive that should be arranged by our Government to build ships, but will say that it seems to me that whatever arrangement is made will be in the national interest. Unfortunately, an attitude seems to prevail that the recipient of a shipping subsidy is being guaranteed a profit and is otherwise receiving monies to the detriment of the Nation.

Not too long ago a tabulation was inserted in the CONGRESSIONAL RECORD to correct the erroneous and distorted impression that merchant-marine subsidies were tremendous. This tabulation showed that over a 15-year period:

1. The merchant marine operating subsidy amounted to less than one-fifth of 1 percent of the total of all subsidies paid; this was the only subsidy subject to recapture.

2. If the ship-construction subsidy is added, only between 2 and 3 percent of the total was earmarked for the entire merchant-marine industry.

From other statistics we can see that today:

1. More dollars are going to the price support of wheat per month than is being spent per year for merchant-marine operations.

2. Four times as much Federal money goes to the support of milk production as to the operation of the whole merchant marine.

3. In the coming year's budget overall agricultural support expenditures are 20 times the anticipated expenditures for merchant-marine subsidies.

I could go on along these lines, but this is no time for a lengthy statistical discussion. Let me point out just one additional item.

During the 11-year period ending about 1949, the subsidized lines paid approximately two and a half times the net retained subsidy in taxes. It is amazing but only a few realize that the underlying principle of Government subsidies to shipping parallels our protective tariff. Certainly it is clear that the shipping industry could not possibly absorb upward of three times the labor costs of its competitors. Do not our tariffs protect essential American industries against the products of cheap foreign labor and by support prices in the case of agriculture?

To say the least, great credit should go to the United States Lines for having had the courage and vision to make such a large investment in a pioneer venture.

General Franklin, the president of that company, knows from his own experience during the war in transporting millions of fighting men and hundreds of millions of tons of support cargo, as no other individual knows and appreciates, the great value of this ship should war come.

Mr. William Francis Gibbs, the naval architect of the steamship *United States,* was appropriately awarded a trophy—an "Oscar"—by the National Defense Transportation Association for the contribution this ship offers toward defense preparedness.

This great ship has proved that we have the know-how. It is generally recognized that before this country rose to maritime prominence in the 18th century, there had been only 7 nations in the entire history of the world which showed real maritime genius. They were Phoenicia, Greece, Italy, Portugal, Spain, Holland, and England. Since then we have shown our maritime genius on several occasions, even though it has been only under threat of war or of commercial strangulation by other nations. Under such circumstances we have always managed to achieve supremacy. However, it has always been dearly bought, and we have invariably thrown away this invaluable knowledge when the crisis passed.

At the end of World War II, we were once more on the threshold of real leadership. Today the 12th hour for the vital decision is rapidly approaching. If we rely upon our past experiences, they will clearly show that we must have a strong shipbuilding industry and a privately operated merchant marine. All the past lessons point to the fact that shipbuilding skills and the know-how of ship operation are essential national assets that must be preserved—they nevertheless are rapidly dissipating. We are on the verge of again ignoring one of the great lessons of history.

The shortage of American passenger ships is increasingly apparent. There were only 35 privately owned units as of January 1 of this year, as compared with 117 such vessels in our merchant marine on September 1, 1939. The parade of statistics on this point is convincing.

I only wish it could be made clear to the American public that a merchant marine is not only vital to our whole economy but to our very security as a Nation as well, for in time of war or national emergency whatever ships are most readily available are pressed into national service. Imagine, during World War II, overnight coastwise passenger ships were being employed for the transportation of troops overseas. One such vessel was torpedoed en route to Greenland with 900 troops aboard; 675 perished. Substandard foreign passenger ships were likewise utilized—at exceedingly high costs to us for conversions and charters. These are the types of ships, substandard as they are, that the theorists would have you depend on in an emergency—if they have not already gulled the public in believing that we can rely on foreign bottoms to meet our transportation needs should war come. This is a dangerous dictum.

During the last war slow wartime ships that were built in frantic haste were just as hastily converted to hospital and troopships. We began to experience trouble with these ships cracking, so we quickly fitted them with riveted straps. In fact, we would have used baling wire in an attempt to hold them together as we were desperate for ships. But, don't think for a minute the responsibility was not great in giving approval to the proposed carriage of about 1,300 troops on ships which at the time were giving us such concern. Several had broken in two, and charges were made that it would be criminal negligence to carry troops on these ships.

We took many a calculated risk. To say the least, it is a miracle that more lives were not lost as the ships on which they sailed were poorly subdivided, were practically firetraps, and were structurally weak.

These are but a few examples of our experiences in the last war. Today, there is a false sense of security in looking over our reserve fleets where we have a number of Victory and C4 troopers. I could point out many of their deficiencies, but need say no more than that these reserve troopers are not properly subdivided for the carriage of large numbers, and, most important of all, they could not compete with the speed of the modern submarine.

Where does that leave us? Well, I have briefly shown that great advances in naval architecture and marine engineering during the past decade or so; also that much of the safety progress is based on peacetime disasters. The bitter lessons that have been learned are of great value in minimizing the unpublicized terrible losses attributed to war. Recklessness induced by war and the disregard for safety during such a period is based on the arbitrary premise that military necessities will always outweigh the normal hazard of the sea. I can't agree with this entire premise. A man killed in, or as the result of a shipboard casualty, such as fire or foundering, is just as dead as though he were killed by the shell of an enemy gun. There is no need to risk unduly the lives of troops and seamen because human lives are always mighty important. That is the great lesson upon which we should not turn our backs.

I appeal to the American public on the basis of supporting an American merchant marine which in the end will provide reasonably safe transportation for the youth of our country, and it should be clear that failure to have cargo ships to maintain a service of supply could be fatal.

Out of the ports of the United States sail the finest and safest passenger and cargo ships in the world under the American flag, topped by the flagship, the steamship *United States,* but the real problem today, insofar as ships are concerned, is not only in the lack in numbers of such ships, including another *United States,* but in a stable, long-range policy which will encourage constant modernization effectuated by suitable appropriations. The most assured guaranty of an adequate American merchant marine which incorporates fireworthiness, proper safe-

guards against sinking, and speed to match the modern submarine—in other words, the best guaranty for these things to meet our next national emergency—is a merchant marine created to modern standards in these uncertain times of peace.

Special New York Times Supplement Describing the State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. NEUBERGER. Mr. President, my home State of Oregon contracted with the outstanding daily newspaper, the New York Times, for a special supplement about Oregon and its opportunities; and it was published as part of the Times for Sunday, April 7, 1958.

The supplement affords readers throughout the Nation a splendid opportunity to understand Oregon's outstanding features in scenery, resources, education, recreation, and citizenship.

This special State of Oregon supplement has been described in detail in an article written by Mr. A. Robert Smith, the correspondent for a number of leading Oregon newspapers, which was published in the Eugene (Oreg.) Register-Guard of April 10, 1958. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON DO-IT-YOURSELF KIT OFFERED TIMES' READERS

(By A. Robert Smith)

WASHINGTON.—Millions of easterners this week received copies of a handsome, colorful publication boosting Oregon as a good place to live, work, and play. With it went an offer of a free Doglas-fir for stranded unfortunates in the East.

The publication was in the form of a supplement to the Sunday edition of the New York Times, a newspaper with a circulation on Sunday of over a million.

On its cover it displayed an artist's conception of Oregon in color—including fish leaping from coastal waters, a cheese near Tillamook, a big rose near Portland, the State capital, a power dam along the Columbia, a bucking bronc near Pendleton, a pear near Medford, an apple near Hood River, mills, trees, and transportation symbolic of industrial activity, cattle, sheep, and crops symbolic of agricultural resources, and an ox-drawn covered wagon symbolic of Oregon's pioneer spirit.

A message from Gov. Robert D. Holmes recalls that pioneers coming to Oregon "found a land of great resources: Rich soil for their plowshares, giant timber for their saws, abundant waterpower for their mills, scenic beauty for their souls." These resources are still intact, he goes on, and are now being developed.

"In recent months we have seen a rebirth of the bold, pioneer spirit and energy here in Oregon. In these months we have watched the mighty Columbia's first surge over newly completed dams; we have stood on the rim of the dramatic canyon of the Snake and realized its great potential of waterpower and storage; we have watched harvesters sweep through fields of wheat and peas in the Umatilla country, and watched the fruit harvests in our green, clean valleys; we have watched the giant fir trees on their way to the mills to become lumber and plywood and we saw the beginnings of new plants for processing uranium, lime, zirconium, woodpulp, electronic devices, frozen foods, and aluminum," Governor Holmes said.

Holmes said it will take more pioneering work for the fulfillment of the State's human resources, but that Oregonians realize "the advantages of labor and management working in friendly cooperation; the advantages of a shared prosperity and the reasonable hope for better things to come; the advantages of hundreds of miles of public beaches, of millions of acres of public-owned recreation areas, of accessible fishing streams and hunting grounds; the advantages of leadership in literacy and the advantages of unsegregated schools and busses and homes."

"These are some of our assets," said the governor. This is our invitation to share them with you."

The tabloid-size publication contains articles on lumbering, water and power, labor resources, agriculture, plans for the Oregon centennial next year, natural gas, the city of Portland, soft goods made in Oregon, brewing, recreation, fisheries, aid to industry, taxation, sports fishing, health, ocean ports and minerals.

Much of the cost of the publication was covered by advertisements placed by Oregon interests—utilities, banks, manufacturing concerns, city of Portland, Lane County, Coos County, Multnomah County, and ports of Portland and St. Helens. Editing was done by Thomas G. Wright, Jr., administrative assistant to Governor Holmes. Wright previously was a reporter for the Oregon Statesman and, as a journalism student at the University of Oregon, was editor of the Emerald campus newspaper.

In an otherwise straight-faced recital with pictures of Oregon's attractive features, the publication carries an ad by a Portland brewer in a light vein with the boldface title "Keep Times Square Green." It starts out as follows:

"Just picture what reforestation will do for Times Square. Cool and green, teeming with game, salmon swimming up Pepsi-Cola signs to spawn. Why, it'll be a little corner of Oregon."

It seeks to entice readers to come to Oregon because the firm's beer isn't available in New York. But realizing some may not be able to come "right this minute," the company offers "to you stranded unfortunates" an "Oregon do it yourself kit: an Oregon fir and directions for planting."

This stranded unfortunate just clipped the coupon and sent for his fir.

The Mallory Decision

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the Los Angeles chapter of the Society of Former Special Agents of the Federal Bureau of Investigation, Inc., to correct the Mallory decision:

SOCIETY OF FORMER SPECIAL AGENTS OF THE FEDERAL BUREAU OF INVESTIGATION, INC.,
Los Angeles, Calif.

Whereas the Supreme Court of the United States of America, under date of June 24, 1957, issued its decision in the case of *Andrew R. Mallory v. The United States of America*, which in effect held that the elapsed period of 7 hours from the time a suspect is first talked to and his arraignment is unreasonable; and

Whereas the House of Representatives Committee on the Judiciary did on April 1, 1958 approve of H. R. 14477 to correct said decision: Now, therefore, be it

Resolved, That the Los Angeles Chapter of the Society of Former Special Agents of the Federal Bureau of Investigation, Inc., meeting on April 10, 1958, does unanimously approve of and recommend the passage of H. R. 11477 by the Congress of the United States of America; and be it further

Resolved, That copies of this resolution be sent to Congressman H. ALLEN SMITH, together with such additional copies as he may desire so that they can be distributed to the appropriate Members of Congress to evidence the action taken herein.

EMMETT C. MCGAUGHEY,
Chairman, Los Angeles Chapter.

The Line Grows Thinner of Those Patriots Who Served in the Spanish-American War

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. VAN ZANDT. Mr. Speaker, the following editorial entitled "The Line Grows Thinner," which concerns those gallant Americans who served during the Spanish-American War appeared in the April 24, 1958, issue of the National Tribune and the Stars and Stripes. This editorial is a fine tribute to the 485,000 young men who volunteered from civilian life for service in the war with Spain. Only 45,000 of these patriots remain, but every one of them is still fired with the same patriotism that led them to answer their country's call six decades ago.

The editorial follows:

THE LINE GROWS THINNER

Just about this time 60 years ago young men in the United States were hurrying to respond to the call of President McKinley for service in the war with Spain.

From all walks of life they came. Rich and poor, but all willing to do battle for a cause in which they believed, they thronged to the recruiting stations to join with their brothers of the small Regular Army, also volunteers, to espouse the fight for liberty of the people of Cuba.

With the cry, "Remember the *Maine*," ringing in their ears, they came from every State of the Union and from the Territories which had not yet attained statehood. Yes, these were muster-in days for that gallant group who joined up as Kipling might have put it "to right a nation's wrongs." Some 180,000 enlisted.

The National Tribune of March 24, 1898, reports that in a recent speech, General Miles said: "During the past few weeks we

have witnessed a memorable display of patriotism. Hundreds of our brave sailors have gone down in the *Maine;* have met death in the terrible steel-bound compartments of the battleship. They are entitled to all honor and credit as national heroes. Notwithstanding the horrors of that night in Havana harbor, we have seen thousands of boys marching up, ready and anxious to take the place of those noble sailors on the ships of our Navy, regardless of the fate that might befall them. No grander sight was ever presented than that at our recruiting stations during the last two weeks."

The war with Spain itself was of but short duration and many of the men who had volunteered for service were mustered out. But their period of rest and inactivity at home was broken by still another crisis.

The Philippine Insurrection broke out and the Boxer Rebellion demanded more troops from the United States. The Regulars were still inadequate to cope with the situation and these same men who had volunteered for the war with Spain again volunteered and were shipped overseas to do battle, not only with a persistent enemy, but also with the hardships of tropical warfare to which they were not accustomed.

Before the Boxer Rebellion and the Philippine Insurrection was over the number of volunteers from civilian life was nearly 485,000.

From this group of patriotic young men there remain now about 45,000. Old men but still fired with the patriotism which led them to answer their country's call six decades ago.

It has been our pleasure, over the years, to meet them when they come to call at the offices of the National Tribune in Washington, D. C.

When it was our privilege to meet them first they were still young, not only in heart but in body, and it was a pleasure to see how they carried themselves, proud of their service and of their country.

Little by little our visitors, veterans of the campaigns of 1898–1902, have become fewer. They are now in their late seventies or early eighties, but when they do drop in to pay us a call we marvel at their erectness, their vitality and their vigor of mind and we pray that we may be like them when we reach their age.

At this time, in camps throughout the Nation, United Spanish War Veterans will be meeting to commemorate the day when they became soldiers or sailors or marines 60 years ago. True, not as many turn out for the muster-in ceremonies now as they did some years ago, but wherever possible, a small group of the camps will meet and recall those experiences of the long ago, renew old friendships, and express the hope that when next year rolls around again they will be able to gather together for another reunion.

We might go on to develop the gains to the United States the efforts of those volunteers brought. They proved to the world that a new power, a new nation, had been developed which must be reckoned with in all future discussions between countries on world affairs.

Their response to the President's call welded together a country which had been severed by the bitter Civil War of 1861–65. North and South flocked in and forged a unity and brotherhood which have survived the test of time.

The only conflict in which we might call modern times, and in which we won not only the war but the peace, was gained by these men of 60 years ago.

It is only just that we pay tribute to them at this time and acknowledge the country's debt to them. Let it never be said that they are forgotten as long as the last man remains alive.

Address by Dr. Bronis J. Kaslas, of Wilkes College, Wilkes-Barre, at a Meeting of the Tatra Club Earlier This Month

---

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by Dr. Bronis J. Kaslas at the initiation ceremony of the Tatra Club held on April 12, 1958, at the Hotel Sterling in Wilkes-Barre:

Mr. Chairman, reverend monsignor, Hon. Congressman FLOOD, honorable judges, senior members, ladies and gentlemen, I am honored to say a few words on behalf of the new members of the Tatra Club. It is very hard for me to anticipate all the feelings of the new members initiated here at this very impressive ceremony. I am, however, sure that all of us new members are very happy to become associates of this distinguished society.

We thank you all for your friendly and paternal acceptance; we are especially grateful to our beloved Judge Selecky for the part he is taking in this unforgettable initiation ceremony.

I wouldn't do justice to the Tatra Club and this select assembly gathered here to celebrate our initiation if I kept silence on some things lying close to my heart; those things are my memories of happy days in prewar Europe. I was then research scholar at the postgraduate school of the University of Strasbourg and a newspaperman of Lithuania's periodicals. I was roaming all over Europe. I personally witnessed the historical events which today we learn about in the schools. And by the strangest, most unbelievable coincidence, I teach today in the Wilkes College those events which I lived through. I never dreamed of this possibility when in 1938 I followed Hitler, almost in his footsteps, to Vienna which was submerged in Nazi swastikas and black and brown uniforms.

From Vienna I went to Bratislava, the splendid capital city of Slovakia. The faces of Czechs and Slovaks were resolute, but marked by sadness and anxiety. They asked me, and asked themselves, What was going to happen, what fate was awaiting them? The only answer I could give them was that Hitler will never stop, unless he is stopped. And he really did not stop until he was stopped. I had a feeling then that this might be the last time I was traversing that most spectacular and the only democratic country of central Europe.

It was late summer and September 1938. From Bratislava I took the train to Trnava, and rolled through a most beautiful panorama formed by the Vah River and Nizkie Tatry-Low Tatra- Mountains. The peaks of Dumbier and Kralova Hola were jutting up proudly like the symbols of the heroic and noble nation of Czechoslovakia. Through Branska Bystrica, Turchansky Svaty, Ruzomberak I went to Vazek, at the foot of the Vysoke Tatry-High Tatra- Mountains separating Poland and Czechoslovakia. From here I could see the highest peak of the Tatra Mountains Gerlachovka, nearly 9,000 feet high. Gerlachovka was standing there majestically, a real, invincible miracle of God's nature. I felt as if Gerlachovka was proclaiming: "Hitler or Stalin can subjugate the human bodies, but they will never be able to enslave the hearts of European nations." Surrounded by Tatra Mountains, overpowered by their symbolic beauty, I had in that moment not the slightest idea that some years in the future I would become a member of the club bearing the name of these majestic mountains.

It was a beautiful September of 1938. The leaves here and there were coloring. I crossed into Poland in the Tatra Mountain region. What a beautiful place and historically famous nation. The triumph of the glory and power of Poland was, while in union with the heroic nation of Lithuania, under the leadership of the Lithuanian royal dynasty of Jagellon. Both nations fought the Asiatic Tartar and Turkish invasions of Europe. Many times they saved Europe from savage Tartar and Turkish subjection. They defeated the Turks at Varna in 1444, where the King Ladislas found a heroic death in the battle for Christian civilization. In 1682, Slavonic nations in alliance with Austria, under the military leadership of the Polish King, John Sobiesky, crushed the power of Turks, relieved the siege of Vienna, and repulsed them deep into the Balkans, thus saving all Europe from Turkish domination. Again, Poland and Lithuania were responsible in arresting the Drang nach Osten of Teutonic Germany when in 1410 the united armies of these two nations, under the direct leadership of the Grand Duke of Lithuania Vytautas and King of Poland Jagello at the famous battle of Tannenberg, destroyed the huge armies of Germans and thus saved all eastern Europe and Ukraine from becoming German colonies. This battle was the greatest and the most decisive event of the Medieval Ages.

These and other historical facts were roaming in my mind when in September 1938 I continued my travel through the areas where those decisive battles had taken place many ages ago. But again, at this moment, the same Teutonic sword was hanging in the clouds of Europe and was aiming at the hearts of Slavonic and Lithuanian nations; the shadows of Attila and Genghis Khan, this time in the red armor, also were visible again.

The famous Englishman with an umbrella, Chamberlain, was flying in that September 1938 back and forth to Berchtesgaden to beg the great master of the Teutons to leave in peace innocent, poor Czechoslovakia. But the proud fuhrer was adamant. And on September 29, when my train was rolling from Prague to Strasbourg, the decision of the Munich conference between Hitler, Mussolini, Chamberlain, and Daladier was announced that Czechoslovakia was to be dismembered and given to Hitler.

Ladies and gentlemen, you might easily guess how I then felt. I went straight to Paris, where I was completing my book on Baltic League in which I advocated a league of the nations around the Baltic Sea uniting for the defense of their destinies. Without having finished the gathering of all material, and still under the influence of my almost tragic journey, I wrote the last paragraph of my book which was a factual, desperate appeal to east European nations. The book was published in 1939, just about 2 months before Hitler and Stalin, 2 princes of darkness, attacked and subjugated Poland. That paragraph in French was something like this: Unissez maintenant ou perissez, car tel heure ne revidendra plus sur le cadran de l'historie,' (Unite now or perish, because another such hour might never come again on the dial of history).

Thank you.

Eulogy of Former Gov. Paul A. Dever, of Massachusetts, Delivered by Lt. Gov. Robert F. Murphy, of Massachusetts

EXTENSION OF REMARKS

OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. O'NEILL. Mr. Speaker, at the Jefferson-Jackson Day dinner held in Boston, Mass., on April 19, 1958, the greater part of the evening was spent in eulogizing our beloved former Governor, the Honorable Paul A. Dever, who died on April 11.

The one chosen to make the principal tribute was the present Lieutenant Governor, the Honorable Robert F. Murphy. While I was the speaker of the Massachusetts House of Representatives, I had the pleasure of serving with Bob Murphy, who was then the majority leader. Later he served as minority leader and in 1954 was the Democratic nominee for Governor. In 1956 he was the nominee for Lieutenant Governor, the position which he now holds in the Commonwealth.

Bob Murphy is a man of exceptional talents and qualities. He is an excellent speaker, well versed in the field of public service; a former newspaperman, and a lifelong Demochat. On this specific occasion he rendered glowing tribute to Paul Dever in remarks which came from the heart and which echoed the sentiments of those assembled. I am proud and honored to include his address in the CONGRESSIONAL RECORD.

EULOGY OF FORMER GOV. PAUL A. DEVER DELIVERED IN BOSTON, APRIL 19, 1958, BY LT. GOV. ROBERT F. MURPHY, OF MASSACHUSETTS

Tonight, while grief locks the heart, and sadness throttles the tongue, and there is an overwhelming emotion of complete loss, this particular occasion is unique.

This annual dinner with its productive elements for the Democratic Party can well be called Paul Dever's party, because it was the function closest to the heart and mind of our late and lamented and never-to-be-forgotten friend.

But he would want it, I think, not as a tribute to himself.

He would want it so that the means can still be procured to perpetuate the record of achievements, which his philosophy of life translated into a long, litany of deeds, in the interests of the poor; the lowly; the sick of mind, heart, and body; the homeless; the little ones and, indeed, all those forsaken and forgotten.

JEFFERSON-JACKSON

Paul Dever stood forequare and always for the old-fashioned civic integrity of an Andrew Jackson.

Time after time, from this very rostrum, he held that "the principles of Thomas Jefferson are the definitions and the axioms of a free society."

The late, great governor was first and foremost for the people, because he was of the people.

BUSINESS

Paul Dever destroyed the falsehood that democracy was hostile to Massachusetts business. While he was pilloried as the enemy, he lifted the economy and, today we defy those detractors to name him or any other Democratic governor, as an enemy of business.

He gave us 318 miles of better roads, greater safety on the highways, an expanded tourist trade; he increased our commerce, and he lowered automobile insurance rates.

He built us new homes: In 2 short years he took them out of the blueprint stage and started 115 projects, that provided 12,240 apartments.

When he took office, not a single project, not even a single apartment, had been completed.

Today, over 50,000 veterans and their families are living in healthful, respectable, low-cost dwellings.

And he sparked job opportunities when he developed the port of Boston and made Logan one of the premier airports of the world.

PUBLIC HEALTH

In the field of public health, once Disraeli said: "The health of the people is the foundation upon which all their happiness and all their powers as a state, depend."

Massachusetts made her greatest advances, in the science of public health, under Paul Dever.

Lemuel Shattuck, the finest chronic disease hospital, is, today, a reality. The new wing of the Chelsea soldiers' home now stands majestically for all to see.

The Holyoke soldiers' home came into being while he provided annuities for our paraplegic veterans.

MENTAL HEALTH

"Paul Dever did more in 1 year in the field of mental health than other governors did in a hundred years," once said Dr. Clifton Perkins, the long-time commissioner of mental health.

Under Dever, for the first time in years, Massachusetts' mental hospitals discharged, as cured, as many patients as they admitted. He segregated mentally ill children from the adult insane.

He provided special training for the feebleminded, afflicted with blindness, and he separated the physically well insane, from those others, ravaged with tuberculosis.

RETARDED CHILDREN

For a century, others talked about the need for a program to help retarded youngsters. Tehy needed help and under Paul Dever they got it.

For lasting cure replaced neglect.

Myles Standish Hospital was born in Taunton, to care for 2,000 exceptional children.

Today, thanks to a compassionate heart, there are no more commanding waiting lists. Firetraps were replaced with seven other new mental-health schools and hospitals. Underpaid attendants were made whole. Understaffed institutions were strengthened.

Myles Standish, Paul Dever always claimed, was his greatest achievement—and, as longtime legislator myself, I know that the present general court will eargerly respond to the suggestion of Governor Furcolo, that the name of Myles Standish be changed to the "Paul Andrew Dever School."

Then, indeed, there will be a lasting memorial in respect to his memory.

Someday, through the succession of governors, the time will come when his portrait will be removed from the walls of the executive chamber where it now hangs.

And when that day comes—when that moment is here—it is my fond hope, that it will be moved to Myles Standish where it will hang from, and adorn the walls of that institution, in, immortality, and in respect—yes, in reverence to the memory of one possessed of a lofty ideal and a benevolent heart. For he once said this regarding retarded children:

"You can have what I have provided; the roadways which lace the landscape—you can build your bridges and tunnels above and under our rivers—you can have your modern buildings with towers piercing the clouds—and all of that.

"And in my welcome days of future, private citizenship, I can look back to all of those with great pleasure.

"But if there is one thing that will warm my heart, and which I am sure, will be an endorsement on a passport by St. Peter, it is that, which I have been able to do, for the mongoloid youngsters of Massachusetts."

LABOR

He was one of the most devoted friends the workingman and woman ever had.

He broadened the workmen's compensation law.

He doubled compensation for the loss of an arm.

He tripled compensation for the loss of an eye.

He raised the minimum hourly wages of the lowest-paid Massachusetts worker.

He gave long-overdue increases to those in the State service, who were caught in the spiral of inflation.

He enacted a new anti-injunction law.

He insisted that maritime workers be made eligible for unemployment compensation.

To labor, a stalwart has gone.

EDUCATION

"It was in making education common to all," once said Russell Lowell, "that the destiny of the free Republic of America was practically settled."

Paul Dever's contributions to public education were legion. He turned his attention to repairing and refurbishing our many State teachers' colleges which had been in bad disrepair for years.

He powered the physical plants at our textile institutes at Lowell and Fall River and New Bedford. Today, they are the best of their kind in the world.

He never stopped trying to provide needed new facilities at the University of Massachusetts.

New instructors were added to the teachers' colleges to train more teachers; and to man, and to staff, our understaffed schools.

In one stretch of 2 years under Paul Dever, 270 public-school buildings were erected in 212 cities and towns, with the State underwriting the cost up to as high as 65 percent.

Regional school consolidation came into being that made it possible for our very smallest communities to grant education comparable to that given by our largest cities.

He approved scholarships to 100 worthy boys and girls at the University of Massachusetts.

He increased scholarship benefits for children of veterans killed in war, and devised a State-aided, vocational-education program for 13,000 handicapped youngsters.

CONCLUSION

I shall always think that Paul Dever was less than enthusiastic about it, but he bowed to the wishes of his friends and associates when he ran for reelection in 1952, after completing two terms as Governor of Massachusetts.

He probably was not too well physically, but he did not complain. Instead, he responded to their urge with his usual vigor.

This followed his choice as the keynoter at the Democratic National Convention in Chicago, and the unfortunate incident that occurred there. He went there to help our cause. He went there, true to his character, to aid his friend Adlai Stevenson, and to proclaim that democracy is inseparable from the liberties of men. Democracy that had given a Jefferson, a Jackson, a Wilson, a Roosevelt, and a Harry Truman, to the service of mankind.

He was not defeated by the Eisenhower sweep. Instead he was crucified by the assaults on his character and by the attacks on his personal probity.

For Paul Dever went down in 1952 by the cowardly and the poisonous thrusts of those who vilified him, as no other man had ever been so debased before.

I have many times thought that he became so crestfallen, so downcast by a succession of untruths and slurs and outright attacks on his honesty, his integrity, and his moral uprightness—and by one, I might add, that he thought would show some essence, some atom of fairness—that his illness began and became so accentuated, as to lead to his ultimate, and to me, his most untimely death.

But our zeal, our admiration for his goodness of character, and for his sincerity will never waiver.

Our admiration for the cold, even light of his brilliant mind, will never cease.

For he was, in fact and in truth, the leader here in Massachusetts of our party. And his influence for the common good will remain long after his assailants have gone.

To them, to them, I say that our faith in him shall never end. To them I say we shall always remain inspired by his precepts and by his example.

To them I say that Paul Dever was the builder, the architect, who while he lived, lifted us to such heights of moral grandeur as we had seldom known before.

For his name and his purpose made hearts beat a little faster in lowly places. And today his name and his good deeds and his charity are being sung in every nook and cranny of this Commonwealth.

And now that he is gone, his spirit soars. For, with his death and with his passing, he has left for history and humanity and eternity for all mankind the everlasting and immortal memory of Paul Andrew Dever.

For the spirit of Paul Dever lives on.

The spirit of Dever will never die.

The spirit that slowed a week ago lives again.

For he has bequethed to us the unfinished fight to aid the jobless; to strengthen our economy; to care for the aged and the sick; to build our highways; and to go forth to battle for the cause of man.

Yes; he has left to us, too, the legacy of helping the Mongoloid kid, and providing the new techniques for the retarded child.

And, as it always was with Paul Dever, so may it always be with us.

May his immortal soul rest in peace.

Marker Urged for Paderewski's Burial Place in Arlington National Cemetery

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of April 23, 1958, calling attention to the fact that no marker has been placed on the grave of the great Polish pianist and statesman, Ignace Jan Paderewski, who died 17 years ago in New York City and was buried in Arlington National Cemetery:

PADEREWSKI MARKER

The great Polish pianist and statesman, Ignace Jan Paderewski, died in New York City on June 28, 1941.

By a resolution of Congress, Paderewski was accorded the honor of burial in the Arlington National Cemetery as a temporary measure since his last request was to have his final resting place in his homeland after the restoration of Poland's freedom and independence.

Seventeen years will have elapsed this June and it will still be impossible to fulfill Paderewski's last request. In spite of this length of time, however, there is still no marker in Arlington Cemetery to show Paderewski's burial place. We wonder if the approaching anniversary of his death would not be an appropriate time to erect a plaque to mark his temporary resting place. Surely the friends and admirers of this great musician and patriot would willingly subscribe the necessary funds to do him this small honor.

KARLIS KALNINS.
ADAM M. SCHMIDT.
CHARLES V. WEST.

Need for New Approach on Foreign-Aid Spending

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. ERVIN. Mr. President, on March 10, 1958, the Charlotte Observer, of Charlotte, N. C., printed an editorial entitled "New Approach Is Needed on Foreign-Aid Spending," in which it compliments the distinguished junior Senator from Oklahoma [Mr. MONRONEY] for the idea advanced by him.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW APPROACH IS NEEDED ON FOREIGN-AID SPENDING

A majority of Americans, we suspect, view the approaching congressional debate on foreign aid with a resignation born of weariness.

Hearings on the Eisenhower administration's $3.9 billion foreign military and economic aid program have turned up little new information for the House Foreign Affairs Committee.

Secretary Dulles' contention that the $3.9 billion figure is a rock-bottom sum has a ring that became familiar before President Truman left office.

On the other hand, foreign-aid critics have already dusted off the tired "Uncle Sap" and "Uncle Sugar" sarcasms to imply that spending United States funds abroad is the work of suckers and softheads.

The truth is probably somewhere between the two extremes. But the American voter and taxpayer, denied access to top-level intelligence reports and strategy plans, has no way of getting at the truth.

Unquestionably many mistakes have been made in the administration of the postwar foreign-aid program.

In a recent closed-door session of the House committee, Comptroller General Joseph Campbell cited numerous examples of inaccurate record keeping, inadequate control of documents, lags in reporting deliveries and other deficiencies.

He urged Congress to conduct a strong internal audit of the whole foreign military-aid program.

Campbell's testimony was later supported by a report from the General Accounting Office listing numerous luxuries and frivolities in what the Pentagon had called an austere foreign military-aid program.

Such mistakes are perhaps inevitable and do not of themselves nullify benefits to the United States including the prevention of postwar economic collapse in a number of free nations, the obtaining of access to essential resources abroad, and the establishment of the worldwide network of United States military bases.

Moreover, the great bulk of military aid funds has been spent right in the United States to the benefit of United States industry and United States wage earners. Even the economic phase of the foreign aid program has indirectly contributed to United States exports by placing hard-to-get dollars in the international monetary pool.

Hence foreign aid is not entirely a charity handout.

Perhaps the need at the moment is a new approach to the whole question, one which will achieve the same objectives but on a sounder basis.

Senator MIKE MONRONEY, of Oklahoma, has advanced one new idea.

He proposes the establishment of an international development association, with a capital stock base of dollars and other hard currencies, but also using local soft currencies. The association, working with the International Bank for Reconstruction and Development, would make long-term loans at low interest rates.

MONRONEY explains in these terms his resolution introduced on February 24:

"It is an effort to facilitate economic development of young nations through international banking machinery instead of through United States loans and grants. It will help us to put to work the vast amount of local currencies we have received and will receive from sales of our agriculture surpluses abroad. By mixing these local currencies with hard currencies, we can make the dollar do the work of many dollars now being spent."

There may be flaws in the Monroney proposal, but at least it has the virtue of fresh originality.

To date, the Eisenhower administration has merely reemployed the techniques of its predecessor, including indulgence in name calling. "Ostrichlike" was the biting phrase used by Mr. Eisenhower to describe criticis when he spoke to the recent bipartisan foreign aid rally in Washington.

The President would be better advised to seek a new formula that would hold out to American taxpayers some hope that foreign aid would eventually become self-liquidating.

The alternative—permanent annual appropriations running into the billions—is both dismaying and depressing.

An Appreciation of Gonzalo Facio, of Costa Rica

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, the able and dynamic editor of the Washington Daily News, John T. O'Rourke, is also president of the Inter-American Press Association. From that vantage point he has the perspective from which to view Latin America and especially their ambassadors from Latin America here in Washington.

On the editorial page of the News for Thursday, April 24, he wrote the following appreciation of our mutual friend, Gonzalo Facio, who left yesterday for Costa Rica and private life.

Under a previous consent I am inserting the text of Mr. O'Rourke's article:

YOU CAN'T KEEP A GOOD IDEA DOWN

(By John T. O'Rourke, editor, Washington Daily News)

Good ideas have a life of their own. Once uttered, a good idea seems to take on its own mysterious vitality, quite apart from that of the man who originally gave it voice.

So that, once a good idea gets into the general consciousness, you can kill it here, only to find it cropping up there, stronger than ever.

We are reminded of this as the personable young Ambassador from Costa Rica, Gonzalo J. Facio, leaves his post here for his homeland to resume his newspaper work. He departs next Sunday.

He has been in Washington only 2 years or so, but the future may show that in that brief time he started something that may contribute more to the peaceful well-being of the South American community of nations than has the work of many other better known diplomats who have spent their whole lives in equivalent posts.

Ambassador Facio began looking at the expenditures which many South American nations make for arms sold to them under the mutual defense agreements. The United States sells these arms at a fraction of the cost to United States taxpayers but, nevertheless, for underdeveloped economies, the burden is heavy. Indeed it is a real impediment, because it absorbs funds which could otherwise be used on all sorts of constructive things.

Since the mutual defense agreements were negotiated, vast changes have occurred in military technique. In an age of the intercontinental missile and hydrogen warheads, cannons and battle cruisers become just so much expensive curios, insofar as hemisphere defense is concerned.

Ambassador Facio says that if various arms have potential value, then keep them. But he makes the point that if they are obsolete and useless, the money spent for them would defend the hemisphere against communism and Communist ideology better, if it were spent on projects conductive to general social progress and prosperity.

Few would disagree with that. But after all, it was just talk, and it failed to disturb the hemisphere's hierarchies of generals, admirals, colonels, politicians, diplomats, and arms negotiators who have operated pretty much outside the public consciousness.

But then Ambassador Facio cheerfully startled everyone by proposing to the Council of the Organization of American States (to which he also has been ambassador) that it act under the terms of its charter which affirms the principles of collective security. He suggested that OAS use its good offices to have the whole hemisphere's military defense purchases reexamined. That tore it.

His startled fellow diplomats quickly torpedoed his idea, and sank it.

A certain other ambassador, who has been at OAS so long that his friends say he thinks he owns it, said that Senor Facio's proposal was a sinister maneuver by the United States to disarm South America. He knew better, of course; he simply did not care how low he stooped to conquer a good idea.

Well, the idea is still floating around and damn the torpedoes.

We predict that now that it is buzzing around the world, the idea never will be stuffed back into the Pandora's box where some diplomats like to hide disturbing notions.

Ambassador Facio's proposal has been printed, to our knowledge, in many publications in the United States, Mexico, Jamaica, and other countries.

Sooner or later, enough men of good purpose will agree that it is sound and should be acted on. Then a new agreement will be worked out in terms of present-day military actualities.

When that happens, hundreds of new projects from Tierra del Fuego to the Rio Grande will become financially possible and millions of citizens will benefit from them.

Perhaps most of those beneficiaries never will have heard of Senor Facio.

But many here in Washington will remember him, and will honor the practical idealism that guided him during his tour of duty as an ambassador to the OAS and to the United States.

Resources Available Through River Development

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, April 28, 1958

Mr. HILL. Mr. President, the distinguished junior Senator from Oregon [Mr. NEUBERGER] has been a leading advocate of multipurpose development of our great river systems.

In the May issue of the Progressive magazine, he has written an illuminating and informative article entitled "The Miracle of Rivers," which describes how a mighty stream can be put to work to improve navigation, reclaim agricultural land, generate vast quantities of waterpower, and prevent disastrous floods.

Senator NEUBERGER's article appropriately features a special issue of the Progressive devoted to the 25th anniversary of the Tennessee Valley Authority, which has done so much for the great area I help to represent in the Senate.

I am particularly gratified that the junior Senator from Oregon has called to our attention the enormous and awesome river projects presently under construction by the Soviet Union, along the mighty waterways of Siberia and European Russia—projects which dwarf even our own Grand Coulee Dam. Senator NEUBERGER has drawn upon the significant and alarming testimony presented to the Senate Interior Committee by the distinguished senior Senator from Louisiana [Mr. ELLENDER], following his extensive travels in the Soviet Union last fall when he saw being built the huge hydroelectric dams on the Angara and Volga Rivers.

I ask unanimous consent that the article from the May issue of the Progressive by Senator NEUBERGER be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MIRACLE OF RIVERS

(By Senator RICHARD L. NEUBERGER, of Oregon)[1]

I

Men have been fascinated by the miracle of rivers ever since the early origins of the human race. Primitive tribes traveled on rivers in crude dugout canoes, and dragged fish from the swift rifles of these rivers. When mankind had advanced farther from the cave, rivers were used to turn wooden wheels which ground grist to flour. But fields of wheat in many realms of the world needed water for irrigation, before this grain could grow. So the massive strength of rivers was tapped to move still larger wooden wheels in order that water from these rivers could be deposited on furrows which required such life-giving succor.

In the sunrise of history, men of course knew nothing of the unseen giant of hydroelectricity, which lurked wherever a river foamed over a precipice or shot through slanting narrows. Even the later frontiersmen and pioneers in buckskin were unaware that in every waterfall hovered a source of fuel mightier and more enduring than any yet discovered. But, as boundaries were laid down, it became more difficult to put these rivers to full and untrammeled use. Boundaries, after all, are made by men. In this same category are such institutions as passports, customs duties, tariffs, and doctrines like States rights or national sovereignty. But rivers recognize none of these artificial or synthetic lines. Their destiny has been shaped by geography rather than by resolutions or treaties.

Snow falls perennially in the mountains and forms icefields and glaciers, which melt in the midday sun. Rivulets seep through the glacial moraine and merge. Where they merge, a creek takes form. Innumerable creeks find their way downhill, through chasms and ravines. They disappear over cliffs in rockets of spray, but take shape again in icy pools at the bottom. When the snowbanks are melting, the mountains trill and echo to the clamorous sound of falling water.

Like capillaries uniting to create a vein or artery, all the creeks and brooks from the highlands finally blend in some gorge of awesome depth and proportions. Eventually, the ramparts of the gorge soften into the timbered slopes of wide valleys. The river, released from its rocky prison, widens into a broad swath as it seeks the distant ocean.

This has nothing to do with State or national boundaries. Instead, it submits to sublime natural processes, by which dense forests permit precipitation from snow and rain to flow to the sea. Theodore Roosevelt, that militant 26th President who loved the outdoors, may have been the father of the TVA idea because he understood the phenomena of nature, where the birth of great rivers occurs. He said to Congress half a century ago, in 1908:

"Every stream should be used to its utmost. No stream can be so used unless such use is planned in advance. When such plans are made, we shall find that, instead of interfering, one use can often be made to assist another. Each river system, from its headwaters in the forest to its mouth on the coast, is a single unit and should be treated as such."

This is the hard core of the TVA idea. It is as simple as that. It sprang from the mind of a progressive Republican President. Nearly three decades later, his distant cousin, a liberal Democrat named Franklin D. Roosevelt, put it into practical effect in the watershed of the Tennessee River. The link between the reign of these two Presidents was a mild, tenacious United States Senator with snow-white hair and a valiant soul who

[1] RICHARD L. NEUBERGER, United States Senator from Oregon, has specialized as a writer and legislator in the field of conservation and water-resource development. He serves on the two major Senate committees concentrating in these fields, the Interior and the Public Works Committees.

knew them both—George W. Norris, of Nebraska.

Water, of course, is virtually inexhaustible. Rivers replenish the ocean, and water from the ocean is sucked into the heavens and dropped as snow and rain on the mountain ranges, where rivers are cradled. This process was under way epochs before Neanderthal man. It will still continue, even if man manages to destroy himself with strontium 90 and hydrogen weapons. It is eternal.

I stood looking at Bonneville Dam with former Secretary of the Interior Oscar L. Chapman. "Dick," he said, "that is an oil well which will never run dry, a coal mine which will never thin out."

II

In every river that rushes downhill, the same water can be used to float boats, irrigate land, generate power, and provide habitat for fisheries. Within these categories, there are subdivisions. Boats can mean a family's aluminum canoe or a throbbing diesel tug hauling half a dozen barges loaded with petroleum or wheat. The reservoir behind a dam can provide swimming for many, and at the same time it can prevent disastrous floods from inundating great cities far below on the Coastal Plain. A river never sleeps.

When Franklin D. Roosevelt sat in the White House, his political enemies charged that he hoped to establish a TVA on the Danube. The suggestion is no longer a political canard. The Eisenhower administration, while indifferent to the TVA which Franklin Roosevelt developed on the Tennessee River, has talked frequently of advancing American funds for a TVA on the legendary River Nile, so that Egypt can become a land of industry and prosperous farms. Friends of that outpost of democracy in the Middle East, Israel, speak hopefully of a TVA on the Jordan River, where the Scriptures were written. Before China was taken over by the Communists, many Americans predicted that this ancient nation might be rehabilitated by a TVA on the Yangtze.

Yet the TVA idea is not exclusively for export. Despite the coolness of his regime to Federal power development generally, President Eisenhower quoted from Theodore Roosevelt's statement about each river system being a single unit when he signed the bill in 1955 authorizing a costly network of storage dams on the upper reaches of the Colorado. In the river basin of the greatest hydroelectric resources, that of the majestic Columbia, many bipartisan groups today are calling for a regional power corporation that would be extensively modeled after the TVA self-financing act, approved by the Senate last summer. A leading advocate of such an undertaking is Oregon's traditionally Republican newspaper, the Oregonian, which not long ago called attention to the fact that "as of June 30, 1957, Congress had appropriated approximately $1.8 billion for all (Federal) power projects in the Columbia River system. And as of that date, $226 million has been returned to the Treasury to apply on the principal, nearly $80 million ahead of schedule. Interest paid on the Government funds was $161 million. This does not take into consideration, of course, the tremendous cash benefits accruing to the Government through increased taxes paid by individuals and industries which depend on federally generated power."

Need there be any more conclusive evidence that Federal investment in great rivers is just about the safest, most solvent expenditure made by the United States Government?

Nature was generous in endowing America with rivers. They rib out the continent from sea to shining sea. Many of them await the kind of unified development symbolized by the TVA, the integrated program which Theodore Roosevelt had in mind when he spoke of treating as a whole each river system, from its headwaters in the forest to its mouth on the coast.

Five major watershed areas, scattered all the way across the Nation, are most susceptible to this kind of treatment. They are:

1. The Columbia, in the Pacific Northwest.
2. The Sacramento, Feather, and San Joaquin, in California.
3. The Colorado, in the Rocky Mountains.
4. The Missouri, on the Great Plains.
5. The St. Lawrence, in the Northeast.

Two of these magnificent waterways are involved in international negotiations. They are the Columbia and the St. Lawrence. I recently toured the St. Lawrence seaway, where a 27-foot navigation channel is being tooled from the Atlantic's waters to the Great Lakes. At Barnhart Island, some 2 million kilowatts will be a collateral benefit of this undertaking. Through authorization by Congress, the New York State Power Authority will tap some 1.8 million kilowatts by drawing off water above Niagara Falls under cover of darkness, when the scenic spectacle will not be jeopardized. The water then will be dropped into the Niagara Gorge through huge penstocks during the daylight hours, when low-cost energy is most neded to move the wheels of industry.

The St. Lawrence seaway is a joint undertaking of the United States and Canada. After years of delicate negotiations, the obstacle of the international border at least has been overcome. The cost of the St. Lawrence seaway is about $1 billion, with some $300 million invested in the navigation improvements and the rest in the colossal powerplants. Yet here, as in the TVA itself, revenues from the sale of hydroelectricity will eventually help to finance the entire undertaking, although tolls also will be collected from the freighters which ply between the Gulf of St. Lawrence and such great new inland "seaports" as Toronto, Chicago, and Milwaukee.

No such happy and beneficial use of the Columbia River on an international basis can be reported, although the same pair of countries share it. Yet upstream storage reservoirs on the main stem of the Columbia, in Canada, could add the equivalent of four extra Bonneville Dams to Federal generating capacity in the United States—to say nothing of far more kilowatts north of the border in British Columbia. These reservoirs have not been built because unified development is lacking.

While Franklin D. Roosevelt and his successor, Harry S. Truman, were in the White House, exactly 20 multipurpose projects were approved for the Columbia Basin. Five years ago this policy underwent an abrupt change. No multipurpose projects have been authorized for construction by the United States Government since 1953.

What is a multipurpose project? It is a project which symbolizes the Theodore Roosevelt concept that a river system surges from alpine meadows to the ocean as a unit. Thus, the same dam of concrete and steel can (1) store water to retard or prevent floods, (2) drown out rapids which impede navigation, (3) provide locks to get tows and freighters past the dam itself, (4) pump some of the stored water to irrigate arid land for agriculture, and (5) generate vast quantities of hydroelectricity which will produce enough revenue to amortize the cost of the whole undertaking—principal, plus interest.

Throughout the United States, this concept is urgently necessary today. On the silt-laden Colorado River, which men once described as "too thick to drink and too thin to plow," it is needed to provide water for thirsty Los Angeles and for potentially-fertile valleys in the distant uplands of Utah, Wyoming, and Colorado. In the vast Central Valley of California, it is needed to transfer water from the snow-cushioned mountains of the north to orchards and lettuce fields parched for lack of irrigation in the south. On the sluggish Missouri, it is needed to level off floods and to improve navigation far into eastern Montana.

Everywhere in these river valleys, men cry out for the beneficial use of water which is now going to waste or even wreaking harm. They seek unified development, although some shun the controversial initials TVA. But regardless of the initials or appellation applied, a dam by any name is a dam just the same. And now a new and compelling reason exists for harnessing the magnificent rivers by which America pours its tribute of snow and ice and rain to the eternal oceans. That reason is the sweeping program of unified development presently underway on the stupendous rivers of the Soviet Union—one of the dramatic stories of this century.

In examining that story we should first understand that our own Nation is not alone in possessing rivers of truly great magnitude. Gen. Emerson C. Itschner, Chief of the Corps of Army Engineers, has pointed out the sobering geographical fact that of American rivers only the Columbia "begins to compare with the four major rivers in Siberia" in hydroelectric capacity. The St. Lawrence has quite a large hydro capacity, but aside from that, the other rivers do not have a very large amount," General Itschner said. The Columbia alone carries in its waters 40 percent of our Nation's total hydroelectric capacity.

In the famous interview with Khrushchev on the CBS Face the Nation television program, the top man of the U. S. S. R. said: "We declare war on the United States in peaceful production. * * * We will win over the United States."

Khrushchev knows that the four major rivers of Siberia—as well as the other great waterways of his country—could be heavy artillery in that rivalry. Energy reserves may shape the destiny of world conflict, because all industrial output rests ultimately on units of energy. Coal mines wear out, and miners decline to work underground. Oil wells eventually run dry; already it requires at least 20 times as much drilling in Texas to bring in a single barrel as it does in the Middle East. Uranium may be the fuel of the future, but how does mankind dispose of waste material which can inflict cancer of the bone on future generations? A single rampant barge of this sinister sludge terrorized shipping on our eastern seaboard.

But a river flows on forever.

In the last budget prepared by President Truman, the United States Government spent on all its Federal power undertakings—TVA, Columbia River projects, Bureau of Reclamation, Southwestern and the Southeastern Power Administrations—a total of $681 million. By the fiscal year of 1957, under the hostile spell of the Republican residency at the White House, this sum had dwindled to $316 million.

But while the United States Government was cutting in half Federal investment in the development of its rivers, Soviet Russia accelerated a program headed in the opposite direction. Details of this program were described to the Senate Interior Committee by three qualified men, while fellow members and I sat in fascination. The tale was told to us by General Itschner, who, as Chief of the Army Engineer Corps, is responsible for the bulk of our Federal river projects; by Senator HENRY M. JACKSON, of Washington, who visited Russia in 1957, and by Senator ALLEN J. ELLENDER, of Louisiana, who has toured the Soviet Union for each of the past 3 years and who, in 1957, had the opportunity of seeing remote areas in Siberia never before visited by an official of the United States Government.

After these presentations, I felt certain that no more profound mistake could be made by us than to neglect the wise use of

America's rivers. I felt equally sure that, if all the people of our land could have heard what was said by these three men, there never again would be a concerted voice raised in opposition to such undertakings as the TVA, Grand Coulee, and Bonneville Dams, the St. Lawrence seaway, the proposed high dam at Hells Canyon, or a river pact with Canada on the foaming reaches of the upper Columbia.

Declared General Itschner in summary: "The Soviet water resource is demonstrating to the world what can be done in this field by well-considered, long-range planning and a willingness to make sacrifices in present standards of living in order to achieve the goal of a great future industrial development. Indeed, the Soviets have given water-resource development a priority second only to the development of heavy industry designed to support military programs."

More than 40 river projects are under construction in Russia. Four of them will be the mightiest hydroelectric plants ever built. They are:

1. Krasnoyarsk Dam, Yenisei River, 4,004,000 kilowatts.

2. Bratsk Dam, Angara River, 3,340,000 kilowatts.

3. Stalingrad Dam, Volga River, 2,350,000 kilowatts.

4. Kuibyshev Dam, Volga-Samara Rivers, 2,100,000 kilowatts.

By way of contrast, the largest powerplant in America is Grand Coulee on the Columbia River—until now, Number One on earth—whose capacity is 1,944,000 kilowatts—less than any of the four Russian giants, and less than 50 per cent of that of the fabulous project rising across the Yenisei River in Siberia. And there would not even be a Grand Coulee in the United States today, if the Washington Water Power Co. had been as successful in its opposition a quarter of a century ago as the Idaho Power Co. has been in our own time, in seeking to block the great Hells Canyon project on the Snake River along the Oregon-Idaho boundary.

In hydroelectric development, according to General Itschner, "the Soviets already approach us in total installed capacity and have individual projects under construction that far exceed any American project in capacity."

For many years, American engineers predicted that Russia's brutal winters would make impossible any successful waterpower projects on rivers which freeze as hard as granite nearly five months of the year. "But," said General Itschner, "the Soviets have shown marked ingenuity in dealing with this handicap." A proposed 6 million-kilowatt dam will be across the Yenisei, in icy Siberia. Furthermore, General Itschner has estimated that at least 25,000 trained Soviet engineers are concentrating on the Russian water-development program. This compares with some 8,000 in General Itschner's own agency, and another 4,000 in the employ of the United States Bureau of Reclamation.

The Krasnoyarsk Dam on the Yenisei River will hoist ships 370 vertical feet, as compared with the 100 feet of the great McNary Dam lock on the Columbia River. Each of the generators at Krasnoyarsk will produce 286,000 kilowatts; this compares with 108,000 kilowatts for the biggest American generators, presently in operation at Grand Coulee. Today, the total known capacity of Soviet hydroelectric plants is 25,883,188 kilowatts, although this does not include 44 plants for which output has not been disclosed. In comparison, total American hydroelectric capacity at the end of 1957 was 27,676,000 kilowatts, with about 10 million more kilowatts under construction.

"Thus," continued General Itschner, "right now Soviet hydroelectric development appears to be roughly equal to ours in amount. However, their rate of increase is greater than ours. * * * The United States has no plants completed which will reach the 2-million-kilowatt mark, although John Day Dam on the Columbia River, on which construction will start this year, will ultimately have 2 million kilowatts if sufficient upstream storage is developed to make this amount of capacity economically justified."

Being a soldier subject to superior orders, General Itschner did not add that the Republican administration—plus its allies in Congress—had fought for 4 years to block construction of John Day by the Federal Government. Finally, the first John Day Dam appropriations were put through by Senator CARL HAYDEN, Democratic chairman of the Senate Appropriations Committee, over the antagonism of President Eisenhower's Bureau of the Budget. Nor did the general reveal that nearly 3 million acre-feet of water had been eliminated from the sufficient upstream storage which he mentioned by the decision of President Eisenhower's administration to substitute three small private-utility dams for the great Federal high dam at Hells Canyon.

IV

Many Americans have a conception of Russia as a nation without technical skills. General Itschner does not share this notion. He told our committee: "A major feature of Soviet power development is the construction of a national transmission grid which will bring electricity, generated sometimes at remote hydro stations, to industrial centers of the U. S. S. R. The beginnings of this plan already have been accomplished * * *." General Itschner, under questioning, emphasized that "building this equipment required Soviet engineers to solve unprecedented electro-mechanical problems." The discussion then continued:

"Senator O'MAHONEY. If that is the case, General, I assume it is your opinion that the technical knowledge and efficiency of Soviet engineers should not be underestimated.

"General ITSCHNER. Yes, Mr. Chairman. They have shown a very great ability in designing lines of this type. You see, the alternating current type of transmission line is the only type that has been used in the United States for any distances. Now, we see here a direct-current type of transmission that reaches up to 800 kilovolts. A great deal more electricty can go over an 800-kilovolt direct-current line than would go over and 800-kilovolt alternating-current line.

"Senator KERR. Do you think we would know how to do the same thing in this country?

"General ITSCHNER. I am sure we can do it, sir, but we have not yet accomplished it."

It was a somber group of Senators who listened to this testimony. Had we voted on Hells Canyon, or TVA self-financing, or a similar program for the Columbia River in that sobering moment, I doubt that there would have been many dissenters.

I sat at the long green-felt conference table in the same solemn mood, as General Itschner and Senator ELLENDER continued their startling disclosures. First, the general told us how Soviet use of inland waterways was beginning to challenge the superiority of the United States. As commerce multiplied through the locks on the Volga and other great rivers, American dominance in this realm was narrowing. American ton-mileage on its waterways in 1956 amounted to 130 percent of 1950 and over 200 percent of 1928. But Russian ton-mileage on its river systems was 175 percent of 1950 and an unbelievable 820 percent of 1928. "Obviously," said General Itschner, "the Soviets are only beginning to learn to use their waterways in the modern sense with which we Americans are familiar." While the Chief of our Corps of Army Engineers was speaking, I wondered if any twinges of conscience pricked those political spokesmen for the private power companies who had tried so hard to discourage the construction of dams, which have increased by manifold the barge commerce on the Columbia River where it cuts through the Cascade Mountain range.

Through the long afternoon the comparisons continued—of 2,200-horsepower tugboats on Russian rivers, rivaling any such craft in the United States; of 6 million Russian agricultural acres brought under irrigation between 1951 and 1956, as compared with 5,500,000 acres in the United States; of a Soviet reclamation project in the south Ukraine which will pump water to 8,500,000 acres, as contrasted with the 1,200,000 acres of the Columbia Basin project, biggest in the United States; of even 300,000-kilowatt turbines planned in Russia for the future, thus eclipsing by nearly 3 times those spinning below the penstocks at Grand Coulee Dam.

Senator ARTHUR V. WATKINS, of Utah, for many years a prominent advocate of reclamation projects, was especially interested when Senator ELLENDER described the model city being constructed for the workers who will erect the immense Stalingrad Dam on the Volga River.

"That is the way we do it in the West—build our cities first," said Senator WATKINS.

"We do not do it that thoroughly, though," replied Senator ELLENDER. "This is a permanent city. I saw huge apartment houses built along wide avenues, lined with trees; in connection with this city they have hospitals, schools of all kinds, kindergarten and secondary schools, even technical schools, wherein the workers who work on the dam and who will probably be workers later when electricity is used to produce manufactured goods, can go to school in order to prepare themselves for the coming event when Stalingrad Dam is completed. * * * They also have a large cultural center where children of the workers, as well as the workers themselves, who play music or who desire to take up drama in connection with their work, can come in and exhibit their talents."

In one shattering burst, the Soviet Union has moved from peasantry to the industrial age. It exceeds us in area, in population, and in discipline. Does it exceed us in the capacity to sacrifice, so that a way of life—either of tyranny or freedom—may continue and endure? This may be the dominant question of our time.

The Theodore Roosevelt-TVA idea of unified and full river development has been an influence in Russian technological gains—in transportation as well as in industrial production. It is ironic that the Soviet Union has turned to its great rivers for strength just at a time when the American Government is in the hands of the first administration in over 2 decades which has been fundamentally inhospitable to the whole idea of Federal multipurpose river projects.

If this policy persists, we shall have only ourselves to blame for wasting much of the sustenance and sinews of America. Rivers rushing downhill may be the muscles of a continent. Shall they be dissipated and made the object of waste? When I stand on the banks of a stream in my own home region, I think of the incredible folly of those who would abandon such a resource. If Russia taps the Yenisei while we fritter away the Snake, who is at fault except ourselves?

Our destiny in power energy lies in waterfalls and that is why the warnings of such pilgrims as Senator ELLENDER and General Itschner must be heeded. The TVA idea of unified stream development, from Teddy Roosevelt's "headwaters in the forest to its mouth on the coast," was never more urgently needed in America than today.

And so the Selway flows to the Lochsa, the Lochsa to the Middle Fork to the Clearwater, the Clearwater to the Snake River, the Snake

at last to the Columbia, and the Columbia on to the sea.

A river flows on forever.

Committee for Student Awareness at the University of Oregon

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, students in every State are increasingly concerned about our Nation's nuclear weapons policies. The following is a letter I received from the committee for student awareness at the University of Oregon, Eugene, and an editorial from the Oregon Emerald by William Cook:

COMMITTEE FOR STUDENT AWARENESS,
UNIVERSITY OF OREGON,
Eugene, Oreg., April 22, 1958.

The Honorable CHARLES O. PORTER,
House of Representatives,
Washington, D. C.

DEAR MR. PORTER: Our society is faced with a compelling problem. This problem broadly speaking involves nuclear attitudes, disarmament, and questioning. Perhaps this all sounds vague, but as we progress, we hope to make clear to you how we feel.

A few short days ago a play called E=MC² was presented by the University of Oregon Theater. Its theme was a future era in which all nations had possession of intercontinental ballistic missiles and nuclear warheads operated by pushbuttons. At the underground headquarters of SAC in San Francisco an earthquake is mistaken for an enemy attack. Retaliation comes before clarification, and a final chapter of catastrophe is written in the book of man. The last line of the play disturbingly reechoed, "What are you going to do about it?"

Before we could complacently shrug our shoulders and say, "Oh, nothing," or deny the whole presentation as ridiculous, we were forced to ask some tough questions. In the following paragraphs we would like to present these questions:

First. Does the American public have adequate information regarding the harm done humankind by raised levels of radioactivity resulting from nuclear tests?

Second. Is the public aware of what an all-out attack on the United States with thermonuclear weapons would do?

Third. What has the role of the Atomic Energy Commission been in making information public and what should it be?

We suspect the executive branch of the Government of deliberately withholding information and fostering misinformation. The instrument of this action has been the Atomic Energy Commission. Fortunately, much of the information regarding the effects of radiation on human life does not lend itself to secrecy. If a person wants to dig deep enough he can find a vast number of unresolved problems. Scientists, well qualified in the field, state that the permissible level of radioactivity is as much a moral as scientific problem. The Bulletin of the Atomic Scientist, a monthly magazine, presents fairly objective, informed evaluations of problems of this nature.

This information has not reached the general public. What the public has received are statements that the positive good from atomic tests outweighs the risks involved. At best this is a nonpublic opinion in lieu of information from which the public should make a decision. Instead of this they receive apologies from Teller and Latter that we open the door to aggression by renouncing atomic weapons. This is not the issue, but it is used to overpower a petition by 9,000 other scientists recently presented to the United Nations. Perhaps it is desirable to develop clean explosives, but we must remember they are precisely the type that will not be used in an all-out war.

The issue of bomb testing involves political as well as moral questions. What of a future when all nations have atomic weapons? Will any peace be safer than the precarious power structure preceding the last two modern wars? Will we not regret our failure to work out collective security and atomic control even if the endeavor only includes non-Communist areas?

For the public decision, which must resolve moral, political, and security questions, adequate and accessible public information is imperative. When the press has access only to what government feels expedient to release, decision can easily be removed from the people. We feel the AEC informational endeavor proposes not to inform the public opinion but to form it in accordance with a preconceived mold. The AEC must not be allowed to gravitate into a Goebbels propaganda ministry.

Any information you could give this committee would be appreciated. We thought it important for you to know how we, as the silent generation, feel about this situation. In the Oregon Daily Emerald, the campus daily student publication, debate on the editorial page by both student letters and members of the Emerald staff has centered around this and related issues. We are enclosing an editorial by William Cook pertaining to this problem.

We remain respectfully yours,
Committee for Student Awareness,
Page B. Mahler, Robert William Adler, Yasumase Kurode, Jim Maxson, Karen J. Horton, Elizabeth Jallie, Julie Pingle, Mary Minor, Diane Day, Douglas W. Fuller, Paul J. Clark, Helen Knight, Ralph G. Swenston, Charles Land, Gary Sala, George M. Boyet.

P. S.—Your visit here to the University of Oregon was an inspiration to all of us interested in this controversy.

[From the Oregon Daily Emerald]

TEMPORARY TEST SUSPENSION WOULD ENHANCE UNITED STATES POSITION

(By William Cook)

For the past several days the letters column of the Emerald has been filled with a pro-and-con discussion of whether the United States should continue testing nuclear weapons. In any discussion of nuclear weapons and their testing, some unknowns and unanswered questions must be acknowledged.

First. Is the level of radioactivity deposited in the atmosphere by nuclear-weapons testing actually harmful to living cells, particularly those of humans? Is the average 2-percent rise in radiation which we're getting from nuclear fallout actually harmful? And are deposits of the long half-lived radioactive element strontium 90 building up in our bones to a dangerous or potentially dangerous level?

The Atomic Energy Commission says the radioactive fallout from testing is not dangerous; Linus Pauling and his petitioners—working from the same data—say it is; we, who ultimately hold the decision, don't know whom to believe.

Second. Do the Russians, perhaps overburdened with the cost of the present arms race, want to call a breather by suspending their tests in the hope that other nations will do the same?

Or is their suspension announcement a "red herring" to divert world notice from the fact that their recently completed test series was reportedly the "dirtiest ever" in terms of nuclear fallout?

We don't know if the Soviet Union, which wants a summit conference badly, really wants to make genuine concessions—provided they are reciprocated—or if they are simply making a propaganda play.

Third. What is the position of the United States in the world today? Do we command respect among the nations of the world with our policies or are we branded as a nation which really doesn't want peace badly enough to give even an inch to try to achieve it? Are we so convinced—officially at least—of the rightness of our position that we are blinded to alternative solutions or to changes in strategy?

Fourth. How do we regard the so-called tide of neutralism which is reportedly sweeping through our NATO allies in Europe? Are our European allies willing to try for a peace at almost any price or are the neutralists merely a highly vocal minority?

Here are some observations we can make:

We know the whole Communist Bloc is committed to a doctrine of eventual world domination. This should always be acknowledged when dealing with the Soviet Union, but we also shouldn't let this doctrine stand in the way of attempting to achieve short-range goals—such as controls on testing which could lead to more peaceful coexistence.

We have learned from hard experience that the only way to deal effectively with the Soviet Union is from a posture of strength—and this implies the strength of world opinion, diplomatic skill and economic power as well as military strength.

If we have a posture of strength we can then give concessions and exact them in return. Without such strength we are crippled—especially around a conference table.

We already possess a strong military force oriented around the use of nuclear weapons. We possess enough nuclear weapons to destroy the Soviet Union several times over.

The military problem of nuclear weapons is principally concerned with the devices to deliver them—missiles and long-range bombers, for example. We are behind the Soviet Union in developing missiles; we are ahead of the Russians in the development of nuclear weapons.

It now appears that nearly all nuclear explosions can be detected around the world. The "tiny" bomb which was exploded inside the Nevada mountain was detected as far away as Alaska. The larger bombs can be detected easily with seismographs and upper air samples.

The United States has called for an end to the arms race, controls on nuclear weapons production and testing and controls on the use of outer space. And the United States has suffered at least three major propaganda setbacks since the sputniks.

From these data and arguments several tenable positions can be logically taken. One in particular can be suggested which would involve a minimum of risk and a maximum of possible gain.

We could suspend our nuclear testing—at least until after what looks like the inevitable summit conference later this year. This concession would cost us little in a military sense, for the tests are only to try clean, humanitarian bombs (i. e., ones which produce less fallout than present bombs).

We would stand to gain a favorable climate of world opinion for the present uncertain one.

Since the Russian test suspension is contingent upon other nations also suspending their testing, they would be in a position at

a summit conference to say they halted their tests but that no other nation would. For a summit conference would come after our nuclear tests, which start next month.

At the summit conference we could find out if the Soviet Union is really willing to make some first steps toward the disarmament which we eventually want. If the Soviet suspension announcement is a bluff, we would call it and at least be able to tell the world of it and score a propaganda victory. And then, if we wanted, we could return to testing nuclear weapons.

But if the Soviet Union is really willing to suspend nuclear testing, then we must not ignore what could be a first step toward ending the present arms race.

A Strong National Guard and Federal Reserve

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, I had the pleasure of appearing before the Department of Defense subcommittee of the Appropriations Committee and presenting my views on the question of a strong National Guard and Federal Reserve. This is a copy of my statement to this subcommittee:

Mr. Chairman and members of the subcommittee, it is a pleasure for me to appear here today representing the Armed Services Committee, by duly authorized resolution, to urge you to increase the budgetary request of the Department of the Army for fiscal year 1959, to insure a maintenance of the authorized strength of the Army National Guard at 400,000 and the Army Reserve at 300,000.

I have the privilege to serve as chairman of the Reserve Forces Subcommittee of the Armed Services Committee. We held extensive hearings on the proposed reduction in strength of these two Reserve components. We heard from representatives of the Army (including the Secretary), National Guard Association, Adjutant Generals Association, Reserve Officers Association, the American Legion, individual guard division commanders and Reserve commanders, four governors (including the chairman of the Governors' Conference) and Members of Congress. Speaking of the appearance of the governors, I might add at this time that the committee was informed that 36 governors have strongly urged that the Congress maintain the Army Guard and the Army Reserve at their present strength. At the conclusion of the hearings my subcommittee unanimously adopted a resolution supporting an Army Guard strength of 400,000 and an Army Reserve strength of 300,000. This resolution was unanimously approved by the full committee by a vote of 34 to 0.

Mr. Chairman, last year the guard and the Army almost came to blows on the 6 months training program. A year ago in February my subcommittee held extensive hearings to determine whether an Army order should be promulgated which required all new enlistees in the National Guard to take 6 months active duty for training. At the same time we reviewed the strength of the guard and asked the Army to project its thinking on the guard's future strength. The subcommittee came to a decision, which was approved by the full committee, to the effect that new enlistees in the guard should be required to have 6 months of active duty for training and that the size of the guard should be pegged at 400,000 or at such figure as might be set by appropriations granted by the Congress. This figure of 400,000 was not one we snatched out of the air. Quite on the contrary, it was a figure agreed to by the Army and supported by the testimony of our best military advisors. To conclude the agreement we asked the Army and the National Guard to enter into a memorandum of understanding, which they did, and we thought we had put the matter of the future strength of the National Guard to rest.

Imagine our surprise, then, when the President proposed his budget to Congress for fiscal year 1959 and we discovered that he was asking for a 10 percent reduction in the strength of both the Army Reserve and the National Guard. The Army Reserve would be reduced from 300,000 to 270,000. The Army National Guard, which was forced to reduce from 437,000 to 400,000 last year, would again be reduced to 360,000 in fiscal year 1959.

I would like someone to explain to me what has happened in the international situation which justifies our decreasing our military Reserve strength. I was under the impression that the Russians had not agreed to disarmament. But if the Congress and this outstanding committee goes along with these budgetary proposals we will be starting disarmament on our own. Furthermore, the size of the Regular Army is being reduced—to which I am unalterably opposed—and in my 21 years in the Congress I have been told over and over again by our military advisers that to insure the national defense the Reserve must be increased when the size of the Regular force is decreased. Apparently this elementary principal of preparedness has now been forgotten.

Now it appears clear that budgetary considerations have taken over and are overriding considerations of national security. As a consequence in order to save dollars we decrease the size of our active establishment and the Reserve components as well.

I believe the main fault in this plan must be laid at the doorstep of the Department of Defense because the Secretary of the Army, the Assistant Secretary of the Army (Manpower, Personnel and Reserves), and the Chief of Staff, United States Army, all recommended a National Guard strength of 400,000 and an Army Reserve strength of 300,000—in other words, no reduction in their current strength.

However, I do not absolve the Army from fault in this proposed cut. Last year the Army entered into an agreement with the National Guard and the Armed Services Committee that the guard would be kept at a strength of 400,000 providing appropriations were provided by Congress. But, I do not believe that the Army made strong enough representations to the Department of Defense when the budget was under consideration before its submission to Congress. It is my feeling, after listening to all of the testimony, that they recommended no reduction in the guard and the Army Reserve, but did little more than recommend. We know the preparation of the budget is a give-and-take matter and it would appear that the Army gave in and took it on the chin with little or no struggle.

But be that as it may, what more can I say to this committee than that the Chief of Staff of the United States Army, an outstanding soldier, states that in his considered military judgment the size of the Army National Guard should be maintained at 400,000 and the Army Reserve at 300,000.

I should briefly discuss one other matter before closing. In previous years the language of appropriations bills have set the strength of the Army Reserve exclusive of 6-month trainees and the strength of the Army National Guard inclusive of 6-month trainees. The Department has expressed a desire for the language to be the same. In order that there be uniformity between the two may I suggest that both be inclusive of 6-month trainees when describing the strength of the Army Guard and Army Reserve.

I wish to thank you for your kind attention and I earnestly hope that this committee will see fit to maintain a strong virile Army Guard and Reserve so our Active Army can be adequately augmented in case of war or national emergency.

The International Development Association—New Idea in Foreign Policy

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial and an article dealing with the subject of the International Development Association. The editorial is from the Northern Virginia Sun and the article is from the Cleveland Press.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Northern Virginia Sun of March 27, 1958]

MR. DULLES IS MISSING A GOOD BET—NEW IDEA IN FOREIGN POLICY

New ideas are among the world's most precious commodities. Especially are they hard to come by, it seems, in the field of foreign policy. Therefore it is refreshing when a major new foreign policy idea is introduced, and disappointing to see the Eisenhower administration greet it coolly.

The new idea has been put forward by Senator MIKE MONRONEY, of Oklahoma. Senator MONRONEY proposes the establishment of an International Development Association (IDA) as a supplement to the World Bank. That bank is limited to making loans in the scarce "hard" (or easily convertible) currencies, such as dollar, or German marks or Swiss francs, and must be repaid in hard currencies. This puts a severe limitation on the kinds of loans it can accept as bankable.

Senator MONRONEY'S supplementary bank would greatly expand the range of multination loans that can be made by making use of "soft" currencies where those will suffice. The capital of the IDA would be made up of a combination of hard currencies and soft currencies—many of the soft currency contributions coming from frozen assets which are now lying idle. An example of this is the currencies accruing to the United States from its disposal of surplus farm commodities abroad.

Acting in combination, the World Bank and the IDA could underwrite loans which the World Bank alone cannot now do. For example, a solution of the India-Pakistan disputes might be achieved by a $400 million development of the Indus Rivers that run through both countries. Such a project is not presently bankable by the World Bank; but if the World Bank were to finance those parts of the project that demanded the use of hard currencies (such as German earth-moving machinery), the IDA could underwrite the remainder that merely required

soft currency funds (the labor and many of the locally furnished materials).

The potential of the Monroney idea is evidenced from the opinion of World Bank President Eugene Black that had the Monroney plan been in existence, the World Bank could have expanded its lending activities by 50 to 60 percent.

There are many attractive aspects to the Monroney plan from a strictly selfish United States point of view. For one thing, it could reduce the number of dollars the United States is presently putting into foreign-aid loans. The administration is currently asking Congress to provide an additional $625 million in loan funds; Senator MONRONEY proposes an initial United States contribution to the IDA of less than half of this.

For another, the multi-nation character of the loans would take the United States out of the position of a rich uncle making loans or outright grants to poor relatives, and would permit a great many nations to participate on a self-help, self-respecting basis. Moreover, it permits them to plan long-range projects, which they are unable to do when dependent on year-to-year congressional whims.

The Monroney plan has attracted significant support. Not only is it looked on with favor by Mr. Black, but it has received the warm support of the first foreign-aid administrator, Paul Hoffman.

Yet the Eisenhower administration is eyeing the plan without enthusiasm. Treasury Secretary Anderson was publicly cool to the idea in testimony before a Senate committee. Secretary of State Dulles appears to prefer making loans on a strictly unilateral basis, even though this will probably cost the United States more and might well be a less effective way of winning friends and influencing people.

Senator MONRONEY, in presenting his plan, to the Senate, had the grace to acknowledge that former Democratic foreign policies, while valid in their time, had become outmoded by onrushing events. "If we insist on retreading badly worn Democratic tires, good in their day but now worn down to the fabric," he said, "our foreign-aid program will be broken down while the world passes us by."

Secretary Dulles might well take these words to heart. We hope he will relax his rigid adherence to present policies, and show a greater willingness to accept new ideas.

[From the Cleveland Press of March 14, 1958]

MANY KINDS OF FOREIGN AID, AND TOO MUCH HEAT GENERATED

(By John W. Love)

"Treason," a reader shouts as he returns to me an article in which I suspected businessmen would soon be taking greater interest in our foreign aid program now before Congress. He has no use for it.

His bitter word may have referred to foreign aid in general or to certain items that went sour. Mistakes there will be in a program so huge.

If it's treason to support these forms of assistance, then O. K., as Pat Henry said in the House of Burgesses, make the most of it.

One of the appeals which foreign assistance has for American businessmen and industrial workers lies in the market it provides for our products and engineering talent.

Some of the dollars lent or granted abroad may take a long time getting back to this country, they may be used as foreign bank reserves in place of gold, but even when they are not visibly spent here they promote the international trade so needed for prosperity. The greatest compliment our foreign aid has received has come from the Russians—they have been taking up the same thing.

The recent loan of $225 million to India has been generating some heat. This is partly because of the way the word of the negotiations came out. Washington dispatches first called it foreign aid, then indicated the Export-Import Bank was handling it.

Early this month the Eximbank announced it was extending a credit of $150 million to India and the Development Loan Fund $75 million, both for 15 years at 5¼ percent interest.

Between the two loans, the money will be spent in this country for equipment for power development, coal and ore mining, roads, communications and industrial expansion. Orders will be placed, it is expected, for textile machinery, electrical and chemical equipment, machine tools, and tools for fabricating heavy structurals.

(How soon the goods can be shipped will depend on the import licenses the purchasers can get them from the Indian government, and it's far from certain when they will be available. The Indians will be woefully short of foreign exchange next summer—may appeal to us or the International Monetary Fund.)

Most opponents of foreign aid, some of them much too shrill, have in mind the work of the International Cooperation Administration, an arm of the State Department.

The quite separate Eximbank makes loans that private banks are not prepared to handle. The International Bank for Reconstruction and Development (World Bank), in which the United States has a 40 percent interest, lends similarly.

The big expansion of the Tata steel works at Jamshedpur, India, is being financed by the privately-owned Tata company itself and money from the World Bank and New York and Montreal banks. This job is being handled by the Henry J. Kaiser engineering division. The Arthur G. McKee Co. of Cleveland has a blast furnace subcontract.

Senator MIKE MONRONEY has in mind forming a new international lending agency, one that would pick up sections from more than one Washington agency. It would have foreign participation in the capital. He figures it would be easier to sell to Congress than a United States foreign aid program centered in the State Department.

Facts Versus Allegations in the Plywood Controversy

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which was handed to me by Mr. Thomas D. Blake last Friday:

STATEMENT BY THOMAS D. BLAKE

My name is Thomas D. Blake and I live at 4664 Reservoir Road NW., Washington, D. C. I am a public relations consultant, and I have been retained by the law firm of Sharp & Bogan, 1108 16th Street NW., Washington, D. C. Sharp & Bogan are attorneys for the Imported Hardwood Plywood Association, Inc., World Trade Center, Ferry Building, San Francisco, Calif. The Imported Hardwood Plywood Association, Inc., is opposed to certain bills introduced into the Congress which would impose an import quota on hardwood plywood. In connection with my work on this matter, I am registered with the Clerk of the House of Representatives and the Secretary of the Senate under the Lobbying Act.

On Thursday, April 24, 1958, as reported in the CONGRESSIONAL RECORD of that date (vol. 104, No. 63, p. 6408), the Honorable MELVIN R. LAIRD, Representative of the Seventh District of Wisconsin, commented on a speech which had just been made by the Honorable CHARLES O. PORTER on the plywood problem in the Pacific Northwest. In the course of his statement, Mr. Laird said, "I would, however, like to state that I have 12 hardwood plywood plants located in my congressional district. The largest hardwood plywood plant in the world is going to be shut down on Friday. It is going to be shut down primarily because of competition from Japan." Later in his remarks, referring to Mr. PORTER'S speech, Mr. LAIRD said, "I am sure that the gentleman [Mr. PORTER] would not want to face up to the 1,000 employees of the Roddis Plywood Corp. and make the same kind of a speech before them that he has made here today in behalf of Japanese imports of plywood and Japanese plywood workers."

On Friday, April 25, when I received my copy of the April 24 CONGRESSIONAL RECORD, above referred to, I called the Roddis Plywood Corp. telephone number listed in the New York City telephone directory. I talked with Mr. Hueman, who identified himself as the manager of the Roddis Plywood Corp. warehouse in New York. When I read him Mr. LAIRD'S statement that the Roddis plant was to close today, Friday, April 25, Mr. Hueman expressed great surprise, and said that he hoped that it wasn't true, as he had many customers whose orders he was waiting to fill from the output of that plant. He said that he had no knowledge of any closing of the plant, and when I asked him how I could get information on such a closing he suggested that I call the main office of the Roddis Plywood Corp., in Marshfield, Wis., and speak to either Mr. Don Gott or Mr. J. Wallenstrom.

I immediately put a call through to the Roddis plant and was put through to Mr. Gott (Marshfield 1900). When I read Mr. Gott Mr. LAIRD'S statement in the CONGRESSIONAL RECORD, Mr. Gott said that the plant was not shut down, but that it had shut down on Friday a week ago (April 18). He said that the full reason for the shutting down of the plant was contained in the press release which was issued prior to the closing of the plant. He repeated that the plant was open today, April 25, and had been open since Monday, April 21.

I then telephoned Mr. E. W. Heller (Marshfield 1000), editor of the Marshfield News Herald, and asked him if he had carried a story on the closing of the plant. Mr. Heller said tha he had, and at my request he dictated the story as it appeared in his paper on Thursday, April 17. Mr. Heller's dictation was taken down by Miss Kathryn Beaty, secretary to Mr. James R. Sharp, of Sharp & Bogan. The story, as dictated by Mr. Heller, reads as follows:

"The approximately 950 employees of the Roddis Plywood Corp. plant here will begin a long weekend at the conclusion of the second shift tonight. They will return to work as usual Monday.

"A. C. Baudek, plant manager, in announcing the 1-day layoff this afternoon, said that it was 'an adjustment due to a very temporary situation which was caused by poor spring weather generally. Many of our customers have asked us to hold up shipment for a few weeks on orders which have been scheduled for delivery.'

"As to possible similar brief work interruptions in the future, Baudek said, 'We will have to play it by ear as we get instructions from the field, but we are not pessimistic.'

"Generally bad weather in much of the Nation has delayed the start of building operations which use the Roddis products 'Or-

ders,' the plant manager said, 'have held fairly good and are continuing to come in, and it's principally a problem of scheduling deliveries.'

"He added that most of the local products are made to architect's specifications and can't be manufactured too far in advance of delivery."

Mr. Heller said that they had run an overall story on Monday, April 21, on general business conditions in the Marshfield area, and included in the general story was the following sentence on the Roddis plant, which he dictated to Miss Beaty.

"At the Roddis plant, orders continued to come in at a good rate over the weekend, and there are no plans for another Friday holiday."

Catholic Welfare Conference Offers Thoughtful Statement on Right-To-Work Laws

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent statement by the Ohio Catholic Welfare Conference on right-to-work laws:

On previous occasions attention has been called to the necessary distinction which must be made between the wisdom of enacting a law and the moral right to do so. Laws at times have been morally valid in themselves but inept and mischievous in their results. Right-to-work laws seem to fall into this category where a distinction is necessary.

Man has a right and duty to work for his livelihood. This right cannot be circumscribed to the extent that a man loses his liberty of choice of a vocation, nor to the extent that he is deprived of an opportunity to support himself and his family. It does not follow that a man has the unconditional right to work in any and every industry or business at will.

For reasons of social justice it may be desirable, and often advantageous to the common good, that man's right be restricted by certain specified conditions. One of these imposed conditions may require that he belong to a labor union or at least be obliged to join the union subsequently, so as to share responsibility with his fellow workmen in support of the union.

Just as a citizen of the United States is free to live in Ohio, Kentucky, or Pennsylvania, yet is obliged to observe the laws of the particular State as a condition of citizenship, so also, in respect to his right to work; he is free to work in any industry of his choice, but only on condition that he abides by the rules adopted by that particular industry as a condition of employment. In other words, the right to work is a general right and cannot be denied to men in the aggregate; but the right to work in a specific industrial plant or business can be subject to special conditions.

If State statutes were to make such a condition of union maintenance mandatory, we would oppose them as unwise, if not unjust. If State statutes, however, were to forbid the enforcement of such a condition, when mutually accepted by management and labor through collective bargaining, then we would be equally opposed. We believe it is unwise to encourage State intervention in this matter, whether it be in favor of right-to-work laws or against them.

There are certain abuses which sometimes creep into the labor movement, but we are convinced that right-to-work laws are not the proper means to correct them. Corruption of certain labor leaders has been one of these current abuses. The denial of the democratic processes and the denial thereby of responsibility to the rank and file of union membership, whether in election to office or in the determination of union policy, are prolific causes of these abuses.

The right to strike, for instance, cannot be denied under certain definite conditions; but it is a right which must be carefully circumscribed and limited by ethical or moral considerations. It cannot be exercised willfully, that is, without just and adequate cause, and even then only in matters of grave importance, with a favorable issue reasonably secure, and, lastly but most importantly, after all other peaceful means have failed.

The right to picket is a concomitant right if a justified strike is called, but violence against persons and property is absolutely wrong and indefensible in conscience. Even the right of mass picketing is a very questionable procedure because of the physical intimidation involved and the proximate danger of overt acts of violence ensuing.

There have been other issues which cause public concern, such as jurisdictional disputes where innocent third parties are made the victims. There are questions also of secondary boycott which involve serious moral questions. All of these should be solved by an increased sense of social responsibility on the part of labor; and, if that procedure fails to correct the evils, then recourse would be had to regulatory legislation.

If we have pointed out certain abuses in the labor movement, we do so not because we think their leaders alone are at fault. There have been serious abuses also on the part of management, such as unreasonable and unjust opposition to the right of union organization, monopoly prices and profits, misrepresentation of products, and bribery and corruption not infrequently. Two wrongs, however, do not make a right; and the two evils do not cancel each other but intensify the damage done to the common good.

Much progress has been made in creating mutually satisfactory conditions in recent years in our labor-management relations. It would be socially undesirable to jeopardize the gains achieved by precipitating new causes of strife and ill will.

We think it is high time to introduce sound ethical standards into all phases of our economy. The present preoccupation with right-to-work laws may be a good occasion for all our leaders in the field of labor and in the field of management to examine their consciences as to their honest motivation, their ideals, and their practices.

As to the present issue before the electorate in Ohio, we are convinced that a right-to-work amendment would not solve our problems, but might lead to a more intensified struggle for domination and thus postpone an era of peaceful cooperation.

Bishop of Columbus.

Reasons for Going to Eniwetok

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, it may be that a first-term Congressman from southwestern Oregon cannot do much to change the administration's nuclear weapons policies, but I intend to keep trying.

Tomorrow morning at 7 o'clock, e. s. t., I board a plane here in Washington as a member of a group of official observers to fly to the Eniwetok atoll in the Gilbert Islands of the South Pacific. The trip each way takes 2½ days. I intend to stay 3 or 4 days, then return whether or not a bomb has been exploded.

Why am I going? I am not on the Joint Committee on Atomic Energy and I am certainly no expert in nuclear physics or tactics. Here are my reasons:

REASONS FOR THE ENIWETOK TRIP

First. I want to learn first-hand about these nuclear weapons tests and the men in charge of them, and present for discussion to these men certain convictions of mine.

Second. Even though I have been and am sharply critical of its policies and methods including its insistence on holding these tests, the Atomic Energy Commission wants me to go.

Third. My able friend and respected colleague, the gentleman from California, CHET HOLIFIELD, chairman of the Radiation Subcommittee of the Joint Committee on Atomic Energy, and an experienced nuclear test observer, assures me that I will learn much of great value to me as a legislator in the atomic age.

Fourth. I believe mankind today teeters on the bring of doom thanks to the nuclear weapons inventions and I believe that, as a United States Representative, I have both the duty and the opportunity to do whatever I can, however little, to help us survive as a free Nation is a free world.

A CHANCE TO TALK TO THE EXPERTS

As I have an opportunity on the way to and at Eniwetok to talk with experts in nuclear weapons, I intend to see how these firmly held convictions of mine stand up:

A. We do not need any more or better nuclear warheads for national security because we have more than enough now to deter intentional attack.

B. Why go to a lot of trouble to develop a "clean" bomb when we have no assurance the Soviets would use such a weapon in war and the concept of a "limited" atomic war is a delusion based on wishful thinking.

C. The 20-megaton bomb, for example, fits easily into our supersonic bombers and has an explosive power equal to all the explosions in World War II; so why be concerned about a smaller bomb, especially when we have maximum deterrence now?

D. Peacetime uses for atomic explosions, the final reason for the tests after development of "clean" and smaller bombs, should be done underground to avoid fallout and should be carried out under international supervision.

E. Fallout from these tests, however small and innocent, and there is a real dispute among scientists about this, is both a trespass on other countries and an assault on all people, under Anglo-Saxon common-law doctrines. We have no right to infringe on another's person and property even a little bit.

ACCIDENTAL WAR IS PROBABLE

F. The real danger today is from an accidental or unauthorized nuclear explosion triggering the all-out war. Thousands of nuclear warheads exist, most ready for instant detonation and all in the hands of frail, error-prone human beings such as you and I. It would be extremely difficult, in these tense times, to distinguish between an authorized and an unauthorized nuclear explosion and to determine the nature of the other nation's alert following such an explosion—whether it was defensive or offensive.

G. Stopping the tests is only a first step toward effective disarmament and real peace. The mutual inspection procedures should be expanded as soon as possible to include conversion of nuclear warheads to peaceful uses and to the cutback of nuclear weapons production. Hard to do? Yes, but a lot easier than rebuilding the world after a massive exchange of nuclear warheads. Trust the Soviets? Of course not, but recognice their self-interest in survival.

THE EXPERTS ARE CONCERNED TOO

My companions and hosts on this trip will be military men and scientists. They have had much to do with our nuclear weapons policies, too much in my opinion. However, like me and like you, they are sincerely concerned with their country's welfare in a tense and troubled world.

Like me and like you, these men would like to have more assurance that their children will have a chance to grow up and to look upon nuclear energy as a shining promise for a better life for all instead of a black threat of universal destruction and death.

Good Luck, Max Rabb

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial which appeared in the April 26, 1958, edition of the Washington Post captioned "Good Luck, Max Rabb." I know this expression of thanks and best wishes is concurred in by my many colleagues who have had the opportunity to work with Max Rabb during the past 5 years. As the first secretary of the Cabinet, his contributions to Government were significant and are still appreciated by his many friends. So to Max Rabb I say: "Well done." You leave behind many friends who will miss you but who find consolation in knowing that the legal profession has regained what we have lost.

The editorial follows:

GOOD LUCK, MAX RABB

Of all the members of the White House staff, Maxwell M. Rabb has been one of the most affable and most effective. As the first secretary of the Cabinet, Max Rabb has tried hard to transform that body from a pro forma and quasi-moribund institution into a more meaningful forum for discussion of domestic policy. He has had a particular interest and concern in the problems of minority groups, and he has contributed notably to some of the good work of the Eisenhower administration in this field. A liberal Republican by disposition, he has been receptive to ideas; and he has helped to dispel the bromides about the palace guard by humanizing the rather austere inner circle of the administration. Whether in his official duties, or in gossiping at parties, or in gaping at Gina Lollobrigida, Max Rabb has been a pleasant and energetic addition in Washington. As he leaves to take up private law practice in New York, his many friends will wish him and his attractive wife well.

The Missouri School of Journalism

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from the April 20, 1958, Los Angeles Times, entitled "The Missouri School of Journalism":

THE MISSOURI SCHOOL OF JOURNALISM

Journalism is something like motherhood: It is neither a trade nor a very formal profession, yet it requires great skill and understanding from its superior practitioners, and these are hard things to teach. Consequently journalism schools, with a few honorable exceptions, are vacuous places, manipulated by teachers with little newspaper experience, much flam and no flair, who stand in the same relation to their students as the spinster social worker to the troubled bride.

Today we wish to salute one of the honorable exceptions, the University of Missouri School of Journalism, which has just weathered its first 50 years. Even disenchanted old editors show a gleam of interest when a Missouri alumnus comes along and some newspapers operate a sort of futurity stakes, picking their entries before they graduate.

The school is making quite a thing of the anniversary—a 10-month celebration beginning in August with a noble theme: "A Stronger Free Press for a Better Free World." President Elmer Ellis of the university and Dean Earl P. English of the school of journalism said in their joint announcement:

"We believe that today the free world is confronted with the most serious threat to its existence since the dawn of western civilization, and that—more than ever before in history—the preservation of this free world depends on the ability of its citizens to exchange information and opinions openly without fear of retribution.

"We believe that the primary responsibility for keeping these avenues of expression open lies not with the Government or with any other agency or group, but with the journalism profession itself. • • •

"We believe that the immense contributions of the communications field are too often 'taken for granted' in democratic societies and that there is a need to emphasize these contributions through a series of events which can earn worldwide attention."

The United States has some pretty poor newspapers along with the great ones and good ones, but the lot of them averages out as the best of the free presses of the world. The Missouri School of Journalism has surely done as much as any single instrumentality of education to help the American press, and if it can, during its golden jubilee, teach a larger part of the public to believe what President Ellis and Dean English believe, it will do more for newspapering—and the free world—than it, or any other school, has ever done before. The enterprise has promise, for the Missouri school has the prestige to make itself heard.

Better Than Food Lines

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mrs. SULLIVAN. Mr. Speaker, the need for a national food stamp plan becomes more urgent each day as a result of the continuing recession. Public assistance rolls in the various States are rising month-by-month and in States where the temporarily unemployed are not eligible for public assistance, the private charities are being overtaxed in trying to help the needy.

But as I have tried to make clear many times in the past 4 years, in urging adoption of a food-stamp plan, even in the very best of times we have probably 6 million Americans going without proper nourishing diets. The number today is, of course, much, much higher.

Mr. Speaker, in the face of so much hunger—and it is really hunger in many, many instances—it is tragic that we cannot use our abundance of food—our huge surpluses—in a much more advantageous manner.

Along those lines, Mr. Speaker, the St. Louis Post-Dispatch commented editorially on April 22 on the need for a better plan of surplus food distribution. The editorial, Better Thand Food Lines, follows:

BETTER THAN FOOD LINES

St. Louis this week started the distribution of free cheese, flour, corn meal, rice, and dried milk to those on the public-assistance rolls or otherwise eligible to receive these Federal surplus commodities. The items hardly represent a balanced diet. They are nevertheless a godsend to the hungry, and the city government deserves credit for making them available.

Standing in a food line, however, is one of the most searing aspects of involuntary unemployment. The handout would not be so grim had Washington adopted the food-stamp plan advocated for 4 years by Rep-

resentative LEONOR SULLIVAN, of St. Louis. After being certified by a suitable agency, these same people would receive by mail stamps to be traded in for surplus commodities, preferably at a grocery.

As a matter of fact, food-stamp legislation adopted two decades ago is still on the books. It could be used by Secretary of Agriculture Benson without waiting for a new law. More varieties of food could be made available. Under existing law, Benson receives 30 percent of all customs receipts for the purchase of perishables—meat, fruit, vegetables, etc.—when surpluses threaten to depress farm prices. And he is authorized to carry over $300 million of these receipts from year to year. But Secretary Benson annually has allowed a considerable part of this money to revert to the Treasury.

These have been prosperous years, on the whole. Still, about 6 million persons in the United States have not been getting the right kinds of food, nor enough of it for decent nourishment. Thus the food-stamp plan is justifiable, on a small scale, even in good times. Surely it should be put into operation during a recession in preference to the dumping of a few storable commodities.

Extracts From Letters on Cystic Fibrosis

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, when a Minnesotan gets mad over something, he gets fighting mad. During recent weeks, I have spoken to the House on several occasions on the subject of cystic fibrosis, and have urged the Congress to declare war on the treacherous child-killing disease. Within the past month I have received well over a thousand letters on CF from my own State of Minnesota and from nearly every State in the Union. All these letters say the same thing: "We need more research in the field of cystic fibrosis, now."

There is some CF research being carried on at the National Institutes of Health and at various hospital centers throughout the world, but compared with research done on certain other diseases, not very much. I have asked the Surgeon General of the United States to call a conference of the Nation's researchers in this field to find out just exactly where we are and what we have got to do to get going. I have not heard from the Surgeon General yet but I feel that something will be forthcoming shortly in the form of accelerated interest in cystic fibrosis at the National Institutes.

Many Members of Congress have called me to tell me they are behind my efforts to get the country alert to this disease which strikes about 7,000 boys and girls each year and which is today nearly 100 percent fatal before these children reach adulthood. The disease is hereditary and doctors have told me that about 1 out of 20 Americans carry the lethal recessive genes responsible for cystic fibrosis.

I wish that I could insert in the CONGRESSIONAL RECORD the hundreds of letters I have received and which are so eloquent, so thoughtful, so gentle, so urgent in tone, coming from parents and friends of CF victims. These letter say more than I could possibly say on this matter, in far fewer words. So that you may see some of the things these people have been writing, I wish to insert extracts from just a few of their letters:

EXTRACTS FROM LETTERS ON CYSTIC FIBROSIS

From Pat Krueger, route 10, South St. Paul, Minn.: "We need help so badly in our fight against cystic fibrosis. We know what cystic fibrosis is, as do our relatives and close neighbors, but the people down the street have never heard of it and we need help from everyone if we are to win the battle."

From Mr. and Mrs. Gordon Gilmer, 1509 North Lyndale, Minneapolis, Minn.: "We have a 'guest' in the house, cystic fibrosis; our 2½-year-old boy is very sick with it. This is not our first child with this dread disease. We have had twin girls who died within the month after their birth. I was married before and lost a 7½-year-old boy in 1946 so I have lived with it for almost 20 years and my husband for half of that time. There is such a thing as geeting used to it, I suppose. Neither one of us refers to what we know is inevitable, we take each day as it comes and enjoy him as much as we are able to without tiring him."

From Mr. and Mrs. Otto Brusewitz, 4623 South Ahmedi Avenue, St. Francis, Wis.: "We are particularly interested in progress of research on this disease because we have lost 2 children (3 and 5 years) with the disease, and we have 2 children 8 years and a 6-months-old baby, who also have the disease."

From Mary Thevenot, 4221 Panola, Fort Worth, Tex.: "I wish your fellow Members of Congress could have been with me this past week. I sat in a hospital with a mother waiting for her baby to die. The doctor could offer little help because he did not know how to combat the disease. This is not the fault of the doctor. It is the fault of all of us for not getting behind this, and doing something."

From Mrs. Gine Grice, 115 East 14th Street, Littlefield, Tex.: "My own little 16-months-old daughter is among the thousands of other children with almost no hope of living beyond their 6th year. The public must be informed of this disease. These children are a tremendous financial burden. Our medical expenses for 1958 totaled $1,672.88. I'm not asking for financial aid for my family. I'm just trying to show how impossible it is for most of us to contribute to a research program. We need financial aid for this purpose and we need it now."

From George R. Sexton, 22 Westminster Street, Westerly, R. I.: "It is heartwarming to us parents to hear that our civic leaders are aware of the plight of our children. Both of my children have cystic fibrosis. So few people know of this dread disease and to us parents so little is actually being done to help these children. * * * Our oldest, Diane, has been given only to the age of 6. She is now 4; we dread each birthday. The boy's life span is just about as uncertain unless medical science can come up with something to help them."

From Dr. and Mrs. John W. Corcoran, 19377 Telbir Avenue, Rocky River, Ohio: "It is a horrible feeling and situation to know that your child will die regardless of the help and aid you are giving it. We know that a cure will some day be found and we live with that continuous hope in our hearts."

From Mrs. Marie Dingledine, 5 Magnolia Avenue, Jersey City, N. J.: "You see, I have buried three babies with this disease, ages 2 years, 9 months, 5 months. There were times when I thought no one knew or cared very much what they had; so little was known about this condition."

From Mrs. Bertha Holte, 5961 56th Avenue, Maspeth, N. Y.: "It is of utmost importance to inform you about the cystic fibrosis campaign for research. We'll specify that these children are soldiers both physically and mentally and most emphatically brave. To see, to hear, and know these seriously ill children is so pathetic. First, because of the long and severe suffering they endure. Second, the manner in which they strive so hard to get well. Third, their own mental gift of understanding to cooperate toward the help that the doctors and nurses from all over the country give to them. The long drawn out treatments, tests, sleepless nights. We, adults, can and will honor these children for their fortitude of their own words to their parents. These children after a certain age of reasoning openly and knowingly know they will die. Their very actions and sympathetic thoughts they acknowledge a devoted love and closeness to their loved ones. It hurts them to see their parents weep. We have lost our son at the age of 10 years and can't forget his words 'Not to cry or to be sad as it's this terrible sickness.' From a religious viewpoint these children are saints—innocently they endure great suffering. It's indescribable to see their little bodies waste before our very eyes. It is so impressed on our memories. We need help to help comfort these most unfortunate little humans."

From Mrs. Charles Ellett, 747 Second Avenue, North Troy, N. Y.: "As I have a twin brother who has 3 out of 4 children (all boys) with this dread disease."

From Mr. and Mrs. James U. Paul, Box 469, Epps, La.: "Our oldest son died in 1952 at the age of 5½ years from this disease. Through the years 1948, 1949, and 1950 we went to numerous physicians who diagnosed Rocky Mountain fever, food intolerance, asthma, chronic bronchopneumonia, etc., finally at Children's Hospital in Denver, Colo., they diagnosed 'fibrosistic disease of the pancreas.' * * * We have two other sons, ages 5 and 8 years. Our son, age 5, has CF also."

From Mrs. Margurite Neiden, 1255 Leo Street, Mobile, Ala.: "It seems everyone has problems but if in any way you can help us, especially our little boy, or help get a fund started to find a cure before it is too late for the children now living, we would appreciate it. I know just saying, 'appreciate it' doesn't sound like much, but if you only knew how heavy our hearts are for someone you love so much, and never know if he will be here tomorrow, how horrible that feeling is."

From Mrs. L. S. Anderson, 949 Learidge Road, Lyndhurst, Ohio: "In the 2 years since our foundation was organized, over 200 cases have become known to us and 50 percent of these cases have since expired, plus an unknown amount of cases which were incorrectly diagnosed but are now being brought to light."

From Mr. and Mrs. H. Gartner, 8 Temple Road, Parlin, N. J.: "As parents of a year-old boy with this disease, we know how cruel it is. We had 2 normal children first and we had never heard of it before. Now I am pregnant again and wonder how we will stand the mental and financial strain of another suffering from this same disease. We spend so much on drugs, vitamins and special diet for our afflicted son there is nothing left for our normal children. * * * His Easter basket was filled with Lederplex, Tri-Vi-Sol, Probana, Pancreatin."

From Mr. R. R. Walker, Lubbock, Tex: "I am glad that something has caused a representative of the people to bring before the whole body of the people's representatives a matter which has brought so much sorrow to the mothers of this country; so many heartaches. * * * I am a grandfather who

has shed many a tear when one of my grandchildren has been taken, not just 1, but perhaps 3. I am told that this disease takes more babies than polio; who knows how many babies have been taken when they know so little about the disease; therefore, I tearfully ask you to do all possible to bring before the representatives of the people this matter and plead for help of helpless babies and heartbroken mothers and fathers."

From Mrs. Harry J. Newman, 12207 East 19th, Spokane, Wash.: "We have just recently moved to Washington State from Iowa. There has been considerable unemployment here recently and last week a young man knocked on our door one evening selling earrings he made out of buttons. He explained he was unemployed at present, his last job having been as a logger. I mentioned this incident as he was trying to provide for his family * * * a wife and two little girls, both of them victims of cystic fibrosis, whose lives they could only hope to prolong. They had already had one little boy die from the disease—all this suffering in 6 years of marriage. We certainly understood his plight in caring for his family."

From Mrs. Frank Weber, 1825 Forbes Street, Cincinnati, Ohio: "I have a little girl, Karen, 17 months old, who is a victim of this dread disease. It a terrible thing to look at your child each day and wonder when this disease will smother her small life."

From Mr. and Mrs. John Como, 2529 Amst Avenue, apartment 15, New York, N. Y.: "I am writing this letter to tell you that I have a little girl who is 6 years old. Her name is Nancy Como. She is a victim of cystic fibrosis, and I have been to 61 doctors and gone in and out of different hospitals. My daughter has been sick for 4 years. She cries and coughs all day and night. She is 30 pounds for 4 years. I try to do all I can but I, and my husband, are very tired. I know what the other parents are going through. There are many sleepless nights with cystic fibrosic children. Always tired, don't care to play with other children. It is a very, very hard life. So I would appreciate if there could be some fast action on this terrible disease. I see it is a sure killer of children. How long could the body of a child take this coughing? I hope you will look into this matter and try to get fast action. I am a very unhappy mother. I have to really plead with you because I am so unhappy as I said before. Please. Please. Try to get action fast for the help and hope of these poor unfortunate children. I'm sorry for the fast letter as I really like to say more but I haven't time. My daughter is coughing and I must attend to her. That's how bad it is that I have to give her all of my attention. It is a good thing I only have one child. Sorry to say I would like to have more but would not have anymore children brought on this earth to suffer with a terrible disease as cystic fibrosis. Please help.

From Mrs. Mary Flannery 561 Valley Road, Clark, N. J.:

"We have a 9-year-old boy who was diagnosed at the age of 2, cystic fibrosis, and since that time we have been living from day to day, not knowing and not daring to look any further into the future. The cost of the antibiotics, vitamins, and necessary pancreatin powders for digestion, not to mention the aerosol pollution and machine, which are needed for daily survival, has always been constant and of a great expense, but for the 2 years, with a considerable increase of lung damage. Our cost has exceeded our income so greatly that it has now become tremendous, and we find ourselves slowly sinking, until we don't know where it will end. We give our all to our children, especially when they are ill, and if it would help, I would give my son my heart, my life, but since that is not possible, we must do our next best which is to give our last penny to keep him alive."

From Mr. and Mrs. John A. McMillan, 101 Lauten Court, Mobile, Ala.: "We know the joy of a healthy 6-year-old daughter and also the agony and pain that our 3-year-old Terry Elaine has suffered since she was 4 weeks old. On a postal clerk's salary many times we didn't think we could buy another bottle of life-saving antibotics for our baby, and could not if it had not been for outside help. Our story is one of thousands who need help."

From Mrs. G. Harkness, 10349 South Charles Street, Chicago, Ill.: "I lost my dear little grandson to cystic fibrosis a year and a half ago. His age, 3 years and 3 months. Still a baby and he didn't have a chance to live. No one realizes the agony of the parents watching their little one from day to day, knowing there is no hope. A broken hearted grandma."

From Mr. Delbert Magee, 413 Baltimore, Latonia, Ky.: "I am Delbert Magee and we live in Latonia, Ky. We have a little girl, and 3 weeks ago we found out that she has cystic fibrosis. Since there is little known about cystic fibrosis and there isn't any cure for this disease, we feel that the Government should help support the research foundation for a cure on this disease. Time is running out for 7,000 children a year and we cannot sit back and do nothing about this. Only through expensive research, our Government support, people, and prayers can our cystic fibrosis children be cured. We are hoping that you will take action on this."

From Mrs. Henry I. Bernbaum, 2583 Ashurst Road, University Heights, Ohio: "As the mother of a child with cystic fibrosis I wish to thank you personally for bringing the matter of cystic fibrosis before the House on March 20. Our child is still with us and we know that his future rests in the hands of God and medical research. This is a baffling disease to medical men and only through medical research can there be a cure or even a hope. Meanwhile, until an answer is found, the value of educating the public to the existence of this disease and its needs is of the utmost importance. Thank you for all you are doing."

From Mrs. M. J. C. McMinn, 6013 Brook Lea, Houston, Tex.: "It's been 3 years since the death of my last little boy (age 6) and I still lie awake nights remembering his frantic efforts to breathe. It is an experience a mother can't blot out very soon but it doesn't cause me to be bitter. It's just that it keeps me constantly aware of the 7,000 or more each year who are still having to face this same thing."

From Robert W. Keeves, Box 412, Roby, Tex.: "In reference to your work, I am writing this letter. I have a friend who is a 6-year-old girl. She has this disease. I hope that you can find a cure for it because I would hate to see her have this disease for the rest of her life. I have not seen this girl in about 3 years. I hope that if I ever do see her again she will be cured of this disease. You may use this letter as a reference for your work and also my name. I hope you find success in this endeavor."

Banning Hunger Without Fanfare

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mrs. SULLIVAN. Mr. Speaker, the editorial page of the Washington Post is always stimulating, and I find it particularly so on those days when Malvina Lindsay's column appears in the top right-hand corner next to the Herblock cartoon.

Whether she is writing about educational problems, foreign policy, suburbia, civic activities, family needs, or any other subject, she brings to her column a warmth and sensitivity which make her always worth reading.

Consequently, I was delighted and flattered to find her column last Thursday devoted to a discussion of a problem in which I am vitally concerned—the problem of assuring better diets for millions of needy Americans through an intelligent use of a food-stamp plan for distributing surplus foods.

Mr. Speaker, under unanimous consent, I submit for the Appendix of the RECORD, Malvina Lindsay's Washington Post column of Thursday, April 24, Banning Hunger Without Fanfare, as follows:

BANNING HUNGER WITHOUT FANFARE

(By Malvina Lindsay)

Returned American tourists, while praising foreign scenery and culture, frequently deplore the beggars. Often they are shocked in various places abroad by the widespread, unashamed pursuit of alms.

The obviously hungry in this country are generally out of sight. So are the greater number of undernourished. And thanks largely to an abundant continent, there exists here a strong tradition against openly seeking charity.

Now, because of increased unemployment, the number of hungry and undernourished is increasing. New problems are resented by those who are jobless and without income, yet ineligible for public relief because of legal technicalities.

How can more of she Nation's food surpluses in the bulging warehouses and on the farms be made available to the needy in a way most efficient, least conspicuous, least pauperizing?

By food stamps, redeemable at grocery stores or elsewhere, say the authors of about a dozen bills before the Consumers' Study Subcommittee of the House Committee on Agriculture.

But the present method of distribution from warehouse depots is upheld by some Department of Agriculture officials who say it is the most direct answer to needs, and that a food stamp plan would be too involved and costly. The Department says that if Congress wants a food stamp plan it must give specific legislative directive for it.

Those opposing the present plan call it haphazard, wasteful, unfeeling, and a promotion of the breadline. They say that those most needing the food, as the aged, the disabled, parents of small children, must usually lug long distances, by public transportation, bulky sacks of flour, corn meal, dried milk, from warehouse depots in the center or outskirts of cities. Furthermore, say food stamps exponents, such families must parade their want at public places.

Seldom, if ever, is there seen in this country an emaciated, starving human being of the type encountered in more crowded, poorer countries. But there are many undernourished here, an "irreducible minimum," it is estimated, of 6 million who cannot buy an adequate minimum diet. In times of recession this number is augmented.

Yet, the basic price-support commodities, which pile up under support programs, do not lend themselves to rounding out the diet needs of such people. One of the food stamp bills, that of Representative LEONOR K. SULLIVAN, of Missouri, seeks to meet that prob-

lem by extending food stamps to surplus perishables of farmers.

In recent testimony before the Consumers' Study Subcommittee, Mrs. SULLIVAN pointed out there was now on the statute books a provision for Government purchase of perishables (fruit, meat, vegetables) when surpluses get to the point of depressing farm income. She urged that unused money for this be spent in the next 12 months by buying such perishables for use in the school lunch program and to help the needy. A national food stamp program, she pointed out, would provide a readymade market for such perishables, also prevent lopsided diets.

Mrs. SULLIVAN, who has been promoting a food stamp plan for 4 years, said she was presenting as simple and flexible a plan as possible in her new bill. It provides that the Secretary of Agriculture decide each month what foods are in surplus and what quantities are available for distribution, then issue appropriate stamps for these items to go to the "provably needy," and to be redeemed at groceries or other agencies. Such stamps, she said, could come regularly in the mails, along with public assistance checks, or be otherwise quietly distributed.

Mrs. SULLIVAN and others who testified for a better distribution of American food surpluses emphasized that hunger existed among many American children—not of a spectacular nature, perhaps, but in such a form as to deplete their energy, make them ineffective in school work, and handicap their future usefulness to society.

In channeling excess plenty to the hungry and undernourished the method is important. For if done irregularly and without regard to diet needs, the Nation's future resources of health will not be preserved. If done on a handout basis, the American heritage of pride may be weakened.

A Tribute to the Memory of Paul A. Dever, Former Governor of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. LANE. Mr. Speaker, the church was crowded during the funeral mass that was celebrated by Archbishop Richard J. Cushing, of Boston.

Over 1,000 people blocked the street outside, thinking of their late friend and benefactor, and waiting for a last look at the casket embracing the mortal remains of Paul A. Dever, former Governor of Massachusetts.

Inside St. Peter's Church, the archbishop's eulogy communicated his own personal feelings as he said:

At Boston Latin School, at college, and in all the stages of his remarkable career, Paul Dever distinguished himself for the untiring energy with which he worked to make the most of every gift of nature and grace that God gave him. * * * Thus was he able to turn to advantage the difficulties which would have daunted a lesser man. * * * All these hurdles he cleared with great grace because of his capacity for work, work with a purpose and a prayer.

Quietly, the mourners shuffled from the church.

And the funeral cortege glided away.

Even as his life had ebbed in his sleep, outward bound, at the age of 55.

The personality and the achievements of Paul Dever have left a lasting impression on Massachusetts and her people.

In tribute to his memory, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD the following editorial dated April 18, 1958, from La Gazetta Del Massachusetts:

PAUL A. DEVER

Those who knew former Gov. Paul A. Dever most intimately will not remember him for his limitless talent and capacity as a leader of men, not for his achievements in his meritorious career in public service, not for his devotion to the upholding of the ideals and principles of his political faith, but as an unostentatious man whose generous heart led him to help those in need.

The beneficiaries of the charity of Paul A. Dever will miss him almost as much as will his sisters and brothers. They looked upon him as one who was always close to them and to whom they could turn in time of need with positive assurance that their needs would be met.

This was the Paul Dever that the people did not know. He would not allow them to know him. It is probable that he derived as much personal satisfaction from his ability to help the ill and the needy than he gained from any of his too numerous to mention contributions to the betterment of the welfare of the people of Massachusetts.

Paul Dever was a generous man. He, too, was a kind man. He deserves to be remembered as a giver because he was constantly giving of his material possessions to those who relied upon him as a benefactor.

He made a remarkable record as the Governor of Massachusetts. His interest in the unfortunate and the ill was proven by his insistence upon spending public funds for hospitals and for the betterment of the care of those destined to spend long years in hospitals of Massachusetts.

Hungary and the Summit Conference

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the text of a statement dated April 18, 1958, released by the American Friends of the Captive Nations and entitled "Hungary and the Summit Conference":

HUNGARY AND THE SUMMIT CONFERENCE

The current Soviet drive for a new summit conference is part of its campaign to divide and disarm the West by holding out the promise of peaceful coexistence, a campaign which has been pursued ever since the death of Stalin. Stalin's aggressions in Greece, Berlin, and Korea caused the free nations to unite and rearm. Khrushchev's new policy of smiles was designed to make these sacrifices appear unnecessary.

The Hungarian revolution unmasked Khrushchev's smiles. It revealed the unanimous hatred of an entire people for their Communist oppressors and demonstrated once and for all the empty hypocrisy of Soviet promises.

With their life's blood the Hungarian Freedom Fighters bought the West precious time to mend its defenses. How have we used it?

The beep-beep of two Soviet sputniks has drowned out the cries of Hungary's dying. War-weary people, longing for peace but unwilling to pay its high cost, are listening to the honeyed phrases of Khrushchev calling for a summit conference.

It is 16 months since the U. N. General Assembly documented Soviet aggression in Hungary and called upon the U. S. S. R. to withdraw its armies and permit the holding of free elections. But even the puppet Kadar regime, not to speak of the Soviet Union, flouts the U. N. resolutions with impunity and insults the U. N.'s official representative, Prince Wan Waithayakon, former President of the General Assembly, who is not even permitted to enter Hungary. Instead, Khrushchev celebrates his murder of Hungarian freedom in a triumphant visit to Budapest.

It is only 16 months ago that the world vowed never to forget Hungary. Denis de Rougemont, president of the Congress for Cultural Freedom, wrote:

"Henceforth, to shake the hand of a western Communist who freely approves of his party is to salute an accomplice in the crime of Budapest. To publish his writings is to aid the type of intellectual propaganda which led to the crime of Budapest. To reason with him is to forget that he must of necessity justify the massacres of Budapest. To continue cultural exchanges with the Soviet Union under the false banner of the thaw which has just shown its true colors in Budapest is to walk into a trap. To receive and fete troupes of pretty artists and subservient intellectuals sent to us by the Moscow regime and at the same time to forget the voice of the martyred writers who appealed from Budapest, is to betray their testament.

"Let each one search his heart and determine what action he intends to take in his personal or public sphere of influence, against those who applaud the crime, or will look for an excuse."

Yet today the mayor of Philadelphia suggests that Khrushchev be invited to address both Houses of Congress and visit the leading cities of America to promote good will. Official Soviet cultural and commercial missions, complete with secret service agents, are being received in all the countries of the West, western sport teams exchange visits with the captive athletes of the Kadar regime, and appear in Budapest as guests of that regime, while the Hungarian athletes who chose freedom at the Olympic games in Melbourne are forgotten refugees, scattered throughout the world.

While U. N. Secretary General Dag Hammarskjold was being wined and dined in Moscow last month, a Russian soldier, an MVD man, a technician or a member of the secret police stood guard over every 100 Hungarians.

While Premier Khrushchev flaunted his victory over the graves of the freedom fighters, there were still between 80,000 and 100,000 Russian soldiers in Hungary. Their presence is the measure of Khrushchev's fear of the Hungarian people, for the memory of what they did is a living threat of what they or others may do again. That is why he went to Budapest. That is why he wants a summit meeting which will ignore Hungary.

This must not happen.

President Eisenhower has clearly stated that the plight of Hungary and the other countries of Eastern Europe must be discussed at any summit conference, together with the problem of German reunification. We applaud his stand. Yet Khrushchev remains adamant, and popular pressure abroad for a summit meeting on any terms has

become so great that the President and Mr. Dulles may be forced to retreat unless the American people speak out. A summit conference where Hungary is not even discussed would be the supreme triumph of tyranny, the final degradation of the West. It would mean that the West, which did nothing to save Hungary, is now afraid even to speak of it. It would tell the world that Hungary was not only betrayed, it is forgotten.

It is not too late. The millions of people behind the Iron Curtain are, even today, our stanchest allies. They may forgive our failure to help them at the risk of war, but they could never forgive our failure to make their release a main objective in any negotiations with the Soviets. Above all, they could not forgive any settlement which would strengthen the chains that bind them by confirming the status quo. If we fail them now we will not only weaken their passive resistance and relieve Khrushchev of his greatest fear, but we will forfeit our moral prestige throughout the civilized world.

The miracle of the Hungarian revolution and the official recognition of Soviet aggression in Hungary by the U. N. makes the inclusion of Hungary on the agenda of any summit conference a test case for all the captive nations of Eastern Europe. It is the test of Soviet peaceful intentions, the test of the West's ability to stand firm and survive. Since the unification of Germany was already on the agenda at the last summit meeting, where a preliminary agreement to promote German unification through free elections was made and broken by the Soviets, to abandon that subject would also constitute a disastrous western retreat.

Therefore, the withdrawal of Soviet troops and the holding of free elections in Hungary and in East Germany should be preconditions for any agreement between East and West.

Only thus can we keep faith with those who died in Hungary that freedom behind the Iron Curtain might be reborn.

Plywood Imports Don't Help American Plywood Workers

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. MACK of Washington. Mr. Speaker, plywood prices in the Pacific Northwest during the past week have dropped to $64 per 1,000 square feet, one of the lowest prices in years. Prices on most commodities have been going up. Contrary to this trend plywood prices have been declining.

If the decline continues or even holds, more plant close-downs are predicted and that means more unemployment in plywood-producing areas.

An Associated Press dispatch of last week from Portland, Oreg., says:

PLYWOOD SLUMPS, CUTBACK FEARED

PORTLAND.—A cutback in plywood production was feared Friday, following a $4 slump in prices.

That pushed key grade of sanded, quarter-inch plywood back to its mid-winter low of $64 a thousand square feet.

It was at the $64 level that nearly 30 Pacific Northwest mills laid off workers last winter. Some even closed until prices moved upward again.

Several industry spokesmen said sharp cutbacks can be expected if the market continues to drag.

Douglas fir lumber meanwhile continued its upward trend of recent days. Market sources said some lumber items were sold as far ahead as mid-June.

One reason for the slump is overproduction. Why does Congress continue to permit more than 50 million square feet of plywood a month to be imported when the American market is not absorbing all the plywood now produced domestically.

In Praise of Lester Holtzman

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following in praise of my colleague, LESTER HOLTZMAN:

LESTER HOLTZMAN is a most exemplary member of the House Judiciary Committee, of which I am chairman. No longer a novice in the House, he has won his spurs and is a man to be reckoned with. Affable, easy to approach, he is a redoubtable opponent. Anyone who seeks to worst him had better watch his step. His weapons are sharpness of wit, keenness of mind, speedy action. Although young in years, he is old in political acumen and parliamentary skill.

His approach to problems is along commonsense and logical lines. He never hesitates when he knows that his course is right. He is indeed a man of impeccable character. It has been said that you cannot dream yourself into a good character. You must hammer and forge yourself into one. This is exactly what LESTER has done. LESTER is a good man at all times and is a loyal friend—through thick or thin, in victory or defeat, in prosperity or adversity. He is respected by his colleagues and loved by his associates.

He expresses an avid interest in public affairs. The present economic depression has caused him considerable anxiety and stress of mind. He wrote a forthright letter to the New York Times recently wherein he suggested to the President the need to assemble the country's best brains, savants, publicists, and pundits to evolve a plan to solve our present economic perplexities. It was a compelling suggestion, couched in cogent phrases. I hope the President takes heed and follows LESTER'S suggestion. On the day that the New York Times published the letter, that valued paper published an editorial, approving, in part, the idea of such a conclave. Thus, LESTER indirectly won approval of his idea from the editorial staff of the New York Times.

This is but symptomatic of LESTER'S work in the House of Representatives. Often, during debates in our Committee on the Judiciary, when doubt and uncertainty descend upon the members, LESTER, in his quiet and unassuming way, presents a solution that dashes away doubt and difficulty. He clears the atmosphere with a simple, logical observation. Many of us are startled and say to ourselves, "Why did we not think of that?" Thus, LESTER renders incalculably valuable services in the House. I am proud of his friendship.

The good people of his district, in their wisdom, must return him to Congress. They would do disservice to themselves to do otherwise.

Labor Supports Mack's Stand for Quota Limits on Japanese Plywood Imports

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. MACK of Washington. Mr. Speaker, I was gratified to receive today a letter from the Western Council of Lumber and Sawmill Workers, signed by its executive secretary, Earl Hartley, of Portland, which completely supports my position on the Japanese plywood imports issue.

This union council, which has tens of thousands of workers among the forest-products workers of Oregon, Washington, and Idaho, takes two positions that I repeatedly have taken on the floor of the House. It says that plywood workers and the plywood industry are being injured by the Japanese imports and also that relief from these injuries can be obtained by placing quota limits or tariffs on plywood imports or by using both quotas and tariffs to slow down these imports. I have a pending bill in the House that does that.

"If they—the Congress—want to subsidize Japan, why don't they—the Congress—do it with cash. Why take the jobs away from the poor old plywood workers?" Secretary Hartley says in his letter to me.

The western council last week sent all its district councils a circular stating clearly and forcefully its position that quotas, tariffs, or both, are needed on Japanese plywood imports to protect American plywood workers.

One statement in this latter from the Western Council of the Lumber and Sawmill Workers says:

We do not ask that the Japanese be cut entirely out of our plywood market. We do advocate a quota that would reduce Japanese imports to a reasonable and fair volume, or the application of sufficient tariff to effect a realistic price comparison with the United States standards. Either is desirable, but unless something is done to place some restrictions, we can expect these imports to continue to increase in the future with a result of further impact on employment and production in our own plywood industry.

This is exactly the position I have been taking in debates on the House floor on the issue of plywood imports.

Mr. Hartley's letter to me in behalf of the Western Council of Lumber and Sawmill Workers and a copy of the council's circular to all its councils follow:

WESTERN COUNCIL LUMBER AND SAWMILL WORKERS, UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA,
Portland, Oreg., April 23, 1958.

The Honorable RUSSELL V. MACK,
House Office Building,
Washington, D. C.

DEAR MR. MACK: Recently, as you know, there has been considerable controversy over the subject of Japanese plywood imports to the United States.

We thought you would be interested in having a copy of the letter that we are, this week, sending to all of our district councils. We briefly review the position of the western council and its affiliated district councils and local unions as established by previous convention actions.

We sincerely hope that you will give this matter your sincere consideration.

Yours very truly,

EARL HARTLEY,
Executive Secretary.

P. S.—RUSSELL, if they want to subsidize the Japs why don't they do it with cash? Why take the jobs away from the poor old plywood worker. We shouldn't bear the brunt of this subsidy alone.

WESTERN COUNCIL LUMBER AND SAWMILL WORKERS,
UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA,
Portland, Oreg., April 21, 1958.

Re: Japanese plywood imports.
To All District Councils.

DEAR SIR AND BROTHER: With reference to the importation of Japanese plywood, it should be noted that the position taken by the Western Council in support of proposals to restrict these imports is in conformity and consistent with the unanimous action of the delegates at the 1955 convention of the Western Council, wherein they approved resolution No. 3, tariff and plywood imports, and this policy was reaffirmed at the 1957 convention by the unanimous approval of resolution No. 6, Japanese plywood. The first resolution opposed the low tariff and the latter resolution proposed the establishment of an adequate quota. Either of these approaches, or a combination of both, could achieve the objective of restricting Japanese plywood importation. Therefore, the Western Council has, as instructed by convention action, supported proposals that have dealt with both the tariff and quota as a means of placing some restrictions on these imports.

On March 11, 1955, a representative of the United Brotherhood of Carpenters and Joiners of America appeared before the Senate Finance Committee hearing on H. R. 1 and presented testimony showing the need for tariff relief on these foreign imports. This testimony pointed out the rapid increase in plywood production in Japan which had been accomplished largely with American aid dollars, machinery, and techniques, and their exports to the United States.

For example, in 1953 Japan sold to the United States some 106 million square feet of plywood. This represents an increase of 511 percent over the 1952 figures. With a wage scale of about 11 cents per hour in Japan, it should be easy to understand how the Japanese manufacturers can export to the United States at a price considerably lower than the actual production costs of American mills. To show a comparison of price and costs, we quote as follows from a brief of the Hardwood-Plywood Institute to the Committee on Ways and Means of the House of Representatives on September 16, 1957:

	F. o. b. dock, San Francisco, Calif., duty-paid price of plywood from Japan	United States manufacturers' production cost
Lauan ¼-inch by 4 by 8 feet rotary cut	$76	$128.46
Lauan ¼-inch by 4 by 8 feet	100	141.85
Lauan ¾-inch by 4 by 8 feet	280	300.60
Sen (ash) ¼-inch by 4 by 8 feet	125	230.10

These figures would clearly indicate that imported Japanese plywood can be purchased f. o. b. dock, United States of America, for considerably less than the United States manufacturer's production cost. The testimony before the Senate Finance Committee hearings on H. R. 1 referred to above showed a tremendous increase in Japanese plywood imported in 1953 over 1952. These imports have continued to increase in subsequent years.

In 1951 when these imports first began to reach this country in volume, the imports were 13 million square feet. In 1956 the imports were 527 million square feet or an increase of 3,945 percent. The first half of 1957 imports from Japan amounted to 339 million square feet an estimated total of 675 million square feet for 1957, or an increase over 1951 of 5,092 per cent. These figures coincide with the previous reports reflecting the ever increasing productivity of Japanese plywood plants and exports to this country.

We realize there are divergent opinions on this subject as evidenced by the recent arguments in Congress by Representatives from Oregon and Washington. Japanese plywood imports have become one of the major items of controversy by congressional committees in consideration of the trade program. The very fact that this subject has been given prominent consideration in Congress shows a growing concern over these ever-increasing imports.

We do not ask that the Japanese be cut entirely out of our plywood market. We do advocate a quota that would reduce Japanese imports to a reasonable and fair volume, or the application of sufficient tariff to effect a realistic price comparison with the United States standards. Either is desirable, but unless something is done to place some restrictions, we can expect these imports to continue to increase in the future with a result of further impact on employment and production in our own plywood industry.

There is a good possibility that if our American market remains open and unrestricted, that other lumber items, such as doors and other types of heavier plywood, may soon be among the imports. The results: more unemployment in an already curtailed plywood and door industry. Certainly there is no justification in that the workers in this industry should carry the full brunt of a subsidy to another country.

Fraternally yours,

EARL HARTLEY,
Executive Secretary.

REA Interest Rates

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. JOHNSON. Mr. Speaker, more than 500 delegates, directors, and managers of rural electric cooperatives belonging to the Wisconsin Electric Cooperative met March 22, 23, and 24 in Madison, Wis. At that convention they endorsed a total of 17 resolutions.

Four of these resolutions are of particular significance and grow out of two decades of hard work to develop an effective program of cooperative rural electrification and telephone service. Therefore, I would like to recommend these four resolutions to the attention of my colleagues.

The resolutions follow:

RESOLUTIONS ADOPTED BY DELEGATES TO THE 22D ANNUAL MEETING OF WISCONSIN ELECTRIC COOPERATIVE, MARCH 24, 25, 26, 1958

RESOLUTION NO. 1—REA INTEREST RATES

Whereas in 1944 the Congress enacted legislation fixing a 2 percent interest rate to REA borrowers who would contract to provide complete and continuing electric service to all of our rural people without central station electic power; and

Whereas the electric cooperatives of the Nation have accepted this responsibility and are carrying it out in an admittedly outstanding manner; and

Whereas the Department of Agriculture in its 1957 year-end report to the Congress reported that the REA has accrued a net income from lending operations of some $54 million; and

Whereas as a result of an intentional national administration fiscal policy of taking steps to stem inflationary pressures by tightening the supply of money the cost of money to the Treasury in the open money market reached a 24-year high in October, 1957 which resulted in some charges that the 2 percent REA interest rate was below the cost of money to the Treasury; and

Whereas since October 1957 as a result of depressed economic conditions the Federal Reserve Board has been steadily lowering the rediscount rate and the percentage of reserves required of its member systems in an attempt to loosen the credit supply and has resulted in a drop in the average cost of Treasury borrowings to a 3-year low in the neighborhood of 2 percent: Now, therefore, be it

Resolved, That we oppose any legislation introduced which would in any way change the current structure of interest rates charged to REA borrowers, and that any tampering with these rates would result in harmfully and unnecessarily retarding the development of rural electrification; and be it further

Resolved, That we are convinced that most of these attacks originate and are promoted by those monopolistic interests bent on destroying the farmer-owned segment of the electric industry.

RESOLUTION NO. 2—AMENDMENT OF THE REA ACT

Whereas the National Administration has proposed to the Congress that it amend the REA Act to add two additional titles which would provide for a so-called revolving fund,

and also for an insured loan authorization; and

Whereas these titles were described as a means of broadening the source of loan funds to REA borrowers, when they would in fact greatly increase the cost of money, limit the availability of loan funds for capital expansion, and place the program under the responsible direction of a partisan appointee, the Secretary of Agriculture, rather than under an historically independent administrator; and

Whereas the proposed legislation would make the cost of capital funds of REA borrowers far too high to permit them to carry out their responsibility under the act to provide electric service to thousands of rural persons still unserved; and

Whereas the average patrons' equity in the Nation's rural electric and telephone cooperatives still has not reached the feasible level where they could satisfactorily arrange feasible loans in the open money market; and

Whereas we are convinced that the real purpose behind this act is to destroy this program by making us dependent for our future loan funds on the Wall Street money sources which have historically proven hostile to our efforts to electrify rural America: Now, therefore, be it

Resolved, That we are unalterably opposed to this legislation and that we direct the WEC Public Relations department to acquaint our congressional delegations of the total impracticability of the proposals it contains, and the hostile and even sinister motivation behind it.

RESOLUTION NO. 3—THE HISTORIC INDEPENDENCE OF THE REA ADMINISTRATOR

Whereas the original REA Act provided that the appointment of an Administrator of the program be a nonpartisan one, and that he serve independently of political pressures in the interest of the program; and

Whereas with passage in 1953 of the Reorganization Plan No. 2, the Secretary of Agriculture was given additional authority over the program although he assured the Congress that he would not exercise this authority to limit the authority of the REA Administrator without prior notice to the proper committee of the Congress in advance of such action; and

Whereas the Secretary of Agriculture last year did in fact limit seriously the power of the Administrator to make loans, without giving such prior notice to the proper committee: Now, therefore, be it

Resolved, That we strongly feel that the Secretary of Agriculture has violated the trust and confidence imposed in him by the Congress and the President and we therefore recommend that the Congress enact bill S. 2990, providing "that section 1 of Reorganization Plan No. 2 of 1953 shall not hereafter apply to the Rural Electrification Administration, and there are hereby transferred to the Administrator of the Rural Electrification Administration all functions which were transferred from the Administrator to the Secretary of Agriculture by such reorganization plan."

RESOLUTION NO. 5—REA LOAN FUNDS

Be it resolved, That we respectfully request the Congress to authorize and appropriate the following sums in order that the rural electric and rural telephone programs might be carried on during the new fiscal year in a manner needed to meet the needs of consumers:

(a) Electric loan funds: $359 million in new regular loan funds.

(b) Telephone loan funds: $100 million in new regular loan funds.

(c) Administrative funds: $9.5 million for administering both programs.

Public Understanding and Support for Education

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the excellent statement made by the problems and policies committee of the American Council on Education. The statement was developed by the committee in a meeting in Washington in late January 1958 and was published in February 1958.

PUBLIC UNDERSTANDING AND SUPPORT FOR EDUCATION

The American Council on Education, comprising 140 educational organizations and more than 1,000 educational institutions, is a center of cooperation and coordination for the improvement of education at all levels, with particular emphasis upon higher education. Its problems and policies committee, composed of distinguished educators, from time to time prepares and publishes statements on issues that are of concern to a broad sector of the council's diverse membership and to the American people generally.

The statement of propositions that follows was developed by the committee in a meeting in Washington in late January 1958 and is published with the unanimous approval of the committee.

PROBLEMS AND POLICIES COMMITTEE, FEBRUARY 1, 1958

William S. Carlson, president (on leave), State University of New York.

Harry D. Gideonse, president, Brooklyn College.

Margaret L. Habein, dean, College of Arts and Sciences, University of Wichita.

Clark Kerr, chancellor, University of California (Berkeley).

Douglas M. Knight, president, Lawrence College.

J. W. Maucker, president, Iowa State Teachers College.

Joseph C. McLain, principal, Mamaroneck (N. Y.) Senior High School.

Leland L. Medsker, consultant, research project in higher education, University of California (Berkeley).

Nathan M. Pusey, president Harvard University.

Robert J. Slavin, O. P., president, Providence College.

Logan Wilson, president University of Texas.

Members ex officio: Lawrence A. Kimpton, chancellor, University of Chicago, chairman of the council; Arthur S. Adams, president of the council.

PROPOSITIONS THAT NEED PUBLIC UNDERSTANDING

1. Most Americans now realize that our leadership, and indeed our national survival, is being challenged as never before in history. Most Americans must be brought to realize that the survival and well-being of this Nation depend no less upon the strength of our educational system than upon the strength of our Military Establishment.

2. Educational institutions in a democracy are properly expected to meet the fundamental needs of society. If they are subject to passing whims and fancies, schools and colleges cannot perform this function. Responsible citizens share with educators a moral obligation to insist upon wise and careful planning to meet fundamental needs and to protect our educational institutions from hysterical demands and panicky reactions.

3. Critical analysis of our educational system is certainly in order, but mistaken efforts to place blame through name calling and fault finding should not be permitted to obscure the fact that our schools, colleges, and universities are seldom much better or worse than their respective publics want them to be. The best of our institutions certainly rise above common levels of aspiration, yet the vast majority simply mirror the values most commonly held. If American education is to undergo a general improvement, the people at large must place a higher value upon intellectual achievement and must be prepared to uphold higher levels of educational performance.

4. Lipservice, to the value of education is not enough. The critical need is for material support. The American people can afford to spend more on education. Doing this, however, will necessitate assigning a much higher priority to the importance of teaching and research as crucial forms of enterprise in a dynamic society. There must be a willingness to practice self-denial in paying higher taxes and in making heavier voluntary contributions to provide greater material support for education.

5. The time factor is extremely important, and basic issues must be faced now. Nothing less than a massive national effort, launched immediately, will do. Local support and control will remain the best safeguards and guarantors of excellence for our diverse educational system. They can and should be preserved, but bickering over forms and sources of financial support necessary to meet the present emergency can be disastrous. Positive and immediate action on all levels—Federal, State, local, and voluntary—is the first imperative.

6. Economic inflation has already levied a heavier toll on educational institutions than on most other forms of enterprise. Still further inflation would be a more serious threat. If this possible consequence of vastly increased governmental expenditures for education is to be avoided, investment in our schools, colleges, and universities must take precedence over existing expenditures which are of less importance to our national security.

7. The total economic resources available for higher education, whatever they may be, will necessarily exist in limited amounts. One demand upon those resources is to raise the general level of performance in all schools and colleges. If this is allowed to be the only call, however, a tragic mistake will be made. A second, and vital, call upon our economic resources is to strengthen our leadership in all important fields and to add to our best existing institutions the appreciable support needed to meet the demands for the highest order of quality. Statesmanship must see to it that adequate support for the attainment of both goals is provided.

8. A genius of American education has been its unity through diversity. This diversity should be preserved, with strengthening all along the line and greater stress on the importance of quality everywhere. In short, all our human resources must be vastly strengthened through the medium of improved education.

PROPOSITIONS THAT NEED PUBLIC SUPPORT

1. The magnitude of the job to be done can hardly be exaggerated. We are not spending nearly enough on education. Modest measures will not do the job. In colleges

and universities alone, the number of qualified students will be doubled by 1970, and a doubling of expenditures will not even perpetuate present inadequate quality levels. To do the job effectively, the following order of priorities should be observed:

Salaries for teachers, scholars, and scientists should on the average be at least doubled;

Existing institutions should be maintained more adequately and some of them greatly strengthened;

Support for the establishment of new institutions will be necessary, but should not be supplied at the expense of existing institutions;

Scholarship programs should stress quality rather than quantity, graduate as well as undergraduate study, and should be accompanied by a parallel system of grants to the institutions in which scholarship holders enroll.

2. Although Federal support for educational activities already exists in many forms, excessive reliance upon it may weaken other sources of initiative. However this may be, we are in a national emergency, and prompt action of unprecedented magnitude is urgent. The truth seems to be that the Federal Government is the only agency which can act with sufficient speed and on a scale large enough to enable schools, colleges, and universities to accomplish their tasks. Action by the Federal Government need not, and should not, extend Federal controls over education. Further, as a partial attack on a problem of such great size, it need not weaken initiative and action at the State, local, and voluntary levels. Federal support should be considered only as a necessary supplement to action by State and local entities, corporations, alumni, parents, churches, foundations, and philanthropic individuals. The initiative and interest of these agencies and individuals are the greatest asset of American education; they must now be exercised to an extent never before demonstrated.

3. Greatly increased amounts of money must be allocated to fundamental research and other forms of creative and scholarly activity. These can be carried on more effectively in our colleges and universities than anywhere else, because in the academic environment the creativity of central figures is reproduced by students who have worked with them.

4. If American education is to continue to serve the best interests of the Nation, drastic measures to increase the supply of highly trained persons are required in many areas other than physical science and engineering. The need for teachers at all levels and in all fields is a compelling illustration. Continued progress in the humanities, the arts, and the social sciences, as well as in science and technology, is highly essential to our national survival and well-being.

5. Totalitarian methods are not necessary to counter the threats of a totalitarian power. These threats can be countered and overcome by our own American strengths, strengths which in education include academic freedom for teachers, scholars, and scientists; freedom of mobility and choice of programs of study and vocations by college students; diversity of programs, forms of control, and philosophies among institutions. These qualities of American education must receive continuous, vigilant support.

The actions called for cannot be postponed. The priorities must be established immediately. Should we fail to do these things, the deferred costs will be too staggering to be met in time. If the Nation is to survive and prosper, we must start making the basic provisions now.

C/F: Mystery Killer of Children

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, cystic fibrosis is children's foe. It is a disease which should get the attention of all Americans. Once aware of this child killer, Americans will join in a massive effort to get the necessary research underway to find a cure or satisfactory treatment for victims of cystic fibrosis.

The following article appearing in the May issue of Reader's Digest clearly shows why we must declare war on this public enemy:

C/F: MYSTERY KILLER OF CHILDREN

(By James C. G. Conniff)

(Condensed from New York World-Telegram and Sun Saturday Feature Magazine)

Early one morning during last June's heat wave my wife and I woke to find that our youngest child, Robert, was ashen, apparently suffocated. While I worked to restore breath to his yet warm body, my wife telephoned our doctor and the police. They came immediately, and fought hard to save him with oxygen. The battle was in vain.

Afterward our doctor said to me, painfully, "All I can tell you is that if it had to be, then better at 7 weeks than at 7 months or 7 years."

Dazed with shock, I could only nod. But since that bitter morning I have come to disagree profoundly with the idea that "it had to be."

Bobby's killer was a relatively little-known disease which bears half a dozen names. The best known is cystic fibrosis of the pancreas—C/F, for short. Unmasked only 20 years ago, C/F is estimated to threaten the lives of some 6,000 babies a year in the United States—about 1 in every 600 infants born to white parents. (Negroes rarely have C/F, orientals never. Why, nobody knows.) It sets in at birth or soon after, and until about 1950 it meant almost certain death before age five. It is completely noncontagious.

Bobby, I have learned since his death, had a number of symptoms characteristics of C/F. In spite of repeated increases in his formula, he continued to have a voracious appetite while showing little weight gain.

He had loose, frequent, bulky bowel movements—sure sign that his food wasn't getting a chance to nourish him. He had a dry, hacking cough, and frequent, excessive sweats.

But it is not to rebuke our doctor that I am writing this article; even doctors well acquainted with C/F sometimes have trouble identifying it. I write because much progress can be reported in dealing with this disease. Because recently developed laboratory tests are helping practitioners to distinguish C/F from other deceptively similar childhood ailments. Because experts believe that 50 to 60 percent of C/F sufferers can, if diagnosed early enough, count on survival while the crash program to find a lasting cure goes forward.

What, then, was going on in Bobby's tiny body?

Those who know most about cystic fibrosis say it is an insidious raid on an infant's whole exocrine (mucus, tear, salivary and sweat) gland system. As early as 1650 anatomists began to suspect that some mysterious entity now and then invaded the pancreas, the vital gland which empties into the small intestine a clear, watery fluid containing enzymes that break up food for digestion. These early doctors observed that the pancreatic juice sometimes thickened and kept the enzymes from doing their job. But the term "cystic fibrosis" did not enter medical lexicons as formally recognized disease until 1936, when Dr. Guido Fanconi, of Zurich, Switzerland, described three cases and gave what it still their commonest name to the linked symptoms afflicting both digestive system and lungs.

The Fanconi find made no headlines, unfortunately, and it was not until 1938 that Dr. Dorothy H. Andersen, now chief pathologist at New York's Columbia-Presbyterian Babies Hospital, performed parallel studies and alerted the profession. In autopsies of infants who had died of "pulmonary disease," Dr. Andersen was disturbed by the frequency with which she found plugged-up pancreatic ducts. The pancreas had produced not its usual thin, clear fluid, but a thick, gelatin-like substance.

With the pancreas blocked, Dr. Andersen reasoned, no baby can manufacture the enzymes to digest his food. Undernourished, he becomes a pushover for infection. This pancreatic blockage, if unchecked, extends also to the lungs; the same kind of sticky mucus gradually plugs them, too. With less and less air ventilating their honeycomb passages, the lungs become the focus of infection which in a weakened child is almost always fatal.

Dr. Andersen's first thought was: forestall this fatal lung involvement by making up for the pancreatic insufficiency; give extra nourishment to youngsters who show signs of C/F. This she did with a high-protein diet, massive doses of vitamins, rivers of "percomorph oil" (oleum percomorphum)—a G/F regimen still very much in use. To fight infections that already had a lung foothold, Dr. Andersen at first used sulfathiazole. She is still partial to the sulfa drugs, because children seem to take longer than adults in building up resistance to them. But it is to penicillin and the ensuing antibiotics that she credits the phenomenal rise in C/F survival rates.

Where 20 years ago more than 75 percent of C/F victims died before their first birthday (and were diagnosed only at autopsy), today better than 50 percent of nearly 500 fibrocystics diagnosed at Columbia-Presbyterian Babies Hospital early enough to benefit by these treatments are still alive. Fifty-five of them are over 10 years old; the oldest is 22. Most are a bit smaller than average and tend to be nonathletic. But, by and large, they have been able to keep up with normal interests of childhood and youth.

Since Dr. Andersen's first work, medical researchers have learned, step by step, how to make more consistently accurate diagnosis on each of C/F's several frontiers. They have painstakingly mapped the widely differing courses of treatment that C/F calls for when attacking lungs or digestive system, sweat mechanism, or even liver. These treatments, taken together, are essentially a delaying action until a cure is found, but they give solid hope to thousands everywhere.

For all-important early detection, conventional X-raying of chest trouble by experts can help. One of the core discoveries, however—which too few doctors and almost no parents know about—is a fast, 99-percent-foolproof diagnostic procedure pioneered by Dr. Paul A. di Sant-'Agnese, assistant professor of pediatrics at Columbia-Presbyterian Medical Center.

Known as the sweat test, this key to C/F owes its discovery to a heat wave in New

York City in August 1948, when heat prostration brought 10 children to Columbia-Presbyterian Babies Hospital. Five were known from previous visits to be suffering from C/F. Di Sant-'Agnese reasoned that since in these patients other exocrine glands were functioning abnormally, perhaps the sweat glands, too, were shirking their job of cooling. So he ran comparative sweat analyses on 4 control subjects (non-C/F children) and on 4 known fibrocystics. The laboratory findings: the C/F children's sweat yielded a salt content so much higher as to indicate strongly that (1) here was a superior diagnostic tool to identify C/F, and (2) by giving extra salt to C/F sufferers it might be possible to save them from heat prostration.

Since 1949 all C/F children at Babies Hospital Cystic Fibrosis Clinic have been given extra salt (up to 2 grams a day) in hot weather. There have been no troublesome cases of heat prostration since.

Anxious to make the di Sant'Agnese sweat test so quick and simple that anybody could use it, Dr. Harry Schwachman, of the Children's Medical Center, Boston, and a group of coworkers devised a scheme for testing hand sweat. They dissolved silver nitrate and potassium chromate in boiling agar (seaweed gelatin), then cooled the combination to a firm red jelly in a shallow glass dish. Onto its surface they gently pressed the palm of a child suspected, for other reasons, of having C/F. A sharply defined yellowish-white handprint appeared at once. The hand sweat of non-fibrocystics left almost no trace at all. This test was repeated and repeated, with identical findings. Now, with subsequent refinements, it can be used to screen large numbers of children for cystic fibrosis.

Meanwhile, via laboratory and bedside studies, researchers are moving rapidly toward isolating the key mechanism which triggers the whole C/F syndrome.

It is now known, for instance, that a defective gene in both parents plays a crucial role in the risk that their children may be born fibrocystic. Something like 1 in 50 persons is believed to have this lurking gene, and its presence cannot be predetected. But even if both parties to a marriage have it, their offspring will not be fibrocystic unless the impaired genes combine in a certain manner—about which relatively little is yet known.

Inroads on the advanced-stage suffocation danger of C/F have been made in recent years by means of improved techniques of inhalation therapy. Almost all C/F authorities now use medicinal detergents in nebulizers (fine-mist atomizers) to loosen and liquefy the deposits of lung mucus; then, by postural drainage—kneeling, with forehead to the floor—the patients cough it up.

As a clearinghouse for information and as a spur to research, the nonprofit National Cystic Fibrosis Research Foundation was established in 1955 by an attractive young doctor, Wynne Sharples, who has a C/F son and daughter of her own. The Foundation, to which Dr. Sharples today gives most of her time, already has 47 chapters across the country, and it has raised more than $300,000 for research into every conceivable aspect of C/F. It cannot, unfortunately, undertake to provide financial help for stricken families. Realizing, however, that the cost of drugs, vitamins, and protein foods for a C/F child may run as high as $150 a month (average: $700–$900 a year), it has organized committees to get expensive medicines at rockbottom cost from cooperative drughouses for families least able to stand the financial strain.

But the big essential for a C/F victim is early detection. And Dr. Sharples has found that the one who often prompts the correct diagnosis is the mother. "Let her be sure to tell her baby doctor of symptoms that worry her," says Dr. Sharples. "Together they may know the satisfaction of saving a child's life."

NATO and Middle Europe

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I commend to the attention of my colleagues on both sides of the aisle the following editorial from this morning's Washington Post and Times Herald:

NATO AND MIDDLE EUROPE

Despite the reaffirmations of solidarity from the NATO Defense Ministers at Paris, it remains evident that NATO is suffering from erosion. Some of this erosion probably stems from the nature of NATO's military task, which is the essentially negative one of providing a shield against aggression in a time of great change in weaponry. But part of it may well arise from a popular feeling in the NATO countries that governments are not doing what they could do to promote a realistic settlement with the Soviet Union.

Representative HENRY S. REUSS, who has shown an imaginative grasp of a number of foreign policy problems, suggests that NATO propose a settlement in middle Europe based upon troop withdrawal and German reunification. This is not a new suggestion; it is similar to ideas voiced by George Kennan and taken up variously by Sir John Slessor and Walter Lippmann as well as by political groups in Britain and Germany. Specifically, Mr. REUSS envisages withdrawal of Soviet troops to the Russian border and Western troops to the Rhine, free elections in both parts of Germany, arms limitation in middle Europe, East-West guaranties against aggression, and a deemphasis of nationalism in favor of regionalism.

Regardless of the current practicability of such a program, it is altogether true that the Western Allies have offered the Soviet Union no inducement to withdraw from Germany and the satellites. Western policy in Europe, as Walter Lippmann observes in the April Atlantic Monthly, has been based on the decisions taken at the time of the occupation of a defeated Germany; it has not progressed to the necessary reappraisal. Mr. REUSS properly notes that the West has offered Russia no assurance, in the event of withdrawal, that the liberated countries "would not arm to the teeth and become hostile."

This newspaper has little confidence that the Soviet Union would presently accept such a disengagement. The men in the Kremlin seem satisfied with the division of Germany; and the Hungarian Revolution evidently has whetted Soviet fears of liberalization. Furthermore, we doubt whether it would be realistic to expect a Soviet withdrawal all the way to the Russian border in return for withdrawal of western forces only to the Rhine; the Bug or the Vistula might be a more practicable demarcation. Nor can it be assumed that a reunited Germany could or should stay in NATO. We agree with Mr. REUSS, however, that Germany's own limited military forces could help materially in ground defense, and that with Germany's economic and cultural ties to the West there would be little reason for fear that she would slip into the Communist orbit.

Whether or not a favorable Soviet response could be expected, some positive thinking along these lines is desirable from the standpoint of NATO's own interest. The precise details of a proposal are not the crucial question; what is important is for NATO to move beyond a sterile policy which holds no hope of fulfillment. It is lamentable that there has been no official interest in the possibilities of a modification of the Polish Rapacki plan. A positive proposal would give the NATO countries, at the very least, a program for countering Soviet propaganda, and it would provide a means of exerting pressure on Russia which is now lacking because the western terms are impossible. Moreover, such a program would give a political backing to any serious disarmament negotiations. We commend Mr. REUSS' suggestion that exploration of these points ought to be considered essential western preparation for a summit meeting.

The National Capital Planning Commission Should Serve the Federal City and the Federal Government

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the National Capital Planning Commission, according to the United States Government Organization Manual 1957–58, was, under the 1952 act, created as the central planning agency for the Federal and District of Columbia Governments to plan the appropriate and orderly development and redevelopment of the National Capital and the conservation of the important natural and historical features thereof.

Recently the Director of the National Capital Planning Commission was reported by the newspapers as saying that the Commission had served well the Federal interest but had not given to the District of Columbia the importance that was due it. Many well-informed observers have noted this fact and have commented upon it.

Sometimes, of course, it may be difficult to reach a decision in these matters.

But it should be relatively easy for the National Capital Planning Commission to reach a decision as to the best location for the proposed National Capital Center of the Performing Arts, as proposed in the legislation sponsored by Senator J. WILLIAM FULBRIGHT and myself.

In order to be of some assistance in this matter I include here a letter from the Commission of Fine Arts, and a report by the Board of Commissioners, District of Columbia:

THE COMMISSION OF FINE ARTS,
Washington, D. C., April 23, 1958.

Hon. PAT MCNAMARA,
Chairman, Subcommittee on Buildings and Grounds, United States Senate, Washington, D. C.

MY DEAR SENATOR: At the hearing before your committee yesterday morning, Senator HRUSKA asked if we could supply data showing the height of the stage houses of four opera houses and music halls mentioned in the testimony of Congressman THOMPSON before the committee.

We have accordingly secured data from Mr. Wallace Harrison of New York, architect member of the Commission of Fine Arts, with reference to radio city, where the height is 120 feet from stage to grid; also with reference to the Metropolitan Opera House in New York where the stage house is 125 feet high. Mr. Harrison gives as his opinion that the stage house should vary from 90 to 130 feet, depending on the width and height of the proscenium opening. In the opera house which he is designing for the Lincoln Center in New York, the height of the stage house will be approximately the same as that in the present Metropolitan Opera House.

We also inquired at Indiana University about the height of the new auditorium and were informed that the stage house is 72 feet, 6 inches high. We also made the same inquiries at Purdue University and were told the height of the stage house is 72 feet. In both cases they advised us that these heights were not sufficient to accommodate tall scenery such as used by the Metropolitan Opera Co. when on tour.

The National Gallery is 782 feet in length; the wings are 67 feet in height; the central block is 84 feet in height, and the top of the dome is 137 feet above the ground. It would appear, therefore, that a building for a music center could be designed on the Mall site, whose stage house could be between 90 and 130 feet and which would not be out of scale with the National Gallery of Art.

If there is any further information we can secure for you, I hope you will advise me.

Sincerely yours,

DAVID E. FINLEY,
Chairman.

APRIL 17, 1958.

The Honorable DENNIS CHAVEZ,
Chairman, Committee on Public Works,
United States Senate,
Washington, D. C.

DEAR SENATOR CHAVEZ: The Commissioners have for report S. 3335, 85th Congress, a bill to provide for a National Capital Center of the Performing Arts which will be constructed, with funds raised by voluntary contributions, on part of the land in the District of Columbia made available for the Smithsonian Gallery of Art.

The purpose of the bill is to provide a suitable building for the presentation of music, opera, drama, dance, and poetry and to honor and memorialize our great statesmen who have contributed to an increased recognition of the interrelation of the arts and sciences and their basic importance to a true and balanced development of American life. The bill authorizes the Regents of the Smithsonian Institution to construct a building to be known as the National Capital Center of the Performing Arts on the land bounded by Fourth Street SW., on the east, Seventh Street SW. on the west, Independence Avenue on the south, and Adams Drive on the north. Title to the land is in the United States. The Regents would have supervision and control of the Center.

The bill provides, among other things, that the Regents solicit funds for constructing, furnishing, and equipping the Center and presenting programs of the arts.

The bill repeals the act entitled "An act creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents and a music, fine arts, and mass communications center," approved July 1, 1955. The National Capital Center of the Performing Arts authorized by S. 3335 would supersede the proposal contained in the act of July 1, 1955.

The Commissioners recommend generally favorable action on the bill, but point out that there is a need to maintain the Mall vista. For this reason the Commissioners request that the northern boundary of the site be changed from Adams Drive to Jefferson Drive. This would still permit the use by the Center of approximately 12 acres.

In addition to the fulfillment of an important cultural need in the community, the construction of this Center of the Performing Arts will provide a facility which will add materially to the economic development of downtown Washington. We are, therefore, heartily in favor of settling on the site for this project in order that the project may be accomplished in accordance with the provisions of the bill.

The foregoing statement represents the views of a majority of the Board of Commissioners. Commissioner McLaughlin feels that the bill should be passed in the form in which it was introduced.

Time has not permitted the securing of advice from the Bureau of the Budget as to the relationship of this report to the program of the President.

Yours very sincerely,

ROBERT E. MCLAUGHLIN,
President, Board of Commissioners,
District of Columbia.

Government Fiscal Policy: Too Much, Too Soon?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Gordon Grand, Jr., a trustee of the Tax Foundation, Inc., is a thoughtful and dispassionate analysis of the present recession and our tax structure in general. Mr. Grand was for some years in Washington working with and for the Committee on Ways and Means. While his views are those of an independent citizen with which some people might not agree they have the great merit, at this time in our economic history, of not being tinged by partisan politics.

GOVERNMENT FISCAL POLICY: TOO MUCH TOO SOON?

(By Gordon Grand, Jr.)

For the past 6 weeks, Congress has been gloomily pouring over the economic indexes, which are untrustworthy at best, and coming up with dire predictions of a deepening, lengthening recession. In considerable panic, some Members of Congress even envision a catastrophic depression of the 1930 type.

This unpleasant remembrance of things past has brought about a hasty spate of proposed remedies harking back to the early New Deal make work projects of the WPA and PWA variety, CCC camps, increased Federal subsidies and handouts, and further soak the rich tax schemes.

Interestingly, all of the proposed solutions have one thing in common: tried before, they proved notably inefficient. Conversely, and more recently, a move along opposite lines that cut Federal spending and reduced taxes that sot to restrain corporate activity resulted in a sudden and unparalleled spurt of prosperity. Yet, of the two schools of thought, the former trickle up, or dole, theory seems to be prevailing in a time of stress—a stress incidentally, that is only a short step removed from the highest standard of living that has ever prevailed in the history of the world.

In all the confusion, one thing at least, seems sure: If the current economic recession should indeed turn into a full-blown depression, the resulting government intervention in the private economy would make the 1930's look like an exercise in laissez-faire. A serious depression, in fact, could very well mark the end of the private enterprise system. Given only a slight shove, government, which through heavy taxes and various controls already influences every business and personal economic decision, would end up completely dominating the lives of its citizens.

Will various current pump-priming proposals in fact give our economy a shot in the arm that will halt the recession? Or, on the other hand, start an early resumption of the rise in the cost of living through further inflation? Or even have no effect whatsoever? The fact is that there is more solid evidence that the trend of our times is toward more inflation than there is that the current recession will deepen.

In general, the recession remedies now being pushed in Congress fall into two categories: More spending and tax handouts, with some enthusiasts plumping for both. The idea, in both cases, is to spread more money around quickly in the hope that this purchasing power will step up sales of automobiles and other hard goods, put the economy back on the prosperity track, and create jobs to reduce unemployment.

TIME TO ASK QUESTIONS

Both Congress and the President have done what they can to step up current spending, but the big PWA-like projects are still under discussion, and tax cuts apparently have been postponed for a few weeks. Before we are thoroughly committed to an all-out program, there is still time to face up to a series of important questions, answers to which should determine our course of action. Among the questions are these:

1. Is this recession one that seriously threatens our economic future or is it merely a manifestation that millions of consumers are temporarily bought up on things like cars and refrigerators? Production in February 1958 was about 11 percent below early 1957, a decline slightly greater than those in other postwar recessions of 1948–49 and 1953–54. But the current decline is from alltime highs and the most prosperous years we have ever known. Total personal income remains high and savings appear to be rising. For example, net savings in New York State's savings and loan associations increased 60 percent more in January and February of this year than in the same period in 1957. We should at least consider the possibility that the recession will end at an early date without Government intervention, as the people make their millions of individual decisions to spend the money they are now salting away.

2. Is it part of the responsibility of the Federal Government to try to guarantee an ever-increasing boom, with none of the economic adjustments that characterize even an era of general prosperity? Government must step in to ease human misery in a serious ease even minor economic tremors, we are depression, but if we run to government to inviting the complete domination by government that we profess to abhor in many of the world's other countries.

3. Can the Federal Government or any government end a recession or an inflation by any steps short of complete regimentation and the application of strict controls on every step in the economic process? Government, it is clear, does not have the ability to forecast the economy with any more precision than the weather. And if we take, for example, the experience of the 1930's, it is equally clear that government does not have any special know-how to get us out. In

1940, after 9 years of heavy Federal spending and deficits there were still 8 million unemployed, about a seventh of the labor force. Certainly, current pump-priming spending proposals are minor efforts by comparison and offer little hope. A tax handout, such as the proposed $40-for-everybody might increase purchasing power (which is already high) but it is just as likely to end up in the bank until the sovereign citizen decides he wants to spend it.

4. Should the Federal Government indulge in huge new expenditures or tax handouts at all when the present budget outlook offers nothing but deficits? Tax Foundation estimated recently that, even at current spending rates, a Federal budget deficit for fiscal 1958 and 1959 of some $5 billion to $7 billion is in prospect. Other estimates put the fiscal 1959 deficit as high as $10 billion, even without a tax cut. This would push the Federal debt ceiling, recently raised to $280 billion temporarily, to $290 billion or $300 billion. More important, it would mark a resumption of the policy of grand-scale deficit financing, which has already helped halve the purchasing power of the dollar.

The above questions require hard, nonpolitical answers. Just a few months ago we had to make a hard decision about our national defense and we decided, rightly, that the Federal Government must spend whatever is needed to maintain our international position. Now it is proposed that we add to the cold-war spending unknown billions to combat the recession. Thus for the first time in our history, we would be seeking to use Federal expenditures to fight an economic war against recession while facing the necessity for increasingly large outlays to fight a cold war abroad. Even the greatest national economy in the world is not indestructible. Can we stand such a strain, and just what should government do?

If pump priming, tax handouts, and deficit induced depreciation of the dollar are not the answer, is there, then, nothing to be done? Must we just wait and let events take their course? Such a decision has much to commend it, given the known strength and resilience of our economy. But since action of some kind seems essential for political reasons, if no other, the action we take should be the kind that will eliminate some of the handicaps under which our great economic system has been operating.

TESTED REMEDY AVAILABLE

One clue to action comes from 1953–54, when the Federal Government took two important steps which I believe were the basis for the great prosperity of the succeeding 3 years. They were: (1) cut Federal spending, (2) reduce taxes in such a way as to remove some restraints from the private economy.

Federal spending for fiscal 1955, beginning July 1, 1954, was cut by $3 billion to $64½ billion, $10 billion below the Korean war peak (and about $10 billion below current spending levels). Simultaneously, the Internal Revenue Act of 1954 made important strides in taking the tax wraps off the economy.

Without pump-priming Federal spending, without mere tax handouts of the $20-for-everyone variety, the results were almost instantaneous. Total goods and services produced (gross national product) soared $30 billion in a single year, the growing unemployment problem evaporated, and general prosperity reached new peaks for several years.

The same course would appear sound in dealing with the current recession: cutting sharply, rather than increasing, the proposed Federal budget for fiscal 1959. It is less essential domestic spending, not military spending, that has forced the 1959 budget to a record total of $74 billion.

If we avoid any vestiges of pump-priming, if we reduce less essential Federal spending, and if we insist on getting a dollar's worth of defense for every military dollar spent, billion can be made available for tax reduction that will take more restraints off our economy.

Given this opportunity, where should we start:

1. The present Federal tax structure is a formidable barrier to expansion of industry and jobs. Notwithstanding the tax reductions of 1954, Federal individual tax rates are only slightly below the peak levels of World War II; the first bracket rate is now 20 percent as compared with 16.6 percent in 1948. The corporation income tax rate of 52 percent compares with a 38 percent rate in 1948 and a peak wartime rate of 40 percent. Excise taxes were not significantly reduced after World War II and were raised to new highs during the Korean War. The 1954 excise reductions still left the overall burden well above the 1948 level; in fact, the new and increased highway user taxes imposed in 1956 approximately offset the reductions in other excise taxes of 1954.

Nearly all of us would put the too-high individual income tax rates on individuals at the top of any list of barriers to free enterprise operations. The income tax has become so progressive that it is a drag on economic progress. Ever increasing rates up to 91 percent applied against any additional money they might make, cannot be the way to interest and encourage people to invest their savings in new job-creating ventures. In the top brackets of the individual income tax these rates impair the revenue instead of increasing it. A recent tax foundation study showed that in 1953, taxable income in excess of $100,000 per return was less than half of such income reported in 1916. Reducing the top bracket rates would not only restore incentives but would actually increase the revenues.

INCOME TAX IS ONEROUS

Nor is the weight of this tax purely on the high brackets. The tax is now a broad-based tax and most of its yield comes from persons of moderate or small incomes, for that is where the bulk of the income is. Yet the basic starting rate is 20 percent on the first dollar of taxable income, an onerous rate, only 3 percentage points lower than the wartime peak.

Our present individual income tax structures consists of tax brackets unchanged since 1942. These reflect the wartime effort to exact the maximum amount of revenue. The rates and brackets were devised to restrict private economic activity, to prevent the launching of new private ventures and to discourage expenditures on goods that would compete with our wartime production needs. It is hard to see how such a structure can fill the exact opposite goals that our current situation demands.

Clearly then, the first major step for helping our economy to move ahead would be a revision of the individual tax rates and brackets. The following steps suggest the course we might follow:

(a) Divide the first tax bracket into two $1,000 brackets and subject the first $1,000 to a lower rate. The relative effect would be fairly close to that of an increase in exemptions but it would have the virtue of not relieving several million taxpayers from the burden of any income tax. This lower rate on the first $1,000 should be coupled with a flat percentage reduction in all the other bracket rates. A comprehensive revision of the bracket widths and rates should be the ultimate goal, but pending such a revision, a flat percentage reduction would be a step in that direction.

START WITH RATE REDUCTIONS

A reduction of the tax rate on the first $1,000 to 17 percent from the present 20 percent and a flat 10-percent cut in the rates applicable to all taxable income above $1,000 would amount to tax savings of $4.3 billion for individual income taxpayers. A rate reduction to 18 percent on the first $1,000 and a 5-percent cut in other rates would reduce revenues $2.5 billion.

(b) Make a start in reducing the impact of the confiscatory top rates of the individual income tax, either by extending the bracket reach or by lowering the top rate from 91 percent to about 70 or 75 percent. The revenue effects of such a change would certainly not exceed a loss of $100 million, and more likely would be nil.

2. Reduce the corporation income-tax rate from 52 to 50 percent. The revenue cost would be about $800 million. Corporations provide nearly three-quarters of all the non-Government wages and salaries paid. The corporate sector of our economy is one of the biggest segments of business life that is disciplined by vigorous competition. Yet these artificial entities certainly cannot pay taxes out of their own pockets. It is reasonably clear that the corporate tax is paid either by the stockholder or the consumer. In either event, what justification can there be for taking more than half of their profits (which are now less than they were 6 years ago)? Our taxation of corporation seems designed not only to make it unprofitable for investors to put their savings into corporate enterprise (through double taxation of dividends) but further, to prevent the corporations from themselves accumulating funds needed for growth and modernization (through restricted depreciation policies). The net effect has been to erode away corporate capital, to penalize growth, and to erect obstacles to new risky and competitive ventures that business intelligence dictates.

The first step, a token reduction in the corporate rate, should be followed by further cuts, with the objective of reaching as quickly as possible, at least the peak World War II level of 40 percent.

3. Put into effect President Eisenhower's recommendations for aiding small business. The tax savings to small business would be about $200 million.

4. Reduce the excises that were levied for wartime purposes and that interfere with the current business operations by pyramiding costs. Specifically, the excise on transportation of property should be repealed and the excise on the transportation of persons should be cut in half. In addition, the Federal excises on automobiles, parts, and heavy household equipment should be cut in half. The repeal and reduction of these taxes would have widespread beneficial effects (assuming that the excise cuts would be passed on in lower prices). The tax savings from these excise tax reductions would be approximately $1.3 billion.

The total revenue reduction resulting from the adoption of this program would be between five and seven billion dollars. Such a tax revision program would be a positive step in the direction of permanently improving the entire tax structure by lessening the obstacles to business operations and increasing personal incentives. It would be an important step in the right direction, not a panicky antirecession measure, but its benefits would be felt immediately.

In summary, the present economic situation does not call for panicky pump-priming expenditures and political tax handouts by the Federal Government. Not only would the effect of such actions on the current recession be dubious in the extreme, but a certain result of this course would be more huge, inflationary deficits and a cheaper dollar. What is needed is fiscal sanity and a curtailment of less essential spending. Any tax reduction must be measured by a rigid yardstick: does it remove some of the tax restraints on our economy and will its long-term effect add to our hope of lasting prosperity for all the American people?

Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. BYRNE of Illinois. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a very splendid letter from Mrs. Harper Andrews, 211 East Prospect Street, Kewanee, Ill., president of the Illinois League of Women Voters. This intelligent group of women are active in my district, and I commend them all for their efforts to keep informed about many of the complicated matters before Congress. This is indicative of their interest in our Government at both national and local levels.

The subject of Mrs. Andrews' letter is reciprocal trade. She is specific in what part trade will play in the development of Chicago and the Middle West as a world port as the St. Lawrence seaway is completed and begins operation.

As a member of the Public Works Committee, we have detailed and vast information about the seaway. I first began thinking of the seaway when I was a student, long before I knew I would ever be in Congress helping to bring the completion about. I have endeavored since being here to acquaint the people of my district with the tremendous effect the St. Lawrence seaway will have on Chicago. The completion of the seaway is going to make Chicago a world port, taking her place with the other vital port cities throughout the world. It will complete the building of a truly great city, ranking second to none.

Successful operation of the seaway will be dependent upon world trade and our great fleet of merchant ships. A sound policy on these matters will, I am confident, reflect in an unprecedented economic expansion for our city of Chicago.

The letter follows:

LEAGUE OF WOMEN VOTERS,
Chicago, Ill., April 23, 1958.
The Honorable EMMET F. BYRNE,
House Office Building,
Washington, D. C.

DEAR MR. BYRNE: As you see from this picture I am in Atlantic City, attending the national convention of the League of Women Voters, wearing a hat that illustrates what trade means to us in Illinois. There are 1,500 league members here, representing our 128,000 membership in all 48 States, Hawaii, Alaska, and the District of Columbia.

My hat of light blue tulle decorated with small ships represents Illinois' vital interest in water-borne imports and exports. When the St. Lawrence seaway is opened in 1959 and the widening of the Calumet Sag Channel is completed we in Illinois will have easy access to three-quarters of the world's shipping. Already the port of Chicago handles 40 percent of the foreign commerce of the Great Lakes ports.

We anticipate a much greater volume of trade flowing, after 1959, on the waters my hat symbolizes. Then the $260 million the Chicago area is spending for the port and the additional $450 million the United States, Canada, and Illinois have already spent for the seaway will be amply justified.

When the seaway and our new enlarged world port are operating, the real ships, of which those on my hat are only small symbols, will be carrying more of the 40 percent of all United States exports which originate in the Middle West and will be creating more than the 300,000 jobs in Illinois now dependent on world trade.

These are some of the reasons we are hoping for passage by the Congress of a realistic and workable Reciprocal Trade Act which will permit and encourage the undeniable capacities for economic growth of our area.

Sincerely,

ALICE G. ANDREWS.
Mrs. Harper Andrews.

KEWANEE, ILL.

Do You Want To Pay for Needless Projects?

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. GROSS. Mr. Speaker, the Waterloo (Iowa) Courier has expressed support for the President's veto of S. 497, the rivers and harbors pork-barrel bill. In an editorial in its April 17 edition, the Courier properly emphasizes that spending for unnecessary public works—and there are many projects in S. 497 which cannot be justified—means either higher taxes or more inflation.

Having voted "nay" on the bill, as I did on similar legislation in 1956 which also was vetoed by President Eisenhower, I am pleased to include the Courier editorial as part of my remarks:

It takes courage to veto a $1,700,000,000 pork barrel rivers and harbors bill in an election year and during a business recession. Yet President Eisenhower has done so, demonstrating that he puts sound policy above political expediency.

It should be emphasized, as the President did in his veto message, that those public works projects on which construction can be started immediately have already been begun. The additional pork barrel projects in the bill would require months of planning before they could be started. There is every expectation that employment will be on the upturn by then.

The pork barrel bill is an excellent example of the kind of measures that would be adopted if the Democrats were to obtain a big enough majority in the next Congress to pass legislation over a Presidential veto. Such measures would only prolong any existing business recession as did the pump-priming measures of the New Deal in the 1933–1939 period.

What these things mean for the great majority of Americans is a lower standard of living. For spending for unnecessary public works means either higher taxes or more inflation. That fact could be disguised for a time during the early New Deal period by enacting steeply progressive income-tax rates. But with Federal expenditures at the present level no great additional revenue can be obtained by soaking the rich. From now on, additional Government spending will have to come either from additional taxes paid by everyone or additional inflation which merely reduces the value of all savings.

Oliver Wendell Holmes—I

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. O'HARA of Illinois. Mr. Speaker, it is from the lives of the men and women of transcending stature in the past of our country that we derive inspiration for our participation in the present and find the pattern for our course.

Two weeks from this Wednesday, on May 14, there will be held in the city of Chicago the Justice Oliver Wendell Holmes Celebration banquet which in anticipation has stirred the interest of the Nation. This event, calculated to refire our people in a time of trouble and worry with the spirit of one of the great jurists and philosophers of the ages, is being staged by the Adult Education Council of Greater Chicago and the Justice Oliver Wendell Holmes Celebration committee in cosponsorship with the Harvard Club of Chicago. The general chairman and the dynamic force in making the Holmes banquet the focus of national interest is the Honorable Barnet Hodes, who as corporation counsel of Chicago set the pattern for the conduct of a public law office and now with Col. Jacob Arvey heads one of the largest law firms in the United States. The honorary chairman is Carl Sandburg, the famous poet whose Justice Windom in Remembrance Rock is fashioned in reverence for Justice Holmes.

This is the purpose of the banquet as expressed by Mr. Hodes:

We hope that by virtue of the Oliver Wendell Holmes celebration to reacquaint the people of America with the spirit and philosophy which Justice Holmes so eloquently exhibited by his life and accomplishments. We also believe that it is essentian to call the attention of the present generation to the inspiration of Justice Holes because, in doing so, we will give today's generation a greater understanding of our heritage of freedom and responsibility under law.

The program at the banquet will include addresses by Carl Sandburg and by Mark DeWolfe Howe, professor of law at Harvard University, secretary to Justice Holmes and his distinguished biographer; Songs of America, by Pete Seeger; and the premiere of Triumphant Banner, a new play on Justice Holmes, by Francis Coughlin and William Friedkin, with Maurice Copeland as Justice Holmes and Stanley Gorden as Justice Taft, supported by a cast of 25. Donna E. Workman is the production manager.

Mr. Speaker, I am sure it will prove of interest to my colleagues and the country to extend my remarks at this point to include the text of the memorandum on Justice Holmes prepared by the Adult Education Council of Greater Chicago in connection with this historic banquet. The text follows:

OLIVER WENDELL HOLMES, JR.

Here Is a Yankee, Strayed From Olympus, essay on Justice Holmes by Elizabeth Shepley Sargent in Fire Under the Andes.

Born: March 8, 1841.

Parents: Amelia Jackson; Oliver Wendell Holmes (autocrat of the breakfast table, Harvard professor of anatomy, a founder of the Atlantic Monthly).

April 24, 1861: Joined 4th Battalion, New England Guard, as private.

June 21, 1861: Graduated Harvard, was named class poet.

July 1861: Joined Company A, 20th Massachusetts Infantry, as lieutenant (the so-called Harvard Regiment).

October 20, 1861: Wounded in abdomen at the Battle of Ball's Bluff.

September 17, 1862: Wounded in neck at the Battle of Antietam.

May 3, 1863: Wounded in foot at the Battle of Chancellorsville.

July 1864: Final service resisting Gen. Jubal Early's march on Fort Stevens; mustered out of service, 3-year enlistment over.

December 1864: Law clerk in office of Robert Morse, in Boston, after entering Harvard Law School in September 1864.

May 1866: First trip to England.

Autumn 1866: Joins the law office of Chandler, Shattuck & Thayer in Boston.

March 4, 1867: Admitted to the Massachusetts Bar.

1870: Opens Boston law office in partnership with brother Ned, who graduates Harvard Law School with honors; becomes editor of American Law Review; becomes instructor in constitutional law at Harvard.

July 17, 1872: Marries Fanny Bowditch Dixwell at Christ Church in Boston.

1873: Finishes editing of Kent's Commentaries on American Law; becomes partner in Boston law firm of Shattuck, Holmes & Munroe.

1874: Makes new trip to Europe, again visiting the great and near great.

1876: Appointed overseer (trustee) of Harvard University.

1880–81: Gives 12 lectures at Lowell Institute in Boston, the basis for a book on the common law.

March 3, 1881: His book, The Common Law, is published.

1882: Appointed to the Weld professorship in law, Harvard University.

December 15, 1882: Appointed associate justice of the Massachusetts Supreme Court.

July 1899: Appointed chief justice of the Massachusetts Supreme Court.

August 11, 1902: Appointed as Associate Justice of the United States Supreme Court by President Theodore Roosevelt, confirmed by the Senate in December.

December 8, 1902: Sworn in as Justice of the United States Supreme Court.

January 1916: Louis Dembitz Brandeis named to the United States Supreme Court, an old colleague and friend of Holmes from Harvard Law faculty, later to join in many famous dissents.

April 30, 1929: Mrs. Holmes dies in Washington at the age of 88.

January 11, 1932: Justice Holmes resigns.

March 1933: President Franklin D. Roosevelt visits Justice Holmes for advice.

March 6, 1935: Justice Holmes died and is buried next to his wife at Arlington National Cemetery.

Sources of material on Holmes: Max Lerner, The Mind and Faith of Justice Holmes, 1943; Francis Biddle, Mr. Justice Holmes, 1942; Oliver Wendell Holmes, Speeches, Boston, 1913; Harold J. Laski, Collected Legal Papers (editor), New York, 1920; Harry Clair Shriver, Justice Oliver Wendell Holmes, His Book Notices and Uncollected Letters and Papers, New York, 1936; Silas Bent, Justice Oliver Wendell Holmes, New York, 1932.

HOLMES ANECDOTES

President Lincoln climbed a parapet at Fort Stevens to witness his first battle. The firing began and a man on the parapet 5 feet away fell. Then a man 3 feet away fell dead. Holmes turned and shouted at the President: "Get down, you fool." Lincoln got down and said, "Captain, I am glad you know how to talk to a civilian."

On a visit to England, General Hanley said to Holmes at a dinner: "Colonel Holmes, can you train your men to fight in line?" Said Holmes: "Why, General Hanley, you can train monkeys to fight in line."

Holmes to his family: "Did you hear what St. Peter said to the Boston man at the pearly gates?" "You won't like it here."

At a dinner party, Mrs. Bell of Boston said to Holmes: "I hear you have been reading Germinal. Boston is still shocked by Zola. What do you think of him, Judge Holmes?" Said Holmes: "Improving, but dull."

Holmes at the age of 90 to a girl of 16: "I won't refrain from talking about anything because you're too young, if you won't because I'm too old."

Holmes was 70 years old on March 8, 1911. In a message to Lady Pollock, he said: "Give my love to Lady Pollock. Tell her the old man swept around the last post to the home stretch going strong."

FDR said to Holmes, calling on him a few days after the inauguration in 1933, and finding him in the library, reading Plato: "Why do you read Plato, Mr. Justice?" Said Holmes, who was 90: "To improve my mind, Mr. President." Said F. D. R.: "You have lived through half our country's history; you have seen its great men. This is a dark hour. Justice Holmes, what is your advice to me?" Said Holmes: "You are in a war, Mr. President. I was in a war, too. And in a war there is only one rule: Form your battalions and fight."

HOLMES QUOTATIONS

"Life is action and passion. I think it is required of a man that he should share the action and passion of his time at peril of being judged not to have lived."

"If I were dying, my last words would be, Have faith and pursue the unknown end."

"To know is not less than to feel."

"A valid idea is worth a regiment any day."

"To ride boldly at what is in front of you, be it fence or enemy; to pray, not for comfort, but for combat; to remember that duty is not to be proved in the evil day, but then to be obeyed unquestioning; to love glory more than the temptations of wallowing ease, but to know that one's final judge and only rival is oneself. For high and dangerous action teaches us to believe as right beyond dispute things for which our doubting minds are slow to find words of proof. Out of heroism grows faith in the worth of heroism. The proof comes later, and even may never come."

July 4, 1884: "Through our good fortune, in our youth our hearts were touched with fire. It was given us to learn at the outset that life is a profound and passionate thing. While we are permitted to scorn nothing but indifferences, and do not pretend to undervalue the worldly rewards of ambition, we have seen with our own eyes, beyond and above the gold fields, the snowy heights of honor, and it is for us to bear the report to those who come after us. But, above all, we have learned that whether a man accepts from fortune her spade and will look downward and dig, or from aspiration her ax and cord and will scale the ice, the one and only success which it is his to command is to bring to his work a mighty heart."

1897, Brown University commencement address: "A man of high ambitions must leave even his fellow adventurers and go forth into deeper solitude and greater trials. He must start for the pole. In plain words he must face the loneliness of original work. No one can cut new paths in company. He does that alone."

"The law embodies the story of a nation's development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics. * * * The life of the law has not been logic: it has been experience. The felt necessities of the time, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed."

"The very consideration which judges most rarely mention, and always with an apology, are the secret root from which the law draws all the juices of life. I mean, of course, considerations of what is expedient for the community concerned."

April 5, 1905, Lochner dissent: "A constitution is not intended to embody a particular economic theory, whether of paternalism * * * or of laissez faire. It is made for people of fundamentally differing views, and the accident of our finding certain opinions natural and familiar, or novel and even shocking, ought not to conclude our judgment upon the question whether statutes embodying them conflict with the Constitution of the United States. * * * Constitutional law, like other mortal contrivances, has to take some chances. * * *

"The ferment of genius in its creative moments is quickly imparted. If a man is great, he makes others believe in greatness."

"A word is not a crystal, transparent and unchanged; it is the skin of a living thought and may vary greatly in color and content according to the circumstances and the time in which it is used."

From opinions delivered on the Massachusetts Supreme Court: "If it is a bad rule, that is no reason for making a bad exception to it." "A horsecar cannot be handled like a rapier." "A boy who is dull at 15 probably was dull at 14." "Civil proceedings in court are not scientific investigations the end of which always must be objective truth." "The mind like any other organism gradually shapes itself to what surrounds it, and resents disturbance in the form which its life has assumed." "All values are anticipations of the future."

1896, Vegalahn dissent: "One of the eternal conflicts out of which life is made up is that between the effort of every man to get the most he can for his services, and that of society, disguised under the name of capital, to get his services for the least possible return."

March 14, 1904, Northern Securities dissent: "Great cases like hard cases make bad law. For great cases are called great not by reason of their real importance in shaping the law of the future but because of some accident of immediate overwhelming interest which appeals to the feelings and distorts the judgment. These immediate interests exercise a kind of hydraulic pressure which makes what previously was clear seem doubtful, and before which even well-settled principles of law will bend."

Abrams dissent: "When men have realized that time has upset many fighting faiths, they may come to believe even more than they believe the very foundations of their own conduct that the ultimate good desired is better reached by free trade in ideas—that the best test of truth is the power of the thought to get itself accepted in the competition of the market, and that truth is the only ground upon which their wishes safely can be carried out. That, at any rate, is the theory of our Constitution. It is an experiment, as all life is an experiment. * * * While that experiment is part of our system I think that we should be eternally vigilant against attempts to check the expression of opinions that we loathe and believe to be fraught with death."

Letter to Sir Frederick Pollock: "The prevailing notion of free speech seems to be that you may say what you choose if you don't shock me. * * * The whole collectivist tendency seems to be toward underrating

or forgetting the safeguards in bills of rights that had to be fought for in their day and that are still worth fighting for. I have had to deal with cases that made my blood boil and yet seemed to create no feeling in the public or even in most of my brethren."

1899: "We must think things, not words."

Gitlow dissent: "Every idea is an incitement. The only difference between the expression of an opinion and an incitement * * * is the speaker's enthusiasm for the result. Eloquence may set fire to reason. If in the long run the beliefs expressed in proletarian dictatorships are destined to be accepted by the dominant forces of the community, the only meaning of free speech is that they should be given their chance and have their way."

Olmstead dissent: "I think it less an evil that some criminals should escape than that the Government should play an ignoble part."

Schwimmer dissent: "If there is any principle of the Constitution that more imperatively calls for attachment than any other it is the principle of free thought—not free thought for those who agree with us, but freedom for the thought that we have. * * * I would suggest that the Quakers have done their share to make the country what it is. * * * I had not supposed hitherto that we regretted our inability to expel them because they believe more than some of us do in the teachings of the Sermon on the Mount."

March 8, 1931: "To express one's feelings as the end draws near is too intimate a task. But I may mention one thought that comes to me. * * * The riders in a race do not stop short when they reach the goal. There is a little finishing canter before coming to a standstill. There is time to hear the kind voices of friends and to say to one's self: 'The work is done.' But just as one says that, the answer comes: 'The race is over, but the work never is done while the power to work remains.' The canter that brings you to a standstill need not be only coming to rest. It cannot be while you still live. For to live is to function. That is all there is to living. And so I end with a line from a Latin poet who uttered the message more than 1,500 years ago: 'Death plucks my ear and says, live—I am coming.'"

February 1913, Harvard Law School dinner: "There is a very important truth to be extracted from the popular discontent. We must * * * try to see what we can learn from hatred and distrust and whether behind them there may not be some germ of inarticulate truth."

"As I grow older I grow calm. If I feel what are perhaps an old man's apprehensions, that competition from new races will cut deeper than working men's disputes and will test whether we can hang together and can fight; if I fear that we are running the world's resources at a pace we cannot keep; I do not lose my hopes.

"I do not pin my dreams for the future to my country or even to my race. I think it probable that civilization somehow will last as long as I care to look ahead—perhaps with smaller numbers, but perhaps also bred to greatness and splendor by science. I think it is not improbable that man, like the grub that prepares a chamber for the winged thing it never has seen but is to be—that man may have cosmic destinies that he does not understand. And so beyond the vision of battling races and an impoverished earth I catch a dreaming glimpse of peace.

"The other day my dream was pictured to my mind. It was evening. I was walking homeward on Pennsylvania Avenue near the Treasury, and as I looked beyond Sherman's statue to the west the sky was aflame with scarlet and crimson from the setting sun. But, like the note of downfall in Wagner's opera, below the sky line there came from little globes the pallid discord of the electric lights.

"And I thought to myself the Gotterdammerung will end, and from those globes clustered like evil eggs will come the new masters of the sky. It is like the time in which we live. But then I remembered the faith that I partly have expressed, faith in a universe not measured by our fears, a universe that has thought and more than thought inside of it, and as I gazed, after the sunshine and above the electric lights there shone the stars."

MISCELLANY

Other well-known Holmes dissents: *Baldwin* v. *Missouri*, *Toledo News-Bee* v. *United States*, *Milwaukee Leader* v. *Postmaster Burleson*, dissent on child labor law (June 1918).

Winner of the Harvard undergraduate award for an essay on Plato.

Member of Porcellian Society, Hasty Pudding Club, and Phi Beta Kappa at Harvard.

Editor of the Harvard magazine.

Favorite painter: Albrecht Durer.

Best friends: Sir Frederick Pollock and William James.

Keynote to success: "To want something fiercely and want it all the time."

Goad to success: His father's words: "A lawyer can't be a great man."

Difficulty: Relationship with his celebrated father: "So you are the son of Oliver Wendell Holmes." "No. He's my father."

Oliver Wendell Holmes—II

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a memorandum on Mrs. Oliver Wendell Holmes prepared for the Adult Educational Council of Greater Chicago on Mrs. Oliver Wendell Holmes in connection with the historic Oliver Wendell Holmes banquet in Chicago on May 14, 1958.

The article follows:

FANNY BOWDITCH DIXWELL (MRS. OLIVER WENDELL HOLMES)

Mrs. Holmes, like her husband, came from a respected and established Boston family. Like her husband, she brushed shoulders with many of America's early literary, civic, and intellectual giants.

Fanny Holmes was a women to reckon with. She was educated to her position in Boston society and was, in a deep sense, the only woman for Oliver Wendell Holmes to marry. She could, and did, puncture his ego when necessary. She could, and did, give him the meaningful daily support that helped him rise above an inner, unspoken conflict with his celebrated father, Oliver Wendell Holmes, Sr.—the autocrat of the breakfast table.

There was something invincibly distinguished about Fanny Holmes. She paid not the slightest attention to fashion but dressed as she pleased. When everyone else was in bonnets she wore a sailor hat, veiled, set severely on her pompadour, when they wore hats she reverted to her bonnet, tied under her chin with ribbons, perky and fresh. She wore at all times (after a serious illness during her marriage) a high collar of white net, boned. She dressed as she pleased and did as she pleased. Twice one winter, at the age of 60, she and her husband were seen running to fires along Beacon Street.

She urged her husband to leave Boston for Washington and his post on the Supreme Court, even when doubts assailed her as to how she would be received in Washington. A year younger than Holmes, she appeared older than he. She said to a friend: "Mary, look at me. How can I go to Washington—I, who look like an abandoned farm in Maine?"

Arriving in Washington, a coalman refusing coal delivery because of scarce supplies, was told that the coal was for Mr. Holmes. "Who the devil is Oliver Wendell Holmes?" said the coalman. Said Fanny: "After 60 years, Wendell, we have achieved a life where your father's name is of no significance, except as you make it so."

When President Roosevelt held a dinner for Holmes on his coming to the Supreme Court, he escorted Mrs. Holmes to the dinner table. She mentioned that she had been visited by the wives of various Congressmen. Said TR: "You found the ladies pleasant?" Said Fanny: "Washington is full of famous men and the women they married when they were young." T. R. roared with laughter. Later Fanny told her husband: "I find it somewhat easier to go into dinner at the head of all the company."

Fanny was a practical joker, possibly not born so, but developed so, to keep her husband relaxed and free from tension when he was under great strain. She would put some trick item out each April Fool's Day—unlightable matches, false inkspots on freshly written court opinions—even celluloid roaches in the flour barrel. On Washington's birthday, she invariably placed a red and black hatchet at Holmes' place at the dinner table. In March, on St. Patrick's Day, it would be a shamrock.

A high-spirited woman of immense charm and gaiety, her spirits were dimmed after a serious illness, but were restored by the family's later move to Washington. She could say to her husband: "Wendell, I see by the transcript that, if you keep on, you may be almost as famous as your father, some day." Or, "Wendell, I see by the paper that you are the 'laboring man's friend'."

She was imensely devoted to a variety of birds that she kept at all times. Once when one bird got loose and killed a starling, she put him in a separate cage, and isolated thus, hung crepe over the cage door.

Once Justice Holmes created an uproar over a book that had supposedly been lost. He cussed his secretary and there was a great storm. Through it all, Mrs. Holmes just looked at him in the sharp way she had. When Holmes later returned to home from the offices of the Supreme Court the "lost" volume was in its place on the bookshelf. Above it hung an American flag. Below it was a carefully lettered sign that Fanny Holmes had made herself. It said: "I am a very old man. I have many troubles, most of which never happened." Justice Holmes laughed until he cried.

On a visit to Pride's Crossing, Mrs. Holmes was driven to the depot to meet her husband by Larcum of the livery stable. The horse suddenly began running and didn't stop until they got to Pride's Crossing. Mrs. Holmes was imperturbable. She just leaned out and called, waving her parasol: "Larcum, if you kill me, tell him I loved him."

Fanny Holmes said of the many needlepoint pictures on which she loved to work: "I want my pictures destroyed someday. It's dreary for people to feel they must cherish the works of departed aunts."

The marriage of Fanny and Oliver Wendell Holmes lasted 56 years. A broken hip at the age of 88 sent Fanny to bed and soon thereafter she quietly died. She was buried at Arlington National Cemetery in Washington.

For the 6 years that remained to him, Justice Holmes followed an annual ritual on the day of Fanny's death. He would visit her grave and leave a bouquet of a rose, a poppy, and a spray of honeysuckle.

He was buried beside her after his death in 1935.

Unemployment Problem in the State of New Jersey

EXTENSION OF REMARKS
OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. ADDONIZIO. Mr. Speaker, unemployment in New Jersey, as in most other States, is a serious and pressing problem. The latest figures I have been able to obtain show that there are roughly 150,000 unemployed in the State as a whole, or about 9.6 percent of the overall work force.

At the moment the prinoipal labor surplus areas in the State include centers such as Newark, Paterson, Perth Amboy, Trenton, Morristown, and Dover. However, there are three other labor market areas in New Jersey in which economic distress has become virtually chronic. One may feel fairly confident that as general business conditions in the country improve, in most labor markets in the States the employment levels will also improve. But experience demonstrates that in the three areas where serious unemployment has persisted even when the rest of the State was working quite well, there will be no significant recovery unless specific and adequate measures are taken to improve the economac base in these chronic labor surplus markets.

It is because of my conviction that carefully designed legislation must promptly be enacted by the Congress to aid these depressed areas in my State, and elsewhere in this country, that I call to the attention of my fellow Members of Congress a series of studies on the subject now being circulated by the Area Employment Expansion Committee. This committee is headed by former United States Senator Prentiss Brown of Michigan and is composed of a representative group of citizens who have given special study to the problem of the chronically distressed labor area. I attach herewith fact sheet No. 7 (prepared by the Area Employment Expansion Committee which deals specifically with the current situation in New Jersey.

AREA REDEVELOPMENT FACT SHEET NO. 7—NEW JERSEY

The State of New Jersey continues to have three labor market areas which have remained distressed and in which unemployment has been chronic. These three labor markets, which include Atlantic City, Long Branch, and Bridgeton, have for many years tried to solve their problems through their own efforts and those of the State. But they have not graduated from the labor surplus status. They require Federal assistance to enable them to create new locational advantages derived from a new economic base.

The problems of these three depressed urban areas are chronic in character. They will not be surmounted by a temporary upswing in business throughout the country. They will not benefit from a general reduction in the level of unemployment. They will be the last to feel the tides of expansion. To hasten the process of recovery and bring them back into the mainstream of American economic life, these communities must receive specific help.

In January 1958, their rates of unemployment were:

Atlantic City, 17.1 percent.
Long Branch, 11.7 percent.
Bridgeton, over 10 percent.

In the present recession, other labor markets in New Jersey have also been classified as areas of substantial labor surplus. These include Newark, Paterson, Perth Amboy, Trenton, and Morristown-Dover. It is hoped that these communities will not become permanently distressed; they are unlikely to, since most have sound industrial structures.

The distressed communities need help in diagnosing their problems, organizing their community leadership in addition to the commercial interests, financial assistance to improve their facilities, and finally, aid in building adequate industrial sites. They can obtain such assistance from the organization and funds which would be available under the Douglas Area Redevelopment bill.

LABOR MARKETS IN NEW JERSEY

The entire State of New Jersey can be placed in 5 major, 5 smaller, and 6 very small labor markets as follows:

Major:
Atlantic City.
Newark.
Paterson.
Perth Amboy.
Trenton.

Smaller:
Bridgeton.
Long Branch.
Morristown-Dover.
Somerville-Plainfield.
Camden.

Very small:
Burlington.
Gloucester.
Phillipsburg.
Salem.
Sussex.
Wildwood.

BASIC CAUSES FOR CHRONIC UNEMPLOYMENT

The basic causes for the chronic unemployment in these 3 areas must be studied separately, to isolate the types of problems they face and the nature of the long-term aid they need.

Bridgeton, N. J.

This labor market includes all of Cumberland County; part of Atlantic County (Buena Borough, Buena Vista Township, in part); Gloucester County (Franklin Township and Newfield Borough); and Salem County (Elmer Borough and Pittsgrove Township). Its 1955 population is estimated at 113,860 persons. Its principal centers are Bridgeton, Millville, Vineland, Penns Grove, Woodstown, and Buena.

The civilian labor force in this area has increased only slightly. Its numbers, for January of the respective years, were as follows: 1950, 59,350; 1951, 63,400; 1952, 63,600; 1953, 63,500; 1954, 65,150. Subsequently, the Salem area was excluded from the labor market and the figures, exclusive of this area, were as follows: 1955, 46,500; 1956, 47,000; 1957, 48,150.

Actually, unemployment has been consistently high. The rate exceeded 6 percent in all but 2 months of 1950; all but 4 of 1951; half of 1952 and of 1953; all of 1954; all but 2 months of 1955; all 1956; all but 2 months of 1957. Latest figures show an unemployment rate of 9.1 percent for November 1957 and over 10 percent in 1958. At the beginning of 1957, the unemployment rate was 13.4 percent for January and 11.2 percent for March and, except for September when it was 5.4 percent, it has otherwise exceeded 9 percent.

The reason for its difficulties are to be found in the very nature of the area. About 46 percent of its employed force is in manufacturing. A considerable volume of employment has been lost because of the closing of several garment plants. The reduction in dredging, due to the depletion of mature oysters and the lack of demand, has curtailed the fishing industry in this area.

The amount of new employment coming into the area has been insufficient to pick up the slack.

Atlantic City labor market

This labor area includes all of Atlantic County except for Buena Borough, part of Buena Vista Township, Landisville, and Minotola, the townships of Bass River, Shamong, and Washington in Burlington County; Waterford and Winslow Townships and Chesilhurst Borough in Camden County; Uppertownship and Ocean City in Cape May County; and part of Monroe Township in Gloucester County. Currently, it has a work force of some 60,000 persons.

This area has been classified as having substantial unemployment and labor surplus since 1949. The only alleviations were those which occurred during war periods through military withdrawals and war-induced employment expansion in other areas. But, with the end of the war, the labor surpluses have been reestablished.

Actually, unemployment is consistently high except during the 4 or 5 summer months. The reason is quite apparent when it is known that over 80 percent of the nonfarm wage and salary workers are engaged in nonmanufacturing enterprises primarily serving the community, which is a health and vacation resort and a convention center. During the winter months, the rate of unemployment rises, as it did in January 1957 to 17 percent, and in January 1958 to 17.1 percent.

Long Branch

This labor market includes Monmouth County except for Millstone and Upper Freehold Townships and Allentown Borough; and Ocean County except for part of Plumstead Township. It has a labor force of some 114,900 persons.

This area, too, is primarily a vacation resort. Less than 17 percent of the area's employment is in manufacturing. The area houses considerable tourist resort business and employment, therefore, is highly seasonal. The major manufacturing industry is apparel. There is other light manufacturing, in the electrical machinery industry.

Unemployment in this area has not tended to be as serious as in Atlantic City, but it has created a chronic surplus for many years. In 1957, except for the summer months, the rate of unemployment was above 6 percent, with the rate in January 1957 reaching the level of 8.7 percent; this compares with 9.4 percent in January 1956, and 9.9 percent in January 1955. In January 1958, the rate was 11.7 percent.

Both Atlantic City and Long Branch are greatly in need of diversification of enterprises and industry to provide more alternative employment during the nonsummer months.

DISTRESSED LABOR MARKETS

The 3 labor markets of Atlantic City, Bridgeton, and Long Branch have been classified as surplus areas for more than 3 years. They are so classified at present. Their rates of unemployment have been high (table I). They would be qualified for the benefits of such classification under the Douglas bill. Atlantic City has been classified as chronically distressed since 1952. Bridgeton and Long Branch have been so classified since 1954.

Unemployment in surplus areas higher than in remainder of State

The rate of unemployment in these areas has been markedly higher than in the re-

mainder of the State. In 1953, the average for these 3 areas was 5.8 percent, as compared to 3.5 percent for the other areas. The contrast for other years was as follows:

[Percent]

Year	3 distressed areas	Other State areas
1954	7.7	6.3
1955	8.0	5.5
1956	7.7	4.9
1957	7.2	5.3

The 3 surplus areas provided about 16 percent of the unemployed in the State, though they accounted for about 11 percent of the population (table III).

Disproportionate share of unemployment compensation

While the labor force in these 3 chronic surplus areas represents only about 11 percent of the State's population, the residents of these areas account for some 16 percent of the unemployment compensation beneficiaries. In fact, the rate of continued unemployment claims of the covered population tended to be more than double the rate for the remainder of the State (table III).

Unemployment compensation benefits paid to these 3 areas amounted to about 15 percent of the total of benefits in the State (table IV).

Claimants who exhausted their unemployment benefits in these 3 labor markets comprised 13 to 17.5 percent of the total of the State (table V).

The disparity between the unemployment benefits in these areas and the rest of the State speaks strikingly of the chronic conditions which need substantial correction.

TABLE I.—*Usual labor supply classification of areas of substantial labor surplus in New Jersey,* [1] *1953–57*

Labor market area	Year classified as surplus [2]	1953	1954	1955	1956	1957
Major area: Atlantic City	1952	D	D	E–D	E–D–E	E–D–E
Smaller areas:						
Bridgeton	1954	NC	NC–S	S	S	S
Long Branch	1954	NC	NC–S	S	S	S

[1] Major areas are classified as follows: D—Unemployment between 6 and 8.9 percent of total labor force. E—Unemployment between 9 and 11.9 percent of total labor force. Smaller areas are classified "S" if unemployment is 6 percent or more. NC—Not classified. NC–S—Classified as labor surplus for part of year.
[2] Current classification system was instituted in 1951.

Senate Bill 3337

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. FORD. Mr. Speaker, under leave to extend my remarks I would like to include an editorial from the Waterways Journal of April 12, 1958, entitled "Senate Bill 3337," it comments favorably on an amendment to the Medals of Honor Act proposed by Senator CHARLES POTTER, of Michigan:

SENATE BILL 3337

There have been many acts of heroism on the inland waterways over the years. An example of the acts above and beyond the call of duty was the rescue of more than 150 persons by the crews of the towboats *Houston* and *Dallas* of the Coyle Lines, Inc., during hurricane Audrey last year. Unfortunately, most of the inland waterways' heroes have not received the public recognition they deserve.

To correct this omission, Senator CHARLES POTTER, of Michigan, has introduced in the Senate S. 3337 to amend the Medals of Honor Act by authorizing awards for acts of heroism on vessels engaged in interstate commerce on the inland waterways. The Medals of Honor Act was passed by Congress in 1905 to provide for the awarding of bronze medals of honor to persons who, by extreme daring, endangering their own lives in saving or endeavoring to save lives from any wreck or other disaster upon any railroad in interstate commerce in the United States.

Last year Congress passed an amendment to authorize such awards for acts of heroism involving a motor vehicle. In introducing

his bill, Senator POTTER said: "The history of our country is replete with acts of heroism by personnel on vessels and barges of our inland waterways. It is fitting and proper that these courageous people shall also be eligible for awards of honor for their heroic acts." The bill is now before the Senate Committee on Interstate and Foreign Commerce.

Senator POTTER deserves commendation for his recognition of the heroism of inland waterways personnel and for his leadership in taking steps to correct the situation. The bill has the support of the Waterways Journal as well as the endorsement of a number of waterways organizations, including the Inland Waterways Common Carriers Association.

It is also to the credit of inland waterways personnel and to the inland waterways carriers that the inland waterways have an excellent maritime safety record. With the opening of the navigation season and with the return of thousands of pleasure craft to the rivers it is important that water safety be stressed. Proper observance of the rules of the road will prevent most accidents and education of pleasure-boat owners in the rules of water safety is the first step. The inland waterways carriers and the United States Coast Guard have done much effective work in this field, but it must be a continuing campaign in which all waterway interests should join.

Reynolds County School District Instituted First Vocational Agriculture Course in Forestry in the State of Missouri

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVE

Monday, April 28, 1958

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an article from the Wayne County Journal-Banner, Piedmont, Mo., which was a reprint from the December Missouri Conservationist:

REYNOLDS COUNTY SCHOOL DISTRICT INSTITUTED FIRST VOCATIONAL AGRICULTURE COURSE IN FORESTRY IN THE STATE OF MISSOURI

(By Jim Keefe)

The consolidated school in Ellington, a small Ozark town of 777 souls in Reynolds County, is composed of several buildings and some people of vision. The buildings, for the most part, are not new. Years of hard use by children are plainly evident on them.

Reynolds is not a rich county. The soils of the southeast Ozarks are stubborn and flinty. Despite a century of toil expended on them, they have not yielded a harvest to create the biggest schoolplant with the latest facilities. Those same soils in the R–2 schoolyard have the familiar rusty red-brown of Clarksville stony loam when it has been bared and exposed to weather. The stones from which the soil takes its name are plentifully in evidence.

But buildings alone do not make a school, just as soil alone does not make a county, and R–2 school has dedicated servants in its staff, people who see hope for better things in the young people frolicking in the yard. These are the real integers of Southern School District R–2.

One of the visionaries of Reynolds County is a vocational agriculture instructor named Luther R. Hilterbrand. With Conservation Commission District Forester Fred B. Whitt, he has set up a course of instruction that may be, in its own way, a quiet revolution in the approach to Reynolds County's resources.

Last year, Hilterbrand got to pondering about agricultural instruction and its hoped-for results in his community. Ray, as he is known, is a son of the region who returned there after he completed his schooling at Missouri University to try to bring out the best in the Reynolds County children. He talked to Fred Whitt, the forester stationed in Ellington, and they discussed the future of Reynolds County and its resources.

Their analysis went something like this: Reynolds is of medium size; 785 square miles. Within its borders is some of the most dissected landscape in the State, with elevations running from 450 feet to 1,700 feet. Its soils are typical of the Ozarks; the bottom lands having narrow strips of medium fertility soils, its uplands composed of stony, eroded soils of extremely low fertility. Only the valley strips are arable, with the uplands left to timber through which fires used to race unchecked and where cattle eked out an existence in open range.

In a Department of Agriculture pamphlet of 1921 vintage, the statement is found: "About one half of the population is engaged in lumbering, including the making of railroad ties * * * stock raising and forestry are the two most profitable industries * * * the county is 90 percent forested." Although those words were written 36 years ago, they describe Reynolds County today.

One other quote from the USDA document is worth citing: "With the rapid decline of the lumber industry, more dependence must be placed on the soil and greater effort made to make it yield larger returns." That statement reflects the ideas of the time, that the forests were to be cut down, exploited, and that timber would then no longer hold any place in the economy. History has exposed the fallacy. Timber is very much with Reynolds County today, but both Whitt and Hilterbrand say that the income from the forests was very low because of the poor timber quality. Ninety percent forested is not enough; there must be good forests.

It was from this reasoning that Hilterbrand went forward. It, he thought, Reynolds County children must grow up in a county 90 percent forested, why not make available to them information they must have about forests and good forestry practices? Agriculture courses they need, but agriculture in Reynolds County must always recognize that stubborn fact of rather poor soil that is best utilized in growing trees. After further discussion with Forester Whitt he was ready to present his case to Superintendent Dr. George DeWoody.

DeWoody is a forward thinking man, too, and he saw Hilterbrand's point. The necessary mechanics of setting up such a course were worked out, and in the fall of 1956 the first group of boys began class and field work in vocational agriculture forestry classes—the first of its kind, so far as is known.

Last fall Cameraman Don Wooldridge and I attended classes with a new group of boys—district R–2 had a brandnew addition to its school plant—a bright shop and classroom, where Forester Whitt was arranging his notes and making preliminary chalk marks on the new green blackboards, Don and I curiously inspected the facilities. (It has been a long time since we were in such classrooms.)

Over Whitt's green blackboard hung the familiar blue and gold Future Farmers of America banner. The local chapter charter hung nearby. Bookcases with books and pamphlets on agricultural subjects occupied one corner, another had a magazine rack with its Poland China World, old copies of Farm Journal, and the like. Around the walls hung idealized portraits of livestock. The emphasis was plainly cattle and crop farming, but for a week the boys were going to be exposed to tree farming—something new in their young lives. Last year's class had made a leaf collection, however, which was displayed. Don nudged me and indicated the multiflora rose fence outside the school building. Wildlife conservation was not unfamiliar to the boys, we noted with satisfaction.

Whitt launched into his class discussion, which that day was silviculture, or the producing and caring for a forest. The course outline, which Hilterbrand had furnished us, stated that the boys would study "Orientation, tree identification, silviculture, hardwood stand management, pine silvics, timber cruising (including methods of estimation and growth measurement), and land measurement (including use of compass, pacing, area estimation)." The first three subjects, and the last, were classroom procedures. All subjects but the first, also had field instruction and were to be practiced on the home farms. In a county like Reynolds there is no lack of outdoor laboratories, for either good or bad examples of forestry. At the town's southwest edge is the Conservation Commission's Deer Run Forest and Refuge, and in northwestern Reynolds is national forest land, for good examples. There is no lack of examples elsewhere of the effects of high grading, overgrazing, fire, and indifference.

While Whitt explained such technicalities as crown dominance, I studied the course outline further. Probably the most valuable bit of instruction was to be the student's own timber project. Each boy was expected to lay out a small tract of timber of his own, estimate timber volume present, and report on what could be expected in the way of future growth. Then he was to put his forestry training into practice by marking cull trees, removing them, make thinning cuttings where indicated, harvest mature trees and practice what he had learned in tallying and scaling. He would be required (as in any FFA project) to maintain an accurate record of his expenses and receipts for labor and materials so as to have an idea of his profit and loss. Hilterbrand would assist him throughout the project. This was putting his learning into practice in the established way.

As I read this, I recalled Fred Whitt's comments on the course as we drove to school. "What these people need is some leadership," he said. "They want to do a good job with what they have, but they need knowledge. The place to begin is with these young fellows who will be farming and working the land. Of course, in my forestry work I spend a good deal of time helping adults make the best use of their timber, but the real, best hope lies with this high-school-age group; they are going to be the inheritors of these resources—such as they are. Let's give them the best knowledge we can, so they'll use these resources wisely and well."

That afternoon, as we motored with the class out to Deer Run for a field session in timber cruising and compass use, Hilterbrand added his own comments.

"I guess you know that many of our high-school boys already have some notion of forestry work from their serving on emergency forest-fire crews. They already have had the lesson of fire drilled into them. What we want to do in this course is give them something more positive. Preventing and fighting forest fires is pretty much a negative thing, but studying, managing, and harvesting your own timber is positive. Their home projects are examples to the community, and it is the entire community that must even-

tually come around to good forestry, at least in Reynolds County."

He paused for a moment, then continued: "There are other values, too. I'm a great believer in carryover. By that I mean things they learn in forest conservation—habits of thinking and attitudes—are bound to be reflected in other things. It's a short step from recognition of good forestry and its reasons to recognition of fish and game laws, and their reasons. From there, the boys can embrace all the ways of good citizens. Maybe I'm hoping for too much," he grinned, "but I visualize this course as having to do with a lot more than just forestry."

He may be right. I'm reporting on what has and is being done, not predicting outcomes. This is fact: Southern Reynolds County School District R–2 has instituted the first vocational agriculture course in forestry in Missouri and possibly the Nation. It was established by Luther R. Hilterbrand and Conservation Commission Forester Fred B. Whitt. The school has 80 acres of timber for experimental purposes and all of Reynolds County for the future. Seven boys have five or more acres in forestry projects now, with more in the offing. This is 1 of 275 vocational agriculture departments in the State, and the State Department of Education is watching this experimental class closely. Hilterbrand says that a high-school-level textbook on forestry is badly needed. In 1957, the second group completed forestry training. That is fact.

What is less clear is what the future holds. One thing is certain; both Hilterbrand and Whitt believe that as this course is permitted to continue and grow, the knowledge young citizens bring to managing Reynolds County's resources is going to be better. They believe their project can be applied to every county in the State with good results, but that forested counties need it most. They believe that, as foresters are patient men who work in terms of 50 to 100 years to produce a beneficial timber crop, so must teachers be patient, but that their beneficial crops of informed young citizens will be remaking the face of their land for the better in much less than 150 years. We believe they are right.

The Challenge of Sputnik

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. ULLMAN. Mr. Speaker, much has been written concerning the advent of sputnik and the consequences which its launching presents to the free world. Unfortunately, much of that writing has only served to increase the confusion which initially gripped many Americans when they became aware that the Russians had launched the first earth satellite.

An exception to this situation can, however, be found in a recent article entitled "The Challenge of Sputnik," written by L. A. DuBridge, president of the California Institute of Technology. The article appears in the February issue of Engineering and Science, a publication of the institute.

President DuBridge is eminently correct, I believe, when he points out that the real challenge of sputnik is that it forces us to take stock of our intellectual resources and to assess how these resources are being utilized. His realistic response to that challenge is deserving of our close consideration.

I note that Mr. DuBridge endorses the administration's program of assistance for higher education. I must take exception with his position on this point, for I am convinced that the administration's approach to this problem is inadequate. But this is a minor point in the development of President DuBridge's general thesis, and our disagreement in this matter does not seriously detract from the significance of his article. I highly recommend it to my colleagues for their consideration, and I ask that it be printed in the RECORD, as follows:

THE CHALLENGE OF SPUTNIK

(By L. A. DuBridge)

On October 4, 1957, the Russians announced that they had successfully launched an earth satellite; that a 180-pound object was circling above the earth at an average height of 300 miles or so. A month later Sputnik No. II was in an orbit.

The reaction of the people of the world to these events was fabulous. To those scientists who had come to take it for granted that earth satellites would someday be launched—by both the United States and the U. S. S. R.—the fact that the Russians launched the first one came as a great surprise. However, it occasioned no more shock to them than having your home team lose a football game. The Russians put one over on us—fairly and squarely. O. K.—we will win the next round.

But to those who had not previously thought much about earth satellites the reaction was about as violent as though Russia had landed an atomic bomb on New York. To some it was more like the landing of a flying saucer from Mars. Astonishment, disbelief, hysteria, anger, recrimination, disillusionment, fear, and a hundred other emotional responses soon became evident. And then followed an unbelievable torrent of outraged denunciation and outrageous proposals for revenge on the Russians, for punishment of the guilty Americans.

In Europe and Asia there was confusion, too, for a great idol had toppled from its pedestal; the carefully nurtured proposition that America was always first in all things technical suddenly collapsed. Europeans waited in vain for a word of explanation, of reassurance. But all they heard from America was the confusion of many voices—some of which declaimed that the end of the free world was now in sight, that Soviet superiority in all things technical, military, and even educational, was now proved; America, it was said, had lost the race for survival. Equally confused were those who treated with contempt of disdain one of the great events of man's history, who dismissed it as a mere bauble.

The Russians have capitalized on this situation by deriding our weakness and confusion, by bragging about their great triumph. They have announced that they intend to send rockets to the moon, that more animal experiments will be carried out, and that someday a manned rocket will be launched. An example of our hysteria was the headlining of a ridiculous rumon that a man had been hurled 186 miles into space in a rocket.

Now, of course, some people have been talking about space travel in this country for years—but they were dismissed as starry eyed visionaries, or just plain nuts (as, indeed, some of them were). But when the Russian Government takes space travel seriously, Americans sit up and take notice. And now our disregarded astronauts are getting the headlines. Suddenly, travel in space has become a subject of everyday conversation. People seriously expect, and some seem even to hope, that their children may someday live on the Moon or on Mars.

Then on December 5 the American Vanguard launching failed—and hysteria broke loose again. I never expected to live to see the day when a leaky fuel pipe would be regarded as an international tragedy. Every engineer knows that accidents of this sort must always be expected in a new venture. Technological advances are not easy. In the early days of aviation, men found the conquest of the air to be a tough business—and scores of hardy pioneers sacrificed their equipment and even their lives to the task of making airplanes more reliable. Modern space rocketry has not claimed any lives yet—but it will. Large rockets are enormously complex devices, and no amount of human ingenuity will ever make them infallible. I am sure the Russians have had accidents. The Germans certainly had many. We have had some and will have more. But we will have successes too. A leaky fuel line or a defective turbine blade can hardly be taken as signs that the whole of our science and technology has suddenly collapsed.

In any case, we find ourselves in a time of great and astonishing events—and hence, inevitably, in a time of great confusion. Many terrible questions must be asked. Are we really in great and imminent military danger? Has Russia assumed technological leadership of the world? Have they proved that a dictatorship is superior to a democracy? Must we then adopt their methods to survive? Is our educational system obsolete? Are we hopelessly outclassed, outstripped, disgraced?

These and many other questions that sputnik has raised have no easy answers. There are too many quantities still unknown. And, even where some things are clear, the question of what we should do about them is often unclear.

The best we can do at the present stage is to bring together the facts and separate the true from the false, the known from the unknown, and the certain from the uncertain. And then we must order our questions. We must recognize that some questions, such as the one, "Are the Russians ahead of us?" have no meaning. Ahead of us in what? As of what date Does being ahead mean they can annihilate us? Other questions are unanswerable because we cannot possibly have the information such as, "Do the Russians intend to attack us with ballistic missiles?" No one can read their minds. But some questions are real and do have answers. We should identify those questions, then seek their answers and try to comprehend their meaning.

FACE THE FACTS

First, however, let us look at a few facts. The Russians have launched the first two satellites. There is no doubt of that. And it is a great achievement. To launch an object into an orbit above the earth, the object must first be lifted well above the earth's atmosphere—say, 200 miles or so—then at that height it must be guided to a horizontal path, parallel to the earth's surface, aimed in the proper geographic direction, and brought up to a predetermined high speed. If an object is made to travel horizontally at 200 miles above the earth at a speed of about 18,000 miles per hour, it will circle the earth indefinitely, because the tendency of gravity to bring it down is exactly balanced by the centrifugal force tending to make it fly away from the earth entirely. A stable orbit is then followed. It may be a circular orbit or, more likely, if the speed is a bit too high or too low, an elliptical orbit getting farther from the earth at one side of its trajectory.

Some people ask: What keeps it going? What keeps it up there? In reply, let us ask: What keeps the moon going around the

earth? What keeps the earth going around the sun? The answer is simple. Nothing. Once an object has been started in motion, it tends to keep going forever—unless something tends to stop it. This great principle was discovered by Galileo in the 17th century, and was enunciated more precisely by Newton 50 years or so later. Every student of high school physics knows Newton's first law of motion (or does he?). Here on earth, of course, friction is always present to make things stop moving—so most people don't really believe that Newton's first law has any practical importance. But high above the atmosphere there is little or no friction, so the satellites keep on going The Sputnik I rocket case lasted about 8 weeks, the satellite itself about 12 weeks. The moon, 240,000 miles away, has been rotating in its orbit for at least 4½ billion years.

ELEMENTARY PHYSICS

So, the questions which puzzle so many about satellite motions are answered by the most elementary principles of physics. And the widespread lack of understanding is sad proof of how few people have learned those simple principles.

There has been some discussion of how to bring down a satellite once it is up there. One Congressman suggested we shoot them down. Other people asked how the little dog in Sputnik II was to be let down. Again, some elementary physics must be recalled.

As I have said, once a satellite is in orbit it will stay there until something changes its motion. Friction will bring it down—very gradually at high elevations and very much faster as it comes into the atmosphere. But it is not easy to slow down a satellite suddenly so that gravity will pull it in at once. Shooting a bullet into it would damage the radio transmitter, but would not stop the motion. If you could make it collide head-on with another satellite going in the opposite direction, that would do it. But to achieve such a collision would be quite a trick. And, of course, a collision of 2 objects, each going 18,000 miles per hour, wouldn't have done the little doggie much good. That doggie was doomed from the beginning, and anyone who thought it could get back alive did not remember his physics.

What about a parachute? Since there is no air up there, there is nothing for the parachute to hang on to. Even if the little dog could jump out of the satellite with his oxygen supply on, he would simply keep on sailing around the earth; he would be another satellite. There is just nothing there to slow him down enough so that gravity can overcome centrifugal force.

If a satellite could be equipped with an extra rocket motor and plenty of fuel so that the rocket blast could be fired in a direction to slow it down—that, of course, would do the trick. It takes a rocket to speed the thing up; it takes a rocket to slow it down. A rocket blast is about the only propulsion scheme we know which will work in a vacuum, above the earth's atmosphere. Maybe someday we will have satellites large enough to carry the slowing-down rocket, together with its fuel and the necessary equipment to fire it at the desired time.

RETURNING SATELLITES

As a falling missile or satellite comes into the atmosphere, a new problem arises. Because of the enormous speed, the friction of the air will generate a great deal of heat. This is the reentry problem. As President Eisenhower said in his first TV science talk, this reentry problem has been solved for a military bomb—i. e., for an object that can stand some heat and that can hit the ground at high speed, or an object that is intended to explode before striking. But we do not yet know how to bring a dog to earth gently enough, and cool enough, so that it will survive. All the energy of the many tons of fuel required to life the rocket originally will now appear as heat on the way down. And thus a returning satellite will usually have the same fate as a meteor; it will probably be burned up—and what is left will strike the ground with a terrific impact.

This raises the question of whether, if you launched a satellite with a bomb in it, you could then drop the bomb to hit any place on earth as the satellite pases over it. The answer, of course, is no. If a bomb were simply ejected from the satellite—say, by a spring or a small charge of gunpowder—it, too, would become another satellite. For the bomb to drop, it would have to be propelled backward by a huge rocket charge to reduce its kinetic energy. And, even then, it would spiral toward the earth in a curious path, and the accuracy of a hit would hardly be great.

Sputnik in itself, then, is hardly a military weapon. Why, then, does sputnik give us such grave concern?

The main reason, of course, is that a rocket and guidance system good enough to put a 1,000-pound satellite into an orbit is certainly good enough to shoot a 1,500-pound hydrogen bomb from Russia to the United States. The guidance accuracy might be only 50 miles. Such accuracy is not good enough to destroy an airbase, but a hit anyplace within 50 miles of New York or Los Angeles would be pretty bad. And the accuracy will eventually be improved.

So the Russians are clearly very good rocket engineers. This is the main thing that sputnik proves. They have put great effort on large rockets, and they were willing to use some of their military rockets for scientific experiments of great propaganda value. That is something we were not willing to do.

Granted they are good rocket engineers, what kind of military rockets do they have? Are they any better than ours? Are they in production, or still in the experimental stage? Will they have 100 next year, or in 5 years? In any case, how big a threat to us is 1 rocket or 10 or 100?

These, of course, are all unanswerable questions—and hence they are the ones that everyone speculates about. Unfortunately, the Russians have not told us precisely just what type of military rockets they have, when they will have them, or how many there will be. They have made a few proud boasts, but only the United States Central Intelligence Agency knows how accurate those boasts are. And CIA is not telling what it knows.

By the same token, in spite of all the press releases, the United States Defense Department has not told the full story of our rocket technology either. The President did say that we have over 30 types of guided missiles in development, and many of them in production. Sputnik alone does not reveal the full military strength of either country. It has revealed simply that the Russians are better rocket engineers than most of us thought. Hence, they may have now, and certainly will have someday, enough military rockets to be a serious threat to us.

UNITED STATES MISSILES

But of one more thing we can be sure: The United States has not been asleep in the guided missile field either. Our Nike antiaircraft missiles, for example, are certainly a powerful protection against the Soviet bomber. Many scientists feel that there have been too many missiles developed in this country. It might have been better to concentrate on a smaller number and not have tried to make them all so perfect. But it is a typical American habit—if there are several ways of doing a thing, we will try them all. And we will push each one to a high state of perfection. We certainly have acquired a very large and diversified missile technology in the past 10 years. And if we wish now to concentrate a large effort on 1 or 2 major projects, we could certainly get them into production fast. In fact, Caltech's jet propulsion laboratory, using existing Army equipment, launched the first United States satellite, the Explorer, less than 12 weeks after the project was authorized.

The notion that Russian rockets could suddenly, tonight, destroy all American bomber bases all over the world and render us immediately defenseless is absurd. Such a feat would require the accurate and simultaneous striking of hundreds of long-range missiles—all making effective hits. To run the risk of not hitting even a few bases would be dangerous, for even a few H-bombs that we could launch can do tremendous damage. Thus our bomber force will be a serious threat to Russia for a long time to come.

But that fact should not give cause for complacency—and I know of no informed person who is complacent. As Dr. Killian, the President's new special assistant, has said, "We need a sense of urgency without despair."

What, then, should we do now? What must we do later?

The first demand which the sputnik situation puts on us, of course, is to examine our military situation. Though the wild statements that the Russians have suddenly zoomed into a position of military supremacy are wrong, it is certain that there are grave dangers. Clearly, everyone now realizes that we need to accelerate our efforts to counter that Russian threat.

At the same time, it is clear that our military strength is only one aspect of our national strength. Military technology is one branch of technology; it can be no stronger than the main structure of technology itself. Rockets, and radar, and atomic weapons are not invented by generals and admirals; they are invented by civilian scientists and engineers working in laboratories—often in laboratories where the Government is paying the bills. These civilians draw on all available knowledge in the world of science and engineering to develop weapons and techniques which the military services require. For a nation to be successful in military technology, it must have two things:

1. Enough well-trained scientists and engineers to man the military-sponsored laboratories; and

2. An active nonmilitary science and technology to supply the new knowledge, and materials and new devices which military technology will require.

The shock to America is that Russia has so quickly attained these two goals. Russia, we now realize more clearly than before, is rapidly attaining a position of great technological strength. Russia is no longer the nation of illiterate peasants that many of us had supposed.

How did they get this way? How did we let the Russians get ahead of us in the satellite game? Paradoxically, it was not the shortage of engineers in this country that was responsible. It was, if anything, a shortage of psychologists. Actually, the possibility of launching a satellite had been under discussion in the United States for a long time. And the Russians had, long ago, also announced that they would launch one—date unspecified. Most people in this country regarded the satellite launching as an interesting scientific project, but it was repeatedly emphasized that it must not interfere with any military project. Hence, it could use no military hardware. So it was not pushed or given any priority. If someone could have visualized the tremendous psychological impact the first satellite would have on world opinion, and if they could have persuaded the Government of its propaganda importance, the project could easily have been accelerated. But not even the

Congressmen who are now shouting for blood ever told the National Science Foundation that the satellite project should be given top priority. Almost no Americans thought there was any rush. In the meantime, the Russians kept their plans secret until, suddenly, the job was done.

THE FIRST STEP

Our first lesson is that we must bring to the top levels of our Goverment better information and judgment about the potentialities of new scientific and engineering achievements, and their possible psychological effects on world opinion and their effects on the United States position of leadership. The appointment of Dr. J. R. Killian is a good step in the right direction—but he will need the help of many scientists, engineers, psychologists, and experts in many areas of world opinion to do the full job.

Our next task is to realize the enormous advances Russia has made in science and technology in recent years.

Now that sputnik has made us look at Russia more closely, we see very plainly—what we could have easily seen long ago—that for 30 years Russia has been systematically building an educational system that would give rigid technical training to a large number of scientists and engineers, who, under the communist system, would then be available to serve the needs of the state.

Soviet leaders foresaw, or soon learned, that you could not force people to be good scientists. There must be powerful incentives for every young person to develop any scientific talents he may have. So the Soviets turned to capitalistic methods and developed an elaborate system of financial incentives to encourage scientific training. Young men and women are paid to go to college—if they qualify. They are paid even more to go to graduate school—if they qualify. They are paid still more when they go into active scientific or engineering work—again if they pass rigid qualifying tests. Finally, the successful scientist or engineer is paid a very high salary, gets a car, a home in the country and extra food rations. And he is showered with medals to recognize his achievements. It's all very simple capitalism—large rewards to the able and the ambitious. And in this country we have been doing just the opposite—seeing to it that scientists, engineers, and teachers do not earn too much.

The net result is that the U. S. S. R. has attained a position of great technological strength, and by concentrating large resources of men and money on military technology—nuclear bombs, submarines, aircraft, and missiles—she has attained a position of great military strength, too.

No longer is it true—if it ever was—that automatically and inevitably and forever is the United States technically superior to the U. S. S. R. in the military field. Whatever the exact balance may be today, the Russians are certainly moving ahead very fast.

This is a sobering thought and requires sober attention. For this fact profoundly affects our foreign policy, our military posture, the nature of our defense effort and the distribution of our resources.

And if Russia can achieve these results in the military field, can she not attain similar goals in industry, in agriculture, in public health? Can she not, in short, attain in time a standard of living for her people comparable to ours? Can she not thus challenge throughout the world the superiority of a democratic system of government in providing for the welfare of its people?

That is the real challenge of sputnik. It is not a question of how good Russia's rockets are, compared to ours. We can have good ones, too. The question is whether Russia has now, before all the world, challenged us to an intellectual contest which we are not prepared to win. Can the Communist system develop and use the brains of its people to a better advantage than our system?

OUR INTELLECTUAL RESOURCES

The challenge of sputnik is that we must now take stock of our intellectual resources and how we are using them.

Arnold Toynbee, the historian, has advanced the proposition that the survival of nations and of civilizations depends on how they meet the challenges which they face. Blindness or complacency in the face of danger leads to collapse from without. Hysteria may lead to collapse from within. But foresight, courage, and determination may conquer and challenge.

Can we, as a nation, bring these qualities to bear on the challenge we face?

Even though the challenge may not be in the form of an immediate military danger, it is clear that a rival power is surging ahead so rapidly on so many fronts that we must begin now to accelerate our pace.

How do we start? First, we must remember that back of any great new military, industrial, or technological achievement, back of any nation's material strength, lie the minds of many people. The most important resources of any nation are its intellectual resources. New developments come from new ideas. New ideas develop in the minds of men. Any single new idea, in fact, develops in the mind of a single man; the pooled ideas of many men constitute a nation's intellectual resources.

Our first task, then, is to strengthen our intellectual resources. The one great overpowering question which we need to ask is whether we are now developing and utilizing to the maximum extent, consistent with democratic principles, the full intellectual and spiritual strength of our people. If we are—we need have no fear. If we are not—we are risking grave danger.

Is America fully utilizing its intellectual resources? The answer is "No."

Not one of us can honestly say that he is using his own intellectual resources fully. From the time we are children, until we die, most of us use only a fraction of the mental powers we have. We do not drive ourselves to use them; we do not encourage our children or friends and neighbors to use theirs. Oh, yes, we want our children to do well in school—but not too well. Johnny mustn't be different. And he mustn't be frustrated.

INSTEAD OF INCENTIVES

Instead of offering every possible incentive to intellectual achievement at all levels, in all fields, by all people, from the cradle to the grave, we offer—what? Tolerant amusement? Indifference? Or antagonism? (Don't be an egghead.)

That is the challenge America faces now, today—that all of us (citizens, taxpayers, parents, teachers, workers) shall be aware of the importance of intellectual achievement. This challenge existed long ago, of course. But now a great question mark has been projected high in the sky for all the world to see. Are American intellectual resources going to be brought to life in a great surge of dynamic enthusiasm? Or is another more monolithic type of society going to be able to drive its people to a pace we cannot match?

I think many of our people have now become aware of the importance of raising the intellectual level of our attainments. They now seek guidance: Where shall we start? What shall we do? Unfortunately, there is no single move, or even any small group of moves, which will solve this problem.

The intellectual resources of our people are developed and nourished in many places—in our homes, our churches, our schools; in the universities, in libraries and museums; in industrial and government laboratories; in newspaper and magazine editorial rooms, and (we hope) in radio and TV broadcasting rooms.

In all of these places, higher intellectual standards must be encouraged and achieved. Better teachers' salaries alone are not enough, but they are necessary. More classrooms and laboratories in schools and colleges are not enough, but they too are necessary. We need to insist that every course our children take in school has a good solid intellectual content and that Johnny and Mary are held to the highest standards of which they are capable, even if they get frustrated once in a while. To say that all our schools have been destroyed by the philosophy of John Dewey is unfair to many schools and is too flattering to Mr. Dewey. But it is equally wrong to say there is no room for improvement. Our task is not to return to the 19th century little red schoolhouse, but to find a new and vigorous educational climate which will fit our children of today to meet the problems of the 21st century—which most of them, and not many of us, will live to see.

To meet the challenges of the year 2000 A. D., our Nation will need to attain an enormous new surge of intellectual vigor.

How can we hope to achieve this when those engaged in intellectual pursuits find themselves at the bottom rung of the economic ladder? I do not claim it is wrong that a movie actress should earn 100 times as much as a professor because her bust and waist measurements have the correct ratio. But I do worry about the future of a society where the best brains are held in low esteem. I know that, to a teacher, other things are more important than salary. But, just to prove to our young people that a life of intellectual endeavor is important to our Nation, let's increase our teachers' salaries—at least a little.

A LITTLE EMPHASIS

Then, too, how can we have a vigorous intellectual climate when so few high school students get any adequate exposure to mathematics and science? Yes, I know people will insist that we must not have overemphasis on science. And I agree. But, before we complain about overemphasis, let's have a little emphasis. The fact is that science and mathematics, in many schools throughout the country, have been all but ostracized as legitimate subjects of study. They are too hard, or too technical, or too remote from life. Bad counseling, bad administration, and bad teaching have all helped in this decline—and I think now is a good time to reverse the trend. It's time to give every youngster a chance to test his mettle on some good tough subjects—mathematics, language, economics, science—so he can find out where his talents lie and choose his future interests accordingly.

Today we are confronted with the political issue of what role the Federal Government should play in rejuvenating the vigor of our educational system. There are those who believe in no Federal activity at all; others believe in very large Federal subventions. Actually, I believe the recently proposed administration program is about right. It is large enough to underline the Federal interest in education; it is small enough to avoid Federal control. It will, by no means, solve all problems, but it will stimulate States and local communities to get busy on a few. It emphasizes the importance of the student and the teacher and seeks to help both.

The Federal Government can take leadership in other aspects of an intellectual reawakening. It can encourage improved higher education and graduate study; it can stimulate and support research and scholarship in many fields; it can make more efficient and effective use of manpower in its own activities.

But, in America it is the people themselves—not the Government—that determine

their future. They set the intellectual standards; they create the intellectual climate; they determine relative values of intellectual and nonintellectual pursuits; they support the educational system; they are responsible for their own children; they pay the bills. They will determine whether or not America responds adequately to the challenge we face. I hope the American people will now get busy.

A TRIPLE RESPONSIBILITY

Finally, I should like to suggest that the universities of America must play a critical role in responding to this challenge. They have, in fact, a triple responsibility.

They have a responsibility, first, to assist the Government in immediate technological problems. They carry on research and development in many fields related to national defense and national welfare.

Second, they have a responsibility in seeking new knowledge. It is the new scientific understanding gained today which is the foundation of our strength of tomorrow. The Nation's relatively few centers of basic research in the country are precious assets indeed. It is essential that they be kept strong and made ever stronger. The universities are dedicated to the task of maintaining centers where the best minds in the country can effectively attack the deepest and most profound problems in every scholarly field.

Finally, the universities have a responsibility in educating men—men who will be leaders in pure and applied science, in education, in business, in politics. The research men, the university teachers, the leaders in industrial technology must be men of high ability, superbly trained. If it is an intellectual challenge that this Nation faces, our success in meeting it will be determined by our success in producing great intellectual leaders.

A former officer of a Rockefeller Foundation board used to say that the most important task in American higher education was to make the peaks higher. Where high quality is found—make it still higher. Where strong leadership is developing—make it still stronger. Where outstanding men are found, help them work to the full limit of their talents. As the grandeur of a mountain range is determined by the height of its highest peaks, so we must give most devoted attention to those institutions at the pinnacles of scientific and educational achievement.

Every citizen in the Nation can join in this endeavor.

Two Thousand Five Hundred Fans Attend Tournament—Game Is Science, Not Basketball

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. GROSS. Mr. Speaker, 5 years ago the science faculty at Iowa State Teachers College in Cedar Falls began to sponsor a northeast Iowa science fair for the purpose of stimulating interest in science among high school students. This year, 282 young people demonstrated science projects, and the fair attracted a turnaway crowd of some 2,500 persons.

As the Waterloo (Iowa) Courier points out in an editorial in its April 15 edition, it is significant that the fair was started long before the launching of the Russian sputniks, which created a national uproar on the subject of science.

I join the Courier in congratulating the winners as well as those in charge of the fair, and as part of my remarks I desire to include the Courier editorial, which follows:

When they say that American schools emphasize sports to the exclusion of academic subjects, they cannot be talking about northeast Iowa. This was demonstrated at the northeast Iowa science fair last Saturday at Iowa State Teachers College, when 282 students demonstrated science projects of amazing ingenuity, originality, and complexity. And the estimated attendance of 2,500 persons (a turnaway crowd) would have been a respectable gathering at a district basketball tournament.

The Courier salutes the champs, Janice Herman, of George Washington High School in Cedar Rapids, and Anthony Dingbaum, of Xavier High School in Dyersville. Both won all-expense-paid trips to the National Science Fair at Flint, Mich.

But, while the stimulus of competition adds interest at the fair, the real value of the event lies in the fact that some 282 outstanding young people have developed an intense and, no doubt, abiding interest in science. Many of these participants will become science teachers or will pursue some scientific field as a career.

And it is worthy of emphasis that the science faculty at Iowa State Teachers College began to sponsor the science fair long before the Soviet launching of artificial satellites created a national uproar on the subject. The event this year was the fifth annual fair, showing that the ISTC faculty needed no external threat to comprehend that the United States in the future would need far more emphasis on science training.

American educators, facing demands for more emphasis on science, often say, "We don't want to adopt the Russian system of forcing students to follow the professional careers which the Government picks for them." The public would agree. But the science fair is one example of the way educational leadership can be exerted to arouse interest in the vocational fields on which the national interest requires more emphasis.

We congratulate Dr. Leland Wilson, chairman of the fair this year, and his committee. Educational leadership of this kind demonstrates what can be done to correct American educational deficiencies in a dangerous world.

The Heikkila Case

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Examiner of April 24, 1958:

THE HEIKKILA CASE

The United States Immigration and Naturalization Service committed a grievous error when it failed to give the public all the facts at the outset of the abrupt William Heikkila deportation last week. As do all too many Federal agencies, it ignored the public's right to know. The penalty it is paying is justifiably heavy. It fostered public misunderstanding of its conduct, contributed to the belief that it violated due process of law and laid itself open to the charge that it acted like a Gestapo though in fact it did not.

With belated wisdom the Service is returning the alien Heikkila from Finland. In this it is not only showing obedience to a court order, it is preventing a possibility that Huikkila might have been transformed into a propaganda martyr.

Two other equally important results will follow, we hope. There can now be a determination as to whether the abrupt deportation of Heikkila actually was a violation of due process of law. And the public will have an opportunity to observe whether the interminable delays of "nicker in the slot justice," as a Federal judge once characterized the legal mockeries in the Caryl Chessman case, are preventing the deportation of dangerous aliens.

To say, as some have, that the Service kidnapped Heikkila and that it denied him his day in court is extremist nonsense. Heikkila was taken into custody and deported on a valid warrant. That warrant was executed only after Heikkila, a man of confessed Communist leanings, had had more than 10 years of his days in court.

The warrant was issued December 30, 1947. Heikkila was given full administrative hearings. Thereafter he appealed to the Federal courts, carrying his case to the United States Supreme Court. In 1953, he lost there. Heikkila then married the woman now his wife and reopened his case on the grounds he was married to an American citizen.

Again the case was carried through full administrative hearings and again through the courts to the United States Supreme Court. Again he lost. Thereafter he started a third round of court appeals. On April 8 he was turned down by Federal Judge Murphy. On all previous occasions when he was turned down he immediately got the protection of a restraining order to prevent deportation. Certainly, this time he did not. Instead he filed a routine motion to amend the finding of fact in the case.

The Immigration Service asked the United States Attorney's office whether a legal restraint was pending, was told there was none, then carried out its "swift" deportation—10 years, 3 months and 18 days after it had started deportation proceedings.

Now Heikkila is being brought back. How many more of these appeals is he entitled to? At what point does the public's right to prompt justice begin to operate.

Let us quote from an opinion of United States Court of Appeals here in the case of Martin Jimenez, an alien pro-Communist deported to Mexico on February 11 in the same abrupt fashion as Heikkila. Jimenez was represented by the same counsel as Heikkila.

"More than 5 years have passed (said the court) since the initial hearing officer recommended that Jimenez be deported. * * * This delay has been occasioned solely by appellant's resort to administrative and court proceedings to assert contentions which have been found to be without merit. * * * Nor has he always proceeded with diligence, * * * The appeal is dismissed as frivolous."

Translated into plainer English, the alien was using the courts to stall.

But even as the Immigration Service was deporting Jimenez swiftly by plane, his counsel was trying to sue out another writ. When, oh when do they come to an end?

We repeat that the Service erred grossly in the manner of its handling of the Heikkila case. Had it within hours of the Heikkila deportation, supplied the public with the full facts reviewed above and with its legal basis for acting, the storm never would have blown up. The service is a vital arm in the protection of the Nation from subversive and

criminal aliens. For the sake of the Nation and its own future usefulness it must avoid meticulously the semblance as well as the fact of totalitarian conduct.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly newsletter to constituents of April 26, 1958. Between the time of writing this newsletter and this insertion in the RECORD, I have received additional and more interesting information, which I shall add after this reprint of my newsletter:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

APRIL 26, 1958.

House floor work included the oleo bill permitting the Navy to serve oleo or margarine (but only when butter stocks are not available or are impractical) and the Federal aid for schools in impacted areas bill. Both bills passed. The aid for school construction and operation makes more permanent the existing law, which helps those areas where local tax revenue is insufficient to provide educational facilities because of Federal tax-free installations and added school attendance (Federal employees' children). I protested the Davis-Bacon provision which permits the Secretary of Labor to set the local wages paid on school construction, in practice a serious violation of collective bargaining, the local economy, and States rights. But Federal aid means Federal control. In this wage-setting provision there is no recourse to the courts from the arbitrary final decision of the Secretary of Labor, hardly the American way. The committee chairman agreed with my position in debate, but he and I are badly outnumbered. My bill to correct this, now pending before the Education and Labor Committee, has little chance of ever being considered.

Criticism over the summarily deported Communist, William Heikkila, prompted Chairman WALTER of the Un-American Activities Committee to present us some interesting background facts. This man, a Communist since 1926, received a deportation judgment with final ruling by the Supreme Court in 1953. Then a new loophole was found, the 1952 Walter-McCarran Act permitting suspension if an alien was married to an American (Heikkila had married after receiving deportation charges, so his wife knew). More delays, more Communist activities, and then a final deportation warrant in March 1956. On April 14, 1958, a final court dismissal of his petition. Did he have his day in court? In all this time, 22 years, engaging in Communist activities, how much damage did he do?

An illuminating study of Congress in the CONGRESSIONAL RECORD by Congressman RALPH GWINN deserves everyone's attention. His thesis simply was that while business people were electing a president, the AFL–CIO was electing a Congress. His facts were in an itemized summary of campaign contributions showing that 300 (of the 435) candidates were given help and 175 were elected in the House (and in the Senate the same situation). Further, that 216 Representatives and 45 Senators voted a majority of the time with the liberal-labor dominated ADA (Americans for Democratic Action). His conclusions after much analysis of legislation—that little, if any, legislation can pass either House or Senate without the AFL–CIO blessing; that the businessman and all clear-thinking citizens had better act in taking part in politics or this Nation will succumb to socialism. Rather, thought provoking. Union monopoly power, the violence and abuse, graft and corruption, and now the control of legislation. Even union members should recognize the danger. What will it take to stir businessmen to political action?

The proposed small-business capital loan bill sponsored by WRIGHT PATMAN and LYNDON JOHNSON of Texas to provide equity and investment capital for small business (how to define small business?) is recognized as another of the do anything, but do it now antirecession spending schemes politically appealing and, therefore, favorably considered by some. Can you imagine using taxpayers' money to finance capital sums for businessmen? Who gets these chunks of money? Do you? Does your competitor? Or is it the political campaign contributor or party member? Is this Government's role? Can our debt-ridden Federal Government afford it? Of course not. Can our taxpayers afford it if he doesn't receive one of the loans? Of course not.

Nor is the only danger the already-known legislative spending bills. Conservatively speaking, there are many other pending spending measures. In the Senate, 23 bills totalling $48 billion over the next 5 years are sponsored by Democrats with Republicans duplicating 7 of them. Simultaneously, tax cuts of $10.5 billion are ready. Now I believe in a balanced budget. My own bill, a constitutional amendment, would force Congress yearly to balance the budget. Now let's look at the facts. In 44 years, since 1913, Democrats controlled Congress for 28 years, Republicans 16 years. Democrats had 22 years of deficits; for example, the national debt rose from $20 billion in 1932 to $266 billion by 1952, all Democrat years except 2, and Republicans, then controlling Congress, cut the debt $5.5 billion. In 16 years controlling Congress, Republicans produced surpluses 14 years totaling $19 billion.

As to taxes, since 1913, Democrats enacted 14 of 15 tax increases, Republicans only 1. Republicans enacted 7 of the 10 tax cuts. To me these facts are significant. Just as facts must come before politics, so do I intend to oppose unwise spending programs of either political party.

The Nation can learn lessons from the Dallas prosperity campaign and auto-buy program. This independent self-confident program is more typical of Texas and earlier American spirit than the Federal handout of recession—fear legislation. I'm proud to represent such a district.

Mr. Speaker, the additional information to which was alluded at the outset of this statement is the result of the public appearance at Southern Methodist University in Dallas of John Gates and Herbert Philbrick. Mr. John Gates is the former Communist and now avowed Socialist. Herb Philbrick is the gentleman who led three lives working for our FBI within the ranks of the Communist Party. Elsewhere in this CONGRESSIONAL RECORD will be found a transcript of their questions and answers, the questions being directed to them by professor and student panel and audience.

The particular information to which I shall limit myself is the statement of John Gates when asked, "Do you see a place for you to go, a party or a group to join?" The answer, "I would like to be identified with the great labor movement. There cannot be a new American radicalism without labor."

Now, referring to the paragraph of my newsletter containing information about the AFL–CIO was electing a Congress, I want to reemphasize the danger of the avowed socialism of John Gates to the great labor movement and to the American system of government and free society. Unfortunately the facts referred to in this newsletter show that the Socialist influence has already been greatly felt within the ranks of organized labor and its influence on congressional legislation.

The conclusion to this trend is not a pleasant picture. Again I quote from Mr. Gates to the question, "Why has communism, as found today, not taken over any advanced western civilization?" The answer was "because a great many of the gains Communists fought for have been achieved under capitalism." This reminds us of Norman Thomas' statement of the mid-thirties when he said that most of the provisions of his 1928 Socialist presidential candidcacy were then already in effect.

Mr. Speaker, should anyone doubt the gains of communism or socialism, a more acceptable name for communism, one has only to list the legislation before this Congress, to read the debate, study the reports and then compare all this with traditional constitutional government. The difference between socialism, called public welfare, interstate commerce, or some other, and original constitutional law can readily be observed.

A National Seashore on Cape Cod

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a resolution adopted by both branches of the General Court of Massachusetts memorializing the Congress of the United States to establish a national seashore on Cape Cod:

Resolution memorializing the Congress of the United States to establish a national seashore on Cape Cod

Whereas there exists on the outer reaches of Cape Cod a magnificent beach, unbroken for 33 miles and constituting a unique natural wonder of the United States; and

Whereas this shoreline has been a landmark for mariners for nearly 1,000 years; and

Whereas this shoreline is hallowed in the beginnings of our country, its hinterland being the first land trod by the Pilgrims of the *Mayflower* and having yielded to them their first drink of fresh New England water; and

Whereas this vast sweep of sand, moor, forest, marsh, and pond fosters hosts of birds, fish, animal, and plant life; and

Whereas this shoreline has been immortalized in paintings, verse, and prose by American artists and writers for nearly 200 years; and

Whereas this shoreline is a source of inspiration and recreation to all the people of the United States and to visitors from other countries; and

Whereas the survival of this shoreline as a natural wonder is imperiled by developments which are inconsistent with its inspirational and recreational value to the people of the United States: Therefore be it

Resolved, That the General Court of Massachusetts request the Congress to establish a national seashore to be designated as the Cape Cod National Seashore in the area from Race Point in Provincetown to Nauset Inlet in Orleans, bounded on the east by the Atlantic Ocean and on the west by a line to be determined by the Government of the United States and other such areas adjacent as may be deemed necessary, for the use and enjoyment of all the people of the United States, said national seashore to be preserved as nearly as possible in the state in which it was created by Nature, to be a source of health and inspiration to all the people of the United States and their descendents forever; and be it further

Resolved, That the General Court of Massachusetts further requests the Congress to enact legislation providing for the purchase and establishment of the national seashore as heretofore described lest this great historic and scenic New England landmark be lost forever to public use by rapidly growing manmade encroachments; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Secretary of the Commonwealth to the presiding officer of each branch of Congress and to the Members thereof from this Commonwealth.

House of representatives, adopted, April 7, 1958.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence, April 9, 1958.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Address by President of Northwest Public Power Association

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, April 28, 1958

Mr. JACKSON. Mr. President, it was my privilege on April 18 to address the Northwest Public Power Association at its 18th annual membership meeting at Spokane.

This association comprises 104 consumer-owned electric systems of Alaska, Montana, Idaho, Oregon, and Washington, serving 2 million people.

In the meeting room I saw the 1-cent power achievement awards which had just been given to 23 outstanding public and cooperative electric systems "for achieving an average cost of electricity to its residential consumers during 1957 of 1 cent or less per kilowatt-hour."

It is estimated 55 percent of the homes served by consumer owned utilities in the Pacific Northwest now enjoy average rates under 1 cent per kilowatt-hour in contrast to the national average of 2.56 cents per kilowatt-hour.

The distinguished president of the Northwest Public Power Association the past year has been Mr. P. C. Spowart, assistant superintendent, Seattle City Light.

Starting his utility career as a laborer in 1911 he progressed to the position of commercial manager in 1934, including responsibility for public relations. He became assistant superintendent in 1951.

He has been active in the American Public Power Association. He is a member of Seattle's Retirement System Board. He will retire this year.

On April 16 Mr. Spowart in his presidential address outlined to the association the opportunity for a $12 billion investment program for the Columbia River.

His Axel of Progress is an allegory for our dual economy with its dependence on a balance of public investment and private investment to achieve optimum benefits in the public interest.

Because his address is broad gaged and thought provoking, I wish to call it to the attention of the Senate.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL ADDRESS BY P. C. SPOWART, NORTHWEST PUBLIC POWER ASSOCIATION ANNUAL MEMBERSHIP MEETING, APRIL 16, 17, 18, 1958

Where there is life there is change. An oriental king seeking a motto suitable alike in prosperity and adversity, received at long length from his own daughter a ring on which was engraved the words "This, too will pass."

Whether today be good or bad, we know tomorrow will be different. Change is in the air this morning as we greet one another in this, our 18th annual membership meeting of the Northwest Public Power Association.

For nearly 47 years I have worked in this State, in the same city, in the same kind of business, for the same employer—serving consumers with electricity. You might think I have lived a settled life. Actually, it has been a life of change, a very interesting change.

The average annual use of electricity in the homes has increased from 206 kwh in 1910 to nearly 9,000 kwh in 1957, and with this increased use has come all the changes and living habits that only electricity can bring. A similar change has occurred in the factories with our workers following the national trend of using more electricity. The kilowatt-hour consumption of electricity per worker has increased from 7,000 in 1929 to 20,000 in 1955 with a proportionate increase in productivity.

And if there is one lesson in 50 years of electric utility experience that is more obvious than others, it is that we are in for more and greater changes.

Seattle City Light pioneered the use of the electric range and water heater and this was a great change.. But today we know that the heat pump and other heating methods and appliances yet to come will provide as great a change as television was over the radio.

Each new appliance will bring on another wave of expansion in use of electricity, demonstrating over and over again the unending variety of ways in which electricity affects the lives of all of us.

I want to be on guard this morning against the temptation of mere reminiscing. You and I are not going to be able to rest on any laurels.

The point I wish to make is that there will be change, and that you are helping to make the change. We should direct our efforts to make tomorrow's world a better world.

We can help achieve this by promoting more and better jobs. Because we, as public bodies and electric utilities, are in a position to do something about this, we have as the theme for our annual membership meeting "More power for more jobs."

The importance of more jobs already has been well said by Congress in the very important Employment Act of 1946. It reads:

"The Congress declares that it is the continuing policy and responsibility of the Federal Government to use all practicable means consistent with its needs and obligations and other essential conisderations of national policy, with the assistance and cooperation of industry, agriculture, labor, and State and local governments, to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power."

This is the national policy. This is the goal of full employment. This is the policy which has been on the law books for the past 12 years without much need for anyone to figure out how to get the law put into practice. However, in the last 3 months Congress has started working on implementing the full employment goal. We already have seen the highway program accelerated, the housing program expanded and, of most importance to us here today, Congress has been taking a new look at hydroelectric power dams and water resources in particular, and our national attitude toward natural resources in general.

Why this change in our Congress in the past few months? I am inclined to believe it is due to our dual economy. We have an economy which depends upon both public and private enterprise. We, as a nation, do not have an exclusively private free enterprise economy and no amount of propaganda will make it so. If you doubt that statement just take a look at whom the Government is subsidizing.

I would compare the working of our economy to the axle of progress. If we are to progress we must have an equal-sized wheel at each end of the axle. One is the wheel of private investment in the business which we normally regard as appropriately private. The other wheel has to do with public investments in schools, roads, post offices, flood control, reclamation, and hydro projects. The two wheels must match. If one is smaller than the other we will go around in circles.

In 1939 we deliberately turned off or choked down the flow of public investment. We first encouraged, then stimulated and finally forced fed the private investment economy to do the war production job. Then after the war we removed the price ceilings and provided accelerated amortization, liberalized depreciation and other incentives in order to force an ever greater flow of funds into the private fields; in some fields we have excess capacity.

On the other hand, public investment has lagged. We do not have adequate capacity in our school and college systems, nor in our flood-control reservoirs or inland waterway channels. We do not have the soil-erosion problem licked. And coming back to the Pacific Northwest we continue to sit by while 80 percent of the region's power potential goes down to the ocean unused.

This should not go on. The public investment wheel is an essential part of the axle of

progress. Right now it is too small and we find ourselves going in the wrong direction. Several things have happened to make Congress cognizant of the need for more public investment.

The first thing I believe, was the Hells Canyon battle which symbolized the broad public acceptance of the fundamental principles of conservation, that natural resources should be developed to achieve the greatest good for the largest number of people for the longest time.

A second factor was the gradual slippage of the national economy. In the Northwest it has been especially so from about 1949 onward and with a further and deeper cut last summer. Because of this, today we have well over 100,000 unemployed in our 4 Northwest States.

Sputnik, I would list as the third factor in jarring Congress out of its complacency. Then came Senators ELLENDER and JACKSON with their reports of 40 big new dams under construction in Russia, 4 of them larger than Grand Coulee. They told of their visit to an exhibition in Moscow where the guides proudly told them that Russia was declaring war upon the United States in the field of peaceful production—that by 1975 or 1980 Russia would surpass us in certain fields of production.

The Northwest Public Power Association also has done its part in making Congress cognizant of the need for more public investment.

Our association submitted testimony at a recent congressional hearing making reference to a statement in the 1955 Dewhurst survey of the Twentieth Century Fund. This is a comprehensive book entitled "America's Needs and Resources." This conservative study points out that the United States has been neglecting its stewardship over its natural resources and that we need several billion dollars investment in land, forest and water resources for their proper development and conservation.

Our testimony pointed out that the major part of the expenditure would be largely a revenue producing investment; it would be a self-liquidating capital investment to stop the destruction of floods, the loss of topsoil and to stop the waste of waterpower.

As a result of all these factors I believe Congress is becoming increasingly aware of the necessity for bold imaginative action to remedy this unbalance betwen public and private investment. The $30 billion—15-year—highway program is one such move, one which we all wanted. We got it, however, not because we wanted it, but because the huge automotive, oil, and cement industries made themselves felt in the right places. We have seen Congress finally go ahead on the St. Lawrence seaway and the Niagara power developments. Again these actions were taken when special interests were willing. But, the public does not always want government by special interests. They want a program based on what is best for the Nation's economy. This was demonstrated in Canada a few weeks ago.

On March 31, Canada had a national election in which the Conservatives won by a landslide, winning over 75 percent of the seats in Parliament. The Liberal leader, Mr. Pearson, had promised a $400 million tax cut. The Conservative leader, Prime Minister John Diefenbaker promised a billion dollar public works program. In doing this Mr. Diefenbaker was merely carrying out an old tradition of the Conservative Party in Canada. It was the Conservative Party in Ontario that had the foresight in 1906 to create the Hydro-Electric Power Commission of Ontario which has become one of the greatest low-cost power systems in the world.

Canada is a large country with a small population so you must realize that an equivalent public works program in the United States would be slightly over $10 billion.

The public mandate was against a tax cut and in favor of a dynamic public works program. That philosophy is catching on in the United States. A $10 billion public works program for America would be a wise investment as well as job producing.

The lesson of the Canadian election serves to underline the recommendation that a great economist, Prof. John Galbraith, of Harvard, made to the Joint Economic Committee 2 months ago in testifying on the Economic Report of the President. He clearly favored public works instead of tax cuts.

He said, "In the present situation, however, there is a good deal to be said on the choice between lowering taxes and increasing public outlays. And the choice is very strongly in favor of the latter." He gives a number of reasons and then emphasizes: "But the most important reason for favoring an increase in civilian public outlays as the principal protective device is that we now have so many things that need doing."

All of us agree that we have many things that need doing. One of our most important jobs is to develop our natural resources and put them to use.

In the face of this need we have over 5 million unemployed. We could have work for all. We are wasting both our human resources and our natural resources. By good planning, by establishing the proper procedures, by establishing the proper governmental machinery, we could insure that these wasted human resources and these undeveloped natural resources would be brought together. As a result we would have a strongers, happier, and healthier Nation.

What the Canadian voters approved seems expecially applicable in the Pacific Northwest. We have need for a $12 billion investment in the development of the water resources of the Columbia River for navigation, flood control, irrigation, fish and wildlife facilities and for power production. A 20-year program.

This investmet to a great extent must be public investment in order to insure that the resources are harnessed on a comprehensive, multiple-purpose basis. Many of the projects will not be economically feasible unless they are constructed with the lowest available financing. The more low-cost money we can get into the Columbia River development program, the fuller will be the development achieved.

For the past 4 years our association has been developing and promoting a bill that would improve the administration and financing of the Columbia River power system—removing it farther away from politics. Seven drafts of the Columbia River Development Corporation bill have been drawn up.

Finally on January 23, 1958 the bill was introduced as S. 3114 by Senators JACKSON, NEUBERGER, MORSE, MAGNUSON, MURRAY, MANSFIELD, HILL, and SPARKMAN. It has been referred to the Senate Public Works Committee.

We have requested preliminary, exploratory public hearings this year for the purpose of developing a public record for the bill and for the purpose of finding the weak spots so that next January we can introduce a revised bill that will have the support of the majority of the people in the Pacific Northwest. To achieve all these things I have mentioned for our region, we must push for the adoption of necessary legislation.

It is what we do as utilities. If you do an efficient job as a utility operator, provide your area with an adequate supply of low-cost power, give good service, promote community development, contribute in every way to the economic welfare of your community, the favorable attitude and support which you personally develop among the voters and governmental representatives in your area—that will ultimately decide the passage of vital legislation—legislation that will provide more power and more jobs.

What you learn here to help you do a better job in your community will benefit the entire public power movement. And by public-power movement, I do not mean some selfish ideology, but comprehensive development of our natural resources that will make the Pacific Northwest a wonderful place to live and be a great asset to the rest of our country.

As I said at the beginning, we have the human resources and the natural resources to build a better America, but it is up to each of us individually to do his part in building it.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Alamo Belongs to the Whole World, Not Just to Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29, 1958

Mr. JOHNSON of Texas. Mr. President, on April 21, San Jacinto Day in Texas, Lt. Gen. J. H. Collier, commanding general of the Fourth United States Army, spoke in front of the Alamo, in San Antonio, at a ceremony honoring the brave men who gave their lives there 122 years ago.

"The Alamo belongs to the whole world," General Collier said, "not just to Texas."

I ask unanimous consent that the text of General Collier's moving and meaningful address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY LT. GEN. J. H. COLLIER, COMMANDING GENERAL, FOURTH UNITED STATES ARMY, PILGRIMAGE TO ALAMO, SAN ANTONIO, TEX., APRIL 21, 1958

We are here today to honor the brave men who gave their lives at the Alamo 122 years ago. These were men who had the fortitude and backbone to fight, to fight for what they believed to be right.

The defense of the Alamo is a heroic chapter in the history of Texas. When men perform such deeds, they achieve an immortality by becoming symbols to the world as heroes of the cause for which they fought. So the Alamo belongs to the whole world, not just Texas.

The struggle in Texas did not start as a war for independence. The men who took their stand here at the Alamo were fighting to secure the rights granted them in the 1824 constitution of Mexico. The government which abrogated that constitution was determined to subjugate the people of Texas. Events led to an uprising of the colonists, and a war for independence then became inevitable.

This is the pattern set by the Thirteen Colonies against George III. The same pattern has been followed by peoples who have gained their freedom all over the world, and in all times in history. It takes shape from a situation in which men have accepted an established order of affairs—a political situation which permits them to live with their fellowmen and maintain their self-respect. The despot, however, will always resort to force and violence to gain personal power and to replace free government with dictatorship.

Fortunately, there have always been men who will rise to fight such acts of tyranny; men who refuse to give up their personal freedom into the hands of a dictator. It is obvious that compromise with tyrrany is impossible, so the struggle changes to a fight for independence, as it did here in Texas.

The Alamo, a shrine to all Texans, belongs to all people who have fought, or are willing to fight, for freedom. It stands as a great symbol, not only of freedom but of this willingness to fight and die in its cause.

Freedom is not a gift; it has its price. That price can be paid in two ways: on the pay-as-we-go basis of eternal vigilance and preparedness, or it can be paid for as it was here 122 years ago, in the blood of a few determined fighters who set an inspiring example for the rest of Texas.

The requirement to pay for our freedom is constant. The manner in which we pay is left to us, but the necessity to pay, if we are not to lose it, is ever present. It is a hard fact that we get nothing for nothing. We must pay for value received, and we value our freedom very highly. The need is even greater today becaues the struggle is worldwide. There is now communism, a cynical, brutal force with the avowed objective of extending its authority over the whole world.

Russia of today was built on the ruins of an outdated autocracy. The power of the czars and their fuedal lords had been absolute. When the people of Russia finally rebelled, the architects who seized control to build a new order did not follow the ideal pattern which produces free people. Instead, they built the most cynical, vicious dictatorship the world has ever known. The blood of the revolutionaries and the ideals and slogans of democracy were exploited and twisted to enslave the people. Not content with robbing their own people of any semblance of freedom, the Communist Party set as its main objective the extension of its authority to encompass the whole world, and perhaps beyond, since the advent of the sputnik.

Can moral enslavement exist, without danger to itself, alongside free-thinking people? They don't think so, and coexistence from their point of view reminds me too much of what happens when a bear and a man are placed together in a cage. Life in the cage is easy enough for the bear, but very rough on the man.

Like the man in the cage, too many people today have become overawed by the strength of the Russian bear. There is too much of a tendency to allow the Communists—because of their sheer persistency—to dictate the terms of world peace. This is a time when every individual who believes in freedom must work for peace—as we know it—just as vigorously as we would wage war.

The situation we face today is quite as real and threatening as the one defied so bravely by Travis, Bowie, Crockett, Bonham, and others in 1836. Our way of life, our personal and national ideals of liberty, stand as a block in the path of Soviet world conquest. The oceans which separate us have been shrunk by aircraft and missiles almost to the size of the Rio Grande. The protective barriers the oceans once formed must be replaced by new walls. We have learned from past experience that appeasement and complacency merely smooth the road for aggressive nations. What is required from each of us is an active faith in freedom and a sense of individual responsibility for its perpetuation.

It is imperative that we do not permit the Communists to make the same mistake made by the Nazis. Hitler and the Japanese were convinced that democratic governments produced weak individuals. It took a war to prove them wrong. None of us wants to fight another war just to prove the same thing to the Communists.

A long time ago George Washington said that, "to be prepared for war is one of the most effectual ways of preserving peace." This is an effective national policy today; to be strong enough to deter any war of aggression. But our strength must consist of more than strength of arms. A combination of military, political, and moral strength is necessary to combat the spread of communism. A strong nation is the composite of strong individuals.

Today let us question ourselves. Do we have the courage and love of liberty to defend the heritage left us by the heroes of the Alamo? Only by showing this fortitude and determination can we pay real and lasting honor to the memory of those valiant men who fought and died here.

Questions and Answers of John Gates and Herbert Philbrick, Before Student Forum of Southern Methodist University

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. ALGER. Mr. Speaker, Dallas was the scene of an interesting event this past week when former Communist John Gates and former FBI Agent Herbert Philbrick appeared together before a panel of professors and students to answer questions. The former Communist and the former counterspy gave some interesting and revealing answers which I would like to call to the attention of my colleagues for their further information.

The following is a transcript from the Dallas Morning News of April 24, 1958:

QUESTIONS, ANSWERS OF GATES, PHILBRICK

Following is the substance of the questions and answers asked of John Gates Wednesday during the question period of the student forum of Southern Methodist University.

Dr. Lloyd Manning Wells, Southern Methodist University government professor, asked the first five questions:

Question. Have not the gains made in America during the last 20 years been made in spite of the Communist Party and not because of it? Is not Communist backing of any issue the kiss of death?

Answer. I don't think so. First of all, in the early thirties, the Communists did pioneer certain issues and help make progress. Since then, they have dissipated their gains. It is true that association and identification as Communist with any movement is the kiss of death.

Question. How do you respond to the charge that the party uses particular peoples and causes to forward the party's aims?

Answer. I was much more successful in furthering causes than in furthering the Communist Party. It disappeared, but the causes endured and are growing.

Question. You are not trying to say that you sought social progress more than the demise of the capitalistic system?

Answer. I sought both. It was not unusual for any political party to fight for the people and for the party. That's what the Republicans and the Democrats do.

Question. Do you believe the triumph of socialism is possible? Probable? Inevitable?

Answer. I do not equate the triumph of socialism with the triumph of the Soviet Union. I believe it is possible, probable, and inevitable.

Question. How can you say socialism is inevitable if you also say the world will be blown up in an atomic war?

Answer. That's why I agree it's possible. I'm confident we're going to avoid an H-bomb war. I'm optimistic. War would be the end of politics and everything else. I don't think the politicians will allow war.

Dr. Douglas Ewing Jackson, Southern Methodist University associate sociology of religion professor, asked the next seven questions:

Question. Are you a religous man?

Answer. I am not a religious man in that I do not believe in the supernatural or a supreme being. But I believe in religious ethics, right and wrong, and I don't believe it necessary for a person to have a formal religion.

Question. Do you have a name for this position?

Answer. Atheism. I'm not a militant atheist, and I do not fight against any religion.

Question. To what ethical system do you subscribe? How do you determine what is right and wrong?

Answer. If I could answer that question I would be the world's greatest philosopher. I just try to distinguish between good and bad.

Question. What is your basis for saying America takes an immoral position when it imprisons Communists?

Answer. It's just like the Yugoslavs' Djilas (author of The New Class) and the Hungarian writers who were imprisoned for writing books. I don't think anyone should be sent to prison for his ideas.

Question. Isn't there a difference between holding ideas privately and expressing them publicly—like calling fire in this crowded theater?

Answer. True.

Question. Would you classify yourself as a Marxist?

Answer. No, I do not want to be classified as a Marxist. I do believe in some Marxist ideas.

Question. De you hold with the Marxist belief that all evils, caused only by the class struggle, will disappear when classes disappear?

Answer. I don't think all evils will be eradicated. Many causes of evil will be eliminated, however.

Dr. J. Claude Evans, Southern Methodist University chaplain, asked the next seven questions of Gates:

Question. Do you still follow the party line on the Negro question? That the only way the Negro can get self-determination is the establishment of a Negro state in two-hundred-and-twenty-odd counties of the South?

Answer. No, I never followed it. It is one of the biggest mistakes of the party, and it alienated the party from the Negro.

Question. Why did the Daily Worker soft-pedal this issue from 1930?

Answer. We soft-pedaled it because it was such a fantastic idea.

Question. Why didn't you defend the execution of the Hungarian premier in 1949? Isn't this an example of what happens to good Communists who deviate from the party line?

Answer. It was a typical act of communism in the past. It is not exactly typical today. A leader will be deposed, but not killed; he will be made a dogcatcher somewhere.

Question. Do you still follow the party line and oppose the Marshall plan?

Answer. One of the biggest mistakes the party made was to oppose the plan. Russia should have applied for Marshall plan aid when it was first started. But Marshall plan aid has been used to build up West Germany, which is throwing the other European countries in deathly fear of a militant Germany. How many times will we let Germany attack the world?

Question. When you resigned from the Communist Party, you said you wanted to rejoin the American people and find out what they were thinking because the party had isolated you from the people. Are you disillusioned with socialism?

Answer. I am not disillusioned with socialism. But I believe some Marxian concepts are outdated. For example, his invalid statement that the rich get richer and the poor get poorer. The United States has proven this invalid.

Herbert A. Philbrick, former counterspy for the Federal Bureau of Investigation inside the Communist Party and now a staff writer for the New York Herald Tribune, asked Gates two questions:

Question. You said you would give your life for the religious freedom of others. When the Communists killed 11 Jews in 1952, why did you not speak out?

Answer. In 1952 I was in Atlanta penitentiary. I have protested in public and print against thesse unjustifiable and criminal executions. I have demanded that the Soviet Union change its policy on Jews. As long as they don't change that stand, they are morally wrong.

Question. Your introductory speech and Khrushchev's speech in 1956 sound very similar to me. Do you have any disagreements with him?

Answer. I have many disagreements with him, as I have stated in public and in print. I disagree with him on the lack of democracy in Russia * * * and the lack of opportunity for the Russian people to make up their own minds. I disagree with his sending the Soviet Army into Hungary and in many other ways.

Moderator Glen Costin then asked 17 of the 700 to 800 questions sent up from the audience. Gates answered most, but Philbrick also answered a few. Unless otherwise noted, Gates was questioned:

Question. If you have really quit the party, why don't you testify for the Government against Communists?

Answer. I have testified at many hearings and trials. I will not be a stool pigeon or an informer.

Question. Do you think the Russian progress under communism could have been greater under capitalism?

Answer. It is possible but not probable. Russia is developing at a more rapid rate than the United States is today.

Question. What is the difference between Russian socialism and the kind you propose?

Answer. I propose a democratic socialism which will retain all the great features of our Government.

Question (to Philbrick). Do you think fighting communism is still a matter of concern today?

Answer. Yes, for many reasons. There is no such thing as an American Communist Party. It is directed by the Soviet Union. Khrushchev is the most dangerous man we ever faced.

Question (to Philbrick). Do you believe Christian capitalism has a monopoly on truth, or can communism have some truth?

Answer. In my 9 years in the party, I found not one single truth. There can be no truth based on falsehood.

Question (to Gates). Is the Communist Party still carrying on espionage in the United States?

Answer. I have no doubt it is conducting espionage in the United States just as the United States conducts espionage in the Soviet Union.

Question. Did the Daily Worker's editorial policy come as directive from Moscow?

Answer. For 10 years that I was editor there was never any direction of any kind from the Soviet Union. But we didn't need directions, we believed any policy of Russia was right and we gladly followed it.

Question (to Philbrick). Don't you think this kind of affair is good in order to bring communism out in the open?

Answer. Yes, I think so.

Question (to Philbrick). What is your reaction to "democratic socialism?"

Answer. I haven't the faintest idea what it is. I know the satellites are called people's democracies, so I'm afraid of what democratic socialism might be.

Question (to Gates). How do you support yourself now, since breaking with the party. Do you see a place for you to go, a party or group to join?

Answer. I have no affiliations at the present or any immediate intentions. I am not satisfied with anything on the scene now. I would like to be identified with the great labor movement. There cannot be a new American radicalism without labor.

Question. Do you believe the individual should exist for the state?

Answer. No. The individual should exist for himself and for society. The state should serve the individual.

Question What do you think the fate of the Communist Party in the Soviet Union is?

Answer. I don't know.

Question. If you had been convicted of trying to overthrow the U. S. S. R. would you have been treated as fairly as you were here?

Answer. I did not receive a fair trial here. Soviet injustice, though much harsher, does not excuse American injustice.

Question. Who is the "we" in your statement, "We tried to change the party three times"?

Answer. The party itself the first two times. The third time it was a group called "revisionists" of which I was identified as leader.

Question. What is your reaction to the names party leaders called you? Do you fear for your person?

Answer. Sticks and stones may hurt me, names may make me mad. I don't have the slightest fear for my safety.

Question. Why has communism, as found today, not taken over any advanced western civilizations?

Answer. Because a great may of the gains Communists fought for have been achieved under capitalism.

Question (Dr. Jackson to Gates). Name a single gain the party made for a single Negro.

Answer. The party itself never made a single gain for any Negro. But it did participate in pioneering some advances.

Now, Mr. Speaker, I include an editorial of Friday, April 25, 1958, from the Dallas Morning News commenting on this interesting discussion:

GATES TALKED A GOOD GAME

Three hours before Communist John Gates' appearance at Southern Methodist University, the courageous anti-Communist, Herb Philbrick, lunched quietly with a few friends and predicted almost to the letter what Gates would say and how he would perform.

He would say the American Communist Party is dead—to lull suckers into belief that domestic Reds are no threat. He would parrot the latest Communist line—but call it socialism. He would get in good licks against capitalism and Secretary of State John F. Dulles, to the delight of certain collegians who may have heard the same in their classes.

First of all, Philbrick predicted, he would not obey the rules of fair play. "He will take twice as much time as allotted him, wearing out the perspiring crowd and forcing me to take far less than the agreement calls for."

Sure enough. The moderator plainly gave him 20 minutes. Gates took 40. And nobody even tried to stop him. Not even the moderator. Southern Methodist University's advertised debate of free ideas turned out to be 40 minutes for communism, 15 for Americanism—just as Gromyko, Vishinsky et al., have monopolized United Nations sessions with ambiguously vague generalities.

Philbrick nobly acquitted himself. His answers were crisp. He refused to dignify the shameful personal attack by Gates.

It is to be hoped that impressionable young collegians will reflect calmly on what Gates said, that they will read Witness, by Whittaker Chambers, and Masters of Deceit, by J. Edgar Hoover for an accurate insight into Communist techniques.

If enough Americans can be duped into believing that nuclear tests should be stopped, without proof the Soviet Union stops them, this Nation can be destroyed.

If enough Americans can be duped into thinking the Communist Party of America is dead, then more Americans can be led into Communist fronts under respectable guises to further the Red line. It doesn't matter to Khrushchev whether Russian objectives are promoted through the American Communist Party or through the National Committee for a Sane Nuclear Policy.

If communism can be promoted in America under the more appealing name of democratic socialism, so what?

Gates did perform one real service. He thoroughly disillusioned sincere Socialists by calling himself one. But socialism or communism—both are ruled from the top. Both degenerate into tyranny. That is the basic nature of those systems. Both are repugnant to the real American. Either, if followed, will wreck America.

Mr. Speaker, I would like to pose some of the questions which come to me as a result of Mr. Gates' statement:

First. Are not socialism and communism economically here confirmed to be the same?

Second. How does the professed atheist tell right from wrong?

Third. How can democratic socialism retain the features of our constitutional form of Government, as he says?

Fourth. Has the American labor movement, now influenced by liberals and ADAers, become the result of the earlier efforts of Communists and Socialists whom Mr. Gates would like to join?

Fifth. By what philosophy of constitutional government do we now justify the many legislative bills we are now considering that are being sponsored by the AFL–CIO?

Finally, is it not obvious that Senator KNOWLAND's, or anyone else's, valiant efforts to establish a workingman's bill of rights or any conservative legislation is doomed to failure unless agreed to by the politically potent labor leaders?

Eulogy of Former Gov. Paul A. Dever, of Massachusetts, Delivered by Lt. Gov. Robert F. Murphy, of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. O'NEILL. Mr. Speaker, at the Jefferson-Jackson Day dinner held in Boston, Mass., on April 19, 1958, the greater part of the evening was spent in eulogizing our beloved former Governor, the Honorable Paul A. Dever, who died on April 11.

The one chosen to make the principal tribute was the present Lieutenant Governor, the Honorable Robert F. Murphy. While I was the speaker of the Massachusetts House of Representatives, I had the pleasure of serving with Bob Murphy, who was then the majority leader. Later he served as minority leader and in 1954 was the Democratic nominee for Governor. In 1956 he was the nominee for Lieutenant Governor, the position which he now holds in the Commonwealth.

Bob Murphy is a man of exceptional talents and qualities. He is an excellent speaker, well versed in the field of public service; a former newspaperman, and a lifelong Democrat. On this specific occasion he rendered glowing tribute to Paul Dever in remarks which came from the heart and which echoed the sentiments of those assembled. I am proud and honored to include his address in the CONGRESSIONAL RECORD.

EULOGY OF FORMER GOV. PAUL A. DEVER DELIVERED IN BOSTON, APRIL 19, 1958, BY LT. GOV. ROBERT F. MURPHY, OF MASSACHUSETTS

Tonight, while grief locks the heart, and sadness throttles the tongue, and there is an overwhelming emotion of complete loss, this particular occasion is unique.

This annual dinner with its productive elements for the Democratic Party can well be called Paul Dever's party, because it was the function closest to the heart and mind of our late and lamented and never-to-be-forgotten friend.

But he would want it, I think, not as a tribute to himself.

He would want it so that the means can still be procured to perpetuate the record of achievements, which his philosophy of life translated into a long, litany of deeds, in the interests of the poor; the lowly; the sick of mind, heart, and body; the homeless; the little ones and, indeed, all those forsaken and forgotten.

JEFFERSON-JACKSON

Paul Dever stood forequare and always for the old-fashioned civic integrity of an Andrew Jackson.

Time after time, from this very rostrum, he held that "the principles of Thomas Jefferson are the definitions and the axioms of a free society."

The late, great governor was first and foremost for the people, because he was of the people.

BUSINESS

Paul Dever destroyed the falsehood that democracy was hostile to Massachusetts business. While he was pilloried as the enemy, he lifted the economy and, today we defy those detractors to name him or any other Democratic governor, as an enemy of business.

He gave us 318 miles of better roads, greater safety on the highways, an expanded tourist trade; he increased our commerce, and he lowered automobile insurance rates.

He built us new homes: In 2 short years he took them out of the blueprint stage and started 115 projects, that provided 12,240 apartments.

When he took office, not a single project, not even a single apartment, had been completed.

Today, over 50,000 veterans and their families are living in healthful, respectable, low-cost dwellings.

And he sparked job opportunities when he developed the port of Boston and made Logan one of the premier airports of the world.

PUBLIC HEALTH

In the field of public health, once Disraeli said: "The health of the people is the foundation upon which all their happiness and all their powers as a state, depend."

Massachusetts made her greatest advances, in the science of public health, under Paul Dever.

Lemuel Shattuck, the finest chronic disease hospital, is, today, a reality. The new wing of the Chelsea soldiers' home now stands majestically for all to see.

The Holyoke soldiers' home came into being while he provided annuities for our paraplegic veterans.

MENTAL HEALTH

"Paul Dever did more in 1 year in the field of mental health than other governors did in a hundred years," once said Dr. Clifton Perkins, the long-time commissioner of mental health.

Under Dever, for the first time in years, Massachusetts' mental hospitals discharged, as cured, as many patients as they admitted. He segregated mentally ill children from the adult insane.

He provided special training for the feebleminded, afflicted with blindness, and he separated the physically well insane, from those others, ravaged with tuberculosis.

RETARDED CHILDREN

For a century, others talked about the need for a program to help retarded youngsters. They needed help and under Paul Dever they got it.

For lasting cure replaced neglect.

Myles Standish Hospital was born in Taunton, to care for 2,000 exceptional children.

Today, thanks to a compassionate heart, there are no more commanding waiting lists. Firetraps were replaced with seven other new mental-health schools and hospitals. Underpaid attendants were made whole. Understaffed institutions were strengthened.

Myles Standish, Paul Dever always claimed, was his greatest achievement—and, as longtime legislator myself, I know that the present general court will eargerly respond to the suggestion of Governor Furcolo, that the name of Myles Standish be changed to the "Paul Andrew Dever School."

Then, indeed, there will be a lasting memorial in respect to his memory.

Someday, through the succession of governors, the time will come when his portrait will be removed from the walls of the executive chamber where it now hangs.

And when that day comes—when that moment is here—it is my fond hope, that it will be moved to Myles Standish where it will hang from, and adorn the walls of that institution, in, immortality, and in respect—yes, in reverence to the memory of one possessed of a lofty ideal and a benevo-

lent heart. For he once said this regarding retarded children:

"You can have what I have provided; the roadways which lace the landscape—you can build your bridges and tunnels above and under our rivers—you can have your modern buildings with towers piercing the clouds—and all of that.

"And in my welcome days of future, private citizenship, I can look back to all of those with great pleasure.

"But if there is one thing that will warm my heart, and which I am sure, will be an endorsement on a passport by St. Peter, it is that, which I have been able to do, for the mongoloid youngsters of Massachusetts."

LABOR

He was one of the most devoted friends the workingman and woman ever had.

He broadened the workmen's compensation law.

He doubled compensation for the loss of an arm.

He tripled compensation for the loss of an eye.

He raised the minimum hourly wages of the lowest-paid Massachusetts worker.

He gave long-overdue increases to those in the State service, who were caught in the spiral of inflation.

He enacted a new anti-injunction law.

He insisted that maritime workers be made eligible for unemployment compensation.

To labor, a stalwart has gone.

EDUCATION

"It was in making education common to all," once said Russell Lowell, "that the destiny of the free Republic of America was practically settled."

Paul Dever's contributions to public education were legion. He turned his attention to repairing and refurbishing our many State teachers' colleges which had been in bad disrepair for years.

He powered the physical plants at our textile institutes at Lowell and Fall River and New Bedford. Today, they are the best of their kind in the world.

He never stopped trying to provide needed new facilities at the University of Massachusetts.

New instructors were added to the teachers' colleges to train more teachers; and to man, and to staff, our understaffed schools.

In one stretch of 2 years under Paul Dever, 270 public-school buildings were erected in 212 cities and towns, with the State underwriting the cost up to as high as 65 percent.

Regional school consolidation came into being that made it possible for our very smallest communities to grant education comparable to that given by our largest cities.

He approved scholarships to 100 worthy boys and girls at the University of Massachusetts.

He increased scholarship benefits for children of veterans killed in war, and devised a State-aided, vocational-education program for 13,000 handicapped youngsters.

CONCLUSION

I shall always think that Paul Dever was less than enthusiastic about it, but he bowed to the wishes of his friends and associates when he ran for reelection in 1952, after completing two terms as Governor of Massachusetts.

He probably was not too well physically, but he did not complain. Instead, he responded to their urge with his usual vigor.

This followed his choice as the keynoter at the Democratic National Convention in Chicago, and the unfortunate incident that occurred there. He went there to help our cause. He went there, true to his character, to aid his friend Adlai Stevenson, and to proclaim that democracy is inseparable from the liberties of men. Democracy that had given a Jefferson, a Jackson, a Wilson, a Roosevelt, and a Harry Truman, to the service of mankind.

He was not defeated by the Eisenhower sweep. Instead he was crucified by the assaults on his character and by the attacks on his personal probity.

For Paul Dever went down in 1952 by the cowardly and the poisonous thrusts of those who vilified him, as no other man had ever been so debased before.

I have many times thought that he became so crestfallen, so downcast by a succession of untruths and slurs and outright attacks on his honesty, his integrity, and his moral uprightness—and by one, I might add, that he thought would show some essence, some atom of fairness—that his illness began and became so accentuated, as to lead to his ultimate, and to me, his most untimely death.

But our zeal, our admiration for his goodness of character, and for his sincerity will never waiver.

Our admiration for the cold, even light of his brilliant mind, will never cease.

For he was, in fact and in truth, the leader here in Massachusetts of our party. And his influence for the common good will remain long after his assailants have gone.

To them, to them, I say that our faith in him shall never end. To them I say we shall always remain inspired by his precepts and by his example.

To them I say that Paul Dever was the builder, the architect, who while he lived, lifted us to such heights of moral grandeur as we had seldom known before.

For his name and his purpose made hearts beat a little faster in lowly places. And today his name and his good deeds and his charity are being sung in every nook and cranny of this Commonwealth.

And now that he is gone, his spirit soars. For, with his death and with his passing, he has left for history and humanity and eternity for all mankind the everlasting and immortal memory of Paul Andrew Dever.

For the spirit of Paul Dever lives on.

The spirit of Dever will never die.

The spirit that slowed a week ago lives again.

For he has bequeathed to us the unfinished fight to aid the jobless; to strengthen our economy; to care for the aged and the sick; to build our highways; and to go forth to battle for the cause of man.

Yes; he has left to us, too, the legacy of helping the Mongoloid kid, and providing the new techniques for the retarded child.

And, as it always was with Paul Dever, so may it always be with us.

May his immortal soul rest in peace.

Disabled American Veterans of Wisconsin Sponsor Junior Achievement Companies

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1958

Mr. PROXMIRE. Mr. President, the achievement of a young Wisconsin man in winning second place in a national essay contest sponsored by the President's Committee on Employment of the Physically Handicapped has focused a dramatic spotlight on the very fine work being done cooperatively by two excellent organizations in Wisconsin.

About 18 months ago, the Department of Wisconsin, of the Disabled American Veterans, a veterans' organization well known for its outstanding work, undertook the sponsorship of a Junior Achievement Co., in Milwaukee. Junior Achievement is also an organization that is well known for its outstanding and unique work in giving America's youngsters a chance to learn about our system of capitalism at its best, by actually forming and managing business concerns of their own. But this particular Junior Achievement Co. is unique, in that it is made up entirely of youngsters who are physically handicapped.

This year, the Wisconsin DAV organization is again sponsoring a Junior Achievement Co.; but this one is comprised of both physically handicapped and physically fit youngsters. The program is so successful that the DAV is making plans to sponsor several chapters next year.

Wayne Stanley Gardner, a high-school senior from Granton, Wis., a community of about 300, in central Wisconsin, won second place in the national contest. He will come to Washington next week, to accept his award from President Eisenhower. All of Wisconsin is tremendously proud of this young man for winning this honor. The Wisconsin Department of the DAV has taken an active part in promoting this essay contest in our State.

Mr. President, Mr. Harold Wellnitz, of Oshkosh, Wis., the department commander of the Disabled American Veterans, has prepared an excellent statement telling of his organization's good work in sponsoring Junior Achievement companies in our State. I ask unanimous consent that his statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HAROLD WELLNITZ, COMMANDER, DEPARTMENT OF WISCONSIN, INC., DISABLED AMERICAN VETERANS

In October 1956, the Disabled American Veterans, Department of Wisconsin, undertook the sponsorship of a Junior Achievement Co., and affiliated with the Junior Achievement of Southeastern Wisconsin, Inc., at 3800 West Wisconsin Avenue, Milwaukee. Junior Achievement itself is nothing new, but this company, as far as is known, was unique in that it was made up of all handicapped teen-agers. Our purpose in this was to give these youngsters some of the advantages and help that a grateful country gave the disabled veteran in his rehabilitation to again become a useful and productive citizen.

Advisers were recruited, and the company was put under the leadership of Mr. Howard Fairbanks, of Brookfield, Wis., himself the handicapped man of the year in Wisconsin. Insurance was provided for every minute these youngsters were with Junior Achievement, and transportation was furnished by the Milwaukee County Red Cross Chapter. The youngsters elected their own officers, sales manager, and board of directors. Stock was issued at 50 cents per share with no one being allowed to own more than 5 shares.

The members met one evening a week at the Junior Achievement center in Milwaukee and manufactured a household product that was not in competition with industry. The success of the company was such that at the end of the school year they dissolved, buying back the stock, and paying a dividend of 10 cents a share. Operating in the same manner as any large corporation, these children learned the meaning of American free enterprise as well as furthering their education toward a useful and productive life.

This year's company sponsored by the DAV Department of Wisconsin is different in the fact that we have mixed the handicapped youngsters with physically fit teen-agers. This experiment is proving to be successful, and it is hoped that in the next season we will be able to have similar companies in other localities in the State. The company this year is the Rod & Reel Co. and manufactures fishing rods—a hollow glass fly rod 7½ feet long and 2½ ounces in weight, a bass action fly rod, and 2 different spinning rods. These products, of course, are very important in the State of Wisconsin.

On May 8, an awards dinner will be held in the Milwaukee Arena with about 1,500 in attendance. Our company will compete with all others for recognition. The various companies are rated on five basic principles of good business—product, production management, sales, and understanding to determine the outstanding companies in the varied fields of endeavor. The judges are the National Association of Accountants, the Sales Executives Clubs and Engineers Society of Milwaukee, and the Milwaukee Advertising Club.

Junior Achievements teaches to American youth confidence in the American system and sound business principles. Many Milwaukee companies are now using Junior Achievements as an essential part of their executive training program.

As far as we know, these companies of handicapped teen-agers, sponsored by the Department of Wisconsin Disabled American Veterans, are the first such groups to be organized. Our satisfaction is the knowledge that we have helped these handicapped youngsters on the way toward contributing to the economic welfare of our country.

At the essay contest awards dinner in Milwaukee on March 17 at the Allis Chalmers Clubhouse, a switch was pulled. The department commander of the DAV accepted a citation for the department from Junior Achievement of Southeastern Wisconsin, Inc., in recognition of its pioneering in this almost neglected field.

The Columbia: Mightiest Power Builder on Earth

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1958

Mr. NEUBERGER. Mr. President, the manner in which water and power resources of the Columbia River Basin are correlated for maximum production of energy has a fascination for engineers and laymen alike. The transmission grid of the Bonneville Power Administration and the multiple-purpose dams of the United States Corps of Engineers and Bureau of Reclamation form the backbone of the network of powerlines and powerplants which make possible this electrically and hydraulically integrated operation of Columbia Basin water resources. Management by the Federal Government has been a major factor in turning the turbulent Columbia into one of the world's mightiest power producers.

Operation of this vast interconnected system of publicly and privately owned power facilities is vividly described in an article in the May 1958 issue of Reader's Digest, entitled "The Columbia: Mightiest Power Builder on Earth," by Wolfgang Langewiesche. I ask unanimous consent that the Reader's Digest article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COLUMBIA: MIGHTIEST POWER BUILDER ON EARTH

(By Wolfgang Langewiesche)

Cruising my little airplane over the Pacific Northwest, I got my first good look at the Columbia River. That river, with its tributaries, is now the biggest power river on earth. It dwarfs the Tennessee. And on its power is built a regional development that dwarfs the TVA. It has brought to the Northwest the Hanford atomic works; it powers the giant Boeing aircraft factories and the shipyards on Puget Sound; it has attracted aluminum mills and smelters. Already it has brought a million new people to work in the Northwest, so that, in the State of Washington, 1 out of 3 persons is now a newcomer.

Throughout this region I had seen a brand-new answer to those who are afraid that we are going to run out of food, land, wood, oil, or whatnot. On the plains of Oregon I had seen rich wheat farms on land that used to be almost desert. The climate has not changed, and there is no irrigation; men have learned how to grow wheat with less rain. In the mountains of Washington I had seen modern forestry grow 50 percent more wood per acre than nature would grow unaided. I had seen the gas pipeline coming in from the four corners region, 1,000 miles away, bringing fuel to this region that lacks coal and oil. The answer to the fearful is: We can now create resources—land, trees, fuel.

Now, on the Columbia River, I was seeing men, in effect, create water.

We think of the Northwest as rainy, and full of tall, dripping pine trees, and mountainsides sloping down to the sea. That's true for the coast—Seattle, Tacoma, Portland. But inland rise the Cascades, a mountain barrier about as high as the Alps. And inland of that, in its rain shadow, lies the inland empire—a vast plain, flat or rolling, without trees. Most of it is too dry for agriculture, and some is outright desert.

Across this barren plain the Columbia wanders almost unseen, most of the way in steep-cut, somber canyons hundreds of feet below the operating level of the country. A river usually appears from the air as a strip of high-intensity civilization. But the Columbia for most of its course has no cities on it, no roads or railroads following it. For long stretches, there's not a house, not a ranch, not a field.

The cause of this strange situation is not hard to discern. The Columbia is fed by the glaciers, rains, and heavy snows high up in the Rockies. So it has plenty of water, plenty of power to cut its bed deeper and deeper. But the country it flows through gets little rain, has almost no streams, and is not being cut down by erosion. So, through the ages, the river has dug down, while the country has stayed up. And there's your problem: a big fat river flows through arid country; and millions of acres are useless because you can't get the water on the land.

That's what Grand Coulee Dam is all about. It lifts the water up onto the plain—economically.

From the air, Grand Coulee Dam, biggest concrete structure on earth, looks small, graceful, even fragile, down there in its canyon. Actually, it is a goliath among power dams: it develops almost 3 million horsepower. It feeds its power into the regional network of high-tension lines. But a small part of its power is used to pump river water out of the canyon up to the level of the country. The water flows up the canyon side through a bundle of 12 pipes that look like organ pipes, each one big enough to supply all of New York City with water. On top, the water goes into a vast storage lake, several miles wide, 27 miles long.

The pumping up is done in the spring, when the river runs high, and in the dead of night, when the region's power requirements are lowest. The rest of the time, irrigation draws on that storage lake, while the dam devotes full time to powermaking.

On an impulse, I left the river here and followed the irrigation water, to see where it was used. I followed the lake, then a canal, a length of pipeline, a canal again. It led me across one of the strangest landscapes on earth. It's lava country, mostly black, through which run canyons that make no sense because they have no rivers in them. I saw a Niagara Falls, only 3 times as high and 5 times as broad. The horseshoe shaped precipice, the gorge—it was all there, except the water. It was a dead waterfall, along a ghost river.

This region is called the channeled scablands of Washington, and it explains why Grand Coulee Dam is where it is.

The country has been devastated twice: first by fire (liquid lava boiling up out of cracks in the ground), then by water. During the ice age a glacier dammed up the Columbia River until it overflowed its canyon and started off sideways, across the plains of stiffened lava, seeking a new channel to the sea. This overflow is what tore up the country, dug those canyons, made that waterfall.

When the ice age faded, the Columbia went back into its old course, leaving the dry river courses. The canyons are called, locally, "coulees." The biggest of them all, Grand Coulee, is now the storage lake for irrigation water. The old watercourse in general now serves as an easy cross-country route for the irrigation water. Out of old devastation we've made a natural resource.

On the plain where the water is used I expected to see a nice expanse of green. I was wrong. The soil worth irrigating lies in patches only, interlaced with black lava flows, hills, stretches of sand. Here and there, a settler's house stands on the vast somber plain, no driveway leading to it, as if it has only just been set down. The landscape looks unfinished and uninviting—because it is. To put new land under irrigation is a tough job. You have to drain as well as irrigate. If the soil gets waterlogged, it goes wrong—in texture or in chemistry. The first years, all you can grow is alfalfa. Its roots dig deep down and loosen up the soil and bring it to life. All this takes money. People here say you must go $25,000 in the hole before such a farm begins to pay off.

It is true that you get the land, itself, practically free—under a successor to the famous Homestead Act, signed by Abraham Lincoln, which once offered to any man on earth a farm in America, free. But the settler must pay off, through the years, his share of the irrigation system. And what he gets is just raw land, with water delivered at one corner by the Government. The rest—the ditches and drainage, the house, the machines—is up to him. It takes guts to succeed here.

Now, for many, the toughest part is over. Farmers are beginning to make good crops of high-value products: peas, sugar beets, canning vegetables. They are paying old bills and buying new machines. I circled the town of Othello, Wash.—once a mere nothing along the highway—and found it an impressive little place: big school, big agencies for cars and farm machinery, a motor court, and a landing strip within walking distance of

everything. Clearly a lot of people are betting a lot of money on the future of that plain.

I went back to the Columbia River and flew its whole length. The more I saw, the more I was astounded. I had known about Grand Coulee and Bonneville Dams. But these are prewar. Since World War II a dozen new dams have been built or set underway. Even since the Korean war the power on the Columbia River system has doubled. Soon the river will look like a string of lakes, with one dam backing the water right up to the foot of the next dam above. Many of the dams are remote, and seldom seen even by northwesterners. But their names pop up continually in local talk: Hungry Horse, Ice Harbor, Priest Rapids, Chief Joseph (generally called Chief Joe). The Dalles, McNary. For the last 10 years half a million dollars has been spent every day to build new dams on the Columbia. In the next 10 years a million dollars a day will be spent for more dams, to keep up with the power needs of the country.

Who does all this? That's just the point. This is a TVA without the A. No central allwise authority runs the development. Some dams are private enterprise; some are United States Government; some belong to cities, some to public utility districts, which means essentially counties. The development runs by argument, hearings, quarrels, lawsuits, compromise. "But this interferes with my power." "It hurts my fish." "It floods out my Indians." In every aspect, involved are the Federal Government, with various of its agencies—Bureau of Reclamation, Fish and Wildlife, Army engineers, the Bonneville Power Administration, Indian Affairs; five States, each with several bureaus and commissions; plus Canada (the Canadian part of the river, in British Columbia, is still mostly wild). Senators from the Northwestern States also make their wishes known. And beneath the surface there is a life-and-death struggle between public power and private power.

Despite the multiplicity of interests, the river is operated as a single entity. I say "operated." Once you have a string of dams on a river, you can't just let the water run. You have to open and close the gates and spillways to take care of floods and droughts and the varying demand for power. Main tool of operation—the Northwest power pool.

What's that? There is no organization of that name, no office, no letterhead. It's simply the fact that all the power producers of the region work together. A four-State grid of high-tension lines connects all the dams. Each dam feeds its power into the grid; each city, industry, rural electrification district draws its power from the grid. Electrically, therefore, the Northwest is one pool.

Here's how it will work, for instance, once the new dams in Idaho are completed: In the early summer, when farmers in Idaho draw a lot of current to run irrigation pumps, the Snake River, a tributary of the Columbia, has a good flow of water. The simple thing to do would be to supply the local demand with locally made current from the local river. But, at this same time of year, power requirements downriver and along the coast are fairly low; the dams down there have more riverflow than they need and must let water run over the spillways, which means waste. Pool operation combines these two situations. Idaho Power shuts down its turbines, closes its dams, and supplies its local farmers with power drawn from the grid. At the same time, the dams downstream open up their turbines and supply to the grid the extra power to make up for what Idaho draws. In this way waste of water downstream is reduced, and up in Idaho, as the water level rises behind the dams, a reserve builds up.

So water has been, in effect, created. There is now a mass of water upriver, ready to work, that would not have been there without this trick of management.

Imagine the bookkeeping. Both water and electric energy are borrowed back and forth between the dams, power companies, Government agencies. When extra water builds up behind dam A because dam B works extra hard, that extra water belongs to dam B. It is valuable property. It is stored in layers you don't see when you look at a reservoir. The topmost 2 feet of water may belong to the XYZ company, the layer of water next below to the Army Engineers, the next foot under that to the United States Bureau of Reclamation, or the city of Tacoma. A string of dams, working a river as a whole—here is a brilliant new creation of man.

The trouble with the Columbia is—its water comes at the wrong time of year. It runs highest in spring and early summer while the snow is melting in the Rockies. The power needs are greatest in the winter, when all the lights and electric heaters are on. So in fall and winter, until a few years ago, when Chief Joe Dam went to work, the region had brownouts.

Even now the aluminum plants, attracted to the region by the cheap electricity, have to close down every winter because there isnt enough power. This is as planned; they get their power cheap on the condition that they may be cut off. But power that isn't firm—that is, available year round—is for most industries and households not worth having.

The best way to get more power is to doctor the river to flow more evenly: to build more storage reservoirs up river. Each gallon you can hold up river in the spring, at high-water time, becomes valuable when you let it run down the river in the fall, at low-water time.

And now comes the miracle of downstream benefits. Suppose you build a dam and powerhouse high up on the upper part of the river. Behind your dam you have a reservoir which you filled in the spring. Now, at the low-water season, as you draw on your own storage to keep your own turbines running, you release a lot of water which flows down the river and runs through everybody else's turbines also. At each dam downstream your water comes as extra water. It would not be available had you not built your dam. So your water does extra work which that dam could not do before your dam was built.

Again water has been created where there was none before—or rather at a time when there would have been none before.

Downstream benefits are also a political headache. They are worth money. When the Army engineers analyze a new dam project, they always take its downstream benefits into account. On the books of the Federal Government the lower dams then pay the upstream dams for benefits received. This is, of course, merely a bookkeeping transaction, but without it many a Federal dam would show a loss to the taxpayer. But a private-power dam cannot collect for downstream benefits from Government-owned dams. The Federal Government claims it owns the river anyway, and all improvements become its property ipso facto. This is part of the grim struggle between private and public power.

The Columbia, with its tributaries, was the last place in the country where big, unused waterpower was still left. Now, the good dam sites are all taken up, or spoken for. And dam building becomes more expensive as the country develops. Sometime after 1970, building of dams will have become so expensive that it will be more economic to add steam powerplants, possibly with atomic heat. Is this the end of the line of river development?

No, there's still another twist. Steampower needs waterpower as a sort of backstop. The demand for electric power goes up and down violently through the day and night. But steampower, to be economical, wants to run at a steady pace. Waterpower, on the other hand, lends itself to operation in spurts. When you shut it down, you lose nothing; the water rises behind the dam, and is available for your next run. And a water turbine requires no warmup; just open up, and let her spin. So, in most of the United States, waterpower is used now to firm up steampower and make it more economic. When the Northwest finally goes to the same regime, it will mean that more turbines can be installed in each dam. And more power can be got from each dam, in short spurts, than it now produces in steady operation. Used that way, Columbia River power will be more valuable than ever.

Thats what I saw on the Columbia: man can create resources. There is no end to our resources as long as there's no end to our ideas.

Automobile Pricing

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article written by Richard L. Strout, entitled "Cars and a Price Jungle," and published in the Christian Science Monitor for April 24. Mr. Strout points out the need for a law requiring labels giving the actual manufacturer's list price on automobiles offered for sale.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of April 24, 1958]

CARS AND A PRICE JUNGLE

(By Richard L. Strout)

We were all seated at the end of the long press table in the Senate restaurant talking, of course, about the automobile industry. Everybody these days talks about the slump, and then about Detroit.

"Do you know," observed a reporter, "that there isn't a new-car salesroom in this city where you can find the actual manufacturer's list price of an automobile to the dealer? When a consumer sets out to buy a car he's just operating in the dark."

"There don't seem to be any fixed prices any more," said a disgruntley voice. "You take in your old car and from there on its like haggling in an oriental bazaar."

I was surprised at the agreement that followed. Several speakers said they wanted new cars but were holding back. I am sure the same discussion is going on over the country. A lot of people, it appears, not only don't like the length, looks, or price, of news cars but are also upset by the details of the deal that sells their old car and gets the new one.

"It's a price jungle," testified John L. O'Brien, president of the Better Business Bureau of Akron, Ohio, before the Senate Subcommittee on Automotive Marketing Practices, headed by Senator A. S. (MIKE) MONRONEY, Democrat, of Oklahoma. "The plain price tag on an automobile offered for sale today is so rare a thing as to be almost nonexistent. You can find out almost anything about an automobile except what the darn thing costs."

It's a queer situation. Hundreds of millions spent for automobile advertising, and yet at the salesroom when the doubtful cus-

tomer enters he, or she, is expected to engage in the Levantine sport of bargaining in which a ballyhooed over allowance for the trade-in is taken care of by an inflated price of the new car.

On a Mexican street corner a tourist smiles at the need to haggle for some common commodity, but back in the United States he now often engages unsmilingly in much the same practice in what may be the biggest single investment he makes outside of his home.

Four spokesmen for the National Automobile Dealers Association, which represents some 25,000 franchised dealers throughout the Nation, testified in favor of a proposed Monroney bill requiring manufacturers' wholesale prices to be displayed on new cars. The association, they explained, had tried and failed to police the industry themselves. Price "packing," they said, was common—marking up or adding charges over and above normal recognized markup from the wholesale price at which a dealer acquires an automobile from a manufacturer.

William M. McCune, representing the State of Pennsylvania on the NADA, said the manufacturers hadn't been of much help. The practice of "packing" really hit hard in 1954 when the big three competitive race got intense. Indeed, a Pontiac dealer of Albany, N. Y., testified before another committee that "packing was condoned and encouraged by General Motors," and a Lincoln-Mercury dealer from Reno, Nev., testified to like effect in his own line.

In large part, it appears, the fault is that of gullible customers looking for fantastic bargains, who think they are somehow beating the system when they get preposterous trade-in allowances. They do not realize that they are paying as much, or more, for their purchase because of "packed" prices of the new car. Sometimes there is outright fraud through the device of a faked factory invoice; sometimes the trick is done more subtly by including a long list of optional equipment and accessories at inflated prices; items which do not occur to the customer as price factors until the deal is all but closed.

"There is a tremendous reservoir of car buyers who are refraining from buying at this time," testified Morgan R. Purdy, Pontiac-Buick dealer of Van Wert, Ohio.

He, like Roland Hughes, Lincoln-Mercury dealer of Jonesboro, Ark., thought the proposed bill would extinguish some of the foolishness engaged in by the disruptive minority who persist in false and misleading claims in advertising.

Salmon Are Only "Pinks" in Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BARTLETT. Mr. Speaker, recently, for reasons completely beyond my comprehension and the comprehension of all Alaskans, allegations have been made that if communism is not rampant in Alaska it might be acceptable there later on. This is simply fantastic. No part of the United States contains citizens more loyal than does Alaska. The April 19 issue of the Valdez Breeze commented on this editorially.

The editorial is offered here:

WASHINGTON, D. C., SEER PREDICTS "PINK" FUTURE FOR ALASKA

Once again Alaska and its residents have been put through a siege of name calling.

We are not arguing party politics, the pros and cons of statehood—we are only wondering why such learned people keep expounding along the same lines?

Surely there has never been a suggestion of rumor as to any of our schools being hotbeds of communistic activities—none of our citizens have appeared before Senate investigating committees because of questionable affiliations. Can the gentlemen who are our accusers say the same for their own States?

To point an accusing finger toward the north and west and say "There lay the future homes of communism" is fantastic.

To infer that should the time ever come that we could elect our own governor we would all blithely vote a straight Communist ticket—is like saying California is going to be exiled from the United States because Harry Bridges lives there.

The founders of our country would only shake their heads in wonder if they could see such ignorance and greed for power as is displayed by those who formulate the laws that govern us all.

Please, gentlemen, before you make any more rash statements get out your reference books and see just where the so-called strength of the Communist power is—for it surely isn't and not likely to ever be Alaska.

Senator Russell Honored

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29, 1958

Mr. TALMADGE. Mr. President, the people of Georgia are exceedingly proud of the deserved honor which is being paid their beloved and distinguished senior Senator, RICHARD B. RUSSELL, in the presentation to him on Wednesday of one of the two 1958 George Washington Awards of the American Good Government Society. I ask unanimous consent that there be printed in the Appendix of the RECORD the editorial entitled "A Statesman Honored," from the April 26, 1958, issue of the Savannah (Ga.) Morning News, which aptly expresses the sentiments of Georgians in this regard.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STATESMAN HONORED

Come the evening of April 30 and a great Georgian who has demonstrated down through the years that there is no substitute for statesmanship in holding the esteem of his constituents will receive a signal honor.

We speak, of course, of Senator RICHARD RUSSELL, who is to be the recipient of 1 of the 2 1958 George Washington awards of the American Good Government Society. The other will go to Senator WILLIAM F. KNOWLAND of California, also a great champion of intellectual honesty.

The presentation to Senator RUSSELL will be made by Erle Cocke, Jr., former national commander of the American Legion. Properly enough, Dr. Felix Morley, author and educator, will deliver an address entitled, "President George Washington."

The people of Senator RUSSELL's home State should be proud indeed that he has been selected for this honor, which has been reserved for such other great Americans as Robert Taft, Herbert Hoover, and the late Senator Walter F. George. The award indicates that throughout the Nation our senior Senator's talents and contributions are being recognized by those who come closest to symbolizing the integrity and courage of the man who was first in war, peace, and the hearts of his countrymen—George Washington.

Foremost Catholic Farm Policy Expert Endorses Direct Payments Method

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29, 1958

Mr. PROXMIRE. Mr. President, one of the Nation's Greatest minds and greatest hearts in the field of farm policy is Msgr. Luigi G. Ligutti, director of the Catholic Rural Life Conference. He is loved and respected by farm people of all faiths and parties and organizations for his humane and understanding view of the problems of agriculture. He is highly esteemed even by those who disagree with his views.

As for me, for many years I have greatly admired Monsiegneur Ligutti's work in farm policy and with farm people. I have the highest esteem both for his recommendations about what should be done to help our farmers, and for his fundamental objectives—which is to preserve, protect, and promote the family-type farm as the basic pattern in our agriculture. I am proud, indeed, to endorse this objective as my own.

In a recent interview in the Register Times-Review, published by the Catholic Diocese of La Crosse, Wis., Monsiegneur Ligutti's views on present farm programs are presented with unusual clarity and force. I ask unanimous consent, Mr. President, to have the interview with Monsiegneur Ligutti printed in the Appendix of the RECORD, so it may come to the attention of all Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the La Crosse (Wis.) Register Times-Review of April 18, 1958]

PRICE SUPPORTS RIDICULOUS—RURAL GROUP CHIEF SLAMS FARM PROGRAM

(By Robert G. Hoyt)

KANSAS CITY, MO.—America's farm program, in some aspects, lacks both commonsense and common justice, the National Catholic Rural Life Conference's executive director said here.

In an interview that touched on a large number of farm-related topics, Msgr. Luigi G. Ligutti declined to comment on President Eisenhower's veto of the recent farm bill, or on the bill itself. But he considers the idea of price supports ridiculous.

"The farmers are producing a great abundance of goods—too much, the Government says," he said.

"So the Government enters the market, buys some of these goods, and puts them away. It costs $1 million a day just to store this surplus, as they call it, not to speak of the cost of buying it.

"Because these goods are taken off the market, naturally prices are higher. So what does this mean? It means that we are pay-

ing taxes so that we can pay higher prices for our food."

He added: "The Rural Life Conference does not mean that the farmer should be left at the mercy of the market, when he has so little control over it. We simply oppose the illogical and doubly expensive system now being used to give the farmer a fair return."

A better way to accomplish this end, he suggested, would be to let the farmer produce what he wants to and market it without controls.

The farmer then would receive, directly from the Government, the difference between the cost of production and a reasonable rate of return on his investment and labor. Such a plan would bring an immediate and sharp drop in prices, and the price reduction would in turn have these effects:

Consumers would benefit financially.

Consumption would increase, especially among poorer families. This would bring a rise in the standard of living—the natural response to abundant production, now artificially prevented. It would also tend to reduce surpluses.

The cost of administering the Government farm program would be materially reduced, because the system of paying directly to farmers would be far simpler than the present arrangement. By a provision limiting the amount payable to any one producer, the system would also allow the Government to put into actual practice the frequently expressed but never implemented policy of favoring family-operated farms.

"Farmers certainly aren't getting sufficient income now to justify their investments and recompense them for their labor. Their income is down by perhaps as much as 30 percent, while prices have gone up 10 percent," the monsignor estimated.

If price supports are to be retained, he argued, they should be administered with an eye to the realities of farm operations. He took issue sharply with the theory, frequently advanced by Agriculture Secretary Ezra Taft Benson, that reductions in price supports will automatically reduce production.

Monsignor Ligutti believes that the general public is not learning the facts of the farm problem or the attitudes held by most farmers. Farm publications and some farm organizations—including the Farm Bureau—defer to the interests of big commercial farmers, do not adequately represent the views of those on family farms.

Though he doesn't insist that all persons now living on the land should stay there, he is critical of the proposal to take 2 million small producers out of agriculture and into industry.

The proposal gets a good press, but Monsignor Ligutti doubts that it would solve the surplus problem.

Befuddled Critics

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Befuddled Critics," from the Arizona Republic.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEFUDDLED CRITICS

Four staff members of the Washington University Law Quarterly have undertaken in the St. Louis Globe-Democrat to refute a series of editorials published in the Arizona Republic pointing out the need to curb the runaway United States Supreme Court.

The conclusion of the Republic's editorial series, as readers of this page may remember, was that some way must be utilized to bring the Supreme Court back to its historic functions without altering its constitutional position. We did not attack the Supreme Court. We defended it against the misuse which the majority of present Justices are making of its prerogatives.

Our Washington University critics devote their first 16 paragraphs to convincing their readers that the Republic claimed the power of judicial review is unconstitutional. We eventually discover the reason for their misapprehension: They themselves are firmly convinced that the Court's legitimate power to rule laws unconstitutional when they are in fact unconstitutional is the same as the power to make new laws or even, if the whim moves, to amend the Constitution. Of all people, attorneys should be able to see the difference, and of all atorneys, those connected with a university law faculty should be acutely aware of it. If they are not, heaven help the law students.

The Republic maintained, and others such as the distinguished Judge Learned Hand have maintained, that the Supreme Court does not have the power, and must not be allowed to usurp it, to make law. Throughout its history that has been the Supreme Court's own position, expressed as late as 1936 in an opinion which declared: "The Constitution is the supreme law of the land ordained and established by the people. All legislation must conform to the principles it lays down. When an act of Congress is appropriately challenged in the courts as not conforming to the constitutional mandate, the judicial branch of the Government has only one duty; to lay the article of the Constitution which is invoked beside the statute which is challenged and to decide whether the latter squares with the former. * * * The Court neither approves or condemns any legislative power. * * *"

Our Washington Law Quarterly critics next charge the Republic with blatant misstatement of rulings handed down by the Supreme Court. In what way? Well, they say, first you must understand that a court decision applies only to the case which is decided. In kindergarten language they explain what attorneys call the law of the case. In essence this is a very sound doctrine which holds that a court judgment has the effect of law against the person to whom it is applied, but nowhere else. The Republic's basic misstatement is supposed to have been that Supreme Court decisions could possibly apply to any but the actual case under consideration.

What are the facts? The Supreme Court's decision in the Nelson case knocked out antisubversive laws in almost half the States of the Union. Of course the States could go to court 1 by 1 if they wanted to spend the money, but in this 1 decision the Supreme Court said the Federal Congress had preempted the antisubversive field by enacting the Smith act, and State laws in the same field were null. The language of the decision was purposely broad enough to cover all States. Of what use is the law of the case when the Supreme Court itself disregards it?

In this matter of preemption, too, our critics disregard the whole truth for the sake of influencing opinion. They say the decision in the Nelson case was not unconstitutional because the preemption doctrine is based on the Constitution, and the decision was based on the preemption doctrine. The truth is that the doctrine was twisted entirely out of shape by the present Supreme Court, which even disregarded a plain statement in the Smith act itself that it was not intended to crowd States out of the antisubversive field.

The Washingon Law Quarterly quartet proceeds in much the same vein, and by much the same methods, in an attempt to discredit all other criticism of the present Supreme Court majority. Despite a constitutional clause which says, "Each House may determine the rules of its proceedings," they manage to convey the idea that the power to investigate "was granted to Congress (by the Supreme Court) only upon condition that investigations have legislation as an object."

How far off base can counselors get when they attempt a defense at any cost? Perhaps a clue is that at one place in their criticism, they attribute Thomas Jefferson's remarks about the Supreme Court directly to the editorial. Flattering, but hardly honest. We wonder what Jefferson's reaction would have been to the law editors' remarks that his words contributed to an ultimate absurdity.

The attack on the Republic's editorials is more confusing than enlightening until we come to one small paragraph. It says: "If the Court decided it could not overrule past decisions, the only other way of changing them would be by amending the Constitution. This is a burdensome process requiring the agreement of three-fourths of the States. Is this change desirable?"

Change? We have been under the impression all along that the only proper way to change the Constitution is by amendment. We most assuredly are not willing to leave it to five members of the Supreme Court. And despite the final exhortation of our Washington Law Quarterly critics, we shall continue to resist the Court's usurpation with every legitimate power at our command.

Idea With Wings

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Post on Sunday, April 27:

IDEA WITH WINGS

Washington will lose a wholesome and constructive voice today when Ambassador Gonzales J. Facio of Costa Rica returns to his native land. Senor Facio is a young man from a small republic, yet in his 2-year tour of duty he contributed an idea which already has made an impact on the hemisphere. In looking at Latin America's problems, Ambassador Facio was struck by the paradox that a peaceful area of the world should pour so much of its treasure into armaments when the region is already largely protected from outside aggression by the shield of the United States. Why shouldn't Latin America profit by the changing nature of warfare, the Costa Rican asked, and reduce its arms expenditures in an orderly manner? When Senor Facio presented the Council of the Organization of American States with a plan aimed at trimming arms budgets and diverting the money saved to beneficial public projects, he ruffled the

feathers of some of his older colleagues. The OAS voted to shelve the proposal and doubtless some Latin diplomats hoped that it would be forgotten entirely. It has not been forgotten; instead, it has taken wing and is still alive in much of the hemisphere. Ambassador Facio's hard-headed idealism may yet prove a catalyst for a sensible and hopeful change.

The Tenth Anniversary of the Establishment of Israel as a Free and Independent Nation

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. VAN ZANDT. Mr. Speaker, the 10th anniversary of the independence of Israel is an occasion of worldwide significance because it represents the application for a decade of the same persevering spirit that inspired the God-fearing American Colonists to found a new nation dedicated to the cause of liberty and freedom.

According to the Hebrew calendar, April 24, 1948, marks the establishment of the State of Israel with full sovereignty among the nations of the world. During the ensuing 10-year period, Israel has demonstrated to the world its ability to develop and expand its agricultural and industrial economy at a rate of progress that has astounded those who were skeptical that Israel could accomplish its avowed purpose of developing its economy and becoming a highly respected member of the family of nations.

Mr. Speaker, when you consider the marked progress made by Israel in the short space of 10 years, it confirms the observations of William Randolph Hearst, Jr., who in writing from New City, Jerusalem, in June 1955, revealed the gift of prophecy when he wrote:

> From my window in the King David Hotel in Israel, I can look out over Mount Zion to the Mount of Olives in Jordan beyond the Old City of Jerusalem for a distance of about a mile.
>
> But in the contrast that exists between the Arab and Jewish sides of Jerusalem it is like passing through the ages from the primitive past to modern western civilization. • • • The heart of the old walled city of Jerusalem where lies the tomb of Lord Jesus Christ and the sacred shrines of the three great religions are typically Arab. By this I mean its streets are crooked and narrow and cobblestoned.
>
> The contrast between the medieval walled city and hustling modern metropolis which the Jews have made of their part of Jerusalem is more than just striking. One cannot escape the conclusion that despite, or perhaps because of, the difficulties placed in their way by the Arab world, which refuses to accept the existence of the Jewish national home, these people are going to be successful in their determination to develop a new and dynamic nation.
>
> On arrival on this side of the city one is immediately impressed by the spirit of vitality and modernity that is reflected in the appearances and actions of a people of many races with only their religion in common, who have come here from all parts of the world to help make their dreams of a homeland come true.
>
> Streets are wide and clean. The shops are many and attractive. New housing developments are spotted all over the rolling countryside. There is an atmosphere of strong will to work and strength of purpose.
>
> From what I have seen in the few hours I have been here, I would say that it is going to take more than the Arab economic blockade, frontier incidents and the resentful ill will of the 40 million people in the Arab world to make the Jewish people abandon fulfillment of the centuries-old aspiration to have a place they can call home.

Mr. Speaker, the Israelis have justified the confidence placed in them for today Israel stands as a beacon of hope for peace in the Middle East because of its ideals of freedom, its devotion to the encouragement of mutual cooperation, and its deep sense of spiritual values without which no nation can long endure. Truly it can be said that Israel represents the addition of a new voice to the symphony of human freedom.

As a practical example of humanitarianism, Israel opened its doors to more than 900,000 destitute and homeless men, women, and children from the ghettos of Asia and Africa and the concentration camps of Europe. Thus the State of Israel has become a sanctuary to these hapless thousands by giving them the opportunity to regain their self-respect and in truth enjoy for the first time in their bleak lives the priceless privilege of being able to look up at the stars as they are restored the right to gain a livelihood unfettered and unchained.

By providing a haven of refuge for nearly a million of persecuted human, beings, Israel has given a ringing and conclusive answer by its exemplary conduct to the biblical question: "Am I my brother's keeper?"

Bereft for ages of a national homeland, the heritage, culture, character, and religious faith of the Jewish people have never been in eclipse for they have outstanding contributions to the advancement of civilization down through the centuries. There is not a nation in existence today that has not benefited from the influence of the Jewish race for it has produced leaders of thought for centuries in the arts and sciences, in religion, politics, philanthropy, and in the wholesomeness of family life.

A persecuted and homeless race that through its proud history was subjected to cruel attacks by bigots and traducers, the Jewish people for centuries were literally hounded from pillar to post and scattered to the four winds with no sovereign nation to call their own.

The Jewish people share the views of Christendom to the extent that they, too, regard Palestine as Judaism's holy land, yet for the first time in history a flag bearing the star of David flies over their spiritual home.

It is evident that the spiritual wellsprings that since biblical times have nursed the Jewish people through adversity and persecution and which account for their deep faith in Almighty God have proved to be their unfailing source of strength down through the ages.

Today their centuries of devout prayer and earnest supplication have been answered, for Israel is truly the promised land for a race who never despaired of God's love and mercy. As a result, while Israel as a nation is still in swaddling clothes, it has become to a persecuted people literally a land of milk and honey because human dignity is restored and guaranteed to a race that had no national homeland but was forced to seek asylum in the other nations of the world. In Israel the Jewish people have a sovereign nation of their own that today has a voice in the United Nations, where the quest by free nations for universal peace is the major objective.

The 10 years of phenomenal progress made by Israel despite its unfriendly neighbors is an indication of the self-determination by an ancient race to survive as a free and independent nation.

Israel has shown positive signs of its desire for peace in the Middle East through repeated public pronouncements by its able Prime Minister David Ben-Gurion, who offered disarmament as being highly acceptable to Israel if the neighboring countries would adopt the same conciliatory attitude and cooperate in making it a reality.

Mr. Speaker, the action by the United States Senate and House of Representatives in adopting resolutions on April 23 extending greetings to the State of Israel on its 10th anniversary exemplified the admiration of the American people for this infant nation.

I am happy to join my colleagues in the House of Representatives in approving the resolution saluting Israel on its progress during the difficult and struggling 10 years of its existence and to wish this highly respected new nation of the Middle East continued success in its growth and development as a free and independent nation.

Mr. Speaker, in conclusion I wish to make part of my remarks the beautiful prayer offered at the opening session of the House of Representatives on April 23 by Rabbi Israel Goldstein of Congregation B'nai Jeshurn, New York, chairman of the American Committee for the Celebration of Israel's 10th anniversary.

The prayer follows:

> Lord, Creator, Shepherd, Father, if a thousand years are but as yesterday in Thy sight, 10 years are but as a moment. Yet there are great moments in the human drama which attest to the divine spark in man and to Thy finger in history. Such was the fashioning of these United States of America into a new society of human freedom and dignity. Such too has been the restoration and rededication of an ancient people to nationhood upon its ancient soil thrice hallowed by religious inspiration.
>
> It was meet that our beloved America reared in the spiritual heritage of ancient Israel's timeless book, helped the modern State of Israel come into being, and strengthened it during its infant years. And little Israel has given as well as received. It has given an example of how to reclaim the soil and how to redeem human beings, of how to provide homes for the homeless, and boons of freedom and dignity for the underprivileged. It has shown how to overcome fear with faith at a time when the world is filled with apprehensions. And its hand of fellowship and peace is extended. "Shalom, shalom la'rachok v'lakarov," peace, peace to those that are far and to those that are near.

Grant, O God, that the bonds which make us feel a sense of spiritual kinship with Israel may grow with the years.

In the words of Israel's ancient prayer we pray today and every day: Spread Thy tabernacle of peace over the habitation of men everywhere, so that in peace and in comity men and nations may build a world worthy of Thy blessing, O Lord, Creator, Shepherd, and Father. Amen.

Talmadge Farm Plan

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator TALMADGE's Farm Plan," from the April 25, 1958, issue of the Albany (Ga.) Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR TALMADGE'S FARM PLAN

Striking in its simplicity and bold in its approach to the complex farm problem which has plagued the Nation for two decades is the program outlined to the United States by Georgia's energetic junior Senator, HERMAN E. TALMADGE. Convinced that the Nation's economy is dependent in large measure on the formation of a realistic approach to modern agriculture, and wearied of the patchwork of discredited programs with which the national economy is now burdened, Senator TALMADGE has charted a future course which would enable the Government and the American farmer alike to begin again on the simple basis of free enterprise farming bolstered by a system of compensatory payments.

At the outset, it is apparent that his plan embodies all of the best elements of the advocates of a fully free farm market and those who propose that the Government has an obligation to support all farmers. In brief, the TALMADGE plan would (1) eliminate all acreage controls and Government loans; (2) assign each farmer growing basic commodities a domestic production quota to be expressed in pounds, bushels or bales which would be the same percentage of the national consumption of basic commodities that the farmer's historic acreage base bears to the total national acreage base; (3) guarantee and pay to each farmer a sales price support of the differece between the price he receives for his domestic production quota and 100 percent of parity; (4) require each farmer to submit a bill of sale with his application for sales price support payments, and (5) impose a maximum of $25,000 on sales price payments which any individual farmer could receive.

The Talmadge program would cost an estimated $1.28 billion, compared to the present cost of $3.25 billion now paid to farmers under the price-support plan. However, the individual farmer would not suffer, as the Senator pointed out, in that only $1.2 billion of the $3.25 billion now being paid by the Government goes to farmers for direct price props. The Senator's plan would have the added benefits of reducing the enormous amount of redtape through which a farmer must now wade to qualify for price supports, eliminate the regimentation and dictation imposed by acreage controls, and free the farmer to plant and sell as he pleases. It would also take the Federal Government out of the business of buying, storing, and selling farm commodities and place the responsibility for marketing with the farmer and with private enterprise, instead of with the Government.

Small wonder it is, then, that the Talmadge farm plan has elicited immediate support from many important farm groups, as well as from the Democratic majority in the Senate. Such farm State legislators as Senators STENNIS, of Mississippi; PROXMIRE, of Wisconsin; and JOHNSTON of South Carolina have praised the proposal in such glowing terms, seldom accorded a freshman colleague, as the soundest, best plan I know of. Certainly it deserves the studied consideration of both farmers and legislators, and could provide a base on which a more realistic agricultural policy could be constructed. In the meantime, Senator TALMADGE's program stands as a monument to clear thinking in an arena often clouded with partisan politics and catch-as-catch-can schemes designed more to trap votes than to better the lot of the American farmer.

The Disintegration Tactic

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from National Review of February 22, 1958, entitled "The Disintegration Tactic" by James Burnham.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DISINTEGRATION TACTIC

(By James Burnham)

The troubles of the Indonesian islands and the Caribbean Basin, through multiple causes, have been whipped to their present acute stage by one of the most practiced and most baffling of communism's standard operating procedures: the distintegration tactic.

The disintegration tactic is based on a simple, two-part theory: (1) It is good to louse up the workings of an enemy (i. e., non-Communist) institution—trade union, school, factory, or nation, or whatever, (2) If the functional collapse is deep enough, then it becomes easy for a small, disciplined group—such as the Communist cadre—to seize control.

Well planned, the disintegration tactic is a low-cost revolutionary gambit that can yield a maximum result for modest investment. It can be handled by small professional units that rely on the mass aid of unwitting, or unheeding, volunteers. Just wrap a synthetic McCarthy-image in the properly charged magical symbols, and you can count on the drugged liberals to carry through the demoralization of a security system. Spread ideologically fashionable lies about an anti-Communist union leader, and relax while the crowd pushes him out of your way.

MARE NOSTRUM

Often the disintegration tactic includes a sort of social sabotage. You need to throw sand in only one set of critical gears, or weaken one small electrical connection, to ease the whole factory or rocket into a breakdown. Analogously, you may start the disintegration off by, say, shooting just the right man: Castillo Armas of Guatemala, for example, key symbol of a serious United States intention to maintain control of its Caribbean strategic threshold.

Look at the map of the Caribbean—our Mediterranean—and you will see how it is geographically dominated by Cuba, Hispaniola (the Dominican Republic and Haiti), Venezuela, Colombia, Panama, Costa Rica, Nicaragua, Guatemala. (How many hours do you imagine the Kremlin strategists have spent studying that map?) A few years ago these nations were stabilized to a degree seldom precedented in their histories. With the exception of Costa Rica, whose President was a Washington-tamed leftist, they were ruled, as Latin American nations have usually been, by strong, brutal despots. These particular chiefs were, however, bringing to their countries not merely dictatorial order but material progress. They worked closely with United States military and business interests; and fairly closely, most of the time, with the United States State Department.

AFTERMATH OF THE DICTATORS

Today the entire Caribbean Basin is stumbling toward turmoil. Remón, of Panama; the elder Somoza, of Nicaragua; and Castillo Armas, of Guatemala have been assassinated either by Communists or by local fanatics spurred on by Communists. Rójas Pinilla, of Columbia, and Pérez Jiménez, of Venezuela, who made the fatal error of antagonizing the church as well as the Communists and liberals, have been overthrown by amorphous, disintegrative revolts without program or perspective. Batista, of Cuba, is harassed by guerilla bands financed, supplied, and politically supported by vengeful exiles, Soviet agents, and United States leftists, liberals, and concession hunters. Trujillo, of the Dominican Republic, is the target of a united front assault that has mounted higher month by month since the mysterious event that seems to have opened this present Caribbean disintegration campaign: the disappearance of Jesús de Galíndez.

There are two immediate consequences of the overthrow of these dictatorial regimes: First, a general instability and confusion in which a Communist-trimmed anti-Yanqui imperialism is offered as the safest raft for riding the popular currents; and second, an influx of leftists and Communists—not only native exiles, but Spanish civil war veterans who were grafted onto the Kremlin's Latin American apparatus, and Soviet agents in Mexico, the United States, and the Communist-riddled British enclaves (Jamaica, British Honduras, and British Guiana).

ORDER AND DISORDER

Our liberals, almost to a man, support this disintegrative process; indeed, not only support it, but finance, organize and arm it, propagandize and conspire for it, even delude themselves into thinking they direct it. Their influence is entirely negative, and thus a perfect supplement to the Communist disintegration tactic. As as alternative to the dictators the liberals propose nothing but ideological platitudes; they are unwilling to support any of the existing internal social forces that might keep these precarious nations from flying apart.

Fortunately such forces still exist, so that the Communists are not yet unopposed on the field. Chief among these forces are the church and the military, and it is these two that hold things together as the regimes crack. Interestingly enough, the ordinary citizens seem more resistant than our liberals to the Communist operation. In the two most recent free elections (in Guatemala and Costa Rica) the candidate of the right has in each case won a clear plurality. If Senores Ydigoras and Echandi lead the kind of orderly, procapitalist, pro-United States

regimes, resting on church and arms, that their electoral positions promised, then we may predict with certainty that our liberals, swinging like dutiful needles to the turning Communist lodestar, will rail as bitterly against them as they have done against Rójas, Jiménez, Batista, and Trujillo.

The liberals, by their own principles of antiorder, cannot rest until, the chaos having become complete, the Communists take over. Then at last, as with China, the liberals can sit back. One must, you see, accept the inevitable.

Statement of the National Education Association of the United States

SPEECH
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. METCALF. Mr. Speaker, the Committee on Education and Labor is holding hearings on various bills for Federal assistance for school construction and payment of teachers' salaries.

Testimony has been presented showing that the shortage of teachers is increasing and that we are neither filling the present classroom shortage nor meeting the increasing needs of our growing population.

Dr. Walter W. Heller, economist at the University of Minnesota, presented persuasive reasons why we should immediately take steps to relieve the classroom shortage and increase teachers' salaries. A part of Dr. Heller's testimony related to the antirecession impact of Federal aid for school construction and teachers' salaries.

Dr. Heller is eminently qualified to analyze the antirecession results of Federal aid. He is serving as tax adviser to the Governor of Minnesota and is a consultant to the Committee for Economic Development. In addition to acting as chairman of the department of economics of the University of Minnesota, he is a member of the board of directors of the National Bureau of Economic Research. Dr. Heller was tax consultant to Gen. Lucius B. Clay in Germany in 1947–48 and subsequently served on the tax advisory staff of the United States Treasury.

That portion of Dr. Heller's statement relating to the antirecession impact of Federal assistance to build schools and pay teachers an adequate salary follows:

ANTIRECESSION IMPACT

The long-run case for Federal participation in the financing of public education for our children, powerful and persuasive as it may be, is strongly reinforced by short-run considerations. The present deterioration, if not outright crisis, in State-local finance has already been reviewed. I refer now to the timely and appropriate role than an immediate program of Federal school support, especially for school construction, could play in the Federal Government's antirecession policy. At no time since World War II has the business and economic situation been more favorable for a decisive attack on the persistent shortage of elementary and secondary classrooms.

To be sure, we agree wholeheartedly with the basic philosophy expressed by Secretary Marion Folsom last year (in the paper prepared for the Congressional Joint Economic Committee's compendium, Federal Expenditure Policy for Economic Growth and Stability, Nov. 5, 1957, p. 881):

"School construction * * * should be accelerated in spite of the fact that privately financed construction and employment in the building trades are at record levels for peacetime. The child who is ready to enter school should start now—he cannot be put on a shelf until a depression comes and supplies the impetus of an economic emergency to the building of more new schools."

Today we have a golden opportunity to eliminate our classroom shortage—a responsibility that we as a nation have been neglecting for over two decades—and with the added benefits of putting idle men, materials, and equipment back to work. A school-construction program is exceptionally well adapted to reabsorb into productive employment precisely the types of unemployed labor and unutilized industrial capacity that characterize the present recession.

Let us examine some criteria that should be applied to Government expenditure programs to determine whether a program deserves a priority position as an antirecession measure.

1. Does the program meet an established need and thereby represent an efficient use of the country's productive resources?

2. Can its stimulative effects take hold quickly and exert their main force before the economy again reaches boom levels?

3. Does it have a high direct and indirect job-creating impact per unit of expenditure?

4. Are its stimulative effects directed at those areas of the economy most acutely suffering from slack demand in the private sector?

5. Does it abate, rather than intensify, the longrun threat of inflation?

Analyses and surveys made by the National Education Association demonstrate decisively that a program of Federal grants for school construction merit a high rating on all five counts.

1. NEED

The need for additional classrooms has already been so unequivocally established and is of such magnitude that further discussion is unnecessary.

2. TIMING

With appropriate Federal grants, the need for schools could be translated into early and effective economic activity that would not otherwise take place. This conclusion is confirmed by the results of an NEA survey of State superintendents of education 3 weeks ago. The survey found that if Federal funds were made available on a grant basis by July 1, 1958, an estimated minimum of 2,759 classrooms could be put under construction within 1 month, 16,325 within 3 months, 43,979 within 6 months, and 68,113 within 12 months (figures are cumulative). These figures do not include estimates from such populous States as New York and Illinois. These classrooms represent needed construction that will not otherwise be undertaken in 1958–59. Details of this survey are presented in exhibit D–1.

The estimated cost of ready-to-go construction reported by these 30 States would amount to a total of approximately $650 million in 3 months and $1.5 billion in 6 months.[1]

[1] These figures were obtained by applying the national average of approximately $40,000 per classroom, as reported by the United States Office of Education, to the total number of classrooms the States estimated they could build. This figure covers the total cost of school plant including the cost of auxiliary facilities, purchase, and preparation of site, furniture, equipment, and all other costs.

Past experience indicates that construction of classroom additions to existing school plants can be completed in 4 to 10 months. Construction of new elementary schools can be completed in 12 to 18 months, and construction of new high schools in 12 to 24 months. These figures cover only the construction period, not the time required for voter approval of bond issues, planning, and site acquisition.

The speed with which additions to existing facilities can be completed is particularly impressive. For example, a four-classroom addition to an elementary school in the Roseville School District of Minnesota was given voter approval on March 25, bids were opened April 24, construction will start about May 15, and the project will be completed by the opening of school on September 1.

Such additions to existing facilities constitute a large part of total classroom construction. The State education agencies have reported to the United States Office of Education that in the fiscal years 1951 through 1956, 62 percent of classroom construction represented additions to existing facilities and the remaining 38 percent, new facilities. In projecting their needs for instructional rooms for the period 1956 through 1960, the States reported 43 percent as additions to existing school plants, and 57 percent as part of completely new school plants. In other words, in a sizable proportion of school construction projects, no lengthy preliminary steps of planning, site acquisition, and the like are necessary. Such projects could be quickly activated by Federal grants, and the construction period would be far shorter in most cases than it would be for entirely new school plants.

Available economic data strongly suggest that recovery from the present recession will be a slow, fairly prolonged process. As a member of the staff of the congressional Joint Economic Committee put it in a speech on April 14:

"In view of the prospect that the severe capital goods decline may continue into 1959 and that consumer spending on goods, services, and houses will depend on employment and income changes generated by business and Government spending, it would be dangerous to assume that total demand will rise significantly any earlier than the fourth quarter, or perhaps in the first half of 1959. Certainly, it would be very risky to base policy decisions on the assumption of an early strong recovery to full employment of labor and capital.[2]

When we add to this warning the evidence brought forward by Prof. Sumner H. Slichter from past business fluctuations that the jeriod from the bottom of recession to the peak of the boom is at least 2 years,[3] we can safely conclude that a large supplementary school construction program could not only be launched swiftly but also be carried through to substantial completion before the economy is again in a boom phase.

3. JOB-CREATING EFFECTS

Each additional $100 million spent for school construction will create approximately 15,000 man-years of work. This work would be distributed as follows: 6,000 man-years of direct on-the-site labor; 6,000 man-years of indirect labor in building-material industries such as basic metals, lumber, glass, and plumbing manufacture; 1,500 man-years of labor in the architectural, drafting, engineering, and earth-moving oc-

[2] Statement by James W. Knowles, economist, Joint Economic Committee, U. S. Congress, in a speech, The Economic Outlook and Its Implications, before the American Pharmaceutical Manufacturers Association, April 14, 1958.

[3] In an interview published in U. S. News & World Report, April 4, 1958, p. 441.

cupations and professions; and 1,500 man-years of labor in the school furniture and equipment industry.

Although these figures are conservative, they compare quite favorably with the estimate of approximately 11,000 man-years of labor created by $100 million of highway construction reported to another congressional committee.

The 15,000 man-years of labor were computed on the basis of the experience of the Community Facilities Administration and upon an analysis by the CFA of 1,083 school-construction projects financed under Public Law 815.

4. DIRECTION OF IMPACT

Not only in its overall effect, but also in the closeness of its fit to the present patterns of unemployment and excess capacity, an accelerated school-building program ranks high on any list of antirecession projects. This can readily be seen by comparing the types of demands created by the construction program with the types of labor, services, and basic materials now in oversupply. Apart from obvious demands for labor and services in the construction industry, school construction involves large demands for steel, cement, lumber, bricks, copper, glass, aluminum, and the like. Underemployment and overcapacity are concentrated in precisely these areas.

Industrial production by March 1958 had dropped 13 percent from its recent highs as against 10 percent in the 1948–49 and 1953–54 recessions. New housing starts in March 1958 were at their lowest point in 8 years. Industrial production as a whole was at its lowest level since late 1954. Steel output was lower than at any time (except for strikes) since mid-1949. Manufacturers' new orders in February sank to a level $4.3 billion below a year earlier, and their unfilled orders dropped $16 million during the same period. Yet, in all these areas, capacity to produce has risen so sharply that the ratios of output to capacity, especially in heavy goods, have dropped to new postwar lows.

Staff studies by the Federal Reserve Board show that for the 17 major materials covered by its indexes of capacity and output, March 1958 output was running at only 68 percent of capacity.[4] The combined Federal Reserve index for pig iron, steel ingots, primary aluminum, and refined copper showed March output at only 56 percent of capacity.

Unemployment figures are equally striking. From March 1957 to March 1958, the seasonally adjusted rate of unemployment rose from 3.9 percent to 7 percent. Manufacturing jobs were down 1.5 million from a year ago, with more than 1.2 million of this drop concentrated in the durable goods industries. Employment in contract construction had dropped 250,000 from a year ago. The workweek in manufacturing dropped from 40.1 hours in March 1957 to 38.5 hours in March of this year, with weekly earnings dropping $1.35 during this period.

Turning specifically to the construction industry, we find that although new construction activity in March 1958 (seasonally adjusted) was down only 1.3 percent from its peak in October 1957, construction employment (unadjusted) in March 1958 was down 16.6 percent from its August 1957 peak, and 9.1 percent from its March 1957 level. New contract construction awards (as tabulated by F. W. Dodge Co.) were down roughly 10 percent in the first 2 months of 1958 as compared with a similar period a year ago. A figure of related significance is expenditure for private investment in plant and equipment, which dropped 13 percent from $39.96 billion in 1957 to an estimated $32.07 billion in 1958. In brief, the recession has already hit construction activity, and the contract award figures make it clear that without added government stimulus, the construction industry will be in a depressed condition for some time to come.

Although comprehensive and current data on the distribution of the school construction dollar among various types of basic materials are not available, exhibits D–2 and D–3 provide some important clues. Exhibit D–2 shows the estimated consumption of selected construction materials per $1 million of educational construction compared with various other types of construction as of 1947. Although prices have risen substantially, and construction techniques have changed considerably in the past 10 years, the price rises and construction patterns since 1947 have probably affected different types of buildings more or less similarly. If this is true, the 1947 data strongly suggest that a school construction program provides a considerably better fit, in terms of materials consumed, to the pattern of slackening private construction demand than do such alternative public construction programs as highways and military and naval projects.

Further confirming evidence of the highly appropriate focus on school construction demand in terms of resources idled by the 1958 recession is provided by exhibit D–3. It presents a detailed breakdown of school expenditures among 71 labor and materials categories for a current elementary-school construction project in the Roseville School District of Minnesota. The figures under the electrical, plumbing and heating, and general contracts for this new school show that, roughly, 35 percent of the total cost of $478,000 will be for onsite labor and 65 percent for materials.[5] Although the building standards of the school in question no doubt differ in some respects from the national average, it is illuminating to convert the figures on an illustrative basis to the demands that would be created by $100 million of similar school construction. This is shown in exhibit D–4. Using this computation, we find that $100 million invested in school construction contract costs would create $6.1 million of demand for electrical material; $12.7 million for plumbing and heating materials; $6 million for structural steel, steel joists, and steel roof decking; $2.6 million for brick and tile; $5.1 million for concrete and concrete block; $3.9 million for millwork; $3.5 million for sheet metal, roofing, and roof insulation; $3.2 million for metal windows, glass, and glazing; $3.9 million for kitchen equipment; and $1 million for composition floor covering.

The foregoing facts make two conclusions inescapable: (a) It will take considerable time and very sharp increases in demand to bring construction and basic materials industries back up to par, let alone put them back on the path of economic growth; (b) the types of demand created by the school-construction program are particularly well suited to aid in this process of restoration.

Effect of teacher salary increases: Although the preceding analysis of Federal financial support for schools in relation to the recession has emphasized the construction aspect, increases in teachers' salaries should not be overlooked as a stimulus to a depressed economy and an incentive for sustained economic growth.

One of our pressing needs in this period of recession is for increased purchasing power for durable goods. The production of consumer durable goods has suffered an especially sharp drop in the current recession. Production dropped from a seasonally adjusted index of 132 in March 1957 to 105 in March 1958. If the Congress were to provide the substantial increases in teachers' salaries, such increases would have the double-barreled effect of providing more purchasing power in every American community and of lifting the economic status of the American school teacher to a competitive position for competent manpower.

At the present time there is a backlog of needed durable goods among members of the teaching profession. Although gains in teachers' salaries in recent years have kept pace with general wage increases for all employed persons, the gains in teachers' salaries have not been sufficient to offset the lack of gains in the 1940's. The level of teachers' salaries is still substantially below 1939 levels in comparison with the average earnings of all persons working for wages and salaries. In 1939, teachers' salaries were 12 percent higher than the earnings of the average wage or salary worker. But in 1957, teachers' salaries were only 6 percent above the average for all workers. As a result of this lag, teachers have been spending a disproportionate amount of their income for food, clothing, and shelter, and less of it for the purchase of durable goods such as automobiles and washing machines. It is only reasonable to expect that with a substantial salary increase, teachers would purchase many of the items that they have not been able to purchase in the past. In addition, a raise in salary for teachers would also increase other types of consumer expenditures. A teachers' salary increase at this time, therefore, would offer a particularly beneficial stimulus to the economy, and at the same time, would help to upgrade the quality of the teaching profession.

5. LONG-RUN INFLATION PRESSURES

Our best hope of maintaining a relatively stable price level in the longer run is to generate rapid growth in productivity. If we can increase the rate of output per unit of input rapidly enough, we can satisfy the rising income claims of the participants in the productive process by sharing an expanding product rather than by pushing up prices and eroding the value of the dollar.

Here, education stands head and shoulders above most competing programs. As we have shown earlier in this statement, education as an investment in human beings pays rich dividends in greater productive capacity. It develops not only the skills and understanding needed on the production line, but also the brainpower needed to break through technological barriers and reach new heights of human accomplishment. Given the creativity of educated minds, the returns on our educational investments are more than worthwhile—they may be infinite. We can erect no better advance defense against creeping or grinding inflation than the expansion of the producive and creative power of our children through education.

An important comment about the antirecession impact

Although large-scale school construction would create many jobs, the construction of classrooms should not be considered a make-work project. The construction of classrooms for our children is not make-work, it is catchup work. We must not ignore it any longer, regardless of economic downturns or upturns. The same is true for substantial increases in teachers' salaries.

In light of the decisive advantages of a school construction program as an antirecession measure, combined with the com-

[4] The 17 materials are pig iron, steel ingots, primary aluminum, refined copper, cotton yarn, synthetic fibers and yarns, cement, woodpulp, paper, paperboard, petroleum products, coke, and 5 industrial chemicals.

[5] The cost of materials and equipment used in this particular school building are somewhat higher in proportion to the total labor involved in building the school since the heating plant, electrical equipment, and related materials are of sufficient size to accommodate the future addition of classrooms. This practice is common in communities with rapidly expanding school populations.

pelling case for Federal support in the longer run, one may well ask why it has not been at the forefront of our planning and action to overcome the recession. It is, in a sense, an accident of legislative history that preferment is given to highway, post offices, and housing. Without meaning to depreciate these programs either intrinsically or as antirecession measures, one may note that had a Federal school support program been enacted in 1957 or 1956 or earlier, more and better schools for our children would very likely be at the head of the Federal Government's list of antirecession projects today. But caught in the coils—mistakenly and unnecessarily, in my opinion—of misunderstanding and shortsighted reasoning, Federal support for schools has been forced to give way to programs which cannot match either its long-run or its short-run contributions to notional welfare and economic stability.

EXHIBIT D–1. TELEGRAPHIC SURVEY OF CHIEF STATE SCHOOL OFFICERS REGARDING CLASSROOM CONSTRUCTION AND LEGAL INDEBTEDNESS LIMITS

On April 5, 1958, the National Education Association sent the following telegram to each of the chief State school officers in the 48 States:

"Urgent, need estimated answers to two questions by noon Tuesday. Wire reply collect.

"1. If your State were to receive nonmatching Federal funds for public-school construction on July 1, 1958, how many classrooms could your school districts have under construction within 1 month, 3 months, 6 months, 12 months? The four answers should be cumulative. Question refers to classrooms that otherwise would not be constructed next year.

"2. What percent of your districts have for all practical purposes reached legal indebtedness or millage limits?

"J. L. McCASKILL,
"*Director, Legislation and Federal Relations.*"

Replies were received from 46 States. A total of 30 States reported that if nonmatching Federal funds were available as stated in the first question of the telegram, they could have an estimated 68,113 classrooms under construction within 12 months. These are classrooms that would not otherwies have been constructed in 1958–59.

The time schedule for beginning this construction in the 30 States follows:

	Classrooms
1 month	2,759
3 months	16,325
6 months	43,979
12 months	68,113

Ten States were unable to make an estimate because data were not available. Six States reported that Federal funds were not required this year.

The following is a tabular summary of the replies to the first question of the telegram:

Estimated number of classrooms which could be under construction with Federal funds after July 1, 1958

State	Within 1 month	Within 3 months	Within 6 months	Within 12 months
(1)	(2)	(3)	(4)	(5)
Alabama	500	5,000	10,000	11,200

EXHIBIT D–3. ROSEVILLE SCHOOLS, INDEPENDENT SCHOOL DISTRICT NO. 623, STATE OF MINNESOTA

LABOR-MATERIAL BREAKDOWN,[1] BRIMHALL ELEMENTARY SCHOOL

Facilities

Sixteen classrooms, 28 by 32 feet each.
Combination lunchroom-gymnasium, including storage rooms, stage, 52 by 94 feet.
Kitchen and auxiliary rooms, 30 by 52 feet.
Office suite, 30 by 32 feet.
Lavatories, 30 by 32 feet.
Auxiliary rooms for library, and so forth, 16 by 104 feet.
Boiler room, 30 by 42 feet.
Corridors, 12 by 604 feet.
Total, 38,696 square feet.

(NOTE.—Office suite, gymnasium, kitchen, boiler room, and auxiliary spaces planned for eventual sized school of 30 classrooms plus 3 kindergartens and primary playroom. It should be noted that the costs detailed in this exhibit do not include such items as site acquisition, furniture, and architects' fees. On the other hand, bond and preliminary expense and site improvement (the latter involving 5 percent of the total cost) are included.)

	Labor	Material
ELECTRICAL CONTRACT		
1. General and special conditions (legal, insurance, etc.)		$500
2. Conduit and fillings	$4,226	3,680
3. Outlet boxes and fillings	1,039	507
4. Power and lighting panel	340	2,519
5. Wire and cable	1,768	2,140
6. Motor and equipment connections	179	229
7. Electric service	526	3,863
8. Wiring devices	319	465
9. Lighting fixtures	2,094	9,563
10. Lamps	317	752
11. Clock and program system	233	1,870
12. Fire alarm system	234	1,504
13. Sound system	125	1,678
Total	11,400	29,270
PLUMBING AND HEATING CONTRACT		
1. Exterior utility service	1,584	1,703
2. Sanitary drain system	4,950	3,000
3. Rainwater drain system	2,000	1,828
4. Water supply	2,350	4,300
5. Water heater	320	1,240
6. Hot water circulating pumps	240	200

[1] Supplied through the courtesy of Emmet D. Williams, superintendent of Roseville Schools.

	Labor	Material
7. Gas piping	$160	$280
8. Thermal insulation	1,718	2,186
9. Plumbing fixtures	2,776	3,600
10. Boiler and breeching	1,695	3,864
11. Oil burner	1,650	6,850
12. Vacuum pump	200	1,200
13. Radiation	2,500	3,600
14. Unit heaters	400	1,000
15. Valves, traps, and strainers	200	1,500
16. Piping	400	5,259
17. Insulation (piping)	1,350	900
18. Temperature controls	5,100	9,900
19. Refrigeration	425	1,345
20. Sheet metal work	4,100	1,300
21. Registers, grills, and diffusers	80	218
22. Fan units	375	4,900
23. Painting	695	385
Total	35,268	60,558
GENERAL CONTRACT		
1. Bond and preliminary expense	1,628	4,229
2. Excavations and ground and site work	11,460	12,900
3. Forms in place	6,228	7,907
4. Reinforcing of steel and mesh	1,262	8,271
5. Concrete	4,521	19,019
6. Structural steel	$3,126	$11,980
7. Steel joists	2,168	8,858
8. Steel roof deck	2,397	8,000
9. Acoustical desk	3,366	6,251
10. Dampproofing and waterproofing	783	783
11. Face, common, and glazed brick	6,238	4,451
12. Standard concrete block	9,230	5,358
13. Glazed tile	10,380	8,228
14. Miscellaneous metal	2,412	4,484
15. Ornamental metals	1,238	4,218
16. Aluminum vent house	1,059	1,241
17. Hollow metal frames and doors	912	4,955
18. Metal windows	4,530	9,592
19. Sheet metal, roofing, and roof insulation	5,638	16,909
20. Carpentry	4,112	1,290
21. Millwork	18,840	18,851
22. Caulking and weather stripping	628	942
23. Lathing and plastering	2,180	2,702
24. Ceramic tile and marble	1,150	1,102
25. Composition floor covering	2,098	4,894
26. Glass, glazing	1,859	5,567
27. Accoustical treatment	3,010	6,193
28. Finish hardware	2,160	5,897
29. Miscellaneous equipment	368	1,334
30. Folding door	$40	$165
31. Folding stage and stairs	310	1,789
32. Basketball backstops	92	602
33. Insulated storage room	268	751
34. Kitchen equipment	2,078	18,602
35. Painting and decorating	4,164	1,302
Total	121,933	219,702
Grand total	168,601	309,530

NOTE.—Since the heating system and lead-in wiring for electrical service for the initial 16-classroom Brimhall Elementary School Building are sized for an eventual 33-room school, the heating and electrical work costs are somewhat higher than normal. Superintendent Williams states: "Additional construction to this building would run about $1 a square foot less than the initial construction due to the fact that the heating and electrical work would be a smaller proportion of the total. The general construction cost per square foot would be very comparable to the cost of the original building and the cost percentages for the material used would be similar" (letter to the National Education Association, dated Apr. 15, 1958).

EXHIBIT D–4.—*Conversion of labor-material cost breakdown, Brimhall Elementary School (Minnesota) into an illustrative expenditure breakdown per $100,000,000 of school construction* [1]

Item	Labor		Materials		Total	
	Amount	Percent	Amount	Percent	Amount	Percent

See footnote at end of table.

EXHIBIT D-4.—*Conversion of labor-material cost breakdown, Brimhall Elementary School (Minnesota) into an illustrative expenditure breakdown per $100,000,000 of school construction* [1]—Continued

Item	Labor		Materials		Total	
	Amount	Percent	Amount	Percent	Amount	Percent
1	2	3	4	5	6	7
General contract—Continued						
22. Caulking and weather stripping	$131,345	.37	$197,017	.30	$328,362	.33
23. Lathing and plastering	455,942	1.29	565,117	.87	1,021,059	1.02
24. Ceramic tile and marble	240,520	.68	230,481	.36	471,001	.47
25. Composition floor covering	438,792	1.25	1,023,569	1.58	1,462,361	1.46
26. Glass, glazing	388,805	1.10	1,164,325	1.80	1,553,130	1.55
27. Accoustical treatment	629,535	1.79	1,295,252	2.00	1,924,787	1.92
28. Finish hardware	451,789	1.28	1,233,344	1.91	1,685,103	1.69
29. Miscellaneous equipment	76,966	.22	279,003	.43	355,969	.36
30. Folding door	8,366	.02	34,509	.05	42,875	.04
31. Folding stage and stairs	64,836	.18	374,165	.58	439,001	.44
32. Basketball backstops	19,242	.06	125,907	.19	145,149	.15
33. Insulated storage room	56,052	.16	157,070	.24	213,122	.21
34. Kitchen equipment	434,609	1.23	3,890,566	6.01	4,325,175	4.33
35. Painting and decorating	870,891	2.47	272,310	.42	1,143,201	1.14
Total	25,502,007	72.32	45,950,168	70.98	71,452,175	71.45
Grand total	35,262,112	100.00	64,737,488	100.00	100,000,000	100.00

[1] It should be noted that the costs detailed in this exhibit do not include such items as site acquisition furniture, and architects' fees. On the other hand, bond and preliminary expense and site improvement (the latter involving 5 percent of the total cost) are included.

NOTE.—Since the heating system and lead-in wiring for electrical service for the initial 16-classroom Brimhall Elementary School building are sized for an eventual 33-room school, the heating and electrical work costs are somewhat higher than normal. Superintendent Williams states: "Additional construction to this building would run about $1 square foot less than the initial construction due to the fact that the heating and electrical work would be a smaller proportion of the total. The general construction cost per square foot would be very comparable to the cost of the original building, and the cost percentages for the material used would be similar." (letter to NEA, dated Apr. 15, 1958).

Restrictions for Supreme Court

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Valley Times, North Hollywood, Calif., by George Todt, entitled "Restrictions for Supreme Court."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESTRICTIONS FOR SUPREME COURT

(By George Todt)

"At last I perceive that in revolutions the supreme power finally rests with the most abandoned." (Danton.)

Are there those in our Republic who dream that the Supreme Court is so sancrosanct that it may overstep its bounds circumscribed by the Constitution with impunity?

Do some imagine that the opinion of nine appointed officials should supersede the will of the American people as expressed by their duly elected representatives in Congress and the office of the Chief Executive?

Have we so little regard for our traditional system of checks and balances within the framework of three equal and coordinate branches of American Government—executive, legislative, and judicial—that we are close to becoming docile enough to permit usurpation of extravagant new power by one of these branches at the expense of the others?

While the superliberals may hail the aggressive new look of the Supreme Bench in legislative matters as progress, I think it is, in reality, quite reactionary in the worst sense of the word. If the unprecedented trend continues in the present vein, the United States might one day find itself under the rule of an oligarchy of nine men, in actual practice—and Congress can vie with Hermann Goering's Reichstag for the unwanted honor of being named the all-time legislative dud.

There is extreme and widespread dissatisfaction with the social revolution of High Court has produced in our country over the past several years. One important news magazine, U. S. News & World Report, recently summed it up as follows:

1. The South is agitated over racial integration in the schools.

2. Congress is aroused over limitations on the powers of its investigating committees and the Government's right to fire employees accused of subversion.

3. Law-enforcement officials complain of decisions that make it harder to obtain the conviction of admitted criminals.

4. State authorities are displeased over rulings that make Federal enactments supreme over State laws in the field of subversion.

5. Lawyers assert that long-standing precedents have been struck down, that the Court has been writing its own laws and its own amendments to the Constitution.

This just about covers everybody except the people, themselves. The last look I had at a competent poll on this subject reveals that the confidence of our citizenry in regards to the present composition of the Supreme Bench is at an all-time low.

If Congress does not do something about this matter in the present session, it will, to a large extent, have abandoned its responsibility to the American people.

At present, a very modest and limited bill has been introduced by Senator WILLIAM E. JENNER in the upper house which would prevent Supreme Court review in the following fields: (1) the antisubversion program for Federal employees; (2) the admission of lawyers to practice in State courts; (3) cases arising from congressional investigations and citations for contempt of Congress; (4) school-board regulations having to do with subversive activities by teachers; and (5) State laws dealing with subversion.

But even this moderate attempt to preserve some congressional prerogatives may be foredoomed to failure. While the Senate Judiciary Committee didn't reject it last Monday, most competent observers think that this will be the case on this coming Monday.

If so, Congress will have thrown away a golden opportunity to place a brake on the runaway social-political ambitions of the Court. Of course, that is its own business if it does. Who knows? Maybe life in Hermann Goering's Reichstag wasn't so bad after all.

Results of Public Opinion Poll

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. GRIFFIN. Mr. Speaker, recently I conducted a public opinion poll throughout the 11 counties of Michigan's Ninth Congressional District, which I have the honor to represent.

A questionnaire, covering 14 of the major issues facing Congress, was sent to nearly every family in the congressional district. Names and addresses were taken from the telephone directories. To date the response, totaling more than 9,300 replies, has been most gratifying.

Many people added constructive comments or qualifying remarks and explained that on some issues a straight yes or no answer was not fully descriptive of their views. I am sure these people can more fully appreciate the frustration sometimes experienced by a Congressman when he faces an important vote on a complex issue.

A Congressman might like to vote 70 percent in favor of a particular bill and 30 percent against it; or he might wish that the bill were amended or presented in a somewhat different form. But, of course, when the time for decision arrives, he is always required to vote either yes or no—just as if each bill were either all good or all bad.

The overall response to the questionnaire and the thousands of comments received on a wide range of legislative subjects reflect a deep understanding and keen interest on the part of my fel-

low citizens in western Michigan in the problems and affairs of our Government.

Although the job of reading and processing thousands of questionnaires was not an easy one, it was not without an occasional lighter moment. For example, in the interest of preserving domestic tranquility, we were frequently called upon to dispatch an extra questionnaire into households where the husband and wife differed sharply on some of the issues.

I believe the results of the questionnaire are particularly revealing and noteworthy on several issues. For example, 65.5 percent of the farmers (or their wives) who responded, favored a gradual elimination of all farm price supports. It is interesting that a slightly smaller percentage (64 percent) of the total return (farmers and nonfarmers) voted to eliminate farm supports.

Among union members (or their wives) who responded, only 44.9 percent favored outright repeal of the Taft-Hartley law, while 75.3 percent voted for stronger laws to prevent the use of their dues for partisan political activities.

In analyzing the responses to question No. 3; relating to Federal aid to education, it should be kept in mind that respondents were offered the opportunity to check one or more of the suggested approaches to the problem. Since only 39 percent checked (e) "Leave all education finance problems to States and local districts," it appears that at least 61 percent would favor one or more of the several forms of Federal assistance for education.

While 68.9 percent of the responses to question No. 5 were in favor of higher postal rates, it should be taken into account that a great many qualified their answers with such comments as "4 cents on first-class mail," "increase third-class only," or "eliminate junk mail," and so forth.

In a similar manner, a great many of the 67.3 percent favoring continuation of the mutual security program qualified their replies with such remarks as: "reduce economic aid", or "cut out aid to India", or "eliminate aid to Tito", and so forth.

Perhaps the most interesting response was that to question No. 14, indicating that President Eisenhower continues to enjoy very strong support in my district, with 70.7 percent indicating that, in general, he is doing a good job. For comparison purposes, it might be noted that in 1952 President Eisenhower received 62.8 percent of the vote in the ninth district, and in 1956 he received 62.3 percent of the vote.

Some of those who replied to the questionnaire thoughtfully cautioned that they do not believe the results of such an opinion poll should be substituted automatically for the considered judgment of their Congressman. With this comment I agree.

In the last analysis, while such a poll is both interesting and helpful, there are proper limitations upon its function, which were probably best described by Edmund Burke, the 18th century British statesman, when he said:

"Certainly, gentlemen, it ought to be the happiness and glory of a Representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinions high respect; their business unremitting attention. It is his duty to sacrifice his repose, his pleasure, his satisfactions, to theirs, and above all, ever, and in all cases, to prefer their interests to his own.

"But a Representative's unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to any man, or to any set of men living. These he does not derive from your pleasure—no; nor from the law and the Constitution. They are a trust from providence, for the abuse of which he is deeply answerable. Your Representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion."

A tabulation of the questionnaire results follows:

QUESTIONNAIRE RESULTS

1. So far as farm price supports are concerned, in which general direction should Congress now proceed? (Check one.)

	All returns	Farmers only (or wives) [1]
	Percent	*Percent*
(a) Increase farm price supports	9.1	13.6
(b) Continue flexible supports at present levels	26.9	20.9
(c) Gradually eliminate all price supports	64.0	65.5

[1] Actual vote of farmers (or wives); (a), 192; (b), 298; (c), 930.

2. In the field of labor-management relations: Do you favor:

	All returns (percent)		Union members (or wives)[1] only (percent)	
	Yes	No	Yes	No
(a) Repealing the Taft-Hartley Act	23.2	76.8	44.9	55.1
(b) Applying antitrust laws to labor unions	82.3	17.7	62.5	37.5
(c) Extending the minimum wage law (now $1 per hour) to include employees of retail, service, and other businesses not now covered	75.0	25.0	89.5	10.5
(d) Stronger laws to prevent use of union dues for partisan political activities	85.5	14.5	75.3	24.7

[1] Actual vote of union members (or wives): (a), 950 yes, 1,166 no; (b), 1,262 yes, 757 no; (c), 2,171 yes, 254 no; (d), 1,770 yes, 580 no.

3. Please check proposals which you favor (if any) to indicate your general views concerning action Congress should take in the field of education (check one or more).

	Percent
(a) Federal aid for school construction	47.5
(b) Federal scholarships for top students	38.9
(c) Science Academy to help train scientists for defense	45.8
(d) FHA-type loan program for college students	51.3
(e) Leave all education finance problems to States and local districts	39.5

4. Please indicate, in general, your views toward Government pensions for veterans who were not disabled in military service.

	All returns	Veterans only (or wives)[1]
After retirement age, such veterans should be entitled to:	*Percent*	*Percent*
(a) A pension, without regard to need	18.5	26.4
(b) A pension based on financial need	36.1	31.3
(c) No pension (unless disabled in service)	45.4	42.3

[1] Actual vote of veterans (or wives): (a), 1,026; (b), 1,218; (c), 1,645.

In general, do you favor:

	Percent		
	Yes	No	No opinion
5. Increasing postal rates to reduce the huge postal deficit	68.9	23.7	7.4
6. Permitting pay TV to operate on a trial basis	21.6	66.9	11.5
7. Continuing our mutual security program of military and economic assistance to friendly nations	67.3	22.1	10.6
8. Statehood for Alaska	84.0	7.1	8.9
9. Statehood for Hawaii	81.3	9.5	9.2
10. An extension of the Reciprocal Trade Agreements Act, as requested by President Eisenhower	65.8	13.0	21.2
11. Recognition of, and trade with, Red China	15.1	72.5	12.4
12. Balancing the budget even if it means reducing or cutting out some nondefense programs of direct benefit to you	62.0	28.0	10.0
13. Increasing social security benefits with a corresponding increase in social security taxes	55.3	36.6	8.1
14. In general, do you believe President Eisenhower is doing a good job?	70.7	22.4	6.9

The Trade Agreements Act—Article From Bulletin of the Economic Research Department of the Chamber of Commerce of the United States

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1958

Mr. HUMPHREY. Mr. President, the March 1958 issue of Economic Intelligence, issued by the Eocnomic Research Department of the Chamber of Commerce of the United States, contains an interesting article entitled "The Trade Agreements Act."

Although I do not always agree with the position taken by the chamber of commerce, I think the article is of particular interest and importance in connection with the debate which has already begun over extension of the reciprocal trade law.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TRADE AGREEMENTS ACT

Hearings before the House Ways and Means Committee to consider the extension of the Trade Agreements Act have been underway since mid-February. The final act which emerges from Congress vitally concerns many parties. This legislation will largely determine the role that United States industry will play in the expanding world trade and will substantially affect the overall economic, political and military relations of this country with the other nations of the free world. Seldom does an issue so loaded with potential international repercussions come before Congress.

The purpose of the original Trade Agreements Act was to give the President authority to enter into trade agreements with foreign governments to bring about mutually beneficial reductions in import restrictions. This act, since its inception in 1934, has been the keystone of our foreign economic policy.

Some argue that the act gives the President unlimited power to agree to reductions in import protection while it ignores adverse effects upon domestic import-competing industries. To answer this charge, it is only necessary to review the safeguards for domestic industry which are included in the present act and in the administration's proposed extension.

1. The peril-point provision requires the Tariff Commission to determine the duty level below which the sales of a product produced by domestic industry would be injured or threatened with injury. Congress included this provision to prevent overzealous administrative reductions in protection. However, the President is allowed to reduce a duty below the peril point, provided that he notifies Congress of his intent and explains his action.

2. The escape clause requires the Tariff Commission to institute an investigation upon a complaint that production of a particular product is threatened or has been injured, at least in part, by a previously granted reduction in protection. By law, the Tariff Commission is directed to consider only whether or not the sales of a particular imported product injure or threaten to injure that portion or fraction of a domestic industry producing like or similar products. At present, the Commission does not gage injury in relation to the effects upon the total production of the industry appealing for protection. After fact-finding hearings, a report is sent to the President, substantiating or denying the petition of the complainant.

3. The act provides also for a Presidential review of the Tariff Commission's recommendations in light of the national interest. That is, the President considers the Commission's recommendations, weighing the probable effects on consumers, the total domestic industry appealing for protection (rather than just that fraction of the industry producing an import-competing product) and the indirect effects on United States export industries. Finally, the President considers the recommendations of the Commission in light of the possible (and probable) international political and economic repercussions and retaliations. Thus, the President, on such grounds, may accept, modify, or reject a Commission recommendation to raise import barriers.

One thing should be clear: without the power of Presidential review which takes the national interest into account, the narrowly based Commission's recommendations would be final; the act would become a strongly protectionist device.

4. There are numerous other legal provisions and amendments to the act which protect import-competing industries against competition, both fair and unfair. Among them are the buy-American provisions, the agricultural protection provisions, the anti-dumping law and the countervailing (anti-subsidy) duties. There is also a strong national security amendment designed to protect United States industries considered essential to the defense effort.

In fact, the Trade Agreements Act has become so loaded with protective amendments that it is difficult to understand how it can, even as it now stands, be an effective instrument for liberalizing trade. Any success in attaching additional protectionist amendments may well destroy the intent of this legislation. The passage of a badly crippled law would be as desirable as allowing the present act to expire.

IMPORTS AND THE ALTERNATIVES

Obviously, receipts from merchandise trade are only a part of any country's international financial relations. It is true that recently the free world in total has been able to add substantially to its international reserves of gold and dollars. But it is also true that United States foreign aid and loans (plus international loans) have been largely responsible for improving the dollar gap.

However, the fact that for many years we have had a surplus of exports above imports cannot be avoided. There may be other ways to finance this gap. But to continue the present level of our exports or to allow our efficient export industries to grow, we must allow a gradual increase in our imports. Many of the products we presently import are not produced domestically. Only a minority of our imports are strongly competitive with domestic industry products. Actually, only through increased imports can we capture the real benefits of international trade—a higher level of output and per capita real income. Yet there is great concern over the effects of allowing increased imports into our economy.

THE IMPACT OF IMPORTS

One way to assess the impact of reductions in tariffs and other protective devices is to examine the shifts in employment such policies have incurred in the past and will create in the future.

From April 1948 to March 1957, the Tariff Commission reported a finding of injury involving 23 domestically produced commodities. During the 1947–56 period, the Commission found peak employment in the plants producing these 23 commodities to be 113,000 workers. And at the low point of employment in each industry, the total number of workers employed was 85,000. Thus, over these many years there was, at most, a drop of 28,000 workers in the companies involved. And increased imports, of course, were only partially responsible for this drop. Low employment figures in some instances occurred during a period of general economic recession. These figures, of course, do not reflect all the adjustments necessitated by previous foreign competition, but they do indicate that the total drop in employment in industries seriously affected by imports in any one year was fairly small.

EFFECTS OF A 50 PERCENT TARIFF REDUCTION

In 1954, estimates were made of the potential worker displacement if tariffs were reduced by 50 percent. It was estimated that such a policy would cause a potential displacement of 109,000 workers, or less than one-fifth of 1 percent of our total labor force. Of course, displacement does not necessarily mean unemployment. More foreign-held dollars will mean increased employment in our export industries. Moreover, the total impact of a 50 percent tariff reduction would be felt gradually. Only a fraction of the production and employment adjustments would have to be made in any 1 year.

Economic adjustments of much larger magnitudes than those noted above occur constantly due to internal factors. Domestic changes in demand, technology and new products almost continuously create employment and production displacements.

For instance, in the United States, over 3 million people on the average enter the labor force each month; almost the same number leave. Also, about 800,000 workers in the labor force shift from employed to unemployed status and vice versa each month. In 1956, there were almost 600,000 hirings and separations per month in manufacturing alone; such employment shifts are a normal process in our dynamic economy.

On the other hand, over 4.5 million workers owe their jobs today to United States foreign trade. Over 3.1 million workers are employed in our export industries and over 1.3 million workers are employed in handling and processing imported goods. Any reduction in our trade volume would throw some of those workers out of jobs. It should be clear that any change in trade policy, whether directed toward increased or decreased trade, will involve shifts in our export, import, and import-competing industries and will cause temporary displacements and dislocations. Thus, the problems created by import liberalization are relatively small in total. And if reductions in trade restrictions are made in a gradual and equitable manner, the adverse effects on particular groups can be minimized.

THE CRUCIAL CHOICE

Through the Trade Agreements Act we cannot legislate an excess of exports over imports. Such legislation, by itself, will only determine the level of our international trade. Thus, the important question today is: Are we going to avoid all injury and threat of injury or inconvenience to domestic producers, or are we going to allow United States imports to increase? To restrict the flow of trade by import restrictions is to engage in economic warfare, particularly against our allies. To deny markets abroad to United States producers would certainly restrict our economic growth. To follow a path of Government protection and subsidization of a few United States producers would be economic folly. To prevent the free world from earning dollars in the face of the Soviet economic offensive would be disastrous.

CHEAP FOREIGN WAGES

Perhaps the most emotionally appealing plea for protection from imports is that domestic producers face unfair competition because of the low wage rates which prevail abroad. Numerous groups are anixous to perpetuate this sophistry.

No one will deny that unemployment and idle resources are a distressing problem, whatever the cause. However, economic adjustments are occurring every day within the economy as a result of numerous forces far more important and pervasive than changes in the composition and level of imports. In most instances we do not regard these inevitable and desirable adjustments in our system as sufficient cause for massive Government controls and subsidies. Why, then, should imports be singled out as a whipping boy?

Clearly, the United States enjoys a relatively abundant and cheap supply of capital, a high degree of technological competence, and efficient and effective managerial talent. Still it is argued that high wage rates make the United States economy particularly vulnerable to import competition from cheap wage rate producers. Protectionists point out with great relish that while the average hourly earnings in United States manufacturing are a little over $2 per hour, the comparable Japanese wage rates are only 20 cents per hour.

However, any attempt to compare wage rates in different countries by using the same monetary unit—dollars, for instance—

is a very difficult problem. Using official exchange rates to translate foreign wages into dollars is misleading, if not completely erroneous. Such figures may not be representative at all of the relative wage-rate structures in different countries.

WAGES AND EFFICIENCY

Even if such comparisons in dollars could be made accurately, differing wage rates would be a completely erroneous guide upon which to determine competitive advantage or disadvantage in international trade. What low wages do suggest, by themselves (if anything), is that productivity per worker is low in that particular country. Thus it shouldn't be surprising that in Japan output per capita—a rough measure of productivity—is roughly one-tenth of output per capita in the United States. Also, one only needs to look at wage rates within the United States to see that high wages, in general, indicate high productivity per worker and low wages indicate low productivity per worker.

Thus in the production of a particular product, high wages in general indicate relatively low per unit labor costs and low wages indicate relatively high per unit labor costs. Furthermore, if relative wage rates do indicate competitive advantage or disadvantage, how can one explain the fact that United States products sold abroad (often in cheap labor countries), are often produced by our highest wage rate industries?

But even labor costs (wages in relation to productivity) cannot determine competitive advantage or disadvantage in world trade. Labor costs are only one part of the total cost of producing any product. In fact, many of the so-called cheap labor countries are relatively capital poor and incur high capital costs in the production of many goods. India, for example, is a relatively capital-poor country and potentially labor-rich. But productivity per worker is, in general, still low, so that the production of many goods involves both relatively high labor costs and high capital costs.

Even if one geographic area enjoys low total costs in producing many or all products, it is to the advantage of the particular country to produce only those goods in which its cost advantages are relatively greatest and import those products in which its cost advantage is relatively the least—that is, to import the products which the less efficient country produces most efficiently. For instance, we would agree that if the best lawyer in a particular town were also the best secretary, it would still be of advantage to him to concentrate on, or specialize in being a lawyer and hire (import) a less efficient secretary.

THE REAL SOURCE OF COMPETITION

The real wage competition that import-competing industries face is not from across the seas, but from more efficient domestic industries. Through trade, high wage, but low labor cost, domestic export industries compete with low-wage, high-labor cost import-competing firms for the use of workers. But this basic relationship is indirect, so the complaints are more easily misdirected at foreign product competition.

Thus, Government restrictions on trade negate one of the most important competitive forces—internal competition for factors of production—the process by which resources are employed in their most productive uses.

In view of the high level of United States exports relative to imports and the relative technological superiority and efficiency of our economy, the evidence indicates that the United States is, in general, safe from large-scale competition from low-wage-rate countries. Moreover, allowing an increase in our imports would probably induce an expansion in our export industries involving a shift of workers from low-wage rate United States industries to the high-wage rate export industries and improve in the long run our level of real income.

To argue that protection of these less-efficient domestic producers should be continued indefinitely is to argue that competition itself is unfair. It is indeed strange to hear that in fairness the inefficient domestic producer should and must be protected from the efficient producer. Conversely, is it fair to deny markets abroad to efficient United States export industries by protecting inefficient import-competing industries?

SCIENTIFIC PROTECTION

Many groups have demanded tariffs on particular products to equalize the differences in the relative labor costs or total costs between foreign producers and United States import-competing producers. If this argument were carried to its logical conclusion, all international trade would cease.

One economist has stated:

"The business of equalizing costs of production * * * is essentially a proposal to throw away all the basic economic advantages that come from international specialization. I would not argue from this that we should automatically refuse protection to any domestic industry, but I think we have to be clear that the reason for the protection should not be that wages are lower abroad than they are at home. There may be other valid reasons, but the low-wage argument is a phony."—Irving B. Kravis, chairman, Department of Economics, Wharton School of Finance, University of Pennsylvania.

Of course, there may be valid economic considerations that make protection necessary in particular cases. Also there may be military, social, and political considerations that must be carefully weighed. But the cheap foreign labor argument is clearly inadmissible in these deliberations.

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. HOLLAND. Mr. Speaker, I am inserting the statement made by Maurice Splain, Jr., past grand worthy president of the Fraternal Order of Eagles, on the campaign now being waged by the Eagles for Jobs After 40.

This organization has contributed much to social progress in the United States during its many years of existence. I am sure their activity to secure employment for men who have been refused work because they are 40 years of age and over is a signal to the American people, through their elected representatives, to do something about it as we are depriving men of employment who in their prime years of life—have the experience and family responsibility which makes them good, conscientious workers.

I feel certain that the Members of the House shall be very much interested in Mr. Splain's remarks:

STATEMENT OF THE FRATERNAL ORDER OF EAGLES BY PAST GRAND WORTHY PRESIDENT MAURICE SPLAIN, JR., BEFORE HOUSE SUBCOMMITTEE ON EDUCATION AND LABOR, APRIL 24, 1958

It is my privilege, as a spokesman for the Fraternal Order of Eagles, in the capacity of secretary to the board of grand trustees, and as a former national president, to represent before your committee an organization which has devoted throughout its 60-year history, considerable of its energies and resources to improving the social welfare status of our fellow Americans. The record of our fraternity, with its 1,552 aeries or lodges, and a membership of 1,300,000, including the Auxiliary affiliates, is a proud one of pioneering for social legislation which has become an essential fabric of the American way of life. We have often been called the common man's fraternity, and as such, we believe we represent a typical cross section of the people of America, and that our thinking incorporates the desires and opinions of these average men and women.

Permit me to acquaint you gentlemen, briefly, with some of the highlights of our social legislative history. Some years ago, the Eagles embarked on a nationwide campaign to rid America of its poorhouses. The first State old-age-pension law, in Montana, was sponsored by an Eagle legislator, under the initiative of his fraternity. It was signed by an Eagle Governor who presented the pen used in affixing his signature to the bill to the Fraternal Order of Eagles. Subsequently in most of the States Eagles introduced old-age-pension bills which are now laws. The various Governors who signed these laws, in acknowledgment of our campaigns, presented the Eagles with the pens with which they signed the measures, and these pens are now a part of our Eagle archives. Early in 1920, the Eagles undertook in conjunction with its State old-age-pension activities, a nationwide drive for a National Social Security Act, and spent more than a million dollars, it has been estimated, to blaze the trail for this legislation.

When the late President Roosevelt, a life member of our fraternity in Buffalo, N. Y., signed the act, he invited an Eagle delegation, headed by former Republican Congressman John M. Morin, of Pennsylvania, a former national president of the Eagles, to be present, and he turned one of the signatory pens over to this delegation with the remark that "our countrymen owe the Eagles good will for their unselfish service."

The Eagles sponsored the first mothers' pension law in Missouri, and jointly with labor, initiated the first workmen's compensation act in Wisconsin. I give your committee this background to project before you our long continuing concern for the well-being of our fellow Americans.

At present our principal objective is to assure equal opportunity of employment for all regardless of age. We believe that men or women, qualified and physically able to perform useful work, should have equal access to jobs, and that it is time that arbitrary age barriers set up unwisely and without justification, be removed by industry and other employers. To achieve this end, we are currently engaged in a jobs after 40 campaign to end age discrimination in employment through legislative channels. Our local aeries and membership have overwhelmingly through resolutions and other means given enthusiastic endorsement to the jobs after 40 campaign. We are committed to support in Congress and in State legislatures, any measures which will bring about through feasible legislation the opening of employment opportunities to older workers, who have experience, skills, and physical vigor to offer. The placing of such workers on the human scrap heap by employers is a tragic and senseless policy that should be ended, not only for the personal welfare of those involved, but also for the good of all America.

Recently our fraternity brought to Washington approximately 700,000 petition signatures obtained by Eagle circulators in various communities throughout the United States in connection with the jobs after 40 cam-

paign. These petitions call upon Congress to enact legislation to end age discrimination in employment. We had set our goal at half a million signatures. The response was truly amazing. Our petitions were circulated for about 3 months, but a number of labor organizations joined our campaign, and this tremendous total of signatures was obtained. There is little doubt that this number could have been augmented many times over had the campaign been longer and reached into other untouched segments of our population. Impressive as are the number of signatures, equally impressive are the hundreds of letters we received pledging support of the jobs after 40 campaign, some of them very personal, and revealing the family heartbreaks and despair because a physically vigorous and able head of a household with dependents could not find work because under 40 only or similar prejudices existed. Here is a major source of discontent and unhappiness in America, and one that becomes worse with time as greater numbers of our people reach middle age. Remember, we are not dealing with men and women of more advanced age who have become infirm or lost much of their physical vigor. We are dealing with persons in the prime of life, at the peak of their productive capacities, and in good health. Unemployment for them has an important bearing on the problem of sufficient income in later years. Obviously, if a person over 40 can't find a job because of his age, he will be unable to save for his elderly period, and in many instances goes into debt. So, elimination now of age barriers in employment will do much to diminish in future years the problem of adequate income and a decent standard of life for our elderly people. May I earnestly ask, therefore, on behalf of the Fraternal Order of Eagles, that you gentlemen of this committee give every support, and prevail upon your colleagues in Congress to favor legislation which will remove age discrimination in employment?

Turning to the welfare problems of the elderly, or those in social-security beneficiary ages, we find many hard put, in their declining years, to provide even a minimum of needs, because of curtailed incomes. There are two important questions every person ought to think about relative to his later years. One is: Am I going to enjoy a decent standard of living? The other is: What will happen to me if I should get sick?

The Fraternal Order of Eagles has subscribed in the action taken at its last grand aerie convention, to easing the first problem, that of adequate incomes for the elderly, by recommending removal of the annual ceiling of $1,200 earnings for a social-security beneficiary, and increasing it to at least $2,000, or $2,400. As to the second problem, that of illness, our fraternity favors medical and surgical protection for the later years through a prepaid program under the social-security system.

We all know that social-security payments are not sufficient in themselves, particularly with rising living costs, to provide a decent standard of living. But, unfortunately, many persons in the lower income group, including those who have been industrious and well meaning, reach social-security age with little savings, because they have reared large families, and have had other expenses. These people are limited to earning only $100 a month and they draw social-security payments. But those who have been more fortunate, and have been able to accumulate stocks and bonds and real estate, can draw unlimited amounts of dividends and rents, as indeed it is their right. But we have said to the other social-security beneficiaries: "You have not done so well, but you no longer have the right to earn sufficient money to enable you to enjoy a good standard of living." This is unfair; it is un-American, and alien to our concept of individual liberty. With respect to the $1,200 annual earnings limitation, the social-security laws should be amended as quickly as possible. Such action would be a notable contribution to a better way of life for our elderly citizens.

Medical bills are the bane of advanced years, because such expenses are apt to increase at a time of life when income is lessened. A prolonged illness can often pauperize anyone with modest savings, and make the final period of life a tragic existence. Most people in employment have medical protection through group policies, union-negotiated coverage, workmen's compensation, or individual prepaid health policies. The elderly, no longer employed, have lost this protection when it is needed most, and when their incomes have become fixed.

The Fraternal Order of Eagles believes that prepaid medical care payments in the employable years, through social security, provide the most inclusive way to protect workers against medical bills in their elderly years. We favor a 2-percent additional payroll levy on wages and earnings, with 1 percent contributed by the employee, and 1 percent by the employer, in conjunction with the social security levy. The Social Security Administration could contract for the actual operation of this retirement medical service program, with 1 or more nonprofit health agencies in the 48 States, such as Blue Cross, as an example. A man earning $4,200 a year would have an extra $42 deducted from his pay check during the year, equivalent to about 80 cents a week. We believe that an overwhelming number of Americans would welcome such a deduction, knowing that he or his wife would have no medical worries when they become eligible for social security.

The Eagles have long recognized the inadequate housing for elderly men and women living on social security or old age pensions, and indeed, we are in the vanguard of a movement to do something about it. Our order advocated changes in the FHA financing regulations to facilitate construction of homes for the aged, and with legislation now passed enabling the Government to loan 90 percent of the amount for construction to nonprofit organizations, we have taken definite action. A special Eagle study committee on low cost housing for the elderly has recommended to the grand aerie that the Eagles take advantage of this legislation to provide housing projects for elderly Eagles, and has specified Florida as the most likely location. We are prepared to finance our share of these projects with loans from our memorial foundation fund, which is an intact trust fund established by the Eagles to provide, from the interest, physical welfare services and college educations for the children of Eagle fathers who lost their lives in military service

But great as is our zeal in this regard, we recognize that limited Eagle projects would only touch the surface. We believe that the Government itself, in addition to encouraging nonprofit organizations, like the Eagles, to undertake housing projects for the aged, could well sponsor projects of its own. We favor the type of undertakings that have become a model in Sweden, the motel type of housing, with ground floor, hotel clubrooms, and center hall for entertainment and recreation. Above all, any such projects should inculcate the occupants with a sense of their individual dignity and worth, and in no way should be suggestive of largesse or welfare.

The Eagles believe that because the problems of the elderly touch upon many facets, and because constant review and readjustments will always probably be necessary in view of economic changes, a bureau of older persons, within the United States Department of Health, Education, and Welfare should be set up for special attention to the needs of the retired.

In conclusion, I should like to summarize what the Eagles believe will be major programs toward solving the problem of our elderly citizens: (1) Elimination of employment barriers against persons over 40 so that our present citizens in this age grouping, will reach their senior years with more ample economic means; (2) Medical care and protection for social-security years under a prepaid program of the Social Security Administration; (3) Government low rental, nonprofit housing projects for the aged.

I would like to express to the members of this committee the thanks of the Fraternal Order of Eagles for your labors in seeking a solution to the social welfare problems of our elderly. It is a noble task upon which your committee has embarked. We all know that these are problems becoming more acute each year as the number of our senior citizens increases. These problems demand solution within the democratic framework of our society. Their solution will do much to remove the anxieties and fears that exist among all age groups within our country. The Fraternal Order of Eagles is dedicated to this solution, and we want to assure you the support and good will of our organization, and we pledge to continue to give our best efforts in helping to achieve a happier and better life for our elderly citizens.

San Francisco Call-Bulletin Says "Trinity Plan Good Bargain"

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. SCUDDER. Mr. Speaker, the San Francisco Call-Bulletin adds some more good economic fuel to the fire under the Trinity partnership proposal. Already, reams of facts and figures have been presented on the economic assets of joint development of the Trinity River project. In savings to the Federal Government, in maximum revenues from Trinity, as well as the greatest taxpayments to Federal, State, and local Governments, partnership has proved itself a bargain.

Now, the San Francisco Call-Bulletin adds another economic feather to the partnership cap. It points out that whoever develops Trinity power, standby steam plant equipment must be provided to assure firm power commitments to Trinity customers. The Federal Government does not have this equipment. And if it built the Trinity powerplants, it would in addition have to construct standby plants—all paid for of course by the burdened taxpayer.

Contrast this waste and duplication under an all-Federal power operation, with the fulfillment of these firm power commitments at no extra capital cost under partnership. Not only would partnership save the Federal Government $60 million in putting up Trinity power facilities; but the available standby steam plants owned by Pacific Gas & Electric could increase Trinity's power supply when a firm-up is needed—without added building costs.

As the Call-Bulletin asks:

Why should the Government, merely for the sake of a doctrinaire theory, essay a project which a private utility company can do better and more efficiently, and at a multi-million-dollar saving to the taxpayers?

It should not. I hope we assembled here will not let it.

Under leave to extend my remarks in the RECORD, I include the San Francisco Call-Bulletin editorial referred to above, entitled "Trinity Plan Good Bargain":

[From the San Francisco Call-Bulletin of March 25, 1958]

TRINITY PLAN GOOD BARGAIN

Efforts have been and no doubt will be made to inject the so-called Trinity River partnership plan into California's election campaigns as a political issue.

It shouldn't be. It is not a question of politics, but, as Secretary of Interior Fred Seaton again has explained it, a simple question of dollars and cents.

This is the plan wherein the Federal Government would build the necessary water storage facilities on the Trinity River, and the Pacific Gas & Electric Co. would provide the plant for generating power.

The utility company would pay generously for the falling water, and would spare Uncle Sam the expense of erecting powerplants. The end result would be beneficial to water users, to power users, and, above all, to the taxpayers.

Seaton also made another point which shouldn't be overlooked. If the partnership plan is rejected, and the Federal Government handles the project alone, it will have to provide standby steam plant equipment in order to be sure of fulfilling firm power commitments.

In any natural hydroelectric development, such standby arrangements are essential because the amount of power is governed by the amount of water available. This varies according to seasonal weather conditions.

It is possible in some areas, because of the nature of their industries (aluminum is an example) to sell a maximum load of power at given intervals, and to shut off some customers when the output of power declines.

This is not the case in the area to be served by the Trinity project. Here, the customers will need a steady or firm supply of power at all times, and to insure that the standby plants are necessary.

The Pacific Gas & Electric Co. already has these facilities in being. It can use them to augment its supply of Trinity River power.

The Government, on the other hand, would have to build them, and the taxpayers would have to pay for them.

Why should the taxpayers, already burdened with huge Government expenditures, be asked to pay for a project which isn't even necessary?

Why should the Government, merely for the sake of a doctrinaire theory (i. e., all power facilities should be publicly owned), essay a project which a private company can do better and more efficiently, and at a multi-million-dollar saving to the taxpayers?

The advantages of the proposed plan are so manifest that they should be apparent to everyone, no matter on which side of the political fence.

It offers the cheapest, easiest, and best way of developing the Trinity project with maximum benefits to all concerned, and it is, we repeat, strictly a dollars-and-cents issue, and not a political one.

Lincoln Commission Seems Bogged Down

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. DENTON. Mr. Speaker, under leave to insert my remarks in the Appendix of the RECORD, I include an article by Ben Cole which appeared in the April 16, 1958, edition of the Indianapolis Star in regard to the Lincoln Sesquicentennial Commission:

[From the Indianapolis Star of April 16, 1958]

LINCOLN COMMISSION SEEMS BOGGED DOWN

(By Ben Cole)

WASHINGTON.—Fear was expressed yesterday that the Lincoln Sesquicentennial Commission is heading for failure.

"It certainly got off to a good start in that direction," said Congressman PETER MACK, Democrat, of Illinois, one of the Commission members. "I think it's already gone."

Mack's gloomy view of the Commission's work was disputed by Victor M. Birely, a Washington businessman and vice-chairman of the Commission's executive committee.

Birely declared that the Commission is ahead of the Civil War Centennial Commission and "I think we've made a lot of progress."

Inquiry into the troubles the Commission is having disclosed its chief obstacle is selection of an executive director. Some Commission members want an administrator, others want a Lincoln scholar.

Congressman F. JAY NIMTZ, Republican, of Indiana, author of the Lincoln Sesquicentennial law, wants John Allen, a prominent Washington Republican and leader of a Lincoln group here. NIMTZ is vice chairman of the Commission.

Birely and others, however, see the directorship requiring a man such as Carl Sandburg, Dr. Louis Warren, founder of the Lincoln Foundation, or Eli Lilly, Indianapolis philanthropist and Lincoln scholar.

Lilly was recommended for membership on the Commission by Senator WILLIAM E. JENNER (Republican of Indiana) at the time the President named 12 Commissioners. JENNER called attention to the Indianapolis man's scholarship, devotion to Lincoln's ideals, and his experience with the successful Stephen C. Foster Memorial some years ago. President Eisenhower did not appoint him, however.

The Commission will meet Saturday to name a Director. It will be the third meeting since the Commission was organized. Senator JOHN SHERMAN COOPER (Republican of Kentucky), Chairman, was reluctant to call the 24 members together frequently because lack of funds made it impossible to reimburse members for their travel.

Congress authorized the Commission to spend an initial $40,000 on its work, then adjourned last summer without providing an appropriation. COOPER, Nimtz, and others appealed to the White House for interim funds but were told that these could not legally be provided.

Finally, with the cooperation of the Budget Bureau, the Commission asked Congress for $31,000 early this year. The funds were quickly voted, with Congress increasing the amount to $37,500 and authorizing reimbursement of Commission members for past travel expenses, an almost unheard of courtesy.

Nyle M. Jackson, administrative assistant to Senator JENNER and the Senator's representative at Lincoln Commission conferences, said it was erroneous to blame Democrat partisan politics for the Commission's troubles. Jackson, a devoted Republican, said he has seen no evidence of political foot dragging on the part of Democratic members of the Commission.

"If there has been any politics in this, it has been so subtle we haven't noticed it," said Lee White, one of Senator COOPER's staff members closely in touch with the situation.

MACK, however, charged partisanship in the selection of Mrs. Bertha Adkins, vice chairman of the Republican National Committee, to head the executive committee of the commission.

COOPER was forewarned that Mrs. Adkins' selection might lead to complaint from the Democrats, but he held to the opinion that her executive abilities overcame any handicap she might have because of her GOP office.

MACK said his objection to Mrs. Adkins stemmed from his concern that the Lincoln observance might become confused with the GOP's annual Lincoln Day dinners.

"Actually, the Republicans probably will have their own celebration of the Lincoln anniversary, and that is as it should be," MACK said yesterday. "But this national observance should be removed even from bipartisanship—it should be entirely 'nonpartisan.'"

Commission members are agreed on one thing: The Lincoln sesquicentennial calls for the best the country can give.

"It would be an insult to the memory of one of the greatest Americans who ever lived to do less than our best," Birely insisted.

MACK has been seconded in his efforts to get a Lincoln scholar to direct the Commission by Republican Governor William G. Stratton of Illinois, also a Commission member.

One of the objections MACK has raised to the Commission work, he said, was the selection of COOPER and NIMTZ to be Chairman and Vice Chairman. He said he thought it was "poor judgment" for two Republicans to fill these places. When Mrs. Adkins became executive committee chairman and Allen was advanced for the job of director, MACK viewed the situation as entirely too political.

The Illinois lawmaker said he felt that Democrats had shown good faith by helping to press through the Nimtz bill creating the Commission. MACK recalled that he told the House Judiciary Committee that he wished no honors as author of the law and raised no protest against acceptance of Nimtz's bill instead of his own. He also cited the speed with which a Democrat-controlled Congress voted the money needed by the Commission.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. RAY. Mr. Speaker, many of our fellow citizens of Polish ancestry will

celebrate, on May 3, the 167th anniversary of the enactment of Poland's Constitution by the Polish Diet in Warsaw, in 1791. Exercises in commemoration of that historic action will be held in most of the Polish communities throughout the world—outside of Poland itself. I doubt that the Communists who rule there will permit any public demonstrations but I am certain that their constitution day will be honored in the minds and hearts of the Poles now, unhappily, living under the Communist yoke.

I suspect that the average American of non-Polish background believes that Pulaski and Kosciusko, heroes of the American Revolution, provide our principal links to Poland. Those two distinguished soldiers gave substantial help in the founding of our Republic, but the contribution of men and women of Polish blood did not end with them by any means. Over the years Polish brains have enriched our literature, our science, and our art; Polish valor has strengthened our fighting forces; and Polish skill and brawn have helped build our cities and our industrial plants. And, although Polish immigrants brought with them a passionate love of individual liberty, they left in their homeland as much dedication to freedom as they brought, and that dedication was forcefully expressed in the constitution enacted more than a century and a half ago. On the eve of their constitution day anniversary we should express our appreciation and gratitude to the Polish people for their long devotion to liberty.

Poland has a long and glorious history. Since it emerged as a nation in the middle of the 10th century a number of attempts have been made by aggressive neighbors to assimilate it. But the spirit of free Poland outlasted the Czarist, Hapsburg, and Hohenzollern Empires. As we now congratulate our friends of Polish blood on their constitution day anniversary, we do so with confidence that free Poland will outlast the Communist Empire and eventually resume its place in the family of nations under a government of its own free choice.

Legislation To Extend Unemployment Compensation Benefits

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to include the following telegram I received from Alan Williamson, the South Dakota commissioner of the employment security department, regarding the pending legislation to extend unemployment compensation benefits.

Possibly the proponents of this legislation hope to solve the unemployment problem by adding a small army of employees to administer the new plan:

ABERDEEN, S. DAK., *April 28, 1958.*
Hon. E. Y. BERRY,
House Office Building,
Washington, D. C.:

H. R. 12065, soon to be voted on, is an administrative montrosity for the States. It would entail additional staff in South Dakota of from 50 to 100 people. If enacted it will be the first step toward destruction of State-Federal unemployment insurance program.

ALAN WILLIAMSON,
Employment Security Commissioner.

Tenth Anniversary of Israel

SPEECH
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. OSTERTAG. Mr. Speaker, I am pleased to support the resolution of congratulations and best wishes from the House of Representatives to the people of Israel on the 10th anniversary of the establishment of the State of Israel.

These have been 10 years such as few nations have known. Created as a new homeland for the Jews on the territory of their ancient kingdom, Israel was forced to fight for its existance almost from birth. But despite the threats of annihilation from its neighbors, Israel preserved its independence, established its society, and developed its nation.

As in the early years of our country, much of Israel's energies in this decade have been devoted to opening up the land. In Israel, however, the job has been made far more difficult by the scarcity of water and the necessity of irrigation. But just as they successfully defended themselves, the Israelis also are successfully opening up the land and making the arid hills and plains bloom again as they did 2,000 years ago.

Though agriculture is the mainstay of its economy just as in the ancient days, Israel is not neglecting industry and trade in building a strong, modern economy. Ancient skills and modern technology are being combined to create a healthy, well-balanced economy.

Israel also has established and maintained a stable, representative government in its first decade. It is closely allied with the West and remains a friend of the West.

Though all of these triumphs over adversity have been almost miraculous, Israel's most admirable achievement has been its success in providing a home for almost a million refugees who have flocked to the little nation from all over the world. Almost half of the nation's population are refugees who have come in the first decade. These refugees are being successfully assimilated into the community and in turn are making their contributions to the nation.

But Israel has no desire to rest on the accomplishments of its first decade. It still faces many problems—financial, political, economic—but its people have demonstrated the determination, ruggedness, resourcefulness, patience and wisdom to meet these problems. Its leaders have declared that this is not now the climax, only the prelude. We wish for Israel future decades as outstanding as its first one.

Representative Walter Is Prejudiced

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. FORRESTER. Mr. Speaker, the Washington Daily News, Wednesday, April 16, 1958, page 42, carried an article written by Mrs. Eleanor Roosevelt entitled "Representative WALTER Is Prejudiced," reading as follows:

REPRESENTATIVE WALTER IS PREJUDICED

NEW YORK.—Representative FRANCIS E. WALTER'S attack on the Fund for the Republic is a threat not just to this fund but to all educational foundations. If he succeeds in getting the Treasury Department to revoke the fund's tax exemption there is no reason why many other educational foundations should not find themselves in the same predicament.

Great good has come to this country because of the fact that men who have made a great deal of money have seen fit to establish funds which can be used to do things for which other money might not be available.

There is much that Government itself cannot do; and it is rather rare that private individuals can foster certain studies or initiate certain research as lone individuals. The various funds, which free a certain amount of capital from taxation, have made it possible to do things that needed to be done.

Representative WALTER, Democrat, of Pennsylvania, has shown himself narrow and prejudiced in this matter. I hope that commonsense will prevail and we as a nation will be able to go on enjoying the benefits that come to us from having educational foundations able to perform the kind of work that the Fund for the Republic has been doing.

In other words, Mrs. Roosevelt says that Congressman FRANCIS E. WALTER is narrow and prejudiced because he has dared to suggest that the Tresury Department revoke the tax exemption of the Fund for the Republic; also, Mrs. Roosevelt hopes that our Nation will be able to go on enjoying the benefits that come from educational foundations performing the kind of work that the Fund for the Republic has been doing.

Mr. Speaker, sometimes it seems when a Congressman lifts his voice in defense of the taxpayers, or in defense of constitutional government, or speaks out against unrestricted immigration which has permitted hundreds of Communists to come into this country, not for the purpose of preserving our country but to destroy it, that Congressman is immediately condemned as being narrow and prejudiced.

I am not shocked or surprised to read that Mrs. Roosevelt condemns Congressman WALTER. On January 5, 1956, I called attention to the fact that Mrs. Roosevelt, along with 41 other persons, petitioned President Eisenhower to grant

a Christmas Amnesty to Communist Party leaders jailed under the Smith Act, and also sought postponement of more than 100 similar cases pending or under appeal. The Communists for whom amnesty was sought were 16 Communists who had been convicted of teaching or advocating the forcible overthrow of the United States Government.

The petition also recited that the motive for this appeal was their attachment to the democratic way of life and because they thought the trials of these Communists were conducted in an atmosphere often marked by hysteria.

Of course, Mr. Speaker, Congressman WALTER did not feel that pardons should be granted to those Communists and he did not feel that the democratic way of life would be helped by making favorites of Communists. Some may think that Congressman WALTER was narrow and prejudiced, but thank God the people of the United States agree with him, and so do I, and one who does not agree with him does a distinct disservice to the Democratic Party, to our Nation, and to the world. As a matter of fact, Mr. Speaker, the national Democratic Party owes Congressman FRANCIS E. WALTER a high debt of gratitude, for few men, if any, have worked harder to maintain respect for our party than has Congressman WALTER. It would seem that Mrs. Roosevelt would be cognizant of that fact.

Then too, Congressman WALTER does not agree with the statement of Mrs. Roosevelt that these Communists were tried in an atmosphere of hysteria. As a matter of fact, these Communists had every right accorded them that the Constitution guarantees to anyone, and that despite the fact that these Communists wished to destroy the Constitution. Judge Medina can tell Mrs. Roosevelt about the conduct of the Communists in our courtrooms, and I sincerely hope that Mrs. Roosevelt does not condone what was done to Judge Medina, for that judge and that court were insulted every step of the way in a manner unparalleled in court history in this country. I wonder what kind of trials would be conducted under a Communist regime?

No, Mr. Speaker, I was not shocked over the criticism of Congressman WALTER by Mrs. Roosevelt, for on August 8, 1957, I called attention to an article by her wherein she maligned the South and said that the whole point of the Southerners' fight for the jury trial amendment (civic rights legislation) is that they know a white jury will not give Negroes the right to vote. That dissertation by Mrs. Roosevelt was entitled "Southern Juries Will Ignore Negro Rights."

That statement by Mrs. Roosevelt was not exactly new, because the Communist Party had said the same thing about the South before Mrs. Roosevelt said it. Once upon a time, the South did not expect that of Mrs. Roosevelt inasmuch as in other days Mrs. Roosevelt and her husband were fond of saying that Georgia was their second home, and no people were ever more cordially and courteously received and treated than they were in my native State of Georgia. Now the South expects nothing from Mrs. Roosevelt except prejudice, abuse, and advocacy of things designed to bring about race mixing, which will never occur in the South, and Mrs. Roosevelt might as well understand it.

We well understand in Georgia now that if we needed bread we would only receive a stone from Mrs. Roosevelt. Mrs. Roosevelt would deny to the people of Georgia and the South the right of trial by jury, but was not satisfied with the conviction of Communists by juries, although the verdicts were approved by the trial courts and the appellate courts. Probably it would be sacrilege to intimate that Mrs. Roosevelt might be a little narrow or a little prejudiced, although Mrs. Roosevelt thinks that Congressman WALTER is narrow and prejudiced because he thinks that the tax-exempt status should be removed from the Fund for the Republic, while she thinks it is all right to malign an entire section of loyal Americans.

On February 3, 1958, I called attention to the fact that Mrs. Roosevelt was seriously disturbed over the fact that our country was foregoing the services of J. Robert Oppenheimer, and assumed the position that Dr. Oppenheimer was never accused of anything except his feelings that progress and science should be shared regardless of nationality. I pointed out that despite what Mrs. Roosevelt said, Dr. Oppenheimer had admitted that his brother and sister-in-law were members of the Communist Party, and that he knew it; his wife was the former wife of a Communist Party official and she at one time was a member of the Communist Party; also, the notorious Steve Nelson, who was the Communist convicted by the sovereign State of Pennsylvania, but whose conviction was upset by the United States Supreme Court on the premise that a State could not legislate to protect against violent overthrow, had visited with Dr. Oppenheimer and had befriended his wife; that prior to Dr. Oppenheimer's marriage he had courted a Jean Tatlock, whom he knew to be a member of the Communist Party and that through her had become acquainted with a number of them; that he contributed money to Communist causes, and so forth. I doubt seriously, Mr. Speaker, that Congressman FRANCIS WALTER is disturbed over the decision to remove Dr. Oppenheimer from a position where he would acquire full knowledge of all our atomic bombs, hydrogen bombs, intercontinental missiles, and satellites, and thereby have the information that could be used to utterly destroy this country. The good people of this country likewise feel that they can get along without the services of any person who is not dedicated to constitutional government.

It is noted, Mr. Speaker, that nowhere does Mrs. Roosevelt attempt to answer charges made by Congressman WALTER against the Fund for the Republic, but expresses her hope that we will be able to go on enjoying the benefits that come from educational foundations able to perform the kind of work that the Fund for the Republic has been doing. On March 30, 1958, Congressman WALTER released a statement laying down a bill of particulars against the Fund for the Republic. I will give you a few:

1. The program of the Fund for the Republic has been principally one of action and not of education. Among its chief targets have been congressional investigations of communism. Government security procedures, loyalty oaths, and regulation of immigration.

2. The fund has spent several million dollars opposing the denial of employment to security risks in Government and defense and other industries. The fund has financed attacks upon newspapers, magazines, and individuals expressing positions with which it disagreed. It has financed preparation and distribution of books, magazines, and articles to influence legislation.

3. The fund has also financed attacks, unsupported by competent evidence, upon the loyalty, integrity, intelligence, and mental stability of all confidential informants of the Federal Bureau of Investigation who have testified in public trials or proceedings.

4. While some projects of the fund for the republic appear to be objectively presented, the majority of its operations are based on the biased investigations and result in findings which not only fail to present both sides of a given question, but even further, actually conceal facts necessary for an honest understanding of the subject matter.

5. The Committee on Un-American Activities made inquiry of the Fund for the Republic, and while the facts did not establish that the Fund for the Republic is a Communist-controlled or influenced organization, it is clear that the Fund's activities in toto indict it as a hindrance in this battle against communism.

Mr. Speaker, Congressman WALTER is entitled to the friendship, affection, and support of every true American in his attempt to remove the tax-exempt status of the Fund for the Republic and for other tax-exempt organizations attempting to influence legislation, in violation of section 501 (c) 3 of the Internal Revenue Code. The Fund for the Republic has a bad record, and it is absolutely amazing that this country would permit this organization to have a tax-exempt status, knowing that they have engaged in opposing congressional investigations of immigration, and have spent several million dollars opposing the denial of employment to security risks in government and defense and other industries. It makes one shudder when he thinks of the things that have been done in the name of democracy. Of course, Russia contends that its government is the only democratic government on the face of the earth. Our Government is that of a republic and not of a Russian democracy. Congressman WALTER is assailed because he is effective. He happens to be chairman of the Committee on Un-American Activities, and also chairman of the subcommittee dealing with immigration and naturalization. Our country was built upon philosophies of Congressman WALTER, and will endure under those philosophies. Our country does not stand a Chinaman's chance under the philosophies of Mrs. Roosevelt.

The Case for Alaskan Statehood Now

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, Alaska has been knocking at the door of statehood since 1916, when the first bill for Alaskan statehood was introduced. In the 42 years since, similar bills have been proposed periodically; but it was not until 1950 that substantive action was taken on any of these measures. In that year the House passed an enabling bill, but it died in the Senate.

Four years later a combined Alaskan-Hawaiian statehood proposal was approved by the Senate, but this time the House failed to concur. A year later, another dual measure was recommitted by the House, and statehood was rendered moribund once more. Currently, separate bills for Alaskan and Hawaiian statehood—S. 49 and S. 50, respectively—are on the Senate Calendar; in the House, an Alaskan bill—H. R. 7999—was reported favorably last June, and is now on the House Calendar.

IT IS TIME TO ACT

It is high time that Congress opened the door and admitted our great northwestern Territory to the sisterhood of States. It would seem that Congress, as it has so often in the past, has not caught up with public opinion. Let us look back over the years at the Gallup Poll findings relative to this issue. Since 1946 the Gallup investigators have posed this question to the American people: Would you favor or oppose having Alaska admitted as a State in the Union?

The response was as follows:

[Percentage]

	Favor	Oppose	No opinion
1946	64	12	24
1950	81	8	11
1952	78	10	12
1955	82	9	9
1956	74	10	16
1957	71	8	21
1958 (March)	73	6	21

In other words, as far back as 1946 the margin in favor of Alaskan statehood was more than 5 to 1; and today it is more than 12 to 1. These ratios must be somewhat impressive, at least, even to those who scoff at the validity of opinion polls. And remember, Dr. Gallup was off by fewer than a handful of percentage points in that celebrated election of 1948.

ALASKA DESERVES STATEHOOD

Other reasons, too, demand early action. First, Alaska, as 1 of our 2 incorporated Territories, has long been promised statehood, by implication at the very least; second, it deserves such status; and third, the Nation as a whole and the Pacific Northwest in particular would profit thereby, as would Alaska itself.

Of the 31 incorporated Territories in our history, all, except Alaska and Hawaii, have graduated to statehood. Constitutionally, Alaska is no different from its more fortunate predecessors. The Federal courts repeatedly have said that incorporation leads to statehood. In 1883 an incorporated territory was defined in Ex Parte Morgan as an "inchoate [or embryonic] State." In Balzac against People of Porto Rico, among many similar cases, Supreme Court Justices asserted, in 1922, that "incorporation has always been a step, and an important one, leading to statehood." And although the organic act of 1912, which served to confirm the incorporation of 1868 and made Alaska a full-blown Territory, did not explicitly promise statehood, precedent and judicial dicta alike have maintained that an incorporated Territory is destined for statehood after a reasonable period of tutelage. It would seem that 90 years constitutes a long enough apprenticeship.

EXPANSION FOLLOWS STATEHOOD

In no instance has the granting of statehood to an incorporated Territory proved ill-advised. In every case the Territory experienced a marked expansion in both population and industrial development following its admission into the Union. More importantly, the citizens of each new State became their own masters.

As a rule, the principal qualifications demanded of a Territory aspiring to statehood have been these: First, the sympathy of its people for the traditional ideals of American Government; second, the expressed wish of the electorate for statehood; and third, sufficient resources and population to meet the cost of statehood. It is my considered opinion that Alaska has passed these tests with distinction.

As for the Americanization of Alaska, that Territory from the beginning has been populated to a large extent by citizens from the States, particularly from our great Northwest; the interests, the culture, the politics of Alaskans are fundamentally the same as those held by statesiders. And as Americans, they have unmistakably signified their desire for fullfledged citizenship. In 1946 they voted for statehood by a 3 to 2 margin; 10 years later the ratio was 2½ to 1. And in March 1957 both houses of the Alaskan legislature passed unanimously a resolution urging Congress to grant immediate statehood.

STOREHOUSE OF RESOURCES

Heavily endowed with natural resources and boasting an incredibly rapid rise in population, Alaska laughs at the third of the traditional requirements for statehood. Our great northern Territory constitutes this Nation's most magnificent storehouse of virtually untapped-raw materials, from scarce minerals to petroleum to products of forest and sea. Since 1867, when Alaska was purchased from Russia, more than a billion dollars have been realized from its mines. Among known natural resources are gold, silver, coal, iron ore, copper, lead, zinc, platinum metals manganese cobalt nickel, titanium, cadmium, petroleum, natural gas, and construction materials, as well as such strategic minerals as tin, antimony, mercury, and chromite.

The most important industry in Alaska, nevertheless, is still that of fisheries. Since 1867 the value of fisheries products shipped to the United States has totaled more than $2 billion. Unfortunately, the industry is controlled by absentee financial interests and only a tiny portion of the profits remains in Alaska. The monopolists have been able to maintain their tight control primarily through favors bestowed by the Federal bureaucracy, not the least of which is the latter's sanctioning of the use of fish traps. It is interesting to note that such traps were outlawed long ago by State authority, in Washington and Oregon. With statehood, the small, resident operator would be able to make his voice heard, with a consequent outlawing of the ruinous fish traps and the ultimate dissolution of the fisheries monopoly.

A FEDERAL RESERVE

An even more onerous handicap borne by Alaskans is the incubus of national ownership of the land. The Federal Government now owns approximately 98 percent of the total land area of Alaska, which embraces some 365 million acres. H. R. 7999 provides for a grant to the proposed new State of 182,800,000 acres. Such an award would make it possible for Alaska to revolutionize the development of its unrivaled natural resources. Under the heavy hand of Washington bureaucrats, who have tended to regard Alaska's magnificent forests as permanently virginal, the economic progress of the Territory has been retarded both unnecessarily and tragically.

As for population advancement, the Alaskan story is a phenomenal one. From 1950 to 1956 the civilian population increased from 108,000 to 161,000, a rise of 48.6 percent. According to Gen. Nathan Twining, the military personnel constitute an additional figure of between 45,000 and 50,000. In any case, Alaska has a larger population than one-third of the States had at the time of their admission, whether the military figures are included or not.

WOULD STRENGTHEN DEFENSE

Now, what about the advantages to the Nation as a whole should Alaska be admitted? First, statehood would strengthen in considerable measure our defense posture. In April 1950 the Secretary of Defense strongly endorsed statehood for both Alaska and Hawaii:

> It is obvious that the more stable a local government can be, the more successful would be the control and defense of the area in case of sudden attack. There can be no question but that in the event of an attack any State would be immensely aided in the initial stages of the emergency by the effective use of the State and local instrumentalities of law and order. By the same token it would seem to me that, as persons in a position to assist the Federal garrisons which might exist in Hawaii or Alaska, the locally elected Governors, sheriffs, and the locally selected constabulary and civil defense units all would be of tremendous value in cases of sudden peril. Therefore, my answer to your question is that state-

hood for Alaska and Hawaii would undoubtedly give a considerable added measure of strength to the overall defense of both areas in event of emergency.

And we all remember the warning of the late Billy Mitchell, who asserted that: "He who holds Alaska holds the world." We also are aware that Russian soil is separated from our own by fewer than 60 miles of water.

A PSYCHOLOGICAL BOOST

From the standpoint of military tactics, of course, statehood would not immediately affect the military situation in Alaska. Geography and climate, after all, would remain unchanged; and the Armed Forces would fight allout to defend Alaska without thought as to its political status. But the people of Alaska would be given an immeasurable boost psychologically, and would be inspired to work and fight over and beyond the call of duty.

A second major national benefit resulting from the economic development promised by statehood would be a greatly widened diffusion of Alaskan products—many of which are in short supply in the States and some of which are strategically important—to both military and commercial outlets. As for the Pacific Northwest, Seattle, and other Pacific commercial centers have been the gateways to Alaska. Seattle remains the great distribution center for Alaskan salmon; and this mart, along with Portland and others, would enjoy a rise in business well-being commensurate to no small degree with Alaskan prosperity.

EIGHT ADVANTAGES FOR ALASKANS

As for the advantages of statehood to the citizens of Alaska, I can think of at least eight. First, the people would have the right to full voting representation in the national Congress. Second, they would have the right to vote for the President and Vice President of the United States. Third, they would have the right to choose their own governor and to have the functions of government administered by their elected officials instead of by Federal bureaucrats. Fourth, they would have the right to determine the extent of the authority of their own legislatures. Fifth, they would have the right to have their judiciary selected under local, rather than Federal, authority. Sixth, they would have the right to an equal share on a per capita basis in Federal grants for education, health, highways, and other public benefits. Seventh, they would have the right to a voice in determining the amount and kinds of Federal taxes they must pay. And eighth, they would have a choice in the consideration of any proposed amendment to the Federal Constitution.

As for the antistatehood arguments, I submit that they are not impressive. One of the most frequently enunciated is that Alaska and Hawaii are noncontiguous to any of the present States. It is an old argument; it was bandied about in 1850 when California, separated by some 1,500 miles of wild land from the nearest State, was applying for admission. Later, when the issue of statehood for Oregon was raised, the same old argument was dusted off and used again. Let us listen to the refutation of Senator William H. Seward, of New York:

In coming to this conclusion (to support the admission of Oregon as a State), I am determined by the fact, that, geographically and politically, the region of country which is occupied by the present Territory of Oregon is indispensable to the completion and rounding off of this Republic. Every man sees it, and every man knows it. * * * There is no Member of the Senate or of the House of Representatives, and, probably, no man in the United States who would be willing to see it lopped off, fall into the Pacific or into the possession of Russia or under the control of any other power; but every man, woman, and child knows that it is just as essential to the completion of this Republic as is the State of New York, or as is the State of Louisiana, on the Mississippi. It cost us too much to get it, we have nursed and cherished it too long, not to know and feel that it is an essential part.

Well, then, she is to be admitted at some time, and inasmuch as she is to be admitted at all events, and is to be admitted at some time, it is only a question of time whether you will admit her today, or admit her 6 months hence, or admit her a year or 7 years hence. What objection is there to her being admitted now? You say she has not 100,000 people. What of that? She will have 100,000 people in a very short time.

* * * * *

For one, sir, I think that the sooner a Territory emerges from its provincial condition the better; the sooner the people are left to manage their own affairs, and are admitted to participation in the responsibilities of this Government, the stronger the more vigorous the States which those people form will be.

Another major argument in opposition has been that the recent rise in population stems primarily from a marked increase in military personnel. Assuming that this be true, it must be acknowledged, nevertheless, that the military in Alaska are there to stay for some time: no man can foresee the lifting of the cold war. The military, moreover, serve not only to defend Alaska and the Nation; they also constitute a future as well as present market for Alaska's industries and services. Like other population groups, they help to maintain Alaska's economy.

As for the charge that Alaska's representation in the Senate would be grossly disproportionate to its population—in comparison with such States as New York and California—so what? It would seem that this question was answered quite effectively back in 1787.

WHAT IS COMMONWEALTH?

Let us now examine the glorious goal advocated by the happiness boys—the commonwealth advocates. There's just one thing they have forgotten—the imposition of such a plan would be unconstitutional.

Alaska and Hawaii are incorporated Territories, and as such have been adjudged to be incipient States. As States in embryo, all provisions of the Constitution, the formal as well as the fundamental, apply. Only the fundamental parts of the Constitution, on the other hand, apply to unincorporated territories.

Puerto Rico is a commonwealth, whatever that means. It is quite likely that the Federal judiciary will hold that Puerto Rico is still, constitutionally, an unincorporated territory, and that commonwealth status necessarily connotes unincorporation. If such prove the case, it would seem that Alaska and Hawaii could not legally, constitutionally, assume such inferior status.

A POLITICAL PHENOMENON

In *Downes* v. *Bidwell* (182 U. S. 271, 1901), the Supreme Court declared that "where the Constitution has been once formally extended [in all its parts, both fundamental and formal] by Congress to Territories neither Congress nor the Territorial legislature can enact laws inconsistent therewith." Mr. Justice Brown, in *Rassmussen* v. *United States* (197 U. S. 536, 1905), stated that "the exten[sion of] the provisions of the Constitution * * * once done, is irrevocable." It follows, then, that those who would remake Alaska and Hawaii in the image of Puerto Rico are either disingenuous or uninformed when they extol the benefits Puerto Ricans derive from Federal tax exemptions. As incorporated Territories, Alaska and Hawaii are subject to section 8 of article I of the Constitution, which provides, in part, that "all duties, imposts, and excises shall be uniform throughout the United States." It is doubtful, to say the least, that Congress has the power, under the Constitution, to exempt the citizens of Alaska and Hawaii from the applicability of this uniformity clause.

It should be remembered that Congress did not see fit to make Puerto Rico even an unincorporated Territory until 1917. In all probability the island is still unincorporated, despite its new title of Commonwealth.

This new phenomenon in political science leaves the Alaskans completely cold. The endorsements and the arguments for Alaskan statehood are overwhelming.

The time to act is now.

Discrimination in Employment on Account of Age Is Indefensible

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BENNETT of Michigan. Mr. Speaker, I am introducing a bill which would prohibit employers engaged in interstate commerce from discriminating in employment against individuals on account of age.

We are being confronted with an increasingly aggrevating and deplorable situation in the labor market today whereby middle aged and older workers are being denied the right to work and to earn a livelihood solely because of their age. Sometimes the specified age limit set for employment is as low as 35 years, sometimes it is 40 years, or 45 years of age. When such individuals become unemployed through no fault of their own, or lose their jobs for any rea-

son, they face severe hardships in seeking reemployment. And because of these arbitrary age barriers set up by employers, the older the unemployed worker is, the more difficult it becomes for him to find a job.

This situation constitutes a grave danger to the people of our Nation. The Congress should face up to it and take immediate steps to counteract these discriminatory, demoralizing employment policies and practices on the part of many leaders of commerce and industry. Discrimination in employment against properly qualified persons because of age is contrary to our principles of justice and equality of opportunity. Such practices deprive our Nation of the fullest utilization of our human resources for production and endanger our general welfare.

Mr. Speaker, in order to comprehend more fully the urgent need for my bill, I should like to recite a few facts and figures concerning the growing importance of the middle aged and older classes of persons in our population.

During the past half century a tremendous gain has taken place in the life expectancy of our people, due to progress in the reduction of infant mortality and the prevention of epidemic diseases of childhood. Fifty years ago males at birth had a life expectancy of 46 years and females 48 years. Today the life expectancy of males at birth is 67 years and for females it is 73 years. The prolongation of life may be expected to increase further as a result of new medical advances, and early diagnosis and treatment of chronic diseases of middle and older ages.

Because of the remarkable increase in longevity during the past half century, and the low birth rate in the 1930 decade, the middle aged, that is, 45 to 54 years, and older, that is, 55 years and older, segments of our population have increased proportionately at a faster rate than the total population. While the total population has doubled since 1900, the segment of our population between the ages of 45 to 54 years has increased 171 percent, those people between the ages of 55 to 64 years have increased by 235 percent, and those 65 years old and over have increased by 298 percent.

The United States Department of Labor tells us that by 1965, assuming the rate of growth in production we have experienced in recent years will continue, we shall require a labor force of 74 million people, or 10 million more workers than we had in 1955. The Department further advises us that, because of the age composition of the population, the largest sources of manpower needed to meet this 10 million expansion in the labor force will have to come from those individuals under 24 years of age and from those who are 45 years old and older. In other words, industry and commerce will have to rely on the older workers to meet these manpower requirements. It is of utmost importance, therefore, for the leaders of industry and commerce to change their thinking and reverse their personnel policies and practices of firing middle-aged and older workers and discriminating against them in the hiring of help. The old-fashioned notion that a person becomes too old to work when he reaches the ages of 35 or 45, or any other age, for that matter, is ridiculous on its face. Every intelligent person knows that it is an individual's ability to meet the specific requirements of the job that counts. There is no fixed age at which a person becomes too old to work.

In surveys made by the United States Department of Labor, the contentions most frequently made by employers for not wanting to hire older workers are: First, they are too slow; they cannot meet production requirements; second, they lack skills and flexibility; third, they cannot meet the physical demands of the job; and fourth, pension and insurance costs of older workers are prohibitive.

Mr. Speaker, what are the facts with respect to these contentions? The facts are that none of these reasons has any merit upon careful examination. On the contrary, older workers are generally equal to, and in many respects are more desirable than younger workers. Older workers are often more highly skilled, and have wider experience than younger workers. They are often more dependable and more stable in their jobs, and usually have a lower rate of absenteeism than younger workers. In many cases they are more responsible workers, and often they exceed the average output of the younger workers. With the tremendous technological advances which have been made in industry and commerce, there are now fewer jobs which require great strength and heavy lifting, which formerly put age at a disadvantage. There is considerable evidence that older workers are flexible; that they are willing and able to learn a new job which may be better suited to their abilities. Pensions and insurance experts will confirm the fact that there is no significant basis for the argument that pension and insurance costs of older workers are prohibitive. The costs to the employer of providing pensions usually are in proportion to the services rendered. The man who is hired at a later age has fewer years in which to accumulate pension rights, and therefore receives less in pension benefits than the employee with many years of service.

Mr. Speaker, the leaders of industry and commerce should hire employees on the sole basis of an individual's ability to do the job, without regard to his age, sex, or race. These leaders should recognize that this policy is in their own self-interest, not to mention the interest of the country at large. Employers who do not follow this policy are denying themselves access to about one-third of the available labor market, and an even higher proportion of the available usable skills. They are depriving this Nation of the services of millions of experienced and highly skilled workers at a time when we need to utilize the best available men to cope with the increasing danger to our national security and welfare. They are depriving older people of the dignity and status of self-support.

My bill is designed to rectify these deplorable conditions.

Tenth Anniversary of the Independence of Israel

SPEECH

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. FALLON. Mr. Speaker, 10 years have elapsed since the State of Israel was proclaimed. It was born as the embodiment of the hopes and prayers of countless thousands who did not live to see their dream realized. The toil and sweat of other thousands are making of this small, poor, and in some ways unpromising land an example to all the world.

It would be hard indeed to discover anywhere a more formidable challenge than that faced by this energetic and courageous people. About half of their country is arid desert. Much of the rest is wasteland. And since the proclamation of independence a decade ago a human flood of immigration has swelled the population.

Here we find a heart-warming saga of modern times. The newcomers—most of them penniless with their few small belongings in packages and bundles carried by their side—come from over 60 countries. They come from different social strata and different civilizations. They speak different languages. But all of them have the same objective—to live and work and die in the land of their fathers, the land of Israel. They have found in this land an open door and a welcome and a willingness to share what little there is to share. The people and the Government of Israel are united in affirming that that door will remain open.

The people of this new state are meeting their difficulties with imagination and phenomenal industry. Through major irrigation and drainage projects they have greatly increased the land under cultivation. Agricultural and industrial output have risen by fantastic percentages. A pioneering spirit animates both city and farmland and miracles of production are accomplished with scanty equipment and meager supplies.

While the people plough and build and create their industries they must be ever watchful. Although they are not at war with the Arabs, the armistice which prevails is an uneasy one. Hostilities could break out again at any time, and indeed breaches of peace along the borders are frequent and sometimes serious. Despite their numerical inferiority, however, the Israeli are confident that they could repulse any attacks launched against them. Thir army is well trained and well equipped and in the border regions the people are taught to fight as well as work, with a true pioneer versatility.

The difficulties amidst which Israel has grown have not been confined to questions of internal economics and the everpresent threat of inimical neighbors. Its government has had to steer a cautious course in world politics. Several million Jews are at present in the Soviet

Union and in eastern European countries. Any move which might arouse the enmity of these states would prejudice the fate of many peoples. Yet a fundamental identity of interests with the western world has led the government to stand ever more openly on the side of the West.

The inspiring story of Israel offers new proof of the power of the creative spirit of a people who are in every sense free. All who are familiar with the history of the past decade cannot but believe that it presages a future of evergrowing achievements.

Atomic Energy in the Field of Agriculture

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. VAN ZANDT. Mr. Speaker, at the annual meeting of the Pennsylvania section of the American Society of Agricultural Engineers held at State College, Pa., Friday, April 25, 1958, it was my privilege to deliver the following address on the subject of The Peacetime Uses of Atomic Energy:

THE PEACETIME USES OF ATOMIC ENERGY

(Address delivered by Representative JAMES E. VAN ZANDT, Member of Congress, 20th District of Pennsylvania, at the Pennsylvania section of American Society of Agricultural Engineers, Friday, April 25, 1958, at State College, Pa.)

Mr. Chairman, you honor me by your invitation to participate in this meeting of the Pennsylvania section of the American Society of Agricultural Engineers.

This idea of bringing together experts in agriculture throughout Pennsylvania is highly commendable because it permits personal growth through exchange of opinions and ideas.

The sponsors of this conference are to be congratulated for such a worthwhile contribution to the agricultural advancement of our State.

In keeping with the spirit of the time, and in recognition of the theme of this meeting, I have selected as the subject of my discourse The Peacetime Uses of Atomic Energy, with particular emphasis upon the use of radioactive isotopes in agriculture.

In discussing this important subject, in my capacity as a member of the Joint Congressional Committee on Atomic Energy, you have my assurance that there is a definite feeling of adventure in exploring the nuclear field.

On the one hand, we are exploring the unknown in sciences—physics, chemistry, metallurgy, biology, and so forth—as well as unknown fields in engineering and construction and the knowledge as to how they are managed.

More recently, with the advent of the sputniks and our own satellites, we all have a great interest in the exploration of space, and our committee is particularly interested in the promising uses of nuclear propulsion of satellites and space vehicles.

On the other hand, there must be applied sound scientific engineering and business principles to solve unprecedented problems arising from unique and sometimes impossible situations.

To date, the American people have spent nearly $15 billion in the field of atomic energy and the surface has been barely scratched.

The great bulk of this money has been spent on military application of nuclear energy.

Several years ago, however, the rate of spending on peacetime uses of the atom started to climb considerably.

The result has been that today we are faced with a vast new science that affects the lives of all of us and which is having a marked influence on the industrial life of the Nation.

Since this meeting represents a true cross-section of the agricultural leaders of our State, I wish to tell you the story of atomic energy in down-to-earth language.

It is my hope that when this conference terminates you will have a clearer concept of the atomic revolution that is enveloping mankind.

Atomic energy—or nuclear energy as the scientist calls it—is everywhere around us with the sun pouring out great quantities of atomic energy which come to the earth in the form of heat, light, and other kinds of radiation.

Atomic energy as we know it today results from splitting atoms of heavy element uranium and its by-product plutonium.

Uranium which is sometimes called a critical or operational mass is radioactive material and is used to produce a chain reaction.

The splitting of the atom or fission as it is called releases great amounts of energy, thus permitting man to tap the almost inexhaustible source of nature's energy which can then be used as a curse or a blessing to mankind.

In any serious consideration or review of the peaceful uses of atomic energy, one significant starting point suggests itself in the form of a question: What do we expect to get out of atomic energy?

From a military standpoint, there is no question that the development of nuclear weapons has served as a deterrent to war and a great contributing factor to our national defense.

But even the military applications of atomic energy are very obviously bound to intersect, affect, and concern the peaceful uses.

This appraisal is principally concerned with, and directs its attention to, these intersections and peaceful applications of the atom.

Returning to our question: What do we expect to get out of atomic energy in its peaceful uses?

Let me tell you what we very definitely are not going to get out of it.

To begin with, Thomas Edison points out that a better idea may be had of what a thing is if first you know what the thing is not.

There are some who expect atomic energy to be the cure-all, a sort of universal panacea, for both the economic and physical ailments of the world.

Some others—who may be called plungers, with their eyes on the making of a fast dollar—view the atom as an easy road to fame and fortune.

Well, let me make it perfectly clear; atomic energy is not yet any of these things.

On the other hand, there is room for a good deal of optimism for, in my opinion, we have made a great deal of progress since the Atomic Energy Act was first passed in 1946.

Considerably more progress has been made since the act was amended in 1954.

This progress is mainly due to:

1. A civilian Atomic Energy Commission responsible for the program and carrying out its activities through industrial and university contractors with administration in the field.

2. The more recent policy of encouraging greater private ownership and participation in the development of an atomic energy industry free of Government monopoly.

3. Greater declassification of technical information.

Great progress has been made in this field in recent years.

For example, all of the information pertaining to the use of radioisotopes in agriculture is unclassified, and there is a storehouse of valuable information available to the technical expert who has the time, the energy, and the spirit to go after it.

4. The basis for the international atoms for peace program.

A giant step in achieving a working international atoms for peace program was achieved last fall with the creation of the new International Atomic Energy Agency.

As some of you may know, my good friend and colleague for 10 years on the Joint Committee on Atomic Energy, former Congressman W. Sterling Cole, of New York, has been appointed the first Director General of the international agency.

Last fall I attended the opening meeting of the new agency as a member of the United States delegation to the meeting.

After attending the opening in Vienna, I also made an inspection tour, with other members of the Joint Committee, to atomic energy centers in Western Europe, including Russia.

While in Russia we visited the Soviet nuclear research center at Dubna, about 80 miles north of Moscow, and we were greatly impressed by the great emphasis which the Soviets are placing on pure research and long-range development.

Frankly, we are going to have to keep on our toes and looking to the future, including the promising new peaceful uses of atomic energy, if as a Nation we are going to outsmart the Soviets in the constant struggle for the minds and the following of the peoples of the uncommitted nations of the world.

5. As the fifth and final point, having mentioned the Joint Committee on Atomic Energy, it plays the role of a watchdog for the entire atomic program.

It provides encouragement—and sometimes the spur—for the executive branch—to develop basic technology and to provide both the necessary supplies and the services contributing to the sound growth of the atomic energy industry.

The time and scope of this presentation forbid a detailed exploration of the atom's steadily mounting peaceful use, or of its impact on (1) agriculture, (2) radiation preservation of foods; (3) medicine and public health; (4) power generation; (5) the insurance industry; (6) the coal and mining industries; (7) commercial shipping and airlines; (8) and many other segments of our economy.

One aspect which is deserving of a little more specific treatment is the matter of radioactive isotopes, the miracle tool of the atomic age—the so-called byproducts of our atomic reactors.

In the past several years, there has been a dramatic upsurge in the number and variety of things for which isotopes are being used.

For an illustration, existing applications include everything from clinical examination to oil drilling, from agricultural experiments to spot welding.

Yet the surface has been barely scratched.

Then, too, the annual savings to American industry from the many different isotopes are estimated at one-third of a billion dollars annually.

By 1960, it has been estimated that isotope savings will amount to $5 billion, at an annual cost to the Government of $20 million.

Therefore, it is possible, over the long run, that benefits from isotopes will more than repay the huge investment we have made in our atomic-energy program.

This, by way of anticipation, could prove a very reassuring and comforting answer to our original question: What do we expect to get out of atomic energy?

The role of isotopes in the peacetime uses of atomic energy is revealed in the following authoritative words of atomic-energy Commissioner Dr. Willard F. Libby:

"In the field of the atoms-for-peace program, isotopes will play a very great role, for they can be put to work immediately without extensive training and heavy investment, and can serve for years to reconvince people the world over of the atom's great promise for peaceful uses when they become impatient waiting for the other great peaceful use—atomic power—to arrive."

Now, let me say a few words about the uses of atomic energy in agriculture, which I know is of particular interest to you.

Radioactive isotopes are obtained in atomic reactors as a byproduct, and they are finding increasing uses in applications which are very promising for the future.

I would like to quote in my remarks from a publication of the Atomic Energy Commission entitled "Uses of Isotopes in Agricultural Studies."

Radioactive isotopes, as you probably know, are of great value because they can be used as tracers.

They act in all respects like their nonradioactive brothers, but through the use of instruments the movements of radioactive isotopes within plants can be followed.

Let me quote from the Atomic Energy Commission study on the use of radioactive isotopes in the uptake of fertilizers:

"The most extensive use yet made of isotopes in agriculture has been concerned with studies on the uptake of fertilizers.

"This was one of the first and most important uses in agriculture.

"Now, even after 8 years, fertilizer uptake studies are still yielding valuable information.

"With radioactive tracers it is possible to study not only commercial fertilizers, but green manures as well.

"Although most of the investigations are designed to determine the proper type, placement, and efficiency of various fertilizers, the data obtained provide many other answers since the studies can be carried out under a wide variety of soil and climate conditions.

"American farmers are spending more than a billion dollars a year for commercial fertilizers, and isotope research has found many ways to get greater returns in crop yields with this money.

"With radioisotopes, it is possible to tag a certain material such as phosphorus in the fertilizer, and tell how much moves into the plant.

"The effectiveness of different methods of placement of the fertilizer such as below the seed, broadcast, or foliage application can be easily compared.

"In the past, requirements of a crop on a particular soil for a specific fertilizer usually have been measured by crop yield, but variations in rainfall, temperature, disease, and other factors also affect yield and confound the evaluation of the fertilizer.

"Through the use of radioisotopes many years are being saved in evaluating fertilizer materials and methods of application, and sound conclusions about fertilizer practices are being drawn.

"The capacity of the soil to supply a plant nutrient can be measured by adding a labeled fertilizer as a partial source of the nutrient to the growing plant.

"The plant will draw upon both the natural supply and the added fertilizer in proportion to the availability of each.

"In some soils, most of the plant nutrient will come from the added fertilizer, in other soils most of it will come from the nutrients already present in the soil.

"The isotope dilution analysis is used to obtain this information.

"Thus the plant itself, which is the best judge of availability, is used to give the answer.

"Although measurement of crop yield is satisfactory and in some cases preferable, the new techniques permit an evaluation under varying field conditions and at any stage of the plant's growth through the season.

"Through the use of isotopes, it has been proved conclusively that plants absorb nutrients not only through the roots but also through the foliage, the fruit, the twigs, the trunk, and even the flowers."

Radioactive isotopes have also been used in studies of soil fertility, the use of growth regulators and herbicides, and in controlling plant diseases and fungicides.

Let me quote again from the Atomic Energy Commission study:

"Radioisotopes are of great value in studying plant diseases and devising means for their control.

"Carbon 14 has been used to study metabolic changes in tobacco plants induced by virus infections, mealy bug wilt of pineapple, and effects of the virus of 'little cherry' disease.

"Sulfur 35 has been used to measure the difference in absorption of sulfur by parasites and the host in plant diseases caused by fungi.

"Phosphorus 32 and calcium 45 have been used to compare absorption and movement of phosphorus and calcium in pole blighted and healthy western pines.

"Wheat stem rust and most other rusts can be controlled if plants can be dusted often enough with sulfur.

"But to dust, 70 million acres of wheat in the United States with the minimum amount of sulfur that would be effective in years when weather favors rust would require nearly 2 million tons of sulfur.

"Cheaper fungicides, therefore are badly needed and radioisotopes are helping to find them."

Also, isotopes are being used to achieve higher yields from plants through a better understanding of root systems and their rate of growth and I quote again from the Atomic Energy Commission study:

"To achieve higher yields from plants, a better understanding of root systems and their rate of growth is important.

"An insight into this important aspect of plant growth is gained during fertilizer uptake and soil-fertility studies with radioisotopes.

"For example, tracer studies show that corn plants which have extensive root systems during maximum growth cannot get a major share of the phosphorus from a surface application made at planting time.

"The roots are predominantly below the plow depth when the corn is maturing.

"Therefore, radioisotopes show that the crop feeds largely on phosphorus already in the soil.

"Other interesting points observed in tracing fertilizer include the comparatively shallow feeding of cotton plants and the heavy uptake of nutrients from immediately beneath the peanut plant during the first 7 weeks of growth.

"Research of this kind is leading to a better understanding of the volume of soil utilized by various crop plants.

"In the soils of the Southeast, which are naturally low in fertility, plants are usually expected to subsist on nutrients supplied in the top 6 inches, or plow depth.

"It may be possible to raise the ceiling on yields by providing a deeper zone of nutrients more in keeping with the needs of the plant.

"If heavy rooting could be induced in a number of crop plants to the depth of one additional foot, the bad effects of relatively brief droughts would be materially reduced.

"In studies of root-system growth, radioactive phosphorus was placed in the ground at various depths and positions around the base of the plants.

"The appearance of radioactivity in a plant indicated that roots had reached the fertilizer and permitted making a detailed pattern of root growth as the plant grew.

"Information was obtained on how much each zone of the root system contributed to the phosphorus nutrition of the plant.

"Radioisotopes will certainly play a prominent role in further fundamental research on rooting characteristics in relation to soil properties."

The Joint Committee on Atomic Energy constantly receives reports from the Atomic Energy Commission on both the military and the peaceful uses of atomic energy.

In 1954, our Subcommittee on Research and Development, of which I am a member, held a hearing on the contribution of atomic energy to agriculture, and much valuable information was obtained during these hearings.

In addition, the same subcommittee held another set of hearings in 1956 entitled "Progress Report on Atomic Energy Research," which accumulated a 375-page record on atomic energy research in medicine, biology, agriculture, and food preservation.

The most up-to-date report to the Joint Committee, consists of the 23d semiannual report of the Atomic Energy Commission, and pages 60 to 68 contain a summary of achievements in the last 3 years in atomic energy agricultural studies.

The Joint Committee has a supply of most of these materials which it will gladly make available to you.

If you would like some of these materials, please write a letter to the Joint Committee on Atomic Energy, United States Capitol Building, Washington, D. C., and you will receive whatever materials are available on the peaceful uses of atomic energy in advancing our agricultural program.

In concluding this discussion on peacetime uses of atomic energy, let me repeat again that even though we have spent $15 billion to date, we have barely scratched the surface in developing the ultimate benefits to be derived by mankind.

Fifty years from now, barring an atomic war, atomic energy will be as common as electricity and coal are today.

Atomic planes, atomic rocket ships, automobiles, locomotives, farm tractors, etc., will be in everyday use and an accustomed sight on the world scene.

Homes will be heated and cooled by the atom.

Food, clothing, medicines, and crops will be improved and in general our way of living will be completely revolutionized.

Regardless of what the future holes in this great atomic age, the businessman, industrialist, and the farmer will surely "miss the boat" if they fail to keep abreast of rapid developments in the field of atomic energy.

As one of the original members of the Joint Congressional Committee on Atomic Energy, in the beginning we found it necessary in the best interest of the American people, to do the research and development on a socialistic basis by giving the Government a complete monopoly in the field of atomic energy.

Such a monopoly is no longer necessary and as an ardent disciple of the American system of free enterprise, it was a pleasure to play a part in amending the law to give

industry the right to participate in our Government's effort to harness the atom for the benefit of all mankind.

The problems of agriculture tomorrow, in this atomic age, will tax your ability, ingenuity, energy, and imagination if you, as leaders of that industry, seize the opportunity to keep moving forward to ever-new frontiers.

In accepting this challenge you and the agricultural industry will not only derive mutual benefits, but you will likewise aid in strengthening our Nation's effort to enjoy the blessings of this atomic era.

From Chhajalwadi to the United States Congress

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. McCORMACK. Mr. Speaker, one of the ablest, as well as one of the finest Members of the Congress is the gentleman from California [Mr. SAUND]. He has developed in the minds of his colleagues a profound feeling of respect. He is a great credit to the people of his district. The people of his district are justified in feeling proud of the distinguished Member of the Congress.

In the Life International magazine of May 12, 1957, appears a splended and deserving article about our friend from California [Mr. SAUND], written by Robert M. Glascow.

Under permission to extend my remarks, I include this article:

FROM CHHAJALWADI TO THE UNITED STATES CONGRESS—INDIA-BORN DALIP SAUND HAS WON UNIQUE PRESTIGE IN AMERICA

(By Robert W. Glasgow)

In the social and political hierarchy of Washington, new Members of the Lower House of Congress are usually far less conspicuous than the United States Capital's second-string bureaucrats or many of the tourists for whom they are often mistaken. Among these freshman arrivals in the House of Representatives last year was a dark-complexioned man from southern California's 29th District. As he conscientiously went about his homework of studying new legislation and attending committee meetings, it soon became apparent that he would not long share the other newcomers' anonymity.

He stood out because of his name, DALIP SINGH SAUND, because he was a Hindu born Asian immigrant, first ever elected to the United States Congress. The manner of his election gave him further distinction: running as a Democratic Party candidate in a traditionally Republican Party district in a year of a landslide Republican presidential victory, SAUND had won a nationally publicized race against the famous, glamorous aviatrix, Jacqueline Cochran.

SAUND's congressional colleagues quickly realized that he was not going to be content to rest on the publicity he had gained from his unusual background and his spectacular election victory. When he was given an almost unprecedented honor for a freshman, appointment to the powerful House Foreign Affairs Committee, he made effective use of it. Not long afterward he embarked on an extensive tour of Asia as a one-man subcommittee to help improve relations between the United States and Asia—and also as a one-man symbol of the workings of United States democracy.

High point of DALIP SAUND's 6,000-mile trip through his native India was his return after 37 years to his native village of Chhajalwadi in the Punjab and because he was the first in the Punjab. There, to the piping of flutes, the beat of drums, and the cheers of flower-bearing villagers, he held a tearful reunion with a sister and brother who had stayed at home. And there, as he had in scores of other Indian towns, he stood up before a huge crowd to explain his feelings about India and America.

In such speeches SAUND did not ignore unpleasant aspects of American life as he had lived it. "I explained," he said recently, "that in the earlier years the people of California had not wanted Chinese, Japanese, or Indians in their communities—at least they did not want them as equals. I recalled that there had been laws denying some of us citizenship and prohibiting others from owning land for farming purposes. I made it clear that we had been severely discriminated against.

"But," he adds, "I also explained that these abuses are largely in the past, that all of this has changed since World War II. I cited my own case as an illustration of how much things had changed. I emphasized that one of the remarkable things about a democracy is that it does permit people to change and to make changes. I noted that the fact I was an Indian and had fought my way up, instead of working against me in my campaign for Congress, had worked for me. The minorities—such as Negroes, Mexican-Americans, and Indians—constituted a very small fraction of the voters in my district, so that it took far more than the minority vote to put me in office. This could not have happened 10 years ago."

Chhajalwadi, SAUND's birthplace, is near the city of Amaritsar and about 16 miles from what is now the Pakistan border. He was born there on September 20, 1899, the son of a well-to-do family of government contractors, builders of canals and railroads. They were Sikhs, members of a reformed Hindu sect which, among other things, rejects the idea of caste. Young SAUND, following grammar and high school in Amaritsar, attended and was graduated from the Sikh college there.

Though he never met or saw Gandhi, SAUND soon came to know the writings of this great man. He knew little about the United States of America until World War I, when he began to read stories in Indian newspapers about Woodrow Wilson, his 14 points, and his slogan, "Make the world safe for democracy." When one of Wilson's speeches referred to another American statesman, Abraham Lincoln, SAUND made an overnight trip to the University of Punjab to borrow books about Lincoln.

SAUND graduated from college in 1919, and his parents prepared to line up a career in Britain's Indian civil service for him. As a Gandhi disciple and a fervent Indian Nationalist, SAUND turned down the proposal, as his means of boycotting the British Government. Instead, he decided his place was in private business. He had noticed that almost all canned foods in India were either British or American and decided that there probably would be good opportunities in an Indian canning industry. SAUND had heard that the University of California at Berkeley was an outstanding place to prepare for such a career. This, plus his old interest in Wilson and Lincoln, led him to leave for the United States in 1920.

SAUND came to the United States by way of London, where he stayed only 2 or 3 weeks, unable to enjoy the customary sights because of his impatience to get to America. He entered his new country through the once-traditional gateway for millions of immigrants: Ellis Island in New York Harbor. There the long lines of pushing and shoving people waiting to be processed were a momentarily dismaying experience. "I'll never forget," he says, "there was a long table with food on it, and there were immigrants from everywhere sitting at this table eating. I had been brought up to be polite, and I was shocked at the way these people were grabbing food from each other's plates."

On the long train trip from New York to California he was equally bewildered by the stares of fellow passengers and the strange foods. "I wore a turban and everybody just looked at me," he recalls. "The food was new to me, so I mostly lived on milk." In San Francisco at first things were not much better. "I went to a Travelers Aid station in the ferry building and explained to them I wanted to go to Berkeley. For some reason they sent me to a downtown mission where I was given a small room. I soon found the bed full of bedbugs, so I tried to sleep on the floor. I was alone, and I didn't know where I was. It was the most terrible night I ever spent."

The following morning SAUND found his way to Berkeley and the University of California. At the university he was told that there were about 80 Indian students on the campus and a Hindu students' association, which had its own residence clubhouse.

Established in the clubhouse, SAUND promptly enrolled in some agricultural courses. At the same time he learned that if he were to take courses in mathematics, it would be fairly easy for him to obtain a master's degree. This he did, subsequently going on to take his doctorate in mathematics. By the end of his first year at Berkeley the Ellis Island dining table had become only a wry recollection. SAUND had made many American friends and was appearing often before the Young Men's Christian Association, church and student groups to talk about India.

To this day SAUND is not quite sure when he abandoned the idea of getting into the canning business. But during the summer following his first year at Berkeley he tried his hand at it by taking a job at a California Packing Corp. plant in nearby Emoryville. He was placed in charge of the sirup department. Near the end of the summer the plant superintendent invited SAUND to his home for dinner. SAUND recalls the evening well.

"After we had dinner this man started asking me questions as to what I was going to do in life. I was so confused and undecided at the time that I told him that I didn't know whether to write a history of India, to be a teacher, to go back to India, and be a political fighter, or to go into the canning business. A few days later he told me, "Young man, you talked yourself out of a job the other night. I had decided to offer you the job as assistant plant superintendent. But I wasn't interested in training a man who might quit the next day to write history of India.' "

Though he still did not know what his ultimate plans were, SAUND continued to study at the university and to work in canning plants during the summers to finance his education. Reading French and German mathematics texts gave him considerable difficulty, but he finally got his doctor of philosophy degree. (Title of his thesis: "On Functions Associated With the Elliptic Cylinder in Harmonic Analysis.") He promptly received offers of teaching jobs from a college in Indiana and an engineering school in Pennsylvania. Still undecided, he turned them down.

But already forming in his mind was the decision that was to shape the rest of his life. It stemmed indirectly from his devout observance of his religion. "I used to go to a Sikh temple in Stockton to celebrate re-

ligious days," he recalls, "and would meet other Hindus who had immigrated to California. Some who couldn't even read and write were driving big Cadillacs. I asked where they made their money and was told that they were farmers from the Imperial Valley. So I decided to go down there and make money, too.

The Imperial Valley is a vast former desert area in the extreme southern section of California which has been turned into a great natural hothouse through irrigation. Fortunes are constantly being made—and, as SAUND soon learned, lost—in such crops as cotton and in the highly speculative business of growing carrots, lettuce, and other greens for the winter markets in cities of the eastern United States.

SAUND went to the Imperial Valley in the fall of 1925, and was given a job by a Hindu farmer as foreman of a cotton-picking gang. "That's about the only use I ever made of my mathematics," he says. "I checked the weights of the pickers' cotton bags and I made good money—$17 or $18 a day—and was soon able to save up enough to lease a piece of land of my own." He brought in a fine lettuce crop. But so, it seemed, did everyone else that year.

"There was just too much lettuce. I lost everything," he says. Nevertheless, he remained in the Imperial Valley, trying to farm on leased land. "I was getting by, that was all," says SAUND.

Despite the hard work of farming, SAUND had not given up his intellectual interests. In 1927, in fact, he was inspired to start work on the book about India which he had long thought of writing. His inspiration came from what he considered a grossly unfair portrait of his country in a sensational best-seller of the time, Katherine Mayo's Mother India. Incensed, as were most of his countrymen, by what he considered the book's exaggerations of India's backwardness, SAUND began to write a rebuttal called My Mother India.

The next year SAUND briefly left the valley to go up to Los Angeles and work intensively on his book. One evening after he had spoken before a meeting of the First Unitarian Society in Hollywood, a tall American came up and invited SAUND to visit him at home. SAUND politely declined, but later bumped into the same man—Emil Kosa, Jr., a young artist—in a cafeteria. Again Kosa invited SAUND to visit his home. This time SAUND accepted.

Kosa's father was a well-established artist and the family had a pleasant home on Sunset Boulevard. There SAUND met other members of the family, including Emil's pretty, blond 19-year-old sister, Marian, who was a student at the University of California at Los Angeles. SAUND and the Kosas took to each other at once. Mrs. Kosa was interested in international relations and loved to listen to young SAUND's views. Marian was fascinated by SAUND's ability to recite the English poets and by his own English translations of Indian poetry. The two were married within 6 months after their first meeting.

With his bride SAUND returned to the Imperial Valley. In Westmoreland he renewed his farming efforts. His book, which appeared in 1930, pleased his fellow Hindu nationalists, but was not a commercial success. He managed to make a living on his farm during the early depression years, then in 1934 hit what looked to him like the jackpot: he made about $7,000 from an alfalfa crop. "Then I plunged into alfalfa," SAUND sadly recalls, "and the price went to nothing. I was broke again."

"By this time I had 3 children and found myself owing about $10,000. My prospects were terrible. Several of my neighbors filed bankruptcy proceedings. The fertilizer and seed companies and my other creditors advised me to do the same. I was very sensitive about bankruptcy. My father's people had a custom that when a man takes out bankruptcy, he must set a kerosene lamp burning in his window in the daytime as a mark of his shame. If I had filed for bankruptcy I would have felt just as if I had that lantern in my window."

Some creditors got judgments against SAUND, but he did not file for bankruptcy and continued to pay a little at a time on his debts. After several years he was at last in the clear. As World War II came along, creating a new demand for foodstuffs, he began to prosper.

Though the 1930's were hard years for SAUND, there were pleasant aspects. He began to participate in community life—as a member of service clubs, a worker and leader in charity-fund drives. He also became interested in politics and joined various Democratic Party organizations.

But there was a rankling obstacle. SAUND could not vote. He was not a citizen and could not become one because of the complex United States immigration and naturalization laws.

Instead of simply bemoaning this situation, SAUND helped start an organization called the India Association of America to press for legislation that would give his countrymen citizenship. Through a bill which the House and Senate passed and which President Truman signed in 1946, the objective was achieved. SAUND immediately applied for citizenship and, after delays because of bureaucratic redtape, received his final papers in 1949.

No sooner had SAUND been granted citizenship than he was named to the central committee of the Democratic Party in Imperial County. In 1952 he was elected justice of the judicial district court in his own town of Westmoreland.

The small town of Westmoreland had for years been wide open for prostitution as masses of agricultural day laborers swarmed into the area at peak crop periods. SAUND began handing out tough sentences against prostitutes and bawdyhouse operators, and Westmoreland was cleaned up.

Meanwhile SAUND'S agricultural ventures had brought him enough money to set up a successful fertilizer business. With one son and one daughter in college and another daughter married, he now had more time to devote to politics. After advancing to the chairmanship of the Imperial County Democratic Central Committee, in 1956 he was ready to make his big jump into national politics: a bid for the United States House of Representatives.

United States congressional elections are held every 2 years, and in California each party chooses its nominees in a primary election in the early summer. The Democrat and the Republican who receive the most votes in the primaries become their parties' candidates in the November general election. This meant that SAUND had to campaign in the primary almost as hard as he did in the subsequent election. After beating his Democratic Party national opponents in the primary, he found himself squared off against the victor in an equally hard-fought Republican primary, Jacqueline Cochran.

He could scarcely have faced a more famous or formidable opponent than this handsome, 47-year-old woman whose background was as remarkable as SAUND'S own. From a childhood as an orphan in a poverty-stricken southern town she had risen, through remarkable aviation exploits, to a vital wartime position as head of the WASPS, a group of women fliers who ferried planes from manufacturers to the Nation's airfields. Moreover, she was head of a large cosmetics manufacturing firm and the wife of Floyd Odlum, one of the Nation's most important financiers.

If SAUND lacked such fame, wealth, and prestige, he was an equal match in energy for the indefatigable "Jackie" Cochran. While she zoomed around the 29th Congressional District in her Lockheed Lodestar, SAUND whipped across the desert in his 1956 Buick.

ISSUES AND INNUENDOES

As in many United States congressional races, party issues were not nearly so important as personalities. In his campaign SAUND generally stressed issues that were closest to the valley's farmers and small-business men, particularly Federal aid to agriculture. Although Mrs. Odlum professed concern for the increasing centralization of the Federal Government, she too emphasized the valley's own problems and strongly backed President Eisenhower's farm program.

Not unexpectedly, racial and religious issues were injected during the campaign. Some supporters of Mrs. Odlum were heard to refer to Judge SAUND as "that Hindu" and there was some innuendo that Hinduism was probably not much better than communism. Some of SAUND'S supporters retaliated in kind with reference to Mrs. Odlum's being a Roman Catholic. But neither of the principals in the campaign considered such tactics worthy of notice, and apparently most voters did not either.

As against Miss Cochran's fame and glamor, SAUND'S main advantage was the fact that many in the 29th District seemed to feel that he was closer to the voters than she was. For despite his foreign birth, Asian religion, and darker skin, many voters identified him first as an Imperial County farmer who had shared the good times and the bad and who had participated actively for years in the town affairs of Westmoreland.

Yet as election day neared, few people thought SAUND had much of a chance. It was a presidential as well as congressional election year, and President Eisenhower was at the peak of his popularity. Every Republican candidate stood to share a bit of the President's luster. Yet when the votes of California's 29th District had been counted, things did not turn out that way. Eisenhower had carried the 29th overwhelmingly against Adlai Stevenson, but DALIP SINGH SAUND had defeated Jacqueline Cochran. Many voters had crossed party lines to vote for SAUND. It was a tremendous personal victory.

In his postelection assessment SAUND decided that the greatest thing in his favor had been the simple fact that he was of Indian extraction. "I think there were many, many people who liked this opportunity of demonstrating that they believed in democracy and fair play."

This November the voters in SAUND'S district will have another chance to demonstrate that they feel the same way. For then SAUND will be up for reelection, and since no Congressman, regardless of past successes, can take his office for granted, SAUND must regularly interrupt his congressional chores to shuttle back and forth to California.

Between meetings with constituents, SAUND spends much time quietly at home with his family, some members of which have settled elsewhere around the United States but often return for family reunions. SAUND still reads Indian literature and tries to keep up with news from his homeland. But mainly he is concerned with the future of his district, his State and his new country. For, as he told his relatives and friends in Chhajalwadi last year, "I have become part of American life."

SAUND ON AMERICA

"As a student in India, all that I knew about America was what I read in the British textbooks. I knew all about George III

but was kept in ignorance concerning one of the greatest historical events of all times. I refer to the American Revolution—an incident which, in my opinion, has done more to bring joy and dignity to the lives of men than anything before or since in the annals of man."

Unionism: Past and Future

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. HOLLAND. Mr. Speaker, considerable propaganda has been spread regarding right to work bills being written into law, both on the State level as well as on the national level.

I believe that the story on Unionism: Past and Future, by Leland Hazard, is a very enlightening one which appeared in the Harvard Business Review. It should be read by every Member of Congress as it approaches the problem in a very forward manner:

[From Harvard Business Review of March-April 1958]

UNIONISM: PAST AND FUTURE

(By Leland Hazard)

In every age of rapid change and upheaval, it is only natural for men to raise questions about the roles of existing institutions. In the past 20 years of rapidly mounting labor power, business management has been subjected to a good deal of public scrutiny. Should we managers give up even more power to the unions? Is our significance to the country declining? These questioning glances have naturally made many business leaders feel uneasy.

Fortunately, however, history seems to be on the side of management. Numerous episodes from the past establish its indispensability, but I doubt that any has been so conclusive as the Russian experience:

"Communists, for a short time only, proceeded as if there was no distinction between the functions of management and labor. For a few years following the 1917 revolution, minuscule Soviets in the Russian factories undertook the work of foremen and supervisors. The record discloses a naive and futile attempt to abolish the managerial function.

"Decision making got lost in debate. Every comrade's views about what tool to use, what size to employ, what placement to make, or what arrangement to set up—every comrade's views were considered, all to the end that production diminished as rapidly as discussion increased, and new facilities lagged as Bolshevik promises mounted. In the early 1920's Lenin himself took account of this industrial failure. In a stern reprimand to workers—a long reprimand in the manner of Communist harangues—he summarized: 'You must work, not chatter.' [1]

The attempt to implement the ideal of "from each according to his ability; to each according to his need" through an amorphous industrial maze, in which management was deprived not only of its historical rewards but also of its traditional authority, failed. The Russian dictatorship of the proletariat moved quickly to the reestablishment of the authority and rewards of management. It is now common knowledge that this shift from sovietism to authoritarianism was essential to industrial survival.

Footnotes at end of table.

I have mentioned this Russian failure as the most obvious proof of the significance of management in an industrial system. Despite all of their rapid advances we can take comfort in one thing: while Russian Communists have been learning about management, we in the United States have been developing a more mature understanding of labor. It is my purpose to look at the record and make a prophecy. To be more specific: How much does any forecast of the future of unionism depend on events from its past, and what factors from the past determine the present labor situation? Is the power of unions likely to increase or diminish greatly?

UNIONISM'S HISTORY

Labor's history can be interpreted in many ways. Who is to say what single date, decade, event, or person is to be taken as more significant than another in a movement as long established and as firmly rooted as our labor movement? One might attach special importance to early events and dates such as:

(a) 1827, when the Mechanics Union of Trades Association was founded in Philadelphia.

(b) 1834, when the National Trades' Union was founded "to promote the moral, physical, and intellectual condition of the working classes, and to advance their pecuniary interest."

(c) 1866, when the National Labor Union with a full-time president at $1,000 a year was established.

(d) 1878, when the Knights of Labor became a national organization, with the slogan, "An injury to one is the concern of all," and with its membership open to all "except lawyers, bankers, stock brokers, professional gamblers, and anybody who had anything to do with the sale of intoxicating beverages."

(e) 1881, when the Federation of Organized Trades and Labor Unions, patterned on the British Trades Union Congress, got its start and lived to sponsor the famous movement for the 8-hour day.

(f) 1886, when the American Federation of Labor was born at Columbus, Ohio; elected Samuel Gompers its first president; lived to attain by 1920 a membership of over 4 million (which was to decline by 1933 to little more than 2 million but to rise again to over 10 million in 1955); and then merged with the Congress of Industrial Organizations in an honorable organic unity of more than 15 million organized workingmen.

I cannot presume to judge the relative importance of these or other past events. Yet I must point to the mountain peaks of the past if I am to assess the present and predict the future. Let me continue the history into more recent—and even more formative—periods.

BREAD AND BUTTER

One of the chief determinants of the direction labor was to take was Samuel Gompers' firm insistence that our problems are primarily industrial, and his stout rejection of all temptations to form a labor party.

The long shadow of Gompers points the continuing philosophical course of American labor: "bread and butter" unionism—and at the same time of course, cake.

On July 6, 1892, two barges moved up the Monongahela loaded with Pinkerton agents. At the end of the bloody day 10 were dead, 3 agents and 7 strikers and 60 were wounded. Later, 8,000 Pennsylvania Guard men came to keep the peace.

Then on November 21, Frick cabled Carnegie the news:

"Strike officially called off yesterday. Our victory is now complete and most gratifying. Do not think we will ever have any serious labor trouble again." [2]

Footnotes at end of speech.

"Ever" was too long and Carnegie himself knew it. Nevertheless he replied to Frick from Rome:

"Think I'm about 10 years older. Europe has rung with Homestead, Homestead, until we are all sick of the name; but it is all over now. Ever your pard, A. C."

And yet Carnegie knew it was not over. In later life his writings show his ambivalence. One pamphlet brought a letter from Grover Cleveland, who defeated Harrison—some say because of the Homestead strike. Cleveland said to Carnegie:

"You must capture and keep the heart of any workingman before his hands will do their best." [3]

In the last decade of the 19th century, however, American management did not understand Grover Cleveland's prescient comment—William James was sowing the seeds for a deeper psychological knowledge at Harvard University, but the social sciences were not yet in flower.

It was to be another two decades before the phase "human relations" was generally employed. Indeed, as late as 1933, the picture of the coal mines and steel mills of western Pennsylvania and West Virginia was a melange of NRA, Roosevelt, Phil Murray, John L. Lewis, insurgent workers, tear gas, deputies, and some deaths. But the workingman's heart was not captured, nor his union recognized.

THE WAGNER ACT

Then came another important peak: The National Labor Relations Act (July 5, 1935), popularly known by the name of its author, Senator Robert Wagner, of New York. This New Deal law marked the first major intervention by Government in the long struggle between management and labor over union claims of right to bargain for employees. The act was unequivocally in support of labor. It asserted the right of workers to organize, established procedures for selection of bargaining units and for elections in these units, gave to a union which had a majority of the workers in any unit the right to represent all of the workers in that unit, and required management to bargain collectively with such a union. On April 12, 1937, the United States Supreme Court, still composed of the nine old men, sustained the act. On that day an old order ended.

Results: The act led to such results as Myron Taylor's decision, in March 1937, that United States Steel would recognize the steelworkers' union-organizing committee (SWOC). Meanwhile sitdown strikes, though ultimately held illegal by the United States Supreme Court, had softened General Motors. After these milestones union membership mounted, particularly in the CIO, and surprised industrialists everywhere found themselves looking for industrial relations directors.

The Wagner Act made collective bargaining an instrument of American national policy. The wisdom of this policy may be debatable. Other nations, while practicing collective bargaining, do not rely so heavily on its processes; for example, in Australia and in the Scandinavian countries industrial courts are involved in wage determination. But since we are committed almost exclusively to collective bargaining, any discussion of the future of unionism must begin with the Wagner Act.

This law does not permit a union to bargain only for its members. It requires that the union bargain for all of the employees, even nonunion workers, in the bargaining unit that, under the terms of the act, has been found appropriate. This fact was a shock to employers, and its full significance is not yet perceived by either employers or unions—or, if perceived, is not yet fully accepted.

Footnotes at end of speech.

Reaction: Unions had thought of themselves as brotherhoods—as men banded together and set apart—an injury to one being the concern of all. Management also thought of the membership of unions as a special category of workers to be distinguished from our loyal employees. It was a slow, long fight to impress the inevitability of unions on management; but once it was recognized that unionism was an earnest fact management began saying: "We don't care whether our employees belong to unions any more than we care whether they belong to the Elks or the Masons or the Bapitist Church." What was really meant by such statements in the late 1930's was that management wanted the unions to have as little to do with wages and working conditions as the other cited organizations.

Management is not given to full analysis or completely logical scrutiny of the phrases which express its feelings. It was not so much that management felt that employees who belonged to a union were disloyal, but, rather, that employees who had not joined a union had demonstrated a special brand of loyalty to management.

The Wagner Act, therefore, produced an acute emotional reaction in management—and in union leadership as well. The employer found himself powerless to reward a loyal nonmember with a larger pay envelope, and the union found itself powerless to discriminate against the nonmember. Obviously, even if law had permitted, it would never have been feasible to maintain two rates of pay, one negotiated with a union for its members and another, presumably higher, voluntarily granted to nonmembers.

There are only four ways in which wages can be fixed: (1) by the employer, (2) by the employee or his union, (3) by the Government, and (4) by collective bargaining. In the United States, Congress elected collective bargaining, and the Supreme Court approved the decision.

Perhaps Congress did not realize the full scope of public responsibility which the Wagner Act delegated to management.[4] When all or almost all labor-mangement issues must be determined by collective bargaining, management finds itself confronted with decisions of public as well as private significance. For example, take the big issue of our present wage inflation. Is it the responsibility of management to resist wage increases and suffer the private cost of long, bitter strikes in order that the public may be spared the adverse consequences of inflation? This is a difficult question, although I believe there is perhaps a stronger case for management to put up with strikes today than is generally recognized.[5]

In any event, it is doubtful that the Congress of 1935 fully perceived all the implications of a decision to leave wage determination solely to compulsory collective bargaining. It is significant that questions quite as difficult as the current wage inflation issue arose immediately following the passage of the act. Let us see what happened in the 1930's and early 1940's.

COMPULSORY UNIONISM?

The term "free rider" was quick to emerge. Unions, pointing to their legal responsibility to represent all employees in the lawful unit, asked why nonmembers should receive all of the benefits of union representation and bear none of the cost; that is, be exempt from payment of initiation fees and dues.

The union's charge against a free rider was and still is countered with the charge of compulsory unionism. Shortly following the Wagner Act, managements often resisted union demands that all employees be required to join the union and pay dues, giving as a reason, "loyalty to our loyal employees." In many cases, this was a good reason, but not the real reason. The real motive was to fight a holding action. Many people in the late 1930's believed that the excesses of the New Deal, including unionism, would some day abate.

But now, 20 years later, a philosophical argument over compulsory unionism continues with such vigor that one must not question the sincerity of the participants on either side. There are 19 States with laws or constitutional provisions, often called right-to-work laws, which protect in various ways the privilege of an employee to work whether or not he is paying dues to a union. These laws attest to the vigor of the conviction that union membership should not be a condition of employment.

The arguments in support of the alleged free rider and of the liberty for the individual to take employment free of a tax in the form of union dues are impressive. The unions are challenged on their own ground. It is said that the term "free rider" is applicable only if the union is in fact getting something for the nonmember which he would not have obtained without the intervention of the union. This argument is buttressed in two ways:

1. Unions often charge that wages in this or that unionized industry are not so high as in some nonunion industry—or that union wages have not kept up with cost of living or profits or some other standard. These union arguments are played back to prove that unions have not in fact gained any benefits which would not have accrued without unionism.

2. It is said that learned economists find that unions have had no effect on the general wage level, that instead blind forces such as market, monetary, and fiscal factors determine the general wage level.[6] For this reason, too, it is argued, there is no bonus for the alleged free rider.

In any case, so the argument runs, it should be the individual free American citizen who decides whether the union has benefited him and, therefore, whether he chooses to pay dues. Any factor other than his subjective determination is branded as an invasion of his liberty.

There is no doubt but that the proponents of liberty have a good philosophical argument. But a fact of real life intervenes. True, one cannot remain unconcerned if unionism actually does involve a tax on the right to work. On the other hand, one cannot ignore another important possibility: Fifty-one percent of the employees of a plant, paying dues, could stop working altogether in protest if the other 49 percent are not paying their dues. I would now like to discuss this dilemma as it appears in action and show how it contributed to the Taft-Hartley Act.

THE DUES DILEMMA

Let me draw on my own experience in this area, since it does lead strongly to my concluding generalizations:

In 1940 picket lines were formed around the plants of the company I represented. "Dues picketing," it was called. Employees who had paid their dues were admitted; all others were excluded. In many cases, this was the equivalent of closing the plant. Heavy industries such as steel or glass, where high melting temperatures compel continuous operations, depend on many specialized functions. A few dozen men, kept out of the plant for nonpayment of dues, would leave certain crucial functions unmanned; and so the whole process would stop even though thousands of dues-paying employees had entered the gates.

Fred Keightley, formerly secretary-treasurer of Amalgamated Association of Iron, Steel, and Tin Workers, and later conciliator in the United States Department of Labor, had come to the company in 1935 as director of labor relations. He knew the depth of feeling between dues-paying and nonduespaying employees. He conceived and I articulated a form of cooperation between company and union which spread and ultimately became the law of the land as part of the Taft-Hartley Act.

Our plan required neither the closed shop, under which management may hire only such employees as the union designates, nor the union shop under which management, while free to hire anyone, must fire him if he fails to join the union, or, having joined, loses his good standing.

I would have been against the closed shop or the union shop because of the requirement that the employee be in good standing with his union. Good standing can mean anything; not being black or white, or not being a Methodist or a Catholic, or—of equally great economic consequence—being to energetic in the shop or too vocal on the union floor. I would not willingly contract such power into union hands or such restrictions on management's ability to select and keep necessary manpower.

But it is quite another matter to require an employee to pay reasonable and limited sums to the union as initiation fees and monthly dues, if he is a member; or, if he is not a member, to require him to pay equal amounts as a fee by virtue of the fact that the union is his legal representative in collective bargaining. Employers have all kinds of necessary rules which govern the employee's access to a job. Some of the rules, such as those requiring special clothing, do cost the employee money.

I saw no difference in 1940, nor do I see any difference now, between such rules and one requiring an employee to keep peace in the shop by paying to an organization, empowered by law to represent him, certain sums of money bearing a reasonable relationship to his pay. Our plan required the union to agree with the company on the size of the dues; a typical amount was $2 for the initial payment and monthly payments of 1 percent of gross earnings.

Is this a violation of individual rights? It depends on your viewpoint. Conceivably nudists might claim the right to come to work unclothed, or food-processing girls might object to maintaining washed and manicured hands, or stenographers might insist on wearing evening gowns to the office—all, and many others for many reasons, might scream to high heaven about invaded liberties and denial of their right to work. No one would feel obligated to pay any serious attention to such complaints, even though a case could be made for each of them—a case as doctrinaire as the right-to-work case.

There is such a thing as overinterpretation. When a concept like the right-to-work is meticulously applied to all levels of thought and behavior, its original meaning is perverted. In one sense, requiring a worker to pay dues to a union which he does not belong to is unfair. In another, more practical, sense it is fair. It is simply one of those workaday compromises that we ask him to make so that we can run the organization as smoothly as possible.

Thomas E. Shroyer, now a practicing lawlawyer, represented the National Labor Relations Board at Cleveland in the mid-1940's. When one of our employees questioned the company's right to discharge for failure to make payments to the union, Shroyer wrestled hard with our "cooperation clause" and became thoroughly familiar with it. In due course he became legal adviser on labor matters to Senator Robert A. Taft and his Senate Committee on Labor. During the drafting of the Taft Hartley Act, Shroyer laid the cooperation plan before the committee. It appealed to Senator Taft and

Footnotes at end of speech.

Footnotes at end of speech.

ultimately was incorporated in the Taft-Hartley Act. I doubt that the Federal law will change on this point of labor-management relations.

WILDCAT STRIKES

There were innumerable labor-management problems in the 1940's (many of which still persist), but none was more serious that the quickie strike. A dispute involving a few men, often one man only, would arise in some corner of a plant of 3,000 or 4,000 workers. With tempers mounting and the provision for orderly processing of grievances soon forgotten, the few fellows in the corner would walk out and quickly the whole plant would "go down." These little strikes, sometimes called wildcat strikes, are enormously costly because mass production is efficient only if it is uninterrupted. They were the principal reason for the widespread conviction of management that a union's word was no good.

For a long time labor and business leaders were unable to agree on a contractual solutin of this problem. The top union officers, who had charge of the treasuries, were reluctant to contract not to strike and thereby risk liability for strikes which they knew might be started by rank-and-file members despite the no-strike clause and contrary to to top officers' intentions. Management on the other hand, believed that a no-strike agreement by the top union officials would be useless because they, while secretly fomenting the strike, could always claim that it was unauthorized.

Until after World War II there were a good many no-strike clauses in labor agreements, but they commanded slight respect and little confidence. In 1947 I drew one which is in effect in our company today—and substantially unchanged. Like most inventions it was surprisingly simple:

The union agrees not to strike, sit down, slow down, or stop work during the life of the contract—a conventional stipulation. The innovation was that if any employee or group of employees represented by the union violated the no-strike clause, the union agreed to disapprove the action in a published writing. If the union failed to disapprove, its treasury became liable for the damage; if, on the other hand, the union did disapprove, the company was then free to discipline the offending employee or employees.

The results have been gratifying. There have been some unauthorized violations, and the top union officers have disapproved as the contract requires. Discipline of individual employees, including some discharges, has stood up in arbitration. More important, in 10 years there has been a vast reduction in the number of 2-hour, 2-day, 10-day little strikes which were formerly so costly in production, workers' pay, and stockholders' profits.

The success of the provision is due in no small part to the fact that in 10 years' time no violation has been condoned. Management has filed several suits based on the clause, but it has never been necessary to bring one of them to trial. This raises a point of procedure that I consider important. I think management has often made the mistake of considering litigation with a union useless. It is true that there are some difficulties about bringing legal action against a union, but it can be done. And, particularly when management has accorded full recognition to a union and the union knows that it has been accepted in the full sense of that term, no stigma should attach to litigation. Indeed, it is one way for management to prove that it considers the union a responsible organization.

UNIONISM'S PERMANENCE

The newspapers have for some months been reporting much shocking skulduggery, and some big names in labor appear suspect of clay feet—not too good clay, at that. Will this be the end of the labor movement? Of course not. There are thousands of unsung, unknown, workaday management-labor agreements functioning fairly well—not perfectly, but fairly well. Unionism is built into the American system. It has had its ups and down in the past, as it will be in the future. But the labor-management relationship is as much a part of modern capitalism as are the machines and the stockholders' savings.

I have seen more than one case—in truth, far too many cases—of miserably inadequate union leadership. Incompetence, stupidity, paranoia, megalomania—I could multiply the nouns; I could add some adjectives. But I have rarely had occasion to modify the axiom: "scratch a labor problem, and you will find a management problem."

There are some fundamentals which, once understood, make for harmonious relationships, but management and labor itself have sometimes failed to perceive them.

POINTS TO REMEMBER

Labor no less than management wants some power. By labor I mean in this connection not just the leaders but also the little people, those in the shops and at the benches. It is not enough that wages are good and working conditions are right. The worker often wants good wages and good working conditions not as a voluntary grant from management but as an ego-boosting involuntary yielding by management.

The point was never made better than in an episode reported by Clinton Golden. He relates that during the early days of organizing activities in the Pittsburgh area, a request came in for an organizing committee to come to a Pittsburgh plant that was well known as having excellent wages and working conditions, and supposedly had almost perfect employee relationships. Ultimately, however, a meeting was held. A thousand workers came to that first meeting. It lasted 5½ hours and would have gone on longer but for the promise of the chairman to hold another meeting soon. One attractive girl summed up the general sentiment:

"It's about time something like this happened. We have got to stand on our own feet. They do everything for you but provide a husband, and I even know girls who they got a husband for. And them what ain't got time to get pregnant, they get foster kids for."[1]

Another factor which should be recognized is that a labor leader is necessarily a politician. His people are so many individuals, and each feels justified in demanding his fancied special due. Our 20th century capitalism—so utterly different from that which Karl Marx saw about him—has unleashed individual wants and aspirations which only a politician can reconcile. He is compelled to seek out solutions that are both expeditious and capable of bringing general satisfaction to a large number of people.

RESOLVING CONFLICTS

Neither management nor labor has any inherent rights. Richard E. Danielson in an article 10 years ago made that plain:

"We may fairly base our definition of rights on the theory that they were and are privileges, granted to us at one time or another as the result of all kinds of pressures and forces, which—if justified in experience—become embedded for a short time or a long time in our fundamental law as rights."[2]

Rights exist only as they are exercised. If a union claims the right to strike, it must strike now and then. If management claims the right to manage, it must manage now and then. Managerial, like kingly, prerogatives will be more respected if they are exercised rather than just claimed as if they were of divine right. Rights are not self-enforcing. They ensue from assertion in practice, and this means conflict.

It is the special genius of labor-management relations in America that a process of accommodation for resolving conflicts is constantly working. We do reconcile seemingly irreconcilable differences. This is accomplished by collective bargaining, which means in one of its facets arbitration; and in still another, the strike. The strike at the expiration of a contract is a proper way of resolving the conflict. It is a test of power. But there is nothing wrong with reasonable power; too much will corrupt its holders and bring them to ruin; but too little makes mice of men.

Our genius for solving conflicts by collective bargaining is now buttressed by the power of taught traditions. Scholars like Sumner H. Slichter and George W. Taylor, to mention only a few distinguished names, have shuttled between theory and practice, using each to enlighten the other. Their pupils, and those of their colleagues, are now a goodly force, armed with the theories, skills, and techniques for resolving conflicts.

WILLING HANDS?

Therefore, I predict enduring unionism. Its power should not be feared or resented. I think of unionism, rather, as a technique which has helped to humanize the industrial revolution, and I expect its power neither to increase greatly nor to diminish substantially.

In another century the prediction might have been otherwise. Even in this century it is necessary to add a footnote. The belatedly accepted but now snowballing concepts of personnel practices tend to demonstrate that unions may become unnecessary. But lingering and bitter memories, such as those of Homestead, will tip the scales in favor of unionism—at least for some generations to come.

In the last analysis there is a power greater than all the others. That is the power of the individual human being to withhold his hands, to refuse to work. This force will continue to have its effect, no matter how highly developed automation becomes. What brings forth the power of the human hand in one century differs from what may bring it forth in another. In the 12th century men sought heaven by carrying stones for the great cathedrals. In the 17th century men listened to their Puritan preachers and sought salvation in close application to trade and business. In the 20th—of course it is too early to be sure—men tend to gather in councils to decide the conditions on which they will work.

Management, whose aptitudes for conception, planning, and execution are so essential to industrialism, so important to the good life, must make its influence felt in those councils—lest our economy die of unwilling hands.

A Bill To Control the Distribution of Obscene Literature

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. SAYLOR. Mr. Speaker, last week the House Judiciary Committee reported a bill aimed at controlling the distribution of obscene literature. In the absence of a more direct method of combating the growing evil that has become the No. 1 enemy of the morals of American youth, I shall vote for this measure. I am not certain that it will be as effective as desired, but I intend to support it if only to serve notice on the purveyors of obscenity that Congress resents their diabolical business and is determined to put a stop to it.

From time to time, an aroused citizenry has undertaken campaigns in local communities to rout out the licentious printed materials sold at newsstands. While such action is commendable and should be encouraged, the effort often falls short because of inadequate legal standards on which to convict the guilty. H. R. 6239 would permit prosecution where obscene literature is received as well as where it is mailed. It is my hope that through this legislation the Federal Bureau of Investigation, postal inspectors, and other law enforcement agencies will be better equipped to get the job done.

To emphasize the perfidious nature of obscene material, FBI Director J. Edgar Hoover has explained that lewd photos and books—unlike a narcotic cigarette which becomes ashes after degrading a single victim—can be transmitted on an endless round of moral destruction.

In some areas of the country, a number of book dealers have cooperated—whether because of a desire to accept a community obligation or for fear of business reprisals—in removing objectionable material from their shelves. Unfortunately, the effort will fall short so long as there are selfish, ruthless book merchants whose greed for profit supersedes moral responsibility. We need not go far from the Halls of Congress for substantiation of this premise.

Within the very shadows of the Capitol, you will find shelves of licentious material openly displayed to tempt the youth of the city of Washington. Other victims include young visitors whose parents, in cooperation with schools and community organizations, permit them to come here in the hopes that hallowed shrines within this area will serve as an inspiration to make better citizens of these youngsters. Yet here at their disposal are the seeds of corruption and degradation to which even the strongest characters are vulnerable.

No, I am afraid that voluntary action by the smut merchants cannot be relied upon. Recently, as I walked from the Press Building along 14th Street toward my local residence, I noticed a display of knives in the window of a drugstore. Advertised for sale is an arsenal of weapons that included lethal instruments wielded by Nazi storm troopers plus a variety of other fetching blades available to one and all. The only item lacking in this exhibit is a signboard with the words Invitation to Crime. Here, then, are a miscellany of gadgets poised for killing and maiming. On the newsstands are the mediums for stimulating lust and crime. Together, these wares constitute a compounded disgrace to the Nation's Capital.

Perhaps, through H. R. 6239, we shall at least make a start toward driving from our society those degenerate peddlers of moral and mental disease in printed form. Soon thereafter, we trust, legislation to deal with "pushers" of deadly weapons will also be forthcoming.

Costly Omission in Defense Plan

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, Arthur Sylvester, chief of the Newark News' Washington bureau, has called attention to the fact that President Eisenhower's defense reorganization proposals fail to deal with a major problem. This is the problem of developing a truly unified procurement system. As Mr. Sylvester points out, one of the key recommendations of the second Hoover Commission dealt with this question.

In the hope that the article may encourage Congress to take another look at the matter, under unanimous consent, I include an article by Arthur Sylvester from the Newark Sunday News of April 20, 1958, entitled "Costly Omission in Defense Plan":

COSTLY OMISSION IN DEFENSE PLAN—UNIFIED PROCUREMENT SIGHTED AS REORGANIZATION'S MISSING LINK

(By Arthur Sylvester)

WASHINGTON.—President Eisenhower's program for reorganization of the Defense Department omits one of the key recommendations for greater unification and increased savings advanced by the second Hoover Commission.

This group, named by Mr. Eisenhower and led by former President Herbert Hoover, put its finger on the activities of the three different buying groups for the Army, Navy, and Air Force as the source of some of the greatest military duplication and extravagance. The Citizens Committee for the Hoover Report, a nonpartisan group dedicated to inducing Congress to implement Hoover Commission recommendations, had set its sights this year on passage of legislation to bring about unification in the services of supply.

The committee today approved the President's program as being in line with the recommendations of the first Hoover Commission set up by former President Truman. But it gave no official expression of its chagrin at Mr. Eisenhower's failure to grapple with one of the basic and costly defects of the Military Establishment.

President Eisenhower's omission in his message to Congress on defense reorganization, in his proposed legislation and in public comments since, of any reference to the overlapping, rivalry, and waste in procurement practices has been remarked because he told the American Society of Newspaper Editors Thursday that safety and solvency is the basic aim of his Pentagon plan. Yet for the last 10 years, since the passage of the National Security Act of 1947, unifying the military services, civilian critics of military inefficiency have been trying to set up an integrated supply system as a money saver.

Not only the Hoover Commission, but House and Senate committees have turned up dismaying evidence that these 3 procurement services in the 3 military departments exercise overlapping jurisdiction, cause the purchase of more material of common supply like food, clothing, and other items than needed by the Army, Navy, and Air Force and so run up defense costs. These are reflected in the Defense Department budget, which takes 60 cents of each taxpayer dollar.

When the combined defense establishment was created in 1947 the Air Force was an arm of the Army. Once it became an independent unit it set about building up facilities duplicating those of the Army and Navy. Its purchasing arm was one, and a costly one, too, particularly where common use items are involved.

SECRETARY OF SUPPLY

As a result of House committee investigations in 1951, deficiencies in purchase functions especially in automotive material were revealed. Inefficiencies in the procurement, standardization and cataloguing were shown. The picture was one of waste and extravagance running into hundreds of millions of dollars.

At the time Senator PAUL DOUGLAS, Democrat, of Illinois, offered legislation to create an undersecretary of defense for supply management. His task would be to develop standardized procedures and forms and service function. He would be expected to eliminate duplication and overlapping within and among the supply activities of the military departments in production, procurement, warehousing and distribution.

As Senator DOUGLAS envisioned the official, he would establish and operate depots for common items and other common supply and service installations in the United States. He would develop unified logistics organizations overseas. He would set up a program to systematize scrap recovery, redistribute excess material and surplus disposal, coordinating his operations with other executive agencies. Also he would be expected to develop a corps of professional civilian supply personnel within the Defense Department.

INORDINATE SLOWNESS

Senator LEVERETT SALTONSTALL, Republican, of Massachusetts, revealed to the Senate that

when the 1947 unification legislation was being framed, a proposal similar to Senator DOUGLAS' was considered. But it was rejected on the same ground that objection is now being raised against some of President Eisenhower's reorganization program. That is the fear it would concentrate too much power in the hands of the Secretary of Defense. Since then Mr. SALTONSTALL has changed his mind.

Despite constant congressional prodding, improvement in military supply management is distinguished by inordinate slowness, in the words of one committee. The Military Services agree with the need for improvement. They ask time for further study. They say the suggestion for change apply not to them, but to one of the other services.

Then they proceed as fast as possible to revise their stock management systems in a fashion to widen the differences between the services rather than bring them into harmony. Triplification rather than unification is the result. With it lessened security and greater waste result.

Secretaries of defense come and go and also service secretaries. New Congressmen and new congressional committees try to bring order out of chaos. The Eisenhower administration succeeding the Truman administration started out with promises to bring about a new top-level reassignment of powers.

Now 5 years later President Eisenhower has moved for a major reorganization. But he doesn't propose to touch the separate buying powers of the Army, Navy, and Air Force. Even his new Secretary of Defense, Neil H. McElroy, declared, at his first public appearance 2 weeks ago at the National Press Club he opposed the Hoover Commission's integrated plan.

All of which goes to show that the one constant in the flurry of surface activity and facade of reform is that each of the uniformed services is dedicated to its own system and procedures, particularly when it comes to spending money and even in the purchase of common items.

An Invocation by Rabbi Abraham J. Feldman, D. D.

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. MAY. Mr. Speaker, Rabbi Abraham J. Feldman, D. D., gave the following invocation at the National Conference on the Foreign Aspects of United States National Security at the Hotel Statler on February 25, 1958. I bring it to the attention of Congress at this time because this beautiful prayer is one which men of any religious belief may use in seeking divine guidance for the proper fulfillment of the role of leadership in which the Congress of the United States is cast in these crucial days.

As we approach a summit conference, let us hope that the reality of the brotherhood of man under one God, and the universal desire for peace which exists in the hearts of most men, will become so evident that real strides will be made toward disarmament and ultimately the establishment of a permanent peace.

The prayer is as follows:

"Have we not all one Father? Hath not one God created us? Why, then, do we deal treacherously each man against his brother profaning the covenant of our fathers?"

O Father of all, through these words of Thy prophet messenger, we would renew our awareness of our duty to emulate Thy love, Thy mercy, Thy loving kindness, in our relations with Thy children everywhere, all of them, by Thy will, our brethren. Impart unto us, O God, an increase of that understanding which would lead us to be worthy and willing instruments of Thy will in bringing hope to those of our brethren whose lot and circumstances are less fortunate than ours. May ours be the wisdom and the honesty to validate their hopes by our sharing with them of Thy benevolence with which we are so richly blessed.

Father, we pray Thee, use us to the end that our brethren everywhere be not saddened and humiliated as they turn trustingly unto us for enlarged encouragement, for a revaluation of our sense of dedication as Thy coworkers, for a generous demonstration of our sense of responsibility as stewards of Thy bounty.

Give us, O Lord, eyes that see the needs of Thy children, ears that hear their pleas, hearts that respond with love for our brethren.

Bless us, O God, as we foregather here to strengthen each other for compassion. Bless them whose words and deeds summon us to duty.

World War I Pension Urged

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mrs. HARDEN. Mr. Speaker, I would like to call to the attention of the House an editorial which appeared recently in the Plainfield (Ind.) Messenger. The editorial, Have You Considered? was written by the newspaper's editor and publisher, Mrs. Ellen Cochran Curtis, and I know many of my colleagues will agree with me that Mrs. Curtis has ably presented the growing viewpoint among American citizens that veterans of World War I should be granted a Federal pension. Certainly, World War I veterans have not received from the Government the consideration granted to those who served in World War II. With many of them now in actual need because of advanced years and declining health, Congress should give early consideration to a pension bill. The editorial follows:

HAVE YOU CONSIDERED?

There is a movement on foot by veterans of World War I to ask Congress to grant them pensions after they reach the age of 60 and opposition is quite vocal among—of all people veterans of World War II and the Korean police action. The movement is nationwide and attempts are being made to have an organization in each State to be known as Veterans of World War I with no other matter in mind and not in any way opposed to already organized groups such as the American Legion, Veterans of Foreign Wars, or Amvets.

Those who are opposed to such a plan perhaps have not considered all the facts. We have seen men leave for war upon three occasions during our lifetime and it was no different in 1917 when men marched off to serve their country than it was in later years insofar as offering their lives was concerned; the care of those who were wounded did not compare, in the slightest degree, with that provided for subsequent wars; the pay was much less; the facilities were meager; training was inadequate and clothing and supplies were barely sufficient to keep them from suffering; their parents suffered the same losses as parents of World War II; they were denied college education to fight in Europe; they left jobs with no assurance that they would be reinstated upon their return; they were, in addition to being soldiers, flu victims of the 1918 epidemic; they were the victims of the 1931–38 depression; they were the fathers of World War II veterans; they have been the heaviest taxpayers in these years of such fabulous spending; they have paid the bill and have neither sought nor received anything for their service to their country.

Their ages now range from 60 to past 70 and their days are numbered. Many of them are retired and living on fixed incomes which are not sufficient to meet their daily needs.

Many, who seem so horrified at the idea of giving World War I veterans pensions, are those very ones who went to college on the GI bill, who bought their homes on GI loans, who have had preference in many job situations; whose employers were forced to reinstate them in the jobs which they left; they are the ones who received $20 per week for 52 weeks after they were discharged under the 52–20 plan; they have been paid while learning under the GI training bill; they have had magnificent hospital care whenever needed. They are all still young men. Of course, not all of the younger veterans are opposed to the idea.

The cost of all this has been paid by the taxpayers, including World War I veterans. They have not complained. They have wanted their sons and the sons of their buddies to have every consideration.

Now, doesn't it seem just a little selfish to begrudge pensions to these remaining veterans of World War I, all of whom are on the shady side of life? At most, the program would not last many years. Thousands have already died and those who are left are still paying the bill to help educate and house these two younger groups.

With the number involved and their present age, the cost of pensions for them would not be a drop in the bucket compared with that spent on the others.

Money for foreign aid has been poured into other countries to help their people and whether it helps or not, still remains a mooted question. Why not withhold some of the foreign aid and give these older veterans a pension for their declining years?

If you'll give the matter an honest appraisal, we believe you'll agree that veterans of World War I have had pretty shabby treatment in comparison to those of other wars and to that given our foreign neighbors.

Impressions of the TCM-University Contract Project for Agricultural Research and Education in India

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. AVERY. Mr. Speaker, there has been a great deal said on the floor of this

House and in the press regarding our technical-assistance programs to certain friendly nations. One phase of the program, the Technical Assistance Mission in India, is under the direct auspices of Kansas State College, Ohio State University, the University of Illinois, and the University of Tennessee.

Dr. Arthur D. Weber, dean of agriculture of Kansas State College, has made a personal inspection of the program and its effectiveness in India.

I am including this report of this inspection in my extension because I feel it is of interest to the Congress. Dr. Weber is recognized as one of the outstanding authorities on agricultural matters in the United States.

SOME IMPRESSIONS OF THE TCM-UNIVERSITY CONTRACT PROJECT FOR AGRICULTURAL RESEARCH AND EDUCATION IN INDIA

(By Arthur D. Weber, dean of agriculture, Kansas State College, Manhattan, Kans.)

It was my privilege to be in India from December 13, 1957, to January 28, 1958, for the purpose of reviewing the work of members of the Kansas State College technical assistance team and observing other phases of the technical assistance contract programs being conducted by the University of Illinois, Ohio State University, and the University of Tennessee. These contacts also afforded me an opportunity to become acquainted with the organizational setup for India's agricultural research, resident instruction and extension service activities. From these observations and through the acquaintances I made among India's agricultural leaders in government and in higher institutions of learning, I gained the impressions which are the basis of this statement. As a further introductory comment, I wish to state that since I concur heartily with the views expressed by Director C. Peairs Wilson in the report he submitted following a visit to India during the summer of 1957, I shall concern myself here primarily with policy matters and an overall critique of the project. His report contains an excellent appraisal of the institutions where Kansas State College team members have been stationed and of administrative and other problems with which they were confronted.

At the outset, I wish to express as my deep conviction that members of the college contract technical assistance teams and the TCM staff, and their wives, deserve high commendation for their good work, which is being carried out under unusual, and in some instances, difficult circumstances. Everywhere I went I found evidences of respect and appreciation for the technical assistance program and those working with it.

In this connection, I feel that I would be remiss if I failed to mention that Dr. Frank W. Parker, chief agriculturist, TCM, New Delhi, is held in the highest regard by Indian agricultural scientists and administrators. His broad outlook and clear understanding of India's basic problems and the role research and education must have in the solution of these problems, have brought to the technical assistance effort the vision and leadership which are essential to the attainment of the objectives agreed upon by the Governments of India and the United States of America.

It was also heartening to observe the support and overall administrative guidance being given to the TCM-university contract project by Ambassador Ellsworth Bunker and Minister-Director Howard Houston.

Interest in and concern for India and the direction she will take in solving her problems also are being manifested by other great world powers. The intensity of this interest and concern is being revealed in numerous ways, not the least of which is by official visits to India by heads of governments and other high officials. Effects of such visits are plainly evident in many places; so much so, in fact, that I keep asking myself whether it would be presumptuous to suggest—even urge—that the President of the United States lend encouragement and strength to our technical assistance program by visiting India.

Impressions gained on my visit to India are forceful reminders of the importance of understanding why the United States is furnishing technical assistance to India and other underdeveloped countries. Such understanding is especially important to those who are directly responsible for technical assistance projects, irrespective of whether their responsibility is that of administrators, technicians, or in some other capacity. For obligations assumed for technical assistance can be discharged most effectively by those whose sense of urgency has been sharpened by an awareness of the issues involved.

Then, too, impressions gained since my return from India have served to emphasize that citizens generally, and especially Government officials and Members of Congress, must have a sympathetic understanding of technical assistance to underdeveloped countries if the best interests of the United States are to be served abroad.

Yet it is not easy to state clearly and in simple terms what are the right reasons for technical assistance. Nor is it worthwhile to belabor the matter by repeatedly defining objectives, especially by public statements in the countries where assistance is being given. There the program—what it is, how it is administered, and what it accomplishes—should be the main public relations effort. Nevertheless, back of the program are the reasons for it; and too frequently, it seems to me, these reasons are not clearly understood either in the United States or India.

Whatever means are used to acquaint people with the reasons for technical assistance, the basis for understanding the program, in my judgment, is that the interests of the United States are promoted when an underdeveloped country resolves its problems and remains democratic and free. It is significant that India has chosen democracy and freedom. China, with many of the same problems as India—food production being the key to most of them—has chosen another route. The implication is crystal clear: Technical assistance has become freedom's first line of defense.

Those who doubt that it is in the best interests of the United States to help underdeveloped countries in their struggle to maintain and increase the food supply would do well, I believe, to ponder on this statement made by Sir John Boyd Orr in his book The White Man's Dilemma: "People will exist on a meager diet if they have never had, and do not know that a better can be made available. But when the food position deteriorates, and food becomes scarcer and dearer, or when hungry people learn that more food can be made available, they naturally blame the government and are easily induced to overthrow it."

Basically, India's problems stem from the mores and the social and economic conditions responsible for a woefully inadequate food supply. In the long run, research and education, as has been demonstrated in many countries, offer the best permanent solution to these problems. Fortunately, India has intelligent, well-educated leaders who appreciate this fact and want to effectuate needed changes and improvements. It is because the problems are so far reaching and the difficulties so great that outside assistance is welcomed by these men, dedicated as they are to the concepts of democracy and freedom.

The ultimate goal must be, it seems to me, a degree of literacy throughout India commensurate with the need for general understanding of the country's pressing problems and of the ways and means of solving them. But the food production problem is so critically urgent and so basic to the solution of all the others that it warrants immediate and special attention.

Here again it is fortunate that India has in its colleges of agriculture and veterinary medicine and in its agricultural research, community development, and extension service setups the basic ingredients for an integrated and coordinated system of research and education—a system that could have a tremendous impact on Indian agriculture by providing a sound basis for greater and more efficient production. I would be less than frank, however, if I failed to record my disappointment in observing that thus far existing agricultural institutions and agencies have contributed little to the well-being and economic advancement of India's farmers and stockmen.

On the other hand, I found that Indian institutions and officials recognize this shortcoming, and, as a consequence, consider the TCM-university contract project for agricultural research and education useful in promoting Government of India interests. I do not wish to imply that Indian cooperation leaves nothing to be desired. In some instances, complacency and satisfaction with things as they are were plainly evident. And occasionally it appeared that cooperation was regarded as the price that had to be paid for equipment and commodities. I am happy to be able to report, however, that these were exceptions; in the vast majority of cases Indian cooperation appeared to be wholehearted and satisfactory.

It is not easy to measure the progress that is being made in the attainment of this project's objectives. It is significant, it seems to me, that ways and means of attaining objectives are being discussed and implemented. There is growing understanding and appreciation of the reasons for the success of the land-grant college system in the United States. Throughout India, agricultural leaders, largely, I believe, because of our technical assistance effort, are beginning to realize that agricultural research, resident teaching, and extension service activities are not unrelated, separate programs with incompatible procedures and objectives to be guarded jealously by their respective proponents. Instead, there is an increasing awareness of the urgent need to integrate these activities at all levels, from top administration to the farms, where in the final analysis progress in the attainment of the basic objectives of technical assistance will be measured. How to effectuate such integration presents many knotty problems, owing to the fact that marked administrative and working realinements will be necessary to assure real progress.

How to apply the results of agricultural research is being demonstrated by members of technical assistance teams in such things as grassland improvements, poultry, and dairy production, crops and soils test plots, and the training of extension leaders and specialists. Participation of team members in research and teaching conferences is another important contribution to the overall project.

Training of Indian participants in American colleges and universities deserves special emphasis in any appraisal of the progress being made toward the attainment of basic objectives, in my estimation. For these men will bring enhanced technical competence to their home institutions and a better understanding of how to identify and solve farm problems. They will also have observed the operations of a land-grant college or university and thus will appreciate why the integration of agricultural research, resident teaching and extension are so essential in

attaining greater production and improved efficiency.

The most important consideration with respect to the TCM-University Contract Project, as I view it, is whether India will realine her agricultural institutions and agencies within the rural university concept. I shall not dwell on what this would entail since several publications are available on the subject. Suffice it to say that it is my deep conviction that this development, more than any other, will assure the attainment of basic objectives which promote the interests of both the United States and the Government of India.

I also gained the impression that this realinement is something that will have to be worked out for each institution in accordance with broad guiding principles but without adhering to any fixed or stereotyped pattern of organizational structure. This is necessary, it seems to me, because each institution has its own unique situation, resulting from the circumstances of its origin and development and from its relationships with other institutions, including those of government.

Recent developments at the Coimatore Agricultural College illustrate how rural university status can be attained through compromise and adaptation to the institution's own special needs and requirements. And the proposed U. P. Agricultural University at Tarai State Farm would provide an excellent opportunity to demonstrate how an institution of this kind should be organized and run. It would also serve as a key university or model for new development and even for realinements elsewhere in the country.

As one becomes acquainted with this project, the possible need to extend it for a number of years—perhaps 10 or even longer—takes on added meaning. The guiding principle in this regard, in my estimation, should be the extent to which the basic objectives have been attained, and India's ability to carry on without outside technical assistance.

It seems to me that allotments of funds for the purchase of commodities, except books, could be withdrawn first. Equipment and other commodity purchases should be handled by TCM instead of by the colleges and universities, as at present, in my judgment.

Allotments for training of participants in American universities and colleges probably should be withdrawn last; but even after such training has been discontinued, funds might well be made available for maintaining professional contacts among these men in India and for continuing relationships with their American counterparts and American institutions.

It will be important in the years immediately ahead to follow through with technical assistance to specific projects; otherwise, apparent gains could easily be lost. A good example is the grassland improvement project at Rajkot.

I have recommended that the Kansas State College contract be extended to 1960, and that extensions thereafter be considered in the light of needs and the ability of the college to continue to release key personnel to the project.

It is important that staff members assigned to work on TCM-University contract projects be considered as partners in the total technical assistance effort. Fortunately, working relationships are improving as a result of the establishment of a contract coordination unit in TCM. It is to be hoped also that group leaders, and officials of TCM and of the Government of India will see to it that insofar as possible team members will not have reason to complain because advance arrangements were not made for their families' personal living accommodations. Similarly, it would appear that frustrations arising because of program difficulties and misunderstandings could be minimized by careful, initial planning with the Indian college before the team member's arrival in India. Yet it should be made crystal clear to the prospective team member, it seems to me, that his success will be determined to a large degree by his own resourcefulness and patience. A man's personal attitudes and psychological fitness for a foreign assignment should count heavily when team members are being recruited.

Finally, I should like to observe that, in my judgment, tangible results from technical assistance when expressed in terms of increased production and improved efficiency of Indian farm operations will come very slowly. The magnitude of the difficulties to be overcome and the nature of the problems to be solved are such as to cause one to wonder whether changes can be brought about in time to attain basic objectives of the TCM-University contract project.

Yet I believe that there will be time enough to get the job done because: (1) Indian farmers love the land and possess the inherent qualities of interest and intelligence necessary to bring about significant changes and improvements; (2) technical assistance, through coordination of agricultural research, resident teaching, and extension service activities, can reach the Indian farmer and cause him to change his viewpoints and practices; and (3) India's academic, scientific, and political leaders will meet this challenging opportunity to advance their country's interests by providing the administrative framework, organizational structure, and support necessary for the evolutionary developments that have been envisioned for the institutions primarily responsible for the destiny of Indian agriculture.

Something Wrong in Brussels

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. O'HARA of Illinois. Mr. Speaker, in reading the Chicago Daily News of April 26, 1958, I came across a dispatch from Brussels by William H. Stoneman that I feel should be brought to the immediate attention of the House. If agriculture and labor have been shoved into the background at the exhibition in Brussels, and the life of the average American man and woman obscured from view to make way for tinseled glamor, something is wrong in Brussels.

By unanimous consent I am extending my remarks to include Mr. Stoneman's article as follows:

(By William H. Stoneman)

BRUSSELS.—Americans attending the Brussels World Fair have been asking themselves a question that might merit general consideration at home:

"What are the things about the United States of which Americans should be proudest, and for which they should be most grateful?"

The question arises because the American section of the Brussels Fair fails to emphasize those very things which make the United States the finest country on earth in which to be born, grow up, and spread one's wings.

Thinking Americans, who have seen here the pitiful tribute to their country, have responded with many ideas for those who plan future American exhibits at international expositions.

Perhaps the most convincing suggestion doesn't seem to have occurred to the planners on this occasion, and it may not occur to many people in Washington.

It is that the United States differs from most others because it is the country where an ordinary citizen, starting life from scratch, can make the most of all the talents that he has inherited.

Equally important—if those talents do not permit him to rise to the top and he remains—like most of the 173 million Americans—just an ordinary citizen, he can still live a free and decent existence, with a vastly higher material standard than ordinary people in other countries of the world.

The fact that the United States is primarily a country of ordinary people seems to have escaped the officials who planned our exhibit at this fair.

It seems incredible but it is true that our pavilion here has a Wall Street exhibit but (as far as we could tell from several hours of wandering around the premises) no exhibit to advertise the accomplishments of trade unionism in boosting the American worker's standard of living.

You might think that trade unionism was considered un-American.

The foolish suggestion has even been made that somebody in Washington, name unknown, has decreed that "we must not advertise our material well being because it will make Europeans jealous or dissatisfied."

Whatever the cause, the fact remains that the Russians in their immense pavilion right next door advertise the spurious delights of life under socialism without any real competition from us.

Their preposterous claim, "every Russian worker gets a free vacation of at least 3 weeks at the seashore," is not countered by anything to illustrate the fact that most American workmen are able to tour the country in their own family cars at vacation time paying their own expenses out of their own decent wages.

There is likewise little or nothing in the way of a tribute to one of the key factors in the development and continued prosperity of the United States—the skill and hard work of the average American.

American farm organizations also merit certificates for missing the ball in not helping give Europeans a good picture of the American farmer and his work.

Ditto the trade unions themselves.

You have the idea as you wander around here that all too many citizens connected with the performance haven't the slightest conception of what makes America click.

You are bound to wonder whether the people who chose them had any better idea.

The Medical, Legal, Literary, and Political Status of Ezra Weston (Loomis) Pound

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BURDICK. Mr. Speaker, on August 21, 1957, I introduced a resolution, House Resolution 403, calling for a full and complete investigation of the almost legendary Ezra Pound case to determine where there is justification for his—Mr. Pound's—continued incarceration in St. Elizabeths Hospital.

A week later, a Senator and I—acting independently of each other—asked the Legislative Reference Service of the Library of Congress to undertake for us a thorough study of the medical, legal, literary, and political status of Ezra Pound.

During the past 7 months I have watched with great interest the unfolding of the Pound story. The Library of Congress report, which I had requested, was completed in March and submitted to me at this time. I was happy to see that this authoritative report was used by Mr. Pound's attorney, Thurman Arnold, and his associates of the Arnold, Fortas & Porter firm, and by poet Robert Frost in their presentation of Mr. Pound's case to the court on April 14. The report was prepared by Mr. H. A. Sieber, of the Legislative Reference Service, and to him I wish to acknowledge my indebtedness, and to express my deep appreciation of the meticulous work he did on it, the extra hours of work he put in on careful research and the authentic documentation he gave it.

As you know, on April 18, the 15-year old indictment against Ezra Pound was dismissed in United States District Court by Chief Judge Bolitha J. Laws.

When late last summer Mr. Sieber first examined the court records of the Pound case, he noted that the docket had been stamped in red: "Case closed." Of course, it was not really until a few days ago, after Judge Laws had dismissed the charges against the old poet, that the case was indeed officially closed.

As a teacher of poetry to the 20th century—and whatever centuries are lucky enough to follow—Ezra Pound will be long remembered by the literary historians. As a poet himself and as the discoverer of poets and inventor of poetry for our time, he will not be forgotten.

I do not know very much about Mr. Pound's economic theories and his views of history, but I do know this much; he should not have been in a mental institution for 13 years without good medical reasons. If he is sane enough to live in the community, as the psychiatrists have been saying, he should be living in the community—and I am pleased that the Attorney General and the court agreed.

Because of the intense public and scholarly interest in the Ezra Pound matter, I am placing into the CONGRESSIONAL RECORD, in five instalments, the Legislative Reference Service report by H. A. Sieber, Senior Specialists Division. The report, issued earlier in March, has been revised as of April 14, 1958. The first part here follows:

THE MEDICAL, LEGAL, LITERARY, AND POLITICAL STATUS OF EZRA WESTON (LOOMIS) POUND (1885-)—SELECTED FACTS AND COMMENTS—PART I

(By H. A. Sieber, Research Assistant, Senior Specialists Division, the Library of Congress Legislative Reference Service, March 31, 1958, Revised April 14, 1958)

This report was prepared in the Legislative Reference Service of the Library of Congress pursuant to a congressional request in August 1957 for as much information as is available on the literary, political, legal, and medical status of Mr. Pound.

The report presents a superficial chronology of Mr. Pound's career, 1885 to date, and a brief discussion of some of the considerations entering into the Pound case.

Many of the phases of the Ezra Pound case have remained quite controversial throughout the 13 years since Mr. Pound was apprehended in Italy in May 1945. This report does not attempt to resolve these controversies; however, it does reflect a thorough search of the available primary and secondary source materials at the Library of Congress.

The Government's case against Mr. Pound is fairly well-known. It appears that some of the arguments, and the admittedly fugitive facts supporting the arguments presumed to be favorable to Mr. Pound's release from St. Elizabeths Hospital, are not quite so well-known.

THE BEGINNINGS: FROM IDAHO TO POETHOOD

Ezra Weston (Loomis) Pound was born on October 30, 1885, in Hailey, Idaho.

His father was with the United States land office at Hailey; his paternal grandfather was a Member of Congress from Wisconsin;[1] and poet Henry Wadsworth Longfellow—by way of his mother—was a distant relative.[2] The Hailey Times of November 28, 1957, commented: "Pound left Hailey as a baby, grew up to poethood and one of the most controversial careers of our time."[3]

At the age of 15, Ezra Pound entered the University of Pennsylvania, and a year later, "to avoid irrelevant subjects," he enrolled as a special student. At the university, young Ezra and William Carlos Williams became friends. In 1904, Williams wrote his mother:

"Pound is a fine fellow; he is the essence of optimism and has a cast-iron faith that is something to admire. * * * He is just the man for me. But not one person in a thousand likes him, and a great many people detest him and why? Because he is so darned full of conceits and affectation. * * * His friends must be all patience in order to find him out and even then you must not let him know it, for he will immediately put on some artificial mood and be really unbearable. It is too bad, for he loves to be liked, yet there is some quality which makes him too proud to try to please people. I am sure his only fault is an exaggeration of a trait that in itself is good and in every way admirable. He is afraid of being taken in if he trusts his really tender heart to mercies of a cruel crowd and so keeps it hidden and trusts no one. Oh what a common fault it is—this false pride."[4]

At 18, Pound transferred to Hamilton College, Clinton, N. Y. A member of the Hamilton faculty described Pound's work as a student as "often brilliant, but erratic."[5]

Pound was graduated at 20 and, as a Fellow in Romance languages and literature, became "Instructor with professorial functions" at the University of Pennsylvania. Louis Untermayer, in his Makers of the Modern World, has described the next brief period of Pound's career as follows:

"Seemingly destined for an academic career, he took his master's degree at 21, went to Spain, France, and Italy, and spent a year on research for a thesis on the Spanish dramatist, Lope de Vega. Upon his return toward the end of 1907, he was invited to be on the faculty of Wabash College in Crawfordsville, Ind., "the Athena of the West," Pound satirically recalled, "a town with literary traditions, Lew Wallace, author of Ben Hur, having died there." He was dismissed after 4 months, charged with "unconventionality," "bohemianism," and other more ambiguous misdemeanors, "all accusations," said Pound, "having been ultimately refuted save that of being the Latin Quarter type."[6]

Footnotes at end of speech.

Osborn and Gronert, in their centennial history of Wabash College, observed:

"[Pound] came in 1907 to take over from Professor King's department of Modern Languages the classes in French and Spanish. * * * From the hour of his first class there was no doubt at Wabash of his scholarship nor of the brilliance of his mind. Nor was there any doubt that he on the one hand and the rest of Wabash College on the other were to find one another extraordinary, and at certain points funny."[7]

AN AMERICAN IN EUROPE

Pound took off for Europe. His first book, A Lume Spente, was published at Venice in 1908. In London and Paris, he befriended and helped many young writers—including Robert Frost, Ford Madox Ford, T. S. Eliot, James Joyce, W. B. Yeats, Jean Cocteau, and Ernest Hemingway—and earned a reputation as a poet and critic of the first order. It is generally considered that Mr. Pound played an important, if not the most important, role in articulating the new poetry of the 20th century, and he has been called the discoverer of poets and inventor of poetry for our time.

Carl Sandburg wrote in 1916:

"If I were driven to name one individual who, in the English language, by means of his examples of creative art in poetry, has done most of living men to incite new impulses in poetry, the chances are I would name Ezra Pound.

"Let some of those thrusting spears and inkpots at Ezra Pound try to be fair enough to read him. * * * He is worth having."[8]

In 1957, Carl Sandburg reiterated his view of Mr. Pound's poetry:

"The man in the hospital for the mentally retarded—there has been no money in what he has written though there's a high importance attached to it. * * * In Poetry Magazine in the year 1915 [sic] I had an appreciation of him, one of the most affirmative pieces of writing that I ever did. I'm sorry for Ezra but I go on reading him and will as long as I live. * * * Oh Greek and Latin and Shakespeare and Ezra Pound."[9]

In 1925, Mr. Pound moved from Paris to Rapallo, Italy, a resort on the Lugurian Riviera. There he made his residence for 20 years.

Mr. Pound's preoccupations during these 20 years have been described as follows:

"In the comparative peace of the Rapallo of those days he intensified his creative and critical activities. Never had his energy been more unflagging. Never had his concern for the arts been deeper or more embracing. He worked on an opera on Cavalcanti; he wrote a book on economics; several on literary subjects; he delivered lectures; he continued his Cantos. In the town hall of Rapallo he held concerts where, by means of programs of skillfully arranged contracts, he succeeded in drawing attention to the works of composers, such as William Young and Vivaldi, who was not then performed as he is now. First-rate executants played at these concerts for a division of the gate. They considered the work Pound was doing worth doing. After the first concerts held in the local cinema the municipal authorities allowed Pound to use the town hall free of charge. [The fact that the municipal authorities backed the Rapallo concerts was not calculated to prejudice Pound against the regime; but it must be emphasized that he never accepted the regime on its face value. He thought it had a better record of achievement, in certain respects, than any other government of the time; but that was all.] Pound's Chinese studies, started in 1913, began about the middle thirties to bear fruit. In numerous pamphlets and prose books the pragmatic Confucian ethic took its place, interlocking in Pound's thought, with Social Credit, the teachings of Jefferson and Adams, and Cath-

Footnotes at end of speech.

olic and Fascist theories of the corporate state, to which, from the time he had settled in Italy, he had become increasingly drawn." [10]

In 1948 some 60 citizens of Rapallo, headed by the mayor, wrote:

"The undersigned, who knew the American writer Ezra Pound in Rapallo, where he had lived since 1923, declare it is not true that he took part in Fascist activities in this city. There is no record of his presence at local meetings, nor was he a member of Fascist organizations.

"He was always considered an American citizen, a friend of Italy, openly sympathetic with certain Fascist principles of a social-economic nature, and with the struggle against communism, which he believed was a danger to the United States themselves. During the war Mr. Pound continued to reside in Rapallo, and from his mode of life it was evident that he did not enjoy privileges, but that he even suffered hardships and economic privations.

"Since it is an evident fact that he never acted from motives of profit, he was able to keep the respect of even those neighbors of his who disagreed with his political opinions.

"During the long years of residence in Rapallo, Mr. Pound's activity was always artistic and cultural, as illustrated in his writings in literary criticism and political economy.

"He always conducted himself properly and never engaged in anti-Semitic activity." [11]

In 1939, Mr. Pound came to the United States for a visit and especially to accept an honorary degree from his alma mater Hamilton College, Clinton, N. Y. The citation presented to Mr. Pound read as follows:

"Ezra Pound: native of Idaho, graduate of Hamilton College in the class of 1905, poet, critic, and prose writer of great distinction. Since completing your college career you have had a life full of significance in the arts. You have found that you could work more happily in Europe than in America and so have lived most of the past 30 years an expatriate making your home in England, France, and Italy, but your writings are known wherever English is read. Your feet have trodden paths, however, where the great reading public could give you few followers—into Provencal and Italian poetry, into Anglo-Saxon and Chinese. From all of these excursions you have brought back treasure. Your translations from the Chinese have, for example, led one of the most gifted of contemporary poets to call you the inventor of Chinese poetry of our time. Your Alma Mater, however, is an old lady who has not always understood where you were going, but she has watched you with interest and pride if not always with understanding. The larger public has also been at times amazed at your political and economic as well as your artistic credo, and you have retaliated by making yourself—not unintentionally perhaps—their gadfly. Your range of interests is immense, and whether or not your theories of society survive, your name is permanently linked with the development of English poetry in the 20th century. Your reputation is international, you have guided many poets into new paths, you have pointed new directions, and the historian of the future in tracing the development of your growing mind will inevitably, we are happy to think, be led to Hamilton and to the influence of your college teachers. You have ever been a generous champion of younger writers as well as artists in other fields, and for this fine and rare human quality and for your own achievements in poetry and prose, we honor you." [12]

Footnotes at end of speech.

While in the United States, Mr. Pound "succeeded in arousing bitter controveries by his praise of fascism and his favorable comparison of Mussolini to Jefferson." [13]

Upon returning to Italy, Mr. Pound continued his bitter denunciation of Franklin Delano Roosevelt, the American educational system, Jewish "usurers," Winston Churchill, Joseph Stalin, and bad poetry.

BETWEEN 1940 AND 1945

Mr. Pound began broadcasting over Radio Rome about literary and economic matters and these broadcasts became a soapbox for the world famous poet and amateur economist. Then came Pearl Harbor.[14]

Mr. Pound chose to continue broadcasting.

The monitored transcripts of his broadcasts may be examined on microfilm at the Library of Congress. Significant although not entirely representative extracts from those broacasts appear as an appendix to this report.

Whether these broadcasts represented acts of treason against the United States [15] is not a matter for decision of the Legislative Reference Service of the Library of Congress.

On July 26, 1943, a District of Columbia grand jury indicted Ezra Pound and seven other Americans, who were broadcasting from Italy and Germany, for treason.[16]

Upon hearing in Italy that he had been indicted Mr. Pound wrote a letter, dated August 25, 1943, to the Attorney General, Francis Biddle, protesting the indictment. The Swiss legation at Rome forwarded the letter through the American Secretary of State. Mr. Pound, in his letter, wrote:

"I have not spoken with regard to this war, but in protest against a system which creates one war after another, in series and on system. I have not spoken to the troops, and have not suggested that the troops should mutiny or revolt.

* * * * *

"At any rate, a man's duties increase with his knowledge. A war between the United States and Italy is monstrous and should not have occurred. And a peace without justice is not peace but merely a prelude to future wars. Someone must take count of these things. And having taken count must act on his knowledge, admitting that his knowledge is partial and his judgment subject to error.

"Very truly yours,

"EZRA POUND." [16a]

1945

On May 5, 1945, Mr. Pound surrendered near Genoa. He was sent to the METOUSA Disciplinary Training Center at Pisa where he was incarcerated for over half a year. When Pound was first brought to Pisa, he was put in a specially-constructed, grilled security cage. He was kept in this cage for several weeks after which he was transferred to a pyramidal tent. Maj. Julian Le Page, training officer at the training center, now stationed at the Pentagon, said: "I never heard anything other than the fact that Pound was cooperative and that is why I think he was moved out of the cage."

The following sketch of the cage was made from a United States Army photograph:

On November 26, 1945, Mr. Pound was reindicted on 19 "overt acts of treason." Seven Italians who said they had seen Mr. Pound make "anti-Allied" broadcasts from Rome and Milan had flown to the United States voluntarily in early November to testify before the District of Columbia Federal grand jury which returned the indictment.

The grand jurors presented:

"That Ezra Pound * * * at all times * * * and now * * * a citizen of the United States of America and a person owing allegiance to the United States of America * * * at Rome, Italy and other places within the Kingdom of Italy * * * in violation of [his] duty of allegiance, knowingly, intentionally, willfully, unlawfully, feloniously, traitorously and treasonably did adhere to the enemies of the United States, to wit; the Kingdom of Italy and the military allies of the said Kingdom of Italy, with which the United States at all times since December 11, 1941 * * * have been at war, giving to the said enemies of the United States aid and comfort within the United States and elsewhere." [17]

Footnotes at end of speech.

On November 27, 1945, Mr. Pound stood mute on arraignment and a plea of not guilty to that indictment was entered by the Court. On December 4, 1945, Mr. Pound was admitted to Gallinger Hospital and 10 days later, in pursuance of an appointment by the Court, Drs. Winfred Overholser, Marion R. King, Joseph L. Gilbert, and Wendell Muncie submitted a joint written report to the Court that they had thoroughly examined Mr. Pound and that it was their unanimous opinion that he was suffering from a paranoid state which rendered him mentally unfit to advise properly with counsel or to participate intelligently and reasonably in his own defense. Mr. Pound, they said, was insane and mentally unfit for trial. The text of the letter from the four psychiatrists, dated December 14, 1945, follows:

"The undersigned hereby respectfully report the results of their mental examination of Ezra Pound, now detained in Gallinger Hospital by transfer for observation from the District jail on a charge of treason. Three of us (Drs. Gilbert King, and Overholser) were appointed by Your Honor to make this examination. At our suggestion, and with your approval, Dr. Wendell Muncie, acting upon the request of counsel for the accused, made an examination with us and associated himself with us in this joint report. Dr. Muncie spent several hours with the defendant, both alone and with us, on December 13, 1945, and the others of us have examined the defendant each on several occasions, separately and together, in the period from his admission to Gallinger Hospital on December 4, 1945, to December 13, 1945. We have had available to us the reports of laboratory, psychological and special physical examinations of the defendant and considerable material in the line of his writings and biographical data.

"The defendant, now 60 years of age and in generally good physical condition, was a precocious student, specializing in literature. He has been a voluntary expatriate for nearly 40 years, living in England and France, and for the past 21 years in Italy, making an uncertain living by writing poetry and criticism. His poetry and literary criticisms have achieved considerable recognition, but of recent years his preoccupation with monetary theories and economics has apparently obstructed his literary productivity. He has long been recognized as eccentric, querulous, and egocentric.

"At the present time he exhibits extremely poor judgment as to his situation, its seriousness and the manner in which the charges are to be met. He insists that his broadcasts were not treasonable, but that all of his radio activities have stemmed from his self-appointed mission to save the Constitution. He is abnormally grandiose, is expansive and exuberant in manner, exhibiting pressure of speech, discursiveness, and distractibility.

"In our opinion, with advancing years his personality, for many years abnormal, has undergone further distortion to the extent that he is now suffering from a paranoid state which renders him mentally unfit to advise properly with counsel or to participate intelligently and reasonably in his own defense. He is, in other words, insane and mentally unfit for trial, and is in need of care in a mental hospital."

Footnotes at end of speech.

1946 TO 1954

On January 18, 1946, the Court heard and granted a motion for a formal statutory inquisition to determine Mr. Pound's sanity.

The four psychiatrists, Drs. King, Muncie, Gilbert, and Overholser, who signed the above letter, testified before the inquisition on February 13, 1946, that Mr. Pound was mentally incompetent to stand trial. Pertinent extract from their testimony appear in an appendix to this report.

The Court instructed the specially-impanelled jury:

"Under the state of the law, you are not bound by what they say * * * in a case of this type where the Government and the defense representatives have united in a clear and unequivocal view with regard to the situation, I presume you will have no difficulty in making up your mind."

The jury retired to consider its verdict, and 3 minutes later returned with the finding that the respondent Ezra Pound was of unsound mind.[18]

Following the verdict, Mr. Pound was committed to the custody of the United States and was confined in St. Elizabeths Hospital, Washington, D. C.

Mr. Pound was placed in a criminal lunatic ward at St. Elizabeths, but in 1947, following an unsuccessful motion for bail for Mr. Pound, he was removed to Center Building where he has been quartered for 11 years now.

During the period Mr. Pound has been incarcerated at St. Elizabeths, he has continued to write poetry and to receive visitors, including his wife, Dorothy Shakespear Pound, who has been living a few blocks from the hospital in southeast Washington.

In 1949, Mr. Pound was awarded the Library of Congress-Bollingen prize of $1,000 for "the highest achievement of American poetry in 1948," his Pisan Cantos. Mr. Pound had been selected for the award by a jury of Fellows of the Library of Congress in American Letters. This award created quite a furor because the recipient poet was an "accused traitor."

Robert Hillyer, in the Saturday Review of Literature, wrote: "It is ironic that among the conditions for the award is the stipulation that the recipient must be an American citizen. By some tenuous legality, he may be a citizen, but he knows nothing and cares less about civil obligations * * *. The 1949 Bollingen award is a permanent disgrace."[19]

Even Radio Moscow got into the act, commenting: "One is prompted to ask, How low and miserable must be the quality of modern bourgeois poetry in America if even the insane and verified ravings of a confessed madman could win a literary prize?"[20]

The Librarian of Congress, Luther H. Evans, in a letter to the Saturday Review, said:

"In my many years of study and teaching in the field of political science, I came to regard a political test for art and poetry as a sign of dictatorial, illiberal, undemocratic approach to matters of the mind. * * * I do not feel that it would be proper for me to override the judgment of persons * * * charged with the responsibility to make the judgment [to select the Bollingen prize-winner]."[21]

The Library discontinued its sponsorship of this poetry prize. Mr. Pound continued to be famous as a poet but more and more frequently he was described in the press as the "mad poet" or the "insane traitor."

THE PAST 4 YEARS

In 1955, Prof. Giovanni Giovannini, of the Catholic University of America, wrote that the American press had "maintained a prolonged silence on opinion and sentiment favoring Pound."[22]

The year before, Ernest Hemingway had declared that Pound "should be freed to go and write poems in Italy where he is loved and understood. * * * I believe this would be a good year to release poets."[23]

In December 1955, Sam Hynes wrote in Commonweal magazine, a liberal Catholic weekly, that "it is only prudent to remind ourselves that one room at St. Elizabeths is a closet which contains a national skeleton."[24]

Life magazine, in an editorial, quoting the Hynes statement, urged that "the arguments for quashing the indictment against Ezra Pound should be publicly considered."[25]

New Republic magazine on April 1, 1957, published an editorial declaring: "And yet we would like to see the Government give this old man and this eminent poet his freedom—if not as an act of justice, then as an act of largesse."[26]

Harold Lord Varney in American Mercury, April 1957, suggested that Mr. Pound had been put away as a matter of political convenience "rather than to air his mishandled case in the public glare of the courts." Varney added: "The American Civil Liberties Union does not appear to be concerned over this particular miscarriage of justice."[27]

In August 1957, the American Civil Liberties Union declared that "for a number of years" it had been concerned over Mr. Pound's continued confinement at St. Elizabeths Hospital. The ACLU offered support for "a possible legal challenge."[28]

On August 21, 1957, Representative USHER BURDICK, of North Dakota, introduced House Resolution 403:

"Whereas Ezra Pound has been incarcerated in Saint Elizabeths Hospital for the past 12 years on the assumption that he is insane; and

"Whereas many people visit him there and are convinced that he is not insane:

"*Resolved*, That the Committee on the Judiciary, acting as a whole or by subcommittee; is authorized and directed to conduct a full and complete investigation and study of the sanity of Ezra Pound, in order to determine whether there is justification for his continued incarceration in Saint Elizabeths Hospital."[29]

The September 1957 issue of Esquire magazine contained a thorough article on the Pound case by Richard Rovere. For several months thereafter, Esquire published many letters to the editor, many from recognized literary figures, most of which strongly endorsed the immediate release of the aging poet.[30]

On March 16, 1958, the Washington Sunday Star reported that the Attorney General, recently urged by poet Robert Frost to review Mr. Pound's case, was studying the possibility of quashing the indictment against Mr. Pound. According to the Star, a Justice Department spokesman "acknowledged that 'certain preliminary steps had been taken to make it easier to reach a decision.'"[31]

On March 23, 1958, the Washington Post and Times-Herald published an editorial:

"It seems highly improbable that Pound, now 72, would be a menace to anyone. If the psychiatrists so conclude, we can see no reason why he should not be released under conditions that would assure him proper care and supervision. It is not reasonable to suppose that the Department of Justice would have any interest in pressing charges against him again * * * the Department could reasonably clear the way for his release at any time the psychiatrists conclude he would be harmless and that the proposed arrangements for his care are adequate."[32]

On April 1, the Attorney General, William P. Rogers, commented at a press conference:

"The doctors have taken the position he [Pound] is not competent to stand trial and they have some doubt if he will be. * * * Is there point in keeping him if he never can be tried?"[33]

The Washington law firm of Arnold, Fortas, and Porter announced on April 5 that, in "the public interest, without a fee, following a request by Robert Frost," it had agreed to represent Mrs. Pound in Mr. Pound's behalf.[34]

The Louisville Courier-Journal asked: "Is Ezra Pound shut up in a mental institution because he is a traitor or because he is insane?" The Kentucky newspaper asked for "peace, of a sort, for Ezra Pound."[35]

On April 6, Representative EMANUEL CELLER, of New York, chairman of the House Judiciary Committee, protested any plan to release the poet from St. Elizabeths. Said Representative CELLER:

"I don't care how long he has been in there, maybe we want to keep him in a little longer. * * * I can't understand how they'd let him out scot free. I can't conceive of that.

"Many of our men lost their lives as a result of his exhortations."[36]

The next day, Mr. Pound's law firm issued a statement as follows:

"We have been retained by Mrs. Ezra Pound to institute legal proceedings to secure Mr. Pound's release from St. Elizabeths and to dismiss the 13-year-old indictment.

"We are informed that Mr. Pound's mental condition is such that he will never be able to stand trial, although he is not a danger to himself or society.

"Mrs. Pound has advised us that if Mr. Pound is released they will proceed to Italy where Mr. Pound has spent many years of his life.

"Dismissal of the indictment will not prevent reindictment and trial of Mr. Pound for treason if warranted and if, at some later time, he should recover his mental competence. There is no statute limiting the time when a person may be indicted for treason. However, Government psychiatrists who have studied Mr. Pound for 13 years have stated that there is no prospect of his recovery.

"It is intended that formal legal papers on behalf of Mrs. Pound will be filed in a few days."[37]

On April 9, the Defenders of the American Constitution, Inc. called Representative CELLER's recent remarks "at once absurd and irresponsible. These statements assume as conclusions of law and fact accusations that even the administration that indicted him did not presume to make. * * * Congressman CELLER's statement show him to be more militant than judicial."[38]

The London Times on the same day editorialized:

"Mr. Pound's countrymen will strengthen us in our knowledge that they are fundamentally and traditionally magnanimous if they follow the lead already given by their Attorney General, and allow this strange man a chance to fulfill himself."[39]

The Washington Star, on April 10, concluded: "Considering all the circumstances, it does not seem to us that the ends of justice will be served by the continued confinement of this man."[40]

On April 14, Thurman Arnold and William D. Rogers of Arnold, Fortas, and Porter, filed a motion to dismiss indictment in the case of United States of America versus Ezra Pound. The motion stated:

"If the indictment against him is not dismissed he will die in St. Elizabeths Hospital * * * There can be no benefit to the United States in maintaining him indefinitely in custody as a public charge because that custody cannot contribute to his recovery and defendant's release would not prejudice the interests of the United States. The inevitable effect of failure to dismiss the indictment will be life imprisonment on account of alleged acts and events which can never be put to proof."[41]

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

Filed with the motion was an affidavit by Dr. Winfred Overholser, superintendent of St. Elizabeths Hospital, declaring that Mr. Pound was "permanently and incurably insane," that "there is a strong probability that the commission of the crimes charged was the result of insanity," and that "further confinement can serve no therapeutic purpose." Dr. Overholser stated that Mr. Pound was "not a dangerous person and his release would not endanger the safety of other persons or the officers, the property, or other interests of the United States."[42]

Robert Frost, as friend of the Court, also filed a statement through Mr. Pound's attorneys, saying:

"None of us can bear the disgrace of our letting Ezra Pound come to his end where he is. It would leave too woeful a story in American literature * * * I can see how the Department of Justice would hesitate from fear of looking more just to a great poet than it would be to a mere nobody."[43]

Hearing on the motion to dismiss indictment has been set for April 18, 1958, before the United States District Court for the District of Columbia.

NOTE AS OF APRIL 18, 1958

The 15-year old treason charges against Ezra Pound were dismissed on April 18, 1958, by the District Court of the United States of the District of Columbia, Chief Judge Bolitha J. Laws presiding.

Attorney Thurman Arnold (of Arnold, Fortas, and Porter) told the court that he was representing Mr. Pound "at almost unanimous request of leading writers of the United States and England." In arguing the motion to dismiss indictment, Mr. Arnold said "I do not think it necessary to raise the question of constitutionality." The United States Attorney Oliver Gasch, stated:

"I have studied the affidavit * * * and am satisfied as to the present competency of the defendant to stand trial. * * * Therefore, I do not oppose; in fact I consent to Mr. Arnold's motion."

Judge Laws asked the Government's attorney whether the Government still desired to study the possibility of Mr. Pound's mental incompetence at the time of the alleged crimes. Mr. Gasch replied that "it would be virtually impossible to get [such] evidence in this case," because of the considerable passage of time.[44]

Twelve years ago, Attorney Julian Cornell (then representing Mr. Pound) had written Mrs. Pound that "sooner or later," in the absence of any medical reason to confine Mr. Pound, and "if the case is decided without intolerance and in accordance with legal principles," Mr. Pound would have to be released. Attorney Cornell, however, suggested the case would "not be an easy one".[45]

On April 18, 1958, the Associated Press reported that Jerome, Idaho, radio station KART had offered Mr. Pound a job as radio news commentator.[46] Attorney Arnold told the court that Mr. Pound "expects to go to Italy after he is released."

On April 17, the Wall Street Journal editorialized that in the Pound case, "a little magnanimity would seem to be in order."[47] A letterwriter to the Washington Post expressed opposition to Mr. Pound's release because "the war with Germany and Japan * * * is not forgotten, by the Gold Star Mothers of which I am one."[48]

[14] Several writers have suggested that Mr. Pound attempted to return to the United States in 1941 and that he was denied permission to return to this country. An examination of pertinent State Department Passport Division files does not substantiate this claim. To the contrary, it appears that the State Department was officially eager to have Mr. Pound return to the United States and in 1941 his passport was extended, for six months only, in order to compel his return. However, the documents in the State Department files do not preclude the possibility of the development of a misunderstanding between Mr. Pound and a consular official which might have unintentionally aborted Mr. Pound's "attempt" to leave Italy. (This point is treated more fully below.)

[15] *Cramer* v. *United States* (325 U. S. 1, 65 S. Ct. 918):

"The crime of treason consists of 2 elements, both of which must be present in order to sustain a conviction: (1) adherence to the enemy, and (2) rendering him aid and comfort.

"The term aid and comfort as used in the provision of the Federal Constitution defining treason as giving aid and comfort to the enemy contemplates some kind of affirmative action, deed, or physical activity tending to strengthen the enemy or weaken the power to resist him, and is not satisfied by a mere mental operation.

"* * * the acts done must be intentional.

"The intent sufficient to sustain a conviction of treason must be an intent, not merely to commit the overt acts complained of, but to betray the country by means of such acts."

Quotation of Thomas Jefferson in appendix to Cramer case:

"In a letter of April 24, 1792, Jefferson, then Secretary of State, wrote: 'Treason * * * when real, merits the highest punishment. But most codes extend their definitions of treason to acts not really against one's country. They do not distinguish between acts against the government and acts against the oppressions of the government: the latter are virures; yet they have furnished more victims to the executioner than the former, because real treasons are rare, oppressions frequent'." (See Eight Writings of Thomas Jefferson (Library ed. Wash. 1903), p. 332.)

[16] The 7 others were Jane Anderson, Robert H. Best, Douglas Chandler, Edward Leo Delaney, Constance Drexel, Fred W. Kaltenbach, and Max Koischwitz. The indictments against Anderson, Delaney, and Drexel were dismissed in 1947, 1947, and 1948, respectively, for insufficient evidence in view of the decisions of the Supreme Court in the Haupt and Cramer cases. Kaltenbach reportedly died in a Russian prison; Koischwitz died in Germany during the war. Best was convicted, sentenced to life imprisonment in 1948, and died 4 years later. Chandler was convicted and sentenced to life imprisonment in 1947. Only the Pound case is now pending.

[12] Overholser, Winfred. Affidavit, April 14, 1958.

[13] Mr. Frost's full statement appears in an appendix to this report.

Ezra Pound wrote Alice Henderson in 1913 that Mr. Frost was "very American." In 1915, he wrote the editor of the Boston Transcript that Mr. Frost was a "bloated capitalist." In the same year, he said to H. L. Mencken, about his (Frost's) poems, "he has reality."

It has been said Mr. Pound played a substantial role in securing Mr. Frost's early American publication. Mr. Frost, at a University of North Carolina lecture in 1955, said of Mr. Pound: "Of course, quite a few poets owe a * * * debt to Ezra Pound, but we all know he had no business on the radio. But Ezra Pound always was a stubborn man."

Apparently, Mr. Frost began individual lobbying for Mr. Pound's release during 1957 after earlier joint attempts by Archibald MacLeish and Mr. Frost, and an English committee, had failed.

[14] From notes taken at the hearing. The court reporter's transcript of hearing was not yet available.

The Medical, Legal, Literary, and Political Status of Ezra Pound

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part 2 of the Legislative Reference Service report on Ezra Pound by H. A. Sieber:

THE MEDICAL, LEGAL, LITERARY, AND POLITICAL STATUS OF EZRA WESTON (LOOMIS) POUND (1885-)—SELECTED FACTS AND COMMENTS

(Second installment)

(By H. A. Sieber, research assistant, Senior Specialists Division, the Library of Congress Legislative Reference Service, March 31, 1958, revised April 14, 1958)

MR. POUND'S SANITY

Whether Mr. Pound is sane, or insane, or sufficiently sane to be released from a mental institution, would appear to be, in the final analysis, a question for the psychiatrists.

As Mr. BURDICK's House resolution of August 21, 1957, indicates, "many people visit him [Mr. Pound] there [at the hospital] and are convinced that he is not insane." It should be noted that there is expert opinion to the effect that frequently persons who suffer from paranoic delusions appear to be, for all or most practical purposes, quite sane. However, the delusions may make the person suffering from them incapable of comprehending the realities of certain situations, and as the psychiatrists have repeatedly stated in Mr. Pound's case, may make him incompetent to defend himself and therefore, to stand trial.

On March 16, 1958, Dr. Winfred Overholser was reported by the Washington Star as saying:

"It is perfectly possible to be mentally unfit to stand trial and yet be perfectly safe to be at large." [1]

On April 14, Dr. Overholser said in an affidavit filed by the attorneys for Mr. Pound:

"I have on a large number of occasions, both alone and with other psychiatrists * * * intensively tested, examined, observed and studied Ezra Pound. * * * Pound is, and since December 4, 1945, has been, suffering from a paranoid state which has rendered and now renders him unfit to advise properly with counsel or to participate intelligently and reasonably in his own defense. * * *

"* * * the condition of Ezra Pound * * * is permanent and incurable [and] will not and has not responded to treatment * * * further professional therapeutic attention under hospital conditions would be of no avail and produce no beneficial results.

"* * * Ezra Pound will die insane in St. Elizabeths Hospital without trial of the charges against him if the indictment remains pending.

"* * * there is strong probability that the commission of the crimes charged was the result of insanity, and I would therefore seriously doubt that prosecution could show criminal responsibility even if it were hypothetically assume that Ezra Pound could regain sufficient sanity to be tried.

"In the event that the indictment is dismissed, I will recommend the delivering of Ezra Pound from further confinement * * * under suitable arrangements for his custody, care, and restraint by his committee, Mrs. Dorothy Shakespear Pound. Further confinement can serve no therapeutic purpose * * * would be a needless expense and burden on the public facilities of the hospital. Ezra Pound is not a dangerous person and his release would not endanger the safety of other persons or the officers, the property, or other interests of the United States." [11]

MR. POUND'S PHYSICAL HEALTH

Mr. Pound's general physical condition apparently has been good. Dr. Addison Duval, then Acting Superintendent of St. Elizabeths, said in August 1957:

"Mr. Pound, as you well know, is an old man. I would say that he is in very good physical health for a man of his age. He plays tennis, for example." [4]

MR. POUND'S ANTISEMITISM

Whatever prejudices Mr. Pound may have are, of course, irrelevant to a consideration of his legal case.

For example, Mr. Pound's published prose and poetry have caused many persons to attack him for antisemitism. Mr. Pound himself has said that antisemitism is "unaristotelian" and that everyone should be judged on his merits,[5] and it has been suggested that he has been, at worst, "unaristotelian"; at best, reckless in his generalizations and stereotyping.

MR. POUND'S LITERARY STATUS

The late poet Dylan Thomas has said: "Only posterity can see the picture of the poetry of today as a whole."

However, Mr. Pound's status as a poet is rarely questioned. Individual poems, on the other hand, have found both favorable and adverse critics, which would appear to be the normal situation.[6]

PUBLIC OPINION

It would appear that the larger portion of the population knows very little, if anything about the Pound case. Generally, insofar as the active press mentions the case it appears to be favorable to Mr. Pound's release.

It may be doubted if there is any obvious consensus on the various issues which underlie the case. Mr. John Kasper, the propagandist for white supremacy, now in prison, has been connected with Mr. Pound by several writers, and the Pound-Kasper relationship has, for some persons, prejudiced Mr. Pound's predicament somewhat.[7]

MR. POUND'S LEGAL STATUS

When the district court records of the Pound case were examined in September 1957, the docket was marked with a rubber stamp: "Case closed."

In view of other evidence that the case was and is clearly still open, it is presumed that the clerk's entry on the docket represented clerical error, but the incident does indicate the passage of time which has aged but not obliterated either Mr. Pound or the charges against him.

Whether Mr. Pound is guilty of treason is not now the question. Under the law, he has been and is legally innocent in the absence of a conviction. His legal status at this time is therefore: a mental patient under indictment for treason. Conceivably, if Mr. Pound were to stand trial, he might be able to acquit himself before a court of law. At least there are certain features of his case which to some people have appeared sufficient to raise doubts of Mr. Pound's guilt. The determination of whether Mr. Pound is guilty of treason is a matter for a jury and not within the scope of this report.

Presumably, the Justice Department has sufficient evidence to make out a prima facie case—otherwise the grand jury would have refused to indict. It must be presumed that two witnesses to each overt act charged in the indictment, as required by the United States Constitution, were available in 1945, and are still available, else the indictment would stand to be quashed.[8]

The American Civil Liberties Union and others have questioned whether the statute under which Mr. Pound is kept at St. Elizabeths is constitutional. Again, it is not within the scope of this report to attempt to determine constitutionality of a congressional statute. The following arguments used by Mr. Pound's attorney, Mr. Julian Cornell, in 1947, summarizes the position generally taken by critics of the subject statutes:

"If on medical grounds the defendant should be released from custody, then to continue to hold him would be equivalent to a sentence of life imprisonment upon a man who is and always will be presumed innocent. He would be confined for the rest of his life because of an accusation which can never be proved. It is respectfully submitted that such confinement would be unlawful and unconstitutional." [9]

The present motion to dismiss the indictment declares: "The inevitable effect of failure to dismiss the indictment will be life imprisonment on account of alleged acts and events which can never be put to proof."

In 1947, the Government had argued that, within intent of Congress, the Federal statutes relating to confinement of the insane [10] would permit Mr. Pound to be released "only upon recovery of sanity and then to the custody of the court before which the criminal charge is pending."

As to the constitutionality of the statutes, if construed to deny right to bail, the Gov-

Footnotes at end of speech.

Footnotes at end of speech.

ernment argued that there was no constitutional right to bail and that Congress did not, in such cases as Mr. Pound's, intend to extend the privilege of bail.

During the past 5 years there have been cases in other Federal jurisdictions which have made the distinction between temporary and permanent insanity, and this distinction, it is contended, has weakened the Government's 1947 argument.

The subject statutes or similar statutes have been interpreted in some jurisdictions to provide for detention "for only such a reasonable period of time as will afford a fair opportunity to determine whether the accused is only temporarily incompetent and soon will be able to stand trial * * * [and] if [the accused] is not * * * he must be discharged." [11]

In Wells, by Gillig, v. *Attorney General of the United States,*[12] it was held that the wording of the statute looked to a temporary mental condition, not to a permanent one, and therefore, was not unconstitutional.

The present motion to dismiss the indictment does not concern itself with the question of constitutionality but appeals to the discretion of the Court because the defendant during commitment stands in the position of a ward of the Court.[13]

It is contended that the Court has, according to the Pack and Janitz cases, the inherent power to dismiss an indictment where justice requires and where the United States will never be able to prosecute.[14]

MR. POUND'S ALLEGED ATTEMPT TO RETURN TO THE UNITED STATES 1941–42

At least one writer has offered the opinion that if, indeed, Mr. Pound attempted to return to the United States late in 1941 or early in 1942 and if the State Department (considering him to be a quasi-American)[15] made it difficult or impossible for him to so repatriate, then the United States shares some of the responsibility for Mr. Pound's actions when he was left behind in enemy territory.

Current biography, Who's News and Why, 1942, declared:

"Oddly enough, when Pound attempted to return to the United States in 1941 to lecture on fascism he found himself unable to get transportation in spite of the fact that he said he had several sympathizers among Members of the United States Senate whom he had met in 1939. In May 1942, when he tried to get permission to join a diplomatic train which carried large groups of Americans from Italy to Lisbon, he was again refused.[16]

Francesco Monotti reminisced in 1950:

"Ezra Pound did not return (to the United States) for the simple and at bottom harmless antipathy of a consular officer of his country, who treated him cruelly and arrogantly. We remember him in Rome in company of (his wife), ready to sail. He had set everything in order for a long absence; had taken care of his apartment in Rapallo; * * * distributed works of art and his more prized pieces of furniture among his friends; bought tickets for the plane flight. A little contretemps in the date of departure and the manifest antipathy of the consul made him suddenly change his mind (and so, by accident) Ezra Pound became a fugitive and a traitor." [17]

Later, writing for the Rapallo Il Mare, Monotti elaborates:

"(The Pounds) had disposed of their place in Rapallo, given their more beautiful objects to friends and entrusted other things to Adm. Ubaldo degli Uberti. * * * The American Government had notified American citizens scattered around the world, and the Pounds, like good citizens, were ready to obey and return to the United States. But at the consulate there must have been someone who thought of them as black sheep. In those supreme moments between day and night in their lives, something of grave consequence must have happened at the consulate at Rome. * * * He returned a completely changed man. * * * He decided quickly, the tickets were returned to the airline, Ezra Pound decided to remain in Italy." [18]

Richard Rovere has written:

"It is a matter of record that he tried in 1942 to get aboard the last diplomatic train that took Americans from Rome to Lisbon. He was refused permission to board it. He had no choice but to stay in Rapallo." [19]

Eleanor and Reynolds Packard, who were in Italy on December 7, 1941, and who saw Pound on that day, reported in their book, Balcony Empire, published in 1942:

"The day of Pearl Harbor, Pound unexpectedly came to our house and told us that war between the United States and Italy was inevitable but that he intended to stay on. Reynolds told him that he would be a traitor if he did so." [20]

On this same day, according to the Rome Daily American of June 17, 1954, Mr. Pound is reported to have asserted to a friend who had brought him the news:

"I'm cooked. This is my end. But I want you to bear witness that I am first of all an American. I stand with my country, right or wrong. I will never speak over the air again." [21]

Commented Mr. Giovannini on the reports that Pound was stranded in Italy:

"If these reports are correct the Government bears some responsibility for the action of an American citizen left on enemy soil. And if they are false one wonders what effort the Government made to avoid the risk of leaving in enemy hands a citizen who had been severely critical of Roosevelt and his policies." [22]

MR. POUND'S INTENT TO COMMIT TREASON

Chet Huntley defined expatriate as "a person who is more at home far from home." "Am I an American?" asked expatriate Pound in 1939, and he answered his own question, "Yes." [23]

In 1940, before he actually got himself into his legal predicament, Mr. Pound wrote: "I dunno what my 23 infantile years in America signify. I left as soon as (my) motion was autarchic." [24]

When Reynolds Packard told Mr. Pound in 1941 that staying in Italy would make him a traitor, Mr. Pound apparently was unconcerned. Said Mr. Pound:

"I don't see why fascism is contrary to American philosophy. I have nothing against the United States, quite the contrary. I consider myself a 100-percent American and a patriot. I am only against Roosevelt and the Jews who influence him." [25]

Political Scientist Victor Kerkiss argues in the May 1955 Journal of Politics that Mr. Pound's views are an extension of American populism:

"The * * * facets of Ezra Pound's career— as poet, as critic, and literary midwife, and as political thinker—have a generic relationship to each other. * * * American fascism has its roots in American populism. * * * Ezra Pound's political philosophy is clearly in the mainstream of [the] abortive American fascism of the thirties." [26]

Psychiatrist Frederic Wertham presented a psychiatric study of Ezra Pound in the American Journal of Psychotherapy in 1949. Concluded Dr. Wertham:

"A career such as that of Ezra Pound is a reflection of our own social development in the last decades. * * * His insanity is an example of how we are trying to explain away profound defects in society by placing them outside of society, in the sphere of individual pathology. Ezra Pound has no delusions in any strictly pathological sense." [27]

Whether Mr. Pound had the necessary intent to betray his country is the question which a jury must answer before it can decide whether his overt acts are treasonable or acts, possibly, of patriotism gone astray.

When Mr. Pound was interviewed in 1945 on his arrival in the United States for trial, he said: "Does anyone really know what I said: * * * Get rid of the notion that I betrayed anybody."

Footnotes at end of speech.

[2] Affidavit, April 14, 1958.

[3] At least one psychiatrist has publicly differed with the expert testimony presented to the court as to Mr. Pound's sanity. In 1949, Dr. Fredric Wertham, of New York, in an article in a professional journal (cited elsewhere in this report), wrote: "What is wrong with him [Pound] * * * is not the disease of an individual but a symptom of social degeneration."

[4] Dr. Duval's comments are presented more fully in an appendix to this report.

[5] Pound, Ezra. Signed statement (unpublished manuscript in possession of Washington, D. C., resident).

[6] The controversy over Mr. Pound's receiving the Bollingen prize in 1949 (discussed briefly elsewhere in this report) would clearly show that there are various shades of opinion as to the degree of Mr. Pound's importance to 20th century poetry.

In 1945, Saxe Commins, editor of Random House, had refused to print some of Mr. Pound's poems in an anthology edited by William Rose Benet and Conrad Aiken. Said Mr. Commins at that time: "Random House is not going to publish any Facist. As a matter of fact, we don't think Ezra Pound is good enough, or important enough, to include. If we thought he was, we might have carried him anyway. We just don't think he is." Anthologist Aiken called this burning of books * * * a kind of intellectual and moral suicide which we might more wisely leave to our enemies. See Norman, Charles. The Case For and Against Ezra Pound. New York, P. M., 1945, pp. m12–m17.

[7] Mr. Pound has never publicly dissociated himself from Mr. Kasper's enterprises. However, it should be noted that Mr. Pound has not made public utterances of any sort, except as a poet and in his poetry, since he has been at St. Elizabeths.

[8] In the motion to dismiss indictment filed on April 14, 1958, Mr. Pound's attorneys stated that since the primary alleged acts and events on which the indictment was based occurred before July 25, 1943, "memories have faded and direct evidence by the constitutionally established minimum of two witnesses to each of the various alleged acts and events have inevitably dissipated." The attorneys argued further that the United States lacked sufficient evidence to warrant a prosecution.

[9] Motion for bail, February 1947.

[10] United States Code 24:211 provides: "If any person, charged with crime, be found * * * to be an insane person, [the] court shall certify the same to the Federal Security Administrator, who may order such person to be confined in Elizabeths Hospital. United States Code 24:211b provides that when the person so confined "shall be restored to sanity, the superintendent of the hospital shall give notice thereof to [the court], and deliver him to the court."

Forty-second Anniversary of Camp Crane, Allentown, Pa.

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. DAGUE. Mr. Speaker, acting on the request of my good friend Col. Albert E. Herrmann, past national commander, United States Army Ambulance Service Association, and out of my personal appreciation for the valiant service performed in World War I by the USAAC's, I am pleased to include the following statement commemorating at 42d anniversary of the founding of Camp Crane at Allentown, Pa., on June 1, 1917:

ALLENTOWN COMMEMORATING CAMP CRANE 42D ANNIVERSARY

Allentown, Pa., the training city of the United States Army Ambulance Corps, of World War I, will celebrate the opening of Camp Crane, at the Allentown Fair Grounds in 1917, when Pennsylvanians came from colleges and universities to enlist with the integral part of the Medical Department of the United States Army, to serve with the American AEF, the French, and Italian armies. Camp Crane opened June 1, 1917.

Young men from University of Pennsylvania, Temple University, Lafayette College, State College, Bucknell College, and Susquehanna University, and groups from Philadelphia, Pittsburgh, Scranton, Reading, Wilkes-Barre, Johnstown, Allentown, and Harrisburg sent sections for training.

In 1917 the first group of USAAC's left for overseas to serve with French Army, later with the Italian Army, and then with the American AEF, as they entered the front line service.

Lt. Col. A. Piatt Andrew, who served with the French Army, later with the USAAC's and also who served on his return from overseas, as a Member of Congress from Massachusetts met in Paris with representative USAAC's, many from Pennsylvania, to form the now known, the United States Army Ambulance Service Association, which held their first convention at the old fair grounds, at Allentown, Pa., in 1920.

Pennsylvanians who have served at national commanders of the USAAC's have been: I. Edward Cohen; Col. Richard Slee, Maj. George K. Weston, Albert E. Herrmann, Richard H. Short, Benjamin H. Bowen, Walter Davidson, Dr. Furman R. Shute, Arthur R. Markley, William J. Raudenbush, William A. Stoeltzing, and James M. E. Boes, and the present National Commander Warren S. Ward, of Lewistown, Pa., who is serving this year with the following national officers from Pennsylvania: Robert W. Faulkner, Kenneth R. Moore, James M. E. Boes, James J. Cummings, Charles L. Winkler, Albert E. Herrmann, and J. Harry Davie.

As the United States Army ambulance service enlisted in Philadelphia, in May 1917, the anniversary banquet will be held in Philadelphia, Pa., June 7, 1958, at McAllister's, with national officers, and local USAAC clubs attending from Allentown, New York, Johnstown, Boston, Batavia, Atlantic City, and New Jersey USAAC posts joining with the Philadelphia USAAC Post, No. 1. Commander Edward Kasten will preside, with Clarence Keifreider as chairman, and the following members of the distinguished guest committee: F. Warren King, Charles R. Ashford, Gustave Blind, Albert E. Herrmann, J. Harry Davie, Frank C. Olds, Robert W. Faulkner, Kenneth R. Moore, Thomas H. Ellis, and James D. Hill.

Sudden Death for Effective Poultry Inspection

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mrs. SULLIVAN. Mr. Speaker, the consumers of this country must be warned that unless a decision announced yesterday by Secretary of Agriculture Benson is reversed immediately, they may be eating diseased and unwholesome poultry—poultry harboring virus agents, toxic substances of the vilest kind, tumors consisting of masses of dead cells—and they will be buying this poultry under the innocent impression it is wholesome, because it bears the stamp of approval of the United States Department of Agriculture.

Mr. Speaker, I realize this is a serious charge to make. As one who fought for elimination of diseased poultry in interstate commerce and for the enactment last year of the Poultry Products Inspection Act which is supposed to go into effect the day after tomorrow, I am not at all happy to have to come before the House and say the new law has just been shot full of holes.

Yet that is what appears to have happened. Secretary Benson signed an order overruling his own experts and the public-health authorities of the Nation, and suspending one of the key consumer safeguards in the regulations under which the new Poultry Products Inspection Act is to be administered.

He has suspended the regulation which requires removal of kidneys from inspected ready-to-cook poultry. This regulation is now to apply only to mature poultry, not to the so-called young birds which make up perhaps 75 percent or more of all poultry processed and shipped in interstate commerce.

SECRETARY BENSON'S HANDOUT TO PROCESSING FIRMS

Why did Mr. Benson sign such an order? The press release on it said it was for the purpose of enabling the various poultry processing plants to operate on a comparable basis in 1958. This is pure doubletalk. What it means is that certain segments of the poultry industry, reluctant to install the required equipment and unable to shake the convictions of the career experts in the Department, finally got to the Secretary and prevailed upon him—at the very last moment—to overrule his own experts, and give the processing plants what amounts to a sizable gift of money at the expense of decent standards of purity for poultry.

The firms in the poultry processing industry which pulled off this fantastic robbery of the American consumer have used Mr. Benson as an accessory in a crime against the public health.

This is strong language. But it takes strong language adequately to describe the significance of this development.

Will anyone die from eating poultry which has been inspected and passed as wholesome by the United States Department of Agriculture but which is not in fact wholesome? I do not know. Probably not. But perhaps yes. I just do not know. I am not a scientist or a veterinarian or a public-health expert.

POSITION OF DEPARTMENT OF AGRICULTURE EXPERTS

But here is what Mr. Benson's own Department of Agriculture experts say about leaving the kidneys in poultry while it is being examined and inspected for wholesomeness:

SOME FACTORS UNDERLINING THE REQUIREMENT FOR REMOVAL OF KIDNEYS FROM READY-TO-COOK POULTRY

UNITED STATES DEPARTMENT OF AGRICULTURE,
AGRICULTURAL MARKETING SERVICE,
Washington, D. C., November 22, 1957.

In regulations to be issued under the recently enacted Poultry Products Inspection Act, the United States Department of Agriculture contemplates that the kidneys will be removed from inspected ready-to-cook poultry. The purpose of such a requirement is to assure the wholesomeness of poultry products.

The inclusion of this requirement in the regulations is based on the legal mandate to insure wholesomeness and the Department's consideration of views expressed by representatives of the poultry industry; Federal,

State, and local public-health officials; specially qualified poultry pathologists, veterinarians, and other scientific persons; representatives of State departments of agriculture and the agricultural colleges; and members of the Department's staff of veterinarians engaged in Federal poultry inspection.

Some of the underlying factors for requiring the removal of kidneys are as follows:

1. Under modern poultry-processing procedures, it is practically impossible to inspect poultry kidneys by reason of the position of these organs in the carcass because:

(a) Less than half of kidney surfaces, in their natural carcass position, can be seen or felt by the inspector.

(b) Feeling of the kidney without visual examination will not in itself insure adequate wholesomeness inspection.

2. Kidneys left in ready-to-cook poultry may result in unwholesome poultry reaching the consumer because:

(a) The occurrence of tumors in kidneys is quite common, some of which may be small and deep within the kidney body. There may also be small, deep-seated diseased-tissue areas consisting of masses of dead cells and other cells affected by degenerative processes or minute cysts or abscesses which will most likely be overlooked.

(b) The kidney is an excretory organ through which toxic substances, waste materials such as urates, and foreign material are formed or received and eliminated from the system of the bird. Body waste materials in kidneys cannot be washed from kidney tissues during processing.

(c) Kidneys are highly perishable. Their glandular nature and blood supply compared to other body tissues make poultry kidneys susceptible to early objectionable post mortem changes.

(d) Tearing or shredding of kidneys during processing, even when the intention is to leave them in, is conducive to contamination and unwholesomeness.

(e) Viruses and other disease agents, some of which are harmful to man, may be harbored in kidneys of birds which show no clinical or post mortem evidences of the presence of disease or unwholesomeness, but are apparent upon laboratory examination.

ISSUE DEBATED FOR MONTHS

Mr. Speaker, the decision to call for removal of kidneys in inspecting all ready-to-cook poultry was not final as of November 22. The Department scheduled separate hearings on all phases of the proposed regulations in all parts of the country and this particular issue was fought out and debated and discussed in all of them.

But when the regulations were issued in final form—or what we thought was final form—in February of this year, this requirement remained unchanged. Others among the proposed regulations were changed or amended or dropped, but this one was unchanged. It was based on the solid conviction of the Department's experts that the legal mandate of the new law, requiring that poultry in interstate commerce be wholesome, required in turn that kidneys must be removed for inspection as part of the process of approving ready-to-cook poultry.

BENSON'S ORDER COMES AS LAST MINUTE SURPRISE

It is significant, Mr. Speaker, that although some segments of the poultry processing industry have supported proposed legislation this year to weaken other provisions of the new law, no bill was introduced, so far as I know, to eliminate the provision of the regulations dealing with removal of kidneys.

So the public had a right to assume this issue had been resolved as of last February.

But yesterday, out of the blue, Mr. Benson announced he had suspended this regulation for the rest of 1958. The stage is meanwhile being set to drop this regulation completely. And in the meantime, unwholesome poultry can slip through with a Federal seal of approval.

The same sort of thing happened under the voluntary paid-for-by-industry inspection program. It used to be mandatory under that program that kidneys be removed for inspection. In 1951 the requirement was eliminated on the claim that an inspector could tell by feeling inside the carcass whether the kidney is diseased.

But the Department is clearly on record as saying such a thing is now virtually impossible under modern poultry processing procedures.

I think the consumer would feel a whole lot more secure about the poultry she buys if the experts in the Department of Agriculture, and the public health people, decide the basic regulations instead of the Secretary of Agriculture deciding on the basis of complaints from firms which want to save themselves the expense of proper processing equipment.

BENEFITS TO PROCESSORS UNDER NEW ACT

Mr. Speaker, no one wants to put the poultry processor out of business or bankrupt him. I have suggested several times that if the new law creates financial crises for small firms, that we use the Small Business Administration's loan program to help them get the equipment or machinery they might need to comply with the new law.

But let us not destroy the law's effectiveness by bringing poultry inspection down to the level of the least common denominator in terms of ease of compliance. It was not intended to be a law easy to comply with—it was meant to be effective in protecting the public.

There is a decided advantage to firms—a decided financial advantage—in coming in under the new Poultry Products Inspection Act now, prior to mandatory operation of the act next January 1. Most firms which have already filed applications to come in under the new act are presently under the voluntary paid-for-by-industry program. They have had to pay for the cost of the inspection system up to now in order to get the United States stamp of wholesomeness on their product. Under the new act, the Federal Government pays all costs of the inspection service except overtime. So a firm which has been paying for the inspection service up to now will benefit tremendously by having Uncle Sam take over that cost.

In return for this, the processor should be expected to comply fully with the spirit and intent of the new law. Instead, apparently, some influential processors have reached Secretary Benson and persuaded him to overrule his experts and seriously weaken the effectiveness of the new program.

So the consumer, through his taxes, will be paying for tight poultry inspection but will be getting instead substantially the same kind of less rigid inspection now being provided in many plants at the expense of the processor. And this means the possibility of diseased poultry slipping through.

WHY DID MR. BENSON SURRENDER WITHOUT A FIGHT?

Mr. Speaker, I hope that Secretary Benson's action yesterday in suspending this key regulation dealing with the removal of kidneys from inspected ready-to-cook poultry was based on nothing more than lack of understanding of what he was doing or what it meant.

There are rumors floating around that he was pressured into it by threats of various kinds from firms in the poultry industry. This sounds incredible and unbelievable.

I do know, however, that up to the time this order was issued, only about 15 firms in the entire country had completed their applications for inspection under the new program beginning May 1—only about 15 out of perhaps 500 or more which are in the process of qualifying.

Were the others on a sit-down strike to force the Secretary to surrender on this question of kidney removal? Did they know or anticipate that the regulations would be eased in such a dramatic way just 3 days before the start of the new act's operation? Can we now look for a sudden flurry of action by these other firms whose applications are pending so that they can complete their arrangements and come in under the program almost overnight?

I am only surmising. But if it is true that there was an organized conspiracy here to fail to come into compliance until the rules were rewritten to their liking, then I think we have a basis here for a congressional investigation and perhaps a Justice Department one as well.

But Mr. Speaker, I am not as much concerned over an attempt by the industry to pull that kind of stunt as I would be over the Secretary of Agriculture's willingness to let them get away with it, if that is what did in fact happen.

The Department of Agriculture had nothing to lose from starting this program on May 1 with just 15 firms in voluntary compliance. Those 15 firms were ready and willing and able to comply with all provisions of the regulations, including the one dealing with removal of kidneys. We should have started the new program with those 15. If it did not work out—if shortcomings developed in the program—if the kidney removal provision in actual operation turned out to be an impossible burden, then, and only then, should it have been changed.

NO FIRM HAS TO COMPLY BEFORE JANUARY 1

The period between May 1 and January 1 was intended to be a transition period, a trial-and-error period, to get a new and big program of Government into operation. But no firm has to comply with the new law before January 1. Let us not forget that. I do not care if we have 5 or 10 or 15 or 100 plants in the

program the first day or the first week. The important thing is that the program we do have be effective in protecting the consumer; that it start out a strong program and remain a strong one.

Mr. Speaker, this episode, as I said, demands a full-scale investigation, and I intend to seek one. In the meantime, however, there is serious doubt in my mind whether we should appropriate any funds at all for this new poultry inspection program for the rest of this calendar year, until we have a clearer picture of the role Mr. Benson intends to play in undermining and destroying the effectiveness of the law. No funds are needed for this calendar year if we are not going to have an effective program in operation. The law does not require any firm to comply until next January. Any firm which comes in before then is doing so mainly to save itself money—the cost of the inspection it was previously paying for itself.

If all we are going to succeed in doing under this new law during the rest of this present calendar year is a shift the burden of inspection costs from the shoulders of private industry to the United States Government, and get no better inspection program in return, then we are fooling the public and making a foolish use of Federal funds. I would rather delay the start of the whole program until next January, under those circumstances.

Either that, or start a real and meaningful program this Thursday with only those firms included which are willing and ready to do their share—the 15 firms I understand had fully complied before this new order was issued.

A decision bearing on this issue will have to be made by the Congress in the very near future. The appropriation bill which contains funds for the Poultry Inspection Service is going to have to be resolved in conference. It may very well be that we may want to postpone voting any funds for poultry inspection under the new act until we see what the Secretary has in mind in terms of enforcement. If he intends to kill this act's effectiveness by undermining the regulations, as he has already done for 1958 even before the act goes into effect, then I for one want no part of a compulsory poultry inspection program which shifts inspection costs from industry to Government without protecting the consumer from diseased products.

Federal Excise Tax on Automobiles

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BYRNE of Illinois. Mr. Speaker, under unanimous consent, I insert the contents of a letter from a constituent and friend and a successful businessman, Tony Piet, relative to the need for removal of the Federal excise tax in the automobile industry.

Chicago has been recently engaged in a campaign to stimulate the economy in the automobile industry. I have spoken on the floor about this highly successful campaign called You Auto Buy. The success of the campaign exceeded expectations and has been extended.

My purpose in inserting Mr. Piet's letter is to exhibit some sound thinking regarding the excise tax as it pertains to the automobile industry. I am in agreement with Mr. Piet's thinking. This Federal tax imposed many years ago as a temporary measure has the appearance of becoming a permanent fixture unless something is done at the fountainhead to remove it.

It would appear to me that removing this tax is going to inure immeasurably to the good for the economic structure of the country and the people as a whole. I am a firm believer in the ingenuity and capability of private business to do the needed job. Yet they must be given encouragement and not expected to do the job with hands tied down because of the existence of a tax initiated as a temporary measure. When they criticize Congress and the Government, I believe there is some justification. Measures have been taken, programs begun in the past under the guise of an emergency or temporary imposition. The people have gone ahead and accepted it. Their Government, however, has let the temporary become permanent. Consequently today is it any wonder that our constitutents become strongly vocal in their protests over some of the programs their Federal Government, their lawmakers, are trying to sell them.

The letter follows:

TONY PIET MOTOR SALES, INC.,
Chicago, Ill., April 24, 1958.

Hon. EMMET F. BYRNE,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR EMMET: It is my firm and sincere belief that it is grossly unfair to allow the Federal excise tax to continue—as it pertains to the automobile industry. This tax should have been curtailed as soon as the wartime emergency was over.

The Federal excise tax was originally imposed as a temporary measure, not one for 20 years. I shall sincerely appreciate your wholehearted support in Congress to help throw off this yoke we've been wearing for too long a time.

Now that the wartime emergency is over, we have as great an emergency at our front door and only public spending will ward off the otherwise inevitable calamity we are facing in this wonderful country of ours.

We must encourage spending. By knocking out the automotive excise tax we make our products accessible to a greater portion of the public, thus stimulating a chain reaction of sales, production, and employment.

Our economy is at the crossroads of time. This is a grave issue and your utmost consideration and action is very, very urgent.

Please handle it with courage and expediency now.

Sincerely yours,

TONY PIET.

Mr. Speaker, Tony Piet was formerly a big league ballplayer with the Chicago White Sox, Detroit Tigers, and Pittsburgh Pirates. He is still getting base hits as a businessman. He has also contributed much to build in the community, assisting youth, sponsoring and encouraging the Little League and Pony League baseball clubs. He does not stop in endeavoring to make America better and in selling the idea that there is no place like home, the United States of America.

Eric Sevareid Again Hits the Nail on the Head

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. KEATING. Mr. Speaker, one of the keenest analysts now surveying our national scene is Eric Sevareid, chief Washington correspondent for Columbia Broadcasting System. His nightly commentaries on people and events are uniformly penetrating and provocative. He is the type of person who has made the current observance of National Radio Month a meaningful thing.

In is broadcast of April 17, Mr. Sevareid talked good sense on the President's proposed reorganization of our national defense system. I agree heartily with Mr. Sevareid's overall grasp of the problem and the need for changes. I hope Members of both bodies will consider this matter in the calm light of reasoning such as Mr. Sevareid's before letting loose with their brickbats.

Under leave previously granted, I insert the broadcast at this point in the RECORD:

Good evening. The President spoke to assembled editors today on his plans for reorganizing our military system—the most expensive, the most complicated, the biggest, the most vital collective human enterprise ever known in the United States. The real question is whether it would work, to save the country, to defeat an enemy, in time of a great modern war; the real fear is that as presently constituted, it might not.

Rarely has the President delivered a sharper, franker speech. The vigor of his proposals was matched by the bleakness of the picture he painted of present Pentagon conditions.

The implications of his description would seem to include these, among others: We have interservice quarreling over basic concepts of strategy for any given future war, over individual service roles and missions, over specific theater commands, over the new weapons, over research for still newer weapons, over the moneys that the Congress appropriates. Much of this always existed; we have managed to win our wars, anyway; but each time we had to reorganize after war began; the existence of allies and oceans gave us the time to do so; another war would probably have to be finished by the same system existing at its start.

The President said that unified strategic plans presuppose that the Defense Secretary and the Joint Chiefs of Staff have enough control over support activities to assure that these plans could be executed. Then he said, "In critical respects, it is lacking in our defenses today." This is a far-reaching statement; it can only come as a shock to those who have assumed that the immense expenditures and efforts over the last 10 years had at least insured a system

for carrying out a war plan, whether the plan prove good or bad.

The speech today bears heavily on the emotion-charged issues of rivalries and prerogatives between the uniformed services; one of the chief forces compelling a new showdown on this matter is, of course, the emergence of the new and totally untraditional weapons; the struggle for these weapons is also the struggle for funds, for prestige, for size, for wartime roles; this is so because so many of these weapons are militarily universal, falling naturally into no one service. "The fact is," said the President, "modern weapons have scrambled traditional service functions."

One of the most daring and touchy proposals Mr. Eisenhower makes is to try an overhaul of the way leading admirals and generals are selected for promotion and assignment. He is implying that men rise to the top simply by dogged, narrow serving of their own service's special needs; but, at the top these days, officers must consider national defense as a whole first and service needs second. The President is also clearly fed up with the publicity stunts and campaigns staged by the separate services for their own purposes.

Right now the President has a good momentum with him; if he keeps driving this way, he should be able to get most of what he wants; whether these changes are enough, in view of the decision to postpone the money-handling authority asked for the Defense Secretary, will be the next big question.

This is Eric Sevareid in Washington.

Summit Madness, Nuclear Nonsense, and John Foster Dulles

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. DAGUE. Mr. Speaker, it is undoubtedly true that good Americans from George Washington to Dwight Eisenhower, and including Thomas Jefferson and Abraham Lincoln, suffered from calumnies heaped upon them by their traducers. I doubt, however, that any of those mentioned were ever the target of attacks so violent as those directed at our present Secretary of State and I doubt if any of them bore up under the barrage with greater dignity and aplomb than has John Foster Dulles.

Any American worth his salt and with a modicum of perception must have long since realized that Khrushchev's insistence on a summit conference has only one purpose; namely, the creation of a sounding board for the issuing of propaganda blasts and the strengthening of his own precarious situation. In all of our dealings with the Russian leaders—as distinguished from the people of the U. S. S. R.—we should never lose sight of the fact that we are dealing with men whose solemn word is of no value whatsoever, and in addition that we are in fact being called upon by means of a summit meeting to lend respectability to a lot of international gangsters and murderers. In this instance Secretary Dulles has counselled against such a get-together and apparently has reminded our President that as a leader elected directly by the people his role is entirely different from that of the leaders of the other nations even though in their initial role they may have been elected to a parliament or general assembly. As an additional word of caution Mr. Dulles might also have reminded our President that when you lie down with dogs you get up with fleas.

The subject of the suspension of nuclear tests is so elemental as to invite contempt rather than discussion. What advantage could accrue to this Nation—or to humanity as a whole—through the suspension of our tests is beyond me. Russia completes her tests—and in addition apparently suffers an accidental explosion in the process—and then because she has nothing to lose for another year and because her people are apparently raising hob over local fallout—she comes piously to the front and says let's agree that you will not run your series. How naive, how silly, how asinine can we get? To me there can be only one conclusion; namely, that wittingly or unwittingly those who urge a suspension of nuclear tests until we have completed our present series and those who are calling for a summit meeting are playing the Communist's tune. The time is now here, my friends, when every patriotic American must stand firm.

And as for John Foster Dulles—the greatest Secretary of State in our time—may God give him increased courage and strength.

Poland's Constitution Day

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I have asked permission to extend a few remarks about the anniversary of Poland's Constitution Day which will be observed or remembered by the Polish people and their friends on May 3.

Our Declaration of Independence inspired the Polish people to adopt a constitution inculcating the ideas promulgated by our Declaration of Independence. This was accomplished by the Polish Diet in 1791 in Warsaw. An affinity has existed between Poland and America since the days when one of their great countrymen, Thaddeus Kosciusko, volunteered his services to our young country at a time when we were struggling for our independent way of life.

Our nations have experienced many milestones since we both achieved an independence safeguarded by a constitution.. For us, the past was prologue to a future more glorious but for the Polish people, the years did not yield the things they desired, and still desire. The people in Poland have been subjugated to the Moscow doctrine outwardly but they have continued to show their fighting spirit by maintaining their inherent belief in the right of the individual to the pursuit of happiness. They have not acquiesced in their spirits and hearts but have resisted at every opportunity.

There is no doubt in my mind that though the Polish Government is Communist, the people are not and will never be.

The Polish people are an inspiration to other subjugated countries and even to Americans. We should never forget to be thankful to our Creator for bringing America this far. We must guard our individual liberties unceasingly.

It is my fervent hope that one day not too far distant we shall observe another day dedicated to the liberation of Poland so that in reality she may join the family of the free nations, as an official full-fledged member.

Small Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I received from Mr. James K. Selden, president of the Methuen International Mills, Methuen, Mass., and a copy of his letter to the Small Business Administration, concerning a ruling by the Quartermaster Corps which seemingly is making a mockery of the intent of Congress to help small business:

METHUEN INTERNATIONAL MILLS,
Methuen, Mass., April 28, 1958.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR SIR: We feel that if it was the intent of Congress to help small business on the Government contracts that a ruling by the Quartermaster Depot, which enables any large concern to bid through a dummy, is making a mockery of that intent.

I am enclosing a copy of a letter I have written the United States Small Business Administration.

Very truly yours,
JAMES K. SELDEN,
President.

METHUEN INTERNATIONAL MILLS,
April 25, 1958.

UNITED STATES SMALL BUSINESS ADMINISTRATION,
Washington, D. C.

GENTLEMEN: I am writing this letter as a representative of one of the many manufacturing enterprises which come, by definition, under the heading of "Small Business." Under recent rulings issued by Quartermaster Corps it appears possible that awards on invitations for competitive bidding on "100 percent small business joint determination" may go to bidders who, small as they themselves may be, have actual manufacturing and processing performed by others who do not qualify as "small business." Not only possible but actually as recently exemplified in connection with invitation QM (CTM) 36-243-600 gabardine 14½-ounce wool, and this incident I have discussed with your Mr. W. S. Walle.

Now, I and my associates believe, that under such an interpretation as disclosed

therein, that the real intent of congressional legislation on this subject is thwarted, inasmuch as the national full productive capacity or its military prowess is not served on a small business set-aside by permitting dealers or traders, who do not subcontract to small business, to bid in competition successfully.

It is requested, therefore, that your Administration review this whole matter in the light of these circumstances and other pertinent factors and take steps to modify the rulings referred to above, so that small business concerns may be given encouragement in continuing their activities not only for their own sakes but also in behalf of the national interest.

Very truly yours,

JAMES K. SELDEN,
President.

Change and Challenge in 1958

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. RIVERS. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I include herewith a splendid address made on Saturday, April 26, at South Carolina's distinguished military college, The Citadel, at Charleston, by the president of the Chrysler Corp., the Honorable L. L. Colbert. Mr. Colbert is a distinguished industrialist in his own right. As a graduate of the University of Texas and of Harvard Law School, he identified himself with the late Walter Chrysler at an early age. Recognizing the budding genius of this young man, Chrysler marked him for the position he now occupies by making it possible for Mr. Colbert to serve in every segment of Chrysler's now giant industry.

Mr. Colbert spoke, for the most part, on the automobile industry, realizing that the state of health of the automobile manufacturing business represents the index of the state of health of our national economy. The automobile produced in America uses almost every commodity that is manufactured in this country—consequently, when the automobile business is slack the state of the health of our economy is not good.

Mr. Colbert's address makes suggestions on some of the things which would help our economy. His advice is wise and sound.

I recommend his address to my colleagues:

CHANGE AND CHALLENGE IN 1958

(Speech by L. L. Colbert, president, Chrysler Corp., at The Citadel, the Military College of South Carolina, Charleston, April 26, 1958)

Thank you, General Clark, and good morning ladies and gentlemen.

When General Clark honored me with an invitation to give one of your greater issues lectures, he made quite a point of asking me to speak from the heart about any issues or problems that seemed important from my point of view as one associated with the automobile industry. On the face of it, this would seem to be an easy assignment for an automobile man. But the trouble is that our industry stands right at the center of the American economy, and we seem to be subject to every change, force, pressure and stimulus that happens to be operating at any given moment. So it's a little difficult to know which of the many problems now facing us, the economy and the country I should talk about.

Right now, with the general level of business down considerably from the heights reached in 1957, everybody seems to have his eyes turned toward Detroit. People are looking to the automobile industry to provide a big push toward recovery. This includes policymakers in Washington, steel executives in Pittsburgh, and economists everywhere.

They look hopefully in our direction for a very good reason. When you consider it as a whole, including factories, dealers, suppliers, service stations, and all related activities, the automobile business is one of the key sectors in the economy—and what happens to our sales and production thus has an important bearing on the prosperity of the entire country. One out of every six businesses and 1 out of every 7 workers in the United States are directly dependent upon the manufacture, distribution, servicing and use of motor vehicles. Automobile manufacturing absorbs about 70 percent of the finished rubber products, 20 percent of the finished steel, and 40 percent of all the radios produced in this country. And of course the impact of the automobile industry on the aluminum, glass, electronic and machine-tool industries is also very heavy.

To hear some of the comments being made these days about the key importance of our activities, you might think we could easily provide the much-needed upward push on the economy with a few fast decisions. We have been getting a great deal of free advice on the decisions we should make—decisions on prices, on automotive styling, and on horsepower, to mention just a few—and along with the advice usually comes the word that if we only followed it we could easily sell an extra million or two cars a year.

It would be wonderful if life were that simple for us in Detroit. The fact is that our decisions are affected by many complex considerations—by taxes and Government regulations, by labor and material costs, by the prevailing economic conditions of the country, and above all by the attitudes and the decisons of our customers. I think you will agree that this is a pretty imposing array. There is one important thing to remember about all these considerations. Like everything else in modern life, they change.

The virtue of a free and open society is that we have ways of making adjustments from year to year to fit changing needs. And in the kind of century we are living in, this may be the greatest virtue a country can have.

Change is the controlling condition of our lives, and the speed of change is being stepped up with every passing month. When I was a college student people were fond of saying that ours was the age of the automobile. But very soon it became fashionable to say we were living in the air age. Then it was the age of jet propulsion, and before long the age of the atom. Only a few months ago we were hearing about the age of the missile. And now, they say, we are entering the space age. So it goes.

The present speed of change, with new developments crowding upon us so fast, reminds me of a story that went the rounds in World War II. A carrier pigeon was flying from divisional headquarters to a command post somewhere in the field with a highly important order that was to change the whole disposition of men and materiel. On the way, he became aware that another pigeon was coming up behind him pretty fast. And then he heard this second pigeon say, "You'd better fly a lot faster than that—I'm carrying the countermand."

I guess all of us are going to have to fly just a little faster to keep up with our responsibilities and opportunities and meet the many challenges of this fast-changing mid-century world.

Arnold Toynbee once said: "In a growing civilization a challenge meets with a successful response which proceeds to generate another and a different challenge which meets with another successful response. There is no term to this process of growth unless and until a challenge arises which the civilization in question fails to meet."

What Mr. Toynbee said is profound. Even since he wrote those words, not so very many years ago, the world has changed. And today our civiliaztion is meeting not just one challenge after another, but many challenges simultaneously. Among other things, we are being challenged to match the growing economic and military power of Soviet Russia—to develop the means of exploring space—to meet the ever-growing needs of our people for education—and to find ways to stimulate the continued expansion of our economy as the necessary foundation of our national strength.

But, in my opinion, there is one challenge to our free democratic American civilization that is probably more important than any other. In a word, it is the challenge of finding ways to pay for all the things we are going to need as a nation.

It has become pretty clear with every passing month that the cost of our national defense, including research and development, together with the cost of the educational and other public services in our States and local communities, is not going to get any smaller. If anything, it is going to increase.

These next few years are going to make exceptional demands upon people in all walks of life. But they will make perhaps their heaviest demands upon the business community of America, because it will be the special responsibility of business to stimulate the expansion of the economy.

In recent months we have heard some important people say, in effect, that if we are going to build an adequate defense we will have to give up some of the customary features of the American standard of living.

Now as I see it, that kind of talk is based on a serious misunderstanding of the kind of economy we have. We grow strong as a nation not by giving up goods and services but by finding ways to raise our levels of production and consumption and by broadening our economic base. A diversified and growing economy provides the flexibility and mobility to meet fast-changing situations. It does this by making available a continually widening range of goods and services and skills. It also builds a broadening base of income that can, if necessary, supply increased tax revenue without higher tax rates.

The events of the past few months have reminded us powerfully that a prime source of economic progress is science and technology. To the industrial manager this means that research must be put first in all his plans for remaining successful and useful in a competitive economy.

All of us are familiar with the wonders of research and what it has meant and will mean in our lives. I am not going to labor the point. I do think it might be of some interest, however, to say a few words about the research that goes on year after year in the automobile industry.

At Chrysler we are very proud of the engineering in our cars. It was our engineering that enabled us to make a sales breakthrough a third of a century ago when people thought the business was all sewed up. And year after year we have brought important engineering firsts to market. They

include four-wheel brakes, high-compression engines, floating power, the fluid coupling, and power steering. On our current models we are especially proud of our suspension systems which we are certain give our cars the most comfortable and most stable ride to be found in any production cars built in this country or anywhere else in the world. I might say in passing that there are a good many independent automotive specialists who agree with us on this matter.

Thank you very much for your kind attention to this 1-minute commercial.

One possible result of the very intensive research conducted by the automobile industry is that not too many years away there may be entirely new kind of engine in your car. For some years all the major companies have been researching and experimenting and testing to find out how to build a production model of a gas-turbine engine. This is an engine that has no pistons—that needs a sparkplug only to get started—an engine that needs on octane rating for its fuel.

Chrysler Corp. was the first company in the United States to design a working gas-turbine engine that could be installed in a passenger car of normal size. Two years ago, about this time of year, our engineers drove a Plymouth powered by a gas-turbine engine from New York to Los Angeles.

There are a great many problems ahead of us before we are ready to put an engine of this kind on the market, but someday this or some other new kind of engine will make obsolete every car on the road. What if the gas-turbine should come in 10 years and an even more revolutionary engine in 20? What would this do to the idea that seems to appeal to some people of a nice standardized car that never changes?

In the automobile business you have to be ready for new and radical developments in product and in methods—and you have to be ready to beat the other companies to those new developments if you can. Competition in this industry is in constant, accelerating motion at every level. That's the nature of the business and we wouldn't want it any other way.

Every day of our lives in Detroit we are reminded of the important fact that new ideas are the source of all economic growth. And it is equally important that new ideas are generated by individual men who somehow get fired up to put their abilities to work. I am sure you will agree with me as you go out into military service or into civilian life that the most important and perhaps the most difficult challenge you will have to face as leaders of men is the challenge of finding ways to stimulate that incentive in others.

Sometimes businessmen talk as if incentive is entirely a matter of money. This is not true. Men are stimulated by a wide variety of motivations. Among other powerful drives there is a man's pride in workmanship, his love of his family and of his country, and his desire to prove that he is somewhere near as good as he pictures himself in his own private thoughts. But it is also true that when you can tie those basic drives to financial incentives and make them work together, you get the kind of spectacular results that make this country the kind of country it is.

We are hearing a lot of talk these days about needed reforms in taxation, and I think a great many people agree that through tax reform it might be possible to add measurably to the creativeness and the forward drive of our economy. A number of highly competent groups are studying the tax problem, and the country is looking forward with great interest to their recommendations.

From my point of view as an automobile man there are two tax matters I would like to comment upon briefly. They are closely connected with the ability of the country to recover quickly from the present recession and to expand steadily in the years ahead.

First there is the matter of the automotive excise taxes. As you know, everyone who buys a car or a truck pays a Federal tax amounting to 10 percent of the manufacturer's wholesale price to the dealer. We consider this tax discriminatory. In effect, it puts automobiles and trucks in the same category with luxuries, like perfume and earrings. We feel that the motor vehicle is almost as necessary to modern living as food, clothing, and shelter. It makes no more sense for the Federal Government to tax a man for buying a new car than it would to tax him for buying a new house.

Over and beyond our feeling that this tax is discriminatory, however, there is a more important consideration. By removing this tax or drastically reducing it, the Federal Government could inject a stimulus into the economy that would be felt from coast to coast. It would benefit everyone affected by the manufacture, distribution, servicing, and use of motor vehicles. And as I explained earlier, that includes just about the entire population in one way or another.

It is of the greatest importance, in our opinion, that the reduction of this tax be made on all new cars now in dealers' stocks and that protection be given new-car purchasers between now and the enactment date of a new excise-tax law.

The other tax matter that affects us, as well as every other manufacturer, has to do with the corporate income tax allowances permitted by the Federal Government to enable a company to replace worn-out or obsolete equipment. As you know, if a company buys a new piece of machinery, such as a turret lathe, it must set aside enough money each year to buy another lathe when the present one wears out or is made obsolete by technical progress. These set-asides are known as depreciation expenses and the Federal Government considers them—quite logically—as part of the operating costs of a company rather than as income to be taxed.

As I have stated it, this arrangement sounds perfectly satisfactory for all concerned. In practice, however, we run into serious problems. And most of those problems go right back to the fast rate of change in modern life, which I mentioned earlier. There was a time not so long ago when a piece of machinery was generally used until it wore out. Under those conditions it was perfectly logical for the Internal Revenue people in Washington to let you set aside, 7 percent of the original cost of the equipment each year and charge that amount to operating expense. This was done on the theory that it would last 15 years or so.

Under present conditions, however, few machines are ever in use long enough to wear out. Long before that time they get out of date and have to be scrapped. The length of life of machinery today is determined by the pace of technological progress—not by the length of time it takes to tire out a piece of iron. You may have to scrap your machines because new ones are more efficient or because your product has changed so much the old machine won't do the job. So, under present conditions, you have to write off the cost of most equipment at far faster rates than you did 20 years ago.

At Chrysler, for instance, we just recently scrapped nearly all the machine tools in an entire engine plant because they had become obsolete. Only 6 years earlier that installation was the most advanced and the most highly automatic of its kind in the automobile industry.

Government officials are beginning to recognize this new situation, but they are a long way as yet from giving it realistic consideration in their tax decisions. Neither are they recognizing that it takes far more money to buy the new machines than it did to buy the ones they replace. Inflation, which has added to the cost of living in so many other ways, has increased the cost of machinery enormously. What this means is that you can't even come close to replacing an old machine with a new one just by recovering the cost of the old one.

Other countries have discovered that they can speed up their industrial growth by gearing their tax policies on depreciation to the realities of 20th-century technology. In the United States we have been making only very modest progress in the use of realistic depreciation policies to provide incentive for industrial expansion and modernization. We still have a long way to go.

For far too long a time people have talked about taxation in negatives. It has been mentioned in the same breath with poverty, death, and tyrannical government. It is true, of course, that the power to tax is the power to destroy. But in a broad sense it is also the power to give men the incentive to explore, discover, create, and advance. Used in such a way as to keep in proper balance the incentives of individuals and the sound progress of the country as a whole, tax laws and tax administration can tap the greatest of all resources—the will of men—and put it to work in the Nation's interest.

Our country is going through a difficult period. We are very far from knowing the answers to all our problems. But there is one thing we can be sure of. That is the basic truth that the main source of our strength lies in the will and the imagination of free individuals working creatively and cooperatively with other free individuals. And it is by remembering that truth and using it as the guide to our thinking and planning that we will realize our great promise as a people.

Daylight Time Again

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy Herald-Whig of April 25, 1958:

DAYLIGHT TIME AGAIN

Summer daylight time goes into effect in Quincy Sunday morning at 2, with clocks being moved up 1 hour for the 6-month period ending Sunday morning, October 26. It means an added hour of daylight for most Quincyans, as for millions of other Americans. But it also means a renewal of confusion for much of the Nation, including some Quincyans and quite a few of Quincy's neighbors.

Daylight time is an old story in Quincy, for with the exception of 1 year it has been in effect—at least for summer months—every year since 1940. The result is that most Quincyans suffer only a little confusion, unless their work takes them to neighboring communities that remain on standard time. At repeated elections Quincy voters have approved the fast-time program, even if by small margins at times.

Just as a majority of Quincyans have shown their preference for daylight time, so have the citizens of increasing numbers of Illinois communities. More and more cities of the State have adopted it. Since it has

long applied to Chicago and—in fact—the whole populous northeastern part of the State, it is obvious that a considerable majority of all Illinois citizens will be under daylight time this year.

For this reason it seems silly that the State should not adopt daylight time on a statewide basis, as have many other States. Two of Illinois' neighboring States, Indiana and Wisconsin, now have adopted daylight time on such a statewide basis. Ironically, both at one time expressly forbade any community within their State boundaries to adopt daylight time. But Illinois, with a long record of many communities obviously preferring daylight time, has continued to leave it on a local option basis.

It would be still better to have daylight time effective on a nationwide basis. That would eliminate all of the minor and major confusions that now exist. This was true, of course, during the war. It was effective then on a 12-month basis. It still seems that if it were good for the Nation during wartime, that it should be good for it now.

Space Age Problems Face Congress

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. EVINS. Mr. Speaker, in my newsletter last week I took the opportunity to apprise the people whom I have the honor to represent of some aspects of the problems facing the Congress in this space age of which they may not be aware. Under unanimous consent I include this newsletter in the Appendix of the RECORD.

The newsletter follows:

SPACE AGE PROBLEMS FACE CONGRESS

The present session of Congress has not been by any means a lighthearted one. What with the crisis brought on by the sputniks, the muttniks, the missiles, and the rockets, the problems of the recession, not to mention foreign aid, reciprocal trade, reorganization of the Defense Department, and scores of other critical and controversial problems, the Congress has not had much to be lighthearted about. But there have been moments when the smile has managed to triumph over the scowl. It is our thought that our friends this week might enjoy a report on the lighter side of events at the Capitol.

Because the Congress has been largely preoccupied with problems of the space age, the Capitol Hill newspaper, Roll Call, early this session published a glossary or dictionary of space-age terminology to assist Members and their assistants in dealing with space-age problems. Reprinted below are some of these helpful definitions:

Buck Rogers: Democratic candidate for President in 1960.

Flash Gordon: Republican candidate for President in 1960.

Vanguard: Reluctant rocket developed by the Navy to launch satellite.

Jupiter: Army version of Vanguard—what the first American satellite was put up with.

Thor: What the Navy was when Jupiter did the job.

Meteor: A space-age greeting, as for instance: "Pleased to meet you and also to meteor friend."

Etiletas: Satellite that goes backward. It is accidental—they don't planet that way.

Interstellar constellation: Any political convention.

Rockette: Female space scientist.

Ionosphere: Fear of having too many ions in the fire.

SELECT COMMITTEE ON SPACE EXPLORATION AND ASTRONAUTICS HAS SPACE PROBLEMS

The House Special Committee on Outer Space, recently established under the chairmanship of Majority Leader JOHN W. MCCORMACK, of Massachusetts, started right in having problems in space exploration—in finding suitable office space for the committee to meet. The new office building is under construction, but meanwhile every nook and cranny of the Capitol itself and the present office buildings, including windowless cubbyholes originally designed to be storage rooms and closets, have long ago been pressed into use as office space. Hence the new committee has run into serious difficulties finding a suitable headquarters. One of the members of the committee, when asked by a colleague how they were coming along in this exploration for office space, replied ruefully: "It looks like the members of the select committee are going to have to be the first passengers on the first trip to the moon. I don't know where else we are going to find any space." Eventually, however, the new committee was able to establish offices in the basement of one of the office buildings in space previously occupied by telephone equipment. This led another member to quip: "The Select Committee on Space Exploration and Astronautics is operating from a telephone booth."

The newly appointed members of this committee are being referred to as "the higher-ups" by their colleagues. In one heated exchange in the cloakroom, involving a member of the select committee and one of his less privileged colleagues, the latter was heard to retort: "That may be all right for you fellows on the space committee, but it's too high up in the air for us ordinary workmen."

Just prior to the launching of our first American satellite your Representative received a letter from one of our good leather-goods manufacturers in our district generously offering to make available to our defense authorities a suitable dog collar for use on the first dog sent up into outer space by our missile and rocket experts. The offer has not yet been accepted.

Truly we are living in the Buck Rogers-Flash Gordon age and not only our youth wants to know but all America wants to know the answers.

The President's Veto of Pork Barrel Projects Is Approved by the Public

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. CRAMER. Mr. Speaker, the recent veto by President Eisenhower of S. 497, the rivers and harbors omnibus bill, and it was an action that took courage of conviction and an attitude of great selflessness, has not met with the disapproval of the public as some would have us believe. Indeed, I think that those who saw to it that this bill was loaded with political pork-barrel projects are mightily disappointed now that through purposeful political action they have set back, as President Eisenhower pointed out, the worthy, tested, and qualified projects contained in that bill.

From the outset I had watched that situation arise and had opposed such flagrant violation of the principals previously set out by this Congress. In committee and on the floor of the House I had called for elimination of projects that had not previously been studied by the United States Army engineers and which had not been approved by the Bureau of the Budget and other executive agencies because they did not conform to established standards.

In view of the veto and the importance of getting a sound program underway as soon as possible I have today introduced a bill (H. R. 12235) that I feel certain includes worthy projects that meet these proven standards and additional programs that will qualify by bringing them into conformity with already accepted standards. I remarked upon this during yesterday's session of the House.

In support of the President and of my action, many papers across the Nation have editorialized upholding this veto. I ask permission at this time to include under unanimous consent three of these editorials in the RECORD that the Members may benefit from their considered comment:

[From the St. Petersburg Times of April 19, 1958]

NO TIME FOR PORK BARREL

The cries of political anguish which greeted President Eisenhower's veto of the rivers and harbors bill were not, we fear, prompted by deep concern over the loss of the bill's public-works projects in a time of unemployment.

Many of the projects to which the President objected were pulled out of the weathered pork barrel. They were election-year sugarplums, designed to please the home folks.

It took political courage for the President to veto the bill. Many of his supporters in the hustings will be angry.

It took similar fortitude for Representative WILLIAM C. CRAMER to vote against the bill. The measure contains a number of projects in Mr. CRAMER'S district—surveys for dredging along the Sunshine Skyway, at Gulfport, and Frenchmen's Creek, among them. But as a member of the minority in the House Public Works Committee, Mr. CRAMER opposed the bill on the floor because of some of the items in it which the administration had not approved.

Administration perusal of a bill of this kind calls into action a subtle legislative-executive struggle. Congressmen want projects in this own districts for obvious political advantage. The administration, which must carry out the projects, frequently feels they are against public policy. The executive branch wants available money used for other things. It cannot veto out unapproved projects, and so must kill the entire bill—as President Eisenhower did in 1956 and 1958.

There should be another rivers and harbors bill. Most of the Florida projects which have been lost not only are important, but have received the O. K. of the Army engineers and the Bureau of the Budget. Certainly some compromise can be worked out between the President and the Democratic Congress.

But the needs of the unemployed shouldn't mask dredging and flood-control

programs which are not necessary or improperly financed.

[From the Tampa Tribune, Tampa, Fla., of April 17, 1958]

TRY AGAIN, MINUS THE PORK

To hardly anyone's surprise, President Eisenhower has vetoed a $1,500,000,000 water projects bill.

But to hear some of his critics tell it, the President has cut off the right hand of every Member of Congress and the left leg of everyone on the unemployment rolls.

All of which is bunk filled to the pork-barrel level.

The President acted as he did not because he objected to every item in the measure or because he is unwilling to take forthright steps to fight the recession. On the contrary, and quite frankly, Mr. Eisenhower said that many of the projects proposed in the bill were worthwhile.

But he also pointed out others were wasteful and that the bill included some 28 new projects costing $350 million "under the terms which I cannot approve without destroying some of the most important governmental policies" on water resources.

It should be noted that the President of the United States does not have the authority granted many of our governors to veto individual items in appropriation and authorization measures. He must accept such a bill in its entirety, exactly as Congress passed it, or else veto it.

Mr. Eisenhower, of course, could have taken the easy road in this instance. He could have signed the bill in its pork-barrel form. Then some of the present critics, grudgingly perhaps, might have given him credit for helping to clear the way for more jobs.

But the President is not one to spend just for the sake of spending. He could not in good conscience sign a water projects authorization bill he knew was loaded with far more than the usual number of pork-barrel projects.

To those who say the President is unsympathetic with the plight of the unemployed, the answer is that the water measure would not have gone into effect immediately even if he had signed it. It would merely authorize the various rivers, harbors, and flood control projects, with the actual appropriations to come later.

The course now open to Congress should be crystal clear. It is to come up with a new bill free of the pork-barrel and other defective items to which the President and many other individuals object. It should be done in the realization that it is just as sinful to waste taxpayers' money on make-work boondoggles during a time of recession as it is in a period of boom.

[From the Washington Evening Star of April 17, 1958]

TOO MUCH PORK

President Eisenhower's veto of the $1.7 billion rivers and harbors bill could hardly have come as a surprise to Congress. The reasons he cited for returning the legislation without his approval were largely the same as those he gave for vetoing a similar authorization nearly 2 years ago. They may be summed up this way: Too much pork.

The measure had some good provisions in it, of course. The President cited favorably $800 million worth of projects previously authorized in connection with river basin development. But Congress, as it has been accustomed to do in the past, loaded the bill with pet projects desired by special interests back home but not recommended by the Army engineers for various reasons. Mr. Eisenhower indicated that he might have accepted some of these projects if their sponsors had provided for the assumption by local government of its proper share of the cost. As the President pointed out in this message and in his veto message of 1956, "the best test yet devised for insuring that a project is sound is the willingness of local people to invest their own money in a joint enterprise with the Federal Government." Indeed, several of the items thrown into the omnibus bill have been denounced by the Corps of Engineers as having no economic justification.

Promoters of the pork barrel projects had attempted to justify them as antirecession measures. But the President pointed out that, with a few exceptions, many months or even several years might be required to reach the construction stage on them. Meanwhile there are plenty of other Federal public works of importance that could be started now to stimulate the economy. Many of these already are being rescheduled for immediate construction.

The President made a sensible suggestion as to how Congress can avoid the prospect of a Presidential veto on rivers and harbors legislation in the future. He proposed that projects approved by the Corps of Engineers be included in one bill and all the other projects be the subject of separate measures. In that way desirable legislation would not be imperiled by pork barrel proposals. Any project sound enough to stand on its own feet would be assured of special attention in this way. And a veto of any or all of the additional projects would not affect those which are really essential to the public welfare.

Jefferson National Expansion Memorial

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. CURTIS of Missouri. Mr. Speaker, it gives me a great deal of pleasure to advise my colleagues that the American Institute of Architects at its centennial convention by resolution gave its one hundred percent support to the completion of the Jefferson National Expansion Memorial in the City of St. Louis, in accordance with the plan approved by the United States Territorial Expansion Memorial Commission on May 25, 1948.

The Jefferson National Expansion Memorial is a national undertaking authorized by the Historic Sites Act, approved August 21, 1935, and is under the jurisdiction of the National Park Service and the Secretary of the Interior of the United States. The Memorial consists of about 40 city blocks (about 82 acres). It is designed to be a national memorial to Thomas Jefferson, his aids, and the explorers and frontiersmen who made possible the westward expansion of the United States. The beautiful arch designed by Eero Saarinen portrays the meaning of the gateway to the West and its significance to the growth of our country.

At this time I would like to place in the RECORD for the reading of my colleagues a letter directed to my attention written by Mr. Edmund R. Purves, executive director of the American Institute of Architects.

The letter follows:

APRIL 24, 1958.

The Honorable THOMAS B. CURTIS,
United States House of Representatives, Washington, D. C.

DEAR MR. CURTIS: The American Institute of Architects, the organization representing the profession of architecture in the United States, has historically been zealous and active in its efforts to establish and preserve beauty in this country. The professional obligation of our members is the provision of shelter and comfort for human activities in the most practical and efficient manner, at the same time expressing the spirit, the sense of beauty and the aspirations of the people who live, work, and worship in it. For architecture reveals the real nature of people. Today, as in the days of the Egyptian pyramids and the Gothic cathedrals, architecture is the visible, enduring expression of civilization. Architecture not only reflects—it determines civilization.

From the earliest days in our history some of the greatest and certainly the best known of our architecture has been the monuments commemorating great events, great men, and great ideals. These are among our most precious heritages.

The Jefferson Memorial, like the Washington Monument, and the Lincoln Memorial, was conceived in the grand tradition. Standing where it is planned at the confluence of the two great rivers that opened the west, and commemorating the Louisiana Purchase which truly started America on the path to greatness, it will turn the historic St. Louis waterfront into a point of beauty and inspiration to the thousands who will see it from air, land, and water.

The concept and design of the Jefferson Memorial were achieved through methods which traditionally have produced the great monuments. America's outstanding architects submitted designs in competition and from among these the present design by Eero Saarinen, a fellow of the American Institute of Architects, was chosen. This simple shape of heroic dimensions should take its place among the great monuments and add to the historical and aesthetic glory of our Nation.

The American Institute of Architects meeting in its Centennial Convention in 1957, noted that this project is at a standstill and passed the following resolution:

"Resolved by this centennial convention of the American Institute of Architects, That the Congress of the United States be urged to take action necessary to complete the Jefferson National Expansion Memorial in accordance with the plan approved by the United States Territorial Expansion Memorial Commission on May 25, 1948."

The American Institute of Architects appreciates any action you may be able to take to see that this great work is carried forward.

Respectfully yours,

EDMUND R. PURVES,
FAIA, Executive Director.

Resolutions of County Convention Hit Administration's Farm Policies

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, the Clearwater County DFL convention in my district on April 19 passed four thoughtful resolutions on the agricul-

ture situation generally, family farmers, problems, dairy supports, and Hells Canyon. Under unanimous consent, I insert in the RECORD these timely resolutions:

RESOLUTION ON AGRICULTURE

Whereas the Republican administration in Washington, particularly through the Department of Agriculture, has carried on a premeditated, planned program of elimination of the family farm, of continued reduction of parity on agricultural products, of hostility toward the entire stabilization of farm income, of sharp increase in interest rates on FHA and other loans causing an unbearable burden on farm borrowers; and

Whereas this has reduced farm income by $2½ billion causing distress and disaster on many farms as well as to small-business men, unemployment, factory shutdowns, and general economic stagnation: Be it

Resolved, That we condemn this program as economically unsound, inhuman, undemocratic, and not in the best interest of the Nation as a whole; be it further

Resolved, That we call upon all people to support candidates of the Democratic Party in the coming election in order to restore confidence again in government and salvage our economy from chaos and bankruptcy.

RESOLUTION ON PARITY

Whereas there is a widespread lack of understanding and appreciation of the economic problems of family farmers among other segments of society today; and

Whereas this is partly because the farmer's share of consumer's dollars continues to decline and opponents of farm programs have exaggerated the cost of the farm program to the taxpayer: Therefore be it

Resolved, That there should be education done in this field as to the need for the farmers to receive their equal share of the national income. We further believe that to stabilize the economy of this United States there must be a program whereby the average farmer will receive 100 percent of parity up to a marketing quota, this quota not to exceed $15,000 for each farmer, and that any farmer who produces in excess of the above will be entitled to only 60 percent of parity on any farm product above the $15,000.

RESOLUTION ON DAIRY PAYMENTS

Whereas we believe that the dairy industry is basic in the State of Minnesota; and

Whereas we further believe that more farm families are directly affected by the value of dairy products marketed; and

Whereas the reduction of payments on dairy products to 75 percent of parity has seriously jeopardized the entire dairy industry: Therefore be it

Resolved, This DFL County Convention assembled at Bagley, Minn., April 26, 1958, go on record urging restoration of dairy supports to at least 90 percent of parity through production payments to farmers.

RESOLUTION ON HELLS CANYON DAM

Whereas the construction of a Federal high dam in Hells Canyon, Idaho, would more fully utilize the tremendous potential of this natural resource and make available electrical energy at the lowest possible cost, permitting the processing of the great phosphate deposits in this area at a saving of $12 to $16 per ton compared to the low dams proposed to be built by private interests, in this way providing savings of millions of dollars to the farmers of America for generations to come as well as providing adequate flood control and an abundance of water for irrigation: Be it

Resolved, That this Clearwater County DFL Convention reiterate our stand in favor of Federal development of this natural resource and the distribution of this energy through REA lines and the retention of this heritage of the people for the benefit of all the people of our country, and again urge our Members in Congress to continue their vigorous support of this principle.

Fair-Trade Law Will Help Small Business

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, March 28, 1958

Mr. PELLY. Mr. Speaker, under unanimous consent, I include for printing in the Appendix of the RECORD the testimony on my bill, H. R. 10847, which I presented to the subcommittee of the House Interstate and Foreign Commerce Committee. This measure is designed to protect independent smaller businesses from unfair competition and to strengthen the Nation's economy, and in this connection Members of the Congress are urged to give this legislation their sympathetic consideration.

STATEMENT OF REPRESENTATIVE THOMAS M. PELLY, REPUBLICAN, WASHINGTON STATE, BEFORE THE SUBCOMMITTEE ON COMMERCE AND FINANCE, INTERSTATE AND FOREIGN COMMERCE COMMITTEE, IN SUPPORT OF H. R. 10847

Mr. Chairman, I want to thank you and members of the committee for giving me the privilege to appear and speak for my bill, H. R. 10847, a bill proposed to bring back into our domestic economy some semblance of law and order in the retail field as it relates to trademarked brand merchandise.

The Chicago Daily News of March 11, 1958, carried an article by Sylvia Porter from which I quote:

"Price wars which have followed the abandonment of fair trade on small appliances may be building plenty of business for the big stores, and they're certainly giving consumers a chance to grab some bargains, but the wars also are dooming small appliance retailers the Nation over."

The newspaper article referred to the House Small Business Committee's prediction in January 1957 that if small-business failures and big-business expansions continue at the rate of the previous 5 years, most of the distribution and service business of the Nation and all manufacturing business within 18 years would be controlled by giant corporations.

For myself, Mr. Chairman, let me say bigness is not anything to apologize for, except when failures of small independent businesses are a contributing cause to size. I believe the backbone of our competitive economy and of free enterprise is the neighborhood or family type of business, the independent operator with a few employees, and the smaller concern. This is the kind of store whose policies conform to the grassroots ideas of service and profit incentive and offer customers year in and year out responsibility. This is the kind of business that gives America its high living standard.

I am aware, of course, of the theory whereby certain economists believe that the cure to the present recession lies in attracting consumers and the public by price adjustments; in other words, to draw people into the market places to unload inventories and by stimulating purchases to overcome a psychological public attitude of restraint.

However, Mr. Chairman, if such action was instituted, it would in no way disturb the planning outlined in my bill or similar bills before the Congress. In other words, what my bill proposes is to protect trademarked brand merchandise and nothing beyond that. Even if this is accomplished through an act of Congress, it does not create any monopoly where there is competitive merchandise minus trademarked brands in the open market. In many instances, these large corporate chains merchandise their own brands so this means this is a free and open market for John Q. Public to be served through.

A wretched price situation existed in the early thirties in the depression days where advertised trademarked brands were used as loss leaders and, in most instances, these trademarked brands were sold at less than cost with the hope of attracting buyers into the establishment; where they sold unbranded merchandise, and the public did not gain and independent retail establishments were severly injured.

The Congress, realizing this situation, in or around 1937 enacted the Tydings-Miller law. This law held good for some few years, until action of the Supreme Court nullified certain sections of the law and then left the field wide open again for certain classes of retailers to use trademarked brands as loss leaders, all at the expense of the trademarked brand manufacturer himself, and secondly, injuring competent efficient independent trade.

Then, again, the Congress, realizing the injury sustained in the nullification of the Tydings-Miller law on certain sections of the law, by legislation instituted the McGuire Act, the national law.

There's no need, Mr. Chairman, for me to go into what took place from that moment on. The record speaks for itself but independent retailers find themselves in the same position now, in fact, now even worse than under what existed prior to 1937.

During the hearings on the McGuire Act, there was a statement made by I believe a competent witness who appeared before the committee. I believe his background was in industry for over a quarter of a century as an independent retailer, and it will be found in his remarks before this committee that he mentioned that all fair-trade legislation did was to place competition where it rightfully belongs, with the producer of trademarked brands. I am referring to the testimony of Mr. George J. Burger, vice president of the National Federation of Independent Business. Many of my colleagues are well acquainted with the gentleman and know of his experience in small business.

You and I know that the Nations buyers are being fooled intrading areas with these so-called discount houses. Of course they feature trademarked brand merchandise in most instances. The responsibility for their existence is largely due to weak sales policies of the trademarked brand merchandise manufacturer. In other words, the producer in his greed for volume has no real interest as to where his merchandise is sold so long as he, the producer, gets the volume. That might be a fine situation with those producers of trademarked brands if they carried on their overall policy exclusively with discount houses, but it would appear to me that where they seek other retailers to handle their merchandise and expect those retailers the create public acceptance, then there is some reason for the Congress to write into law as it applies to interstate commerce some justifiable protection for many hundreds of thousands of independent retailers handling trademarked brand merchandise throughout the Nation.

Before coming to Congress, I operated a retail stationery business and in my time I have signed a good many fair trade agreements with manufacturers. To stay in business and pay half-decent wages and not go bankrupt it is essential to average certain gross profits. To give a 20-percent discount requires doing almost twice the volume one would otherwise do.

The other day I came across some of my old figures. The store gross profit percentage which is before expenses were deducted was 36.88 percent. The percentage of expense was 34.32. So, in this case the profit before tax and nonoperating costs was 2.56 percent of sales.

Thus it is with a smaller business, there is hardly enough profit and frequently losses, so there is little incentive to encourage a businessman to continue. Always there is the temptation to sell out and go to work for a big fellow or chain and thereby avoid the long hours, worry and risk, and probably make more money at the end of the year.

But it will be a sad day for this Nation and its basic economy without the individual smaller firms. That, however, is the trend and what will happen without fair trade laws, in my opinion, to allow for protection of quality of merchandise and trade brands and against ruthless price cutting by powerful monopolistic concerns with practices designed deliberately to eliminate competition—often by selling below cost.

Mr. Chairman, I want to be on record so there can be no misunderstanding, that I will not be interested in sponsoring any legislation that would create a monopoly, whether the monopoly applied to a large segment or small segment in our economy. My legislation would not create that situation.

Further, Mr. Chairman, if I thought that my legislation would open up the door for collusion between producer and retailer or through groups of retailers, then I say to you and members of the committee, I would ask you to vote down the legislation.

Finally, Mr. Chairman, it is my hope and trust for the good of efficient independent business, not alone in my State and District but throughout the Nation, that this committee report out sound and workable legislation as we cannot permit independent business in the various communities throughout the Nation to be destroyed through the ruinous vicious unfair competition, all tending to create a monopoly.

I might add one other thought. I do believe that if consistent vigorous enforcement of the antitrust laws had been carried out by the Government consistently during the past 50 years, there never would have been any need for my legislation or similar legislation now before your committee.

Thank you.

If Everybody Would Buy Something

EXTENSION OF REMARKS

OF

HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. HOLT. Mr. Speaker, I would like to call the attention of my colleagues to the very fine article by Mr. M. L. Gunzburg, who to my knowledge on April 8, 1958, was the first to advocate the now famous buy campaign. Mr. Gunzburg is to be complimented for his foresight and contribution:

[From the Los Angeles Times of April 8, 1958]

IF EVERYBODY WOULD BUY SOMETHING

(By M. L. Gunzburg)

The President of the United States has said, in effect, that there is nothing wrong with the American economy that cannot be cured once the people start to buy.

The problem seems to be—when will that time come? How soon will the vast purchasing power of the masses (and of industry) be unleashed and American prosperity once more be in orbit? Where, oh where is the mechanism that can send it aloft?

And from where will it rise? Where is the launching site? In the White House? In Congress? Will it shoot upward from the canyons of Wall Street? From out of the indexes of industry and finance? Or does it lie slumbering deep and hidden in the psychology of the common consumer?

One eminent Senate leader proposes a tax cut for the lower and middle-income groups; an opponent insists high-income groups and corporations be included.

A third Senator protests that all such tax cuts would be so inflationary and so politically explosive as to end in blowing up the Senate itself.

A fourth leader is convinced that public works will prove disappointingly slow and ineffective and that tax cuts also are a mistake and that the true answer lies in correcting the policies of the Federal Reserve.

Other suggestions advocate lifting withholding taxes temporarily, but opponents question how much of such sums would be merely put aside into additional savings of employees and employers and how much would be released into circulation.

Yet all of the theories propounded have the same aim: via one or the other involved Rube Goldberg-like successions of economic cause and effect create purchasing power in the hands of the consumer and the incentive to buy in his "noggin"—and lo, the recession will be reversed.

Meanwhile the administration is advocating and determining its own remedies and has assured us that when and if and as necessary, it will take action.

But what action? What measures? At what costs, not only when enacted but in the future?

How long must we wait for them to be enacted? How much longer, 6 months, 6 years for them to become effective?

And it seems that the longer we wait the more confused and frightened and uncertain the consumer becomes—and the less inclined to spend his money.

Meantime, while the statesmen argue and the sages tremble, here is the writer's suggestion. Its enactment could be immediate.

Here is how it might work:

The administration, preferably the President himself, would appear on the Nation's combined networks and present to it a slogan and a campaign—Buy It Now.

And what would that simple slogan, Buy It Now, mean in actuality? A down-to-earth, rank-and-file, man-in-the-street voluntary program, free of Government controls, coercion or penalty—dependent on individual initiative and individual responsibility.

The President would make it clear in the beginning that he was not addressing his remarks to the 5 million unemployed or to those suffering seriously from the recession. The President's remarks would be directed solely to that vast remaining percentage of the population, citizens whose personal and family prosperity has exceeded anything they have known before.

To these, our more fortunate citizens, he would say in so many words:

"I am not asking you to take off on a buying spree, to be imprudent, to spend your savings in vain. I am asking only that you analyze your budget and your needs and then focus your attention on one item or service that you truly need or desire and one which, without doubt, you will purchase sometime within the year, and instead of waiting—buy it now.

"In fact, you might well have purchased it by now but for one reason or another have postponed doing so. You may have succumbed to the psychology of the times shared by many persons and business organizations—notions that this is not the time to buy, that it may be cheaper later or that you had best wait for prices to hit the bottom. You may even feel uneasy and embarrassed buying.

"But is this holding back of real assistance to your neighbors, or to your own well-being? Quite the contrary. Perhaps the time has come when the neighborly thing to do is to buy the very thing which you feel your neighbor might envy your having.

"Perhaps the shame some citizens feel in buying when their neighbors are unemployed might turn instead into a shame for not buying when their expenditures could bring employment to others. There are over 5 million unemployed and an estimated 2 million partially unemployed, yet seldom before have consumers held so much money in banks.

"Perhaps this is the time to share the economy, in the way it can best be shared, by its use. Select one item you need or wish and buy it now. Is it a new car, a new suit, a refrigerator, a washing machine, a necktie, a stock or bond in which you have faith, a new home, a new room, new carpets, color TV or a transistor radio, piano lessons, a much needed pair of glasses, a visit to the dentist or to your personal physician for a checkup, a bicycle or pair of skates or college education for your grandchildren, or a long-desired vacation?

"Select an item or service you have been wanting to purchase, something you know for sure you eventually will buy—and buy it now."

What are the potentials of such a buy it now campaign?

An obvious advantage is that such a campaign could be understood readily by the average citizen. No mystic shibboleths of classic economics will frighten off the man in the street.

As a practical national effort it could be enacted immediately and its results evaluated swiftly. There would follow no long, uncertain period during which we would await results.

We would have little to lose and at the very least much wisdom to gain.

For such a campaign might shed light on one of the unknown factors of economic law—the mystery of what part psychology plays in supply and demand.

Up to this point we have dealt with the idea of a buy it now campaign as a national effort that would be voluntary without Government intervention.

In fact, it could be so voluntary that the business and advertising fraternity could by itself alone initiate and carry through such a campaign, narrowing it to the limitations of a commercial buy-it-now month.

However, other than the voluntary, there is yet another approach to the buy-it-now campaign, an approach appealing less to the patriotic motives of the consumer and seller and more to their pocketbooks.

This pocketbook approach is also a simple approach, but it necessarily would involve Government action, for it would couple the buy-it-now campaign with an accompanying Federal moratorium or partial moratorium on excise taxes, thus creating substantial inducement indeed to the consumer to buy during the period of the campaign.

It then might be inexcusably bad business for the consumer not to buy it now.

Such a moratorium on excise taxes, as a Government weapon against unemployment, could possess remarkable pinpointing accuracy in coming to the aid of distressed areas and industries.

But regardless of the extent to which Government might participate in any such campaign, one point remains clear: Government is America's biggest buyer and its cooperation as a buying force alone in such a campaign could assume the success of buy it now.

Proposed Amendment to H. R. 12065, the Unemployment Compensation Bill

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. REED. Mr. Speaker, it will be the purpose of the minority membership of the House Committee on Ways and Means to urge that during the floor consideration of H. R. 12065, relating to the payment of temporary supplemental unemployment compensation, to offer an amendment to the bill. The amendment to be offered would make Federal funds available on a repayable basis to those States which at their option elect such funds for the purpose of extending unemployment compensation benefit durations under State law to those individuals who have exhausted their benefit entitlement after June 30, 1957. This proposed amendment embodies in its essential elements the administration's proposal for providing supplemental benefits modified by the proposal sponsored by the distinguished gentleman from Virginia [Mr. HARRISON] to assure that the respective States will have the individual authority to determine whether or not a State participates in the program. The amendment contains a further modification so as to make benefit eligibility at the discretion of the State available with respect to individuals who have exhausted their benefit entitlement since July 30, 1957.

It will not be my purpose to debate the merits of this amendment at this time. Such debate will occur during the floor consideration of the legislation. However, I would point out to my colleagues that this amendment that I have described represents a marked improvement over the bill, H. R. 12065, in the form that it was reported by the Committee on Ways and Means. It is an improvement in that it does not establish a public dole. It is an improvement in that it does not threaten the destruction of the existing unemployment compensation program. It is an improvement in that it preserves the integrity of the Federal-State relationship in the area of unemployment compensation. It is an improvement in that it grants to the States the discretion to determine whether or not the individual States will participate in the program. It is an improvement in that it is not administratively unworkable as is true of the bill, H. R. 12065, in its present form.

Mr. Speaker, so that the membership of the House and other interested persons may have an opportunity to study this proposed amendment to H. R. 12065 I will insert the text of the amendment in the RECORD at this point. In the event that this amendment is approved, it would, of course, be necessary to also offer an amendment to the title of the bill which I will do at the proper time:

AMENDMENT TO H. R. 12065

Strike out all after the enacting clause and insert:

"Short title

"SECTION 1. This act may be cited as the 'Temporary Unemployment Compensation Act of 1958.'

"TITLE I. INDIVIDUALS WHO HAVE EXHAUSTED THEIR RIGHTS

"Payment of compensation

"Eligibility

"SEC. 101. (a) (1) Payment of temporary unemployment compensation under this act shall be made, for any week of unemployment which begins on or after the 15th day after the date of the enactment of this act and before April 1, 1959, to individuals who have, after June 30, 1957 (or after such later date as may be specified pursuant to section 102 (b)), exhausted (within the meaning prescribed by the Secretary by regulations) all rights under the unemployment compensation laws referred to in paragraph (3) and who have no rights to unemployment compensation with respect to such week under any such law or under any other Federal or State unemployment compensation law.

"(2) Except as provided in section 103, payment of temporary unemployment compensation under this act shall be made only pursuant to an agreement entered into under section 102 and only for weeks of unemployment beginning after the date on which the agreement is entered into.

"(3) The unemployment compensation laws referred to in this paragraph are:

"(A) Any unemployment compensation law of a State.

"(B) Title XV of the Social Security Act, as amended (42 U. S. C. 1361 et seq.).

"(C) Title IV of the Veterans' Readjustment Assistance Act of 1952, as amended (38 U. S. C. 991 et seq.).

"Maximum Aggregate Amount Payable

"(b) The maximum aggregate amount of temporary unemployment compensation payable to any individual under this act shall be an amount equal to 50 percent of the total amount (including allowances for dependents) which was payable to him, under the unemployment compensation law or laws referred to in subsection (a) (3) under which he last exhausted his rights before making his first claim under this act, for the benefit year with respect to which this last exhaustion occurred. The term 'benefit year' means the benefit year as defined in the applicable State unemployment compensation law; except that, if such law does not define a benefit year, then such term means the period prescribed by the Secretary.

"Weekly Benefit Amount

"(c) The temporary unemployment compensation payable to an individual under this act for a week of total unemployment shall be the weekly benefit amount (including allowances for dependents) for total unemployment which was payable to him pursuant to the unemployment compensation law or laws referred to in subsection (a) (3) under which he most recently exhausted his rights. The temporary unemployment compensation payable to an individual under this act for a week of less than total unemployment shall be computed on the basis of such weekly benefit amount.

"Application of State Laws

"(d) Except where inconsistent with the provisions of this title, the terms and conditions of the unemployment compensation law or laws referred to in subsection (a) (3) under which an individual most recently exhausted his rights shall be applicable to his claims for temporary unemployment compensation under this act and to the payment thereof.

"Agreements with States

"In General

"SEC. 102. (a) The Secretary is authorized on behalf of the United States to enter into an agreement with a State, or with the agency administering the unemployment compensation law of such State, under which such State agency—

"(1) will make, as agent of the United States, payments of temporary unemployment compensation to the individuals referred to in section 101 on the basis provided in this act; and

"(2) will otherwise cooperate with the Secretary and with other State agencies in making payments of temporary unemployment compensation under this act.

"State May Select Later Date for Exhaustions Under State Law Which Qualify Under This Act

"(b) If the State so requests, the agreement entered into under this section shall specify, in lieu of June 30, 1957, such later date as the State may request. In any such case, an exhaustion under the unemployment compensation law of such State shall not be taken into account for the purposes of this act unless it occurred after such later date.

"Amendment, Suspension, or Termination of Agreement

"(c) Each agreement under this act shall provide the terms and conditions upon which the agreement may be amended, suspended, or terminated.

"No Denial or Reduction of State Benefits

"(d) Any agreement under this act shall provide that unemployment compensation otherwise payable to any individual under the State's unemployment compensation law will not be denied or reduced for any week by reason of any right to temporary unemployment compensation under this act. This subsection shall not apply to a State law which temporarily extended the duration of unemployment compensation benefits, if such State law provides for its expiration by reason of the enactment of this act.

"Veterans and Federal Employees

"In States Which Do Not Have Agreements, Etc.

"SEC. 103. (a) For the purpose of paying the temporary unemployment compensation provided in this act to individuals—

"(1) who have, after June 30, 1957, exhausted their rights to unemployment compensation under title XV of the Social Security Act or title IV of the Veterans' Readjustment Assistance Act of 1952; and

"(2) in a State, if there is no agreement entered into under section 102 which applies with respect to the weeks of unemployment concerned,

the Secretary is authorized to extend any existing agreement with such State. Any such extension shall apply only to weeks of unemployment beginning after such extension is made. For the purposes of this act, any such extension shall be treated as an agreement entered into under this act.

"In Puerto Rico and the Virgin Islands

"(b) For the purpose of paying the temporary unemployment compensation provided in this act to individuals—

"(1) who have, after June 30, 1957, exhausted their rights to unemployment compensation under title XV of the Social Security Act or title IV of the Veterans' Readjustment Assistance Act of 1952; and

"(2) in Puerto Rico or the Virgin Islands, the Secretary is authorized to utilize the

personnel and facilities of the agencies in Puerto Rico and the Virgin Islands cooperating with the United States Employment Service under the Act of June 6, 1933 (29 U. S. C. 49 et seq.), and may delegate to officials of such agencies any authority granted to him by this act whenever the Secretary determines such delegation to be necessary in carrying out the purposes of this act; and may allocate or transfer funds or otherwise pay or reimburse such agencies for the total cost of the temporary unemployment compensation paid under this act and for expenses incurred in carrying out the purposes of this act.

"Review

"(c) Any individual referred to in subsection (b) whose claim for temporary unemployment compensation under this act has been denied shall be entitled to a fair hearing and review as provided in section 1503 (c) of the Social-Security Act (42 U. S. C. 1363 (c)).

"Repayment

"In General

"SEC. 104. (a) The total credits allowed under section 3302 (c) of the Federal Unemployment Tax Act (26 U. S. C. 3302 (c)) to taxpayers with respect to wages attributable to a State for the taxable year beginning on January 1, 1963, and for each taxable year thereafter, shall be reduced in the same manner as that provided by section 3302 (c) (2) of the Federal Unemployment Tax Act for the repayment of advances made under title XII of the Social Security Act, as amended (42 U. S. C. 1321 et seq.), unless or until the Secretary of the Treasury finds that by December 1 of the taxable year there have been restored to the Treasury the amounts of temporary unemployment compensation paid in the State under this act (except amounts paid to individuals who exhausted their unemployment compensation under title XV of the Social Security Act and title IV of the Veterans' Readjustment Assistance Act of 1952 prior to their making their first claims under this act), the amount of costs incurred in the administration of this act with respect to the State, and the amount estimated by the Secretary of Labor as the State's proportionate share of other costs incurred in the administration of this act.

"Repayment in Excess of Amount Owed

"(b) Whenever the amount of additional tax paid, received, and covered into the Treasury under subsection (a) with respect to wages which are attributable to a State exceeds the sum of the amounts described in subsection (a), there is hereby appropriated to the Unemployment Trust Fund for crediting to the account of such State an amount equal to such excess. The amount so credited shall be used only in the payment of cash benefits to individuals with respect to their unemployment, exclusive of expenses of administration.

"TITLE II—GENERAL PROVISIONS

"Definitions

"SEC. 201. For the purposes of this act—

"(1) The term 'Secretary' means the Secretary of Labor.

"(2) The term 'State' includes the District of Columbia, Alaska, and Hawaii.

"(3) The term 'first claim' means the first request for determination of benefit status under this act on the basis of which a weekly benefit amount under this act is established, without regard to whether or not any benefits are paid.

"Review

"SEC. 202. Any determination by a State agency with respect to entitlement to temporary unemployment compensation pursuant to an agreement under this act shall be subject to review in the same manner and to the same extent as determinations under the State unemployment compensation law, and only in such manner and to such extent.

"Penalties

"False Statements, Etc.

"SEC. 203. (a) Whoever makes a false statement or representation of a material fact knowing it to be false, or knowingly fails to disclose a material fact, to obtain or increase for himself or for any other individual any payment under this act shall be fined not more than $1,000 or imprisoned for not more than 1 year, or both.

"Recovery of Overpayments

"(b) (1) If a State agency or the Secretary, as the case may be, or a court of competent jurisdiction, finds that any person—

"(A) has made, or has caused to be made by another, a false statement or representation of a material fact knowing it to be false, or has knowingly failed, or caused another to fail, to disclose a material fact, and

"(B) as a result of such action has received any payment under this act to which he was not entitled

such person shall be liable to repay such amount to the State agency or the Secretary, as the case may be. In lieu of requiring the repayment of any amount under this paragraph, the State agency or the Secretary, as the case may be, may recover such amount by deductions from any compensation payable to such person under this act. Any such finding by a State agency or the Secretary, as the case may be, may be made only after an opportunity for a fair hearing, subject to such further review as may be appropriate under sections 103 (c) and 202 of this act.

"(2) Any amount repaid to a State agency under paragraph (1) shall be deposited into the fund from which payment was made. Any amount repaid to the Secretary under paragraph (1) shall be returned to the Treasury and credited to the current applicable appropriation, fund, or account from which payment was made.

"Information

"SEC. 204. The agency administering the unemployment-compensation law of any State shall furnish to the Secretary (on a reimbursable basis) such information as he may find necessary or appropriate in carrying out the provisions of this act.

"Payments to States

"Payment on Calendar-Month Basis

"SEC. 205. (a) There shall be paid to each State which has an agreement under this act, either in advance or by way of reimbursement, as may be determined by the Secretary, such sum as the Secretary estimates the State will be entitled to receive under this act for each calendar month, reduced or increased, as the case may be, by any sum by which the Secretary finds that his estimates for any prior calendar month were greater or less than the amounts which should have been paid to the State. Such estimates may be made upon the basis of such statistical, sampling, or other method as may be agreed upon by the Secretary and the State agency.

"Certification

"(b) The Secretary shall from time to time certify to the Secretary of the Treasury for payment—

"(1) to each State which has an agreement under this act sums payable to such State under subsection (a), and

"(2) to each State such amounts as the Secretary determines to be necessary for the proper and efficient administration of this act in such State.

The Secretary of the Treasury, prior to audit or settlement by the General Accounting Office, shall make payment to the State in accordance with such certification, from the funds appropriated for carrying out the purposes of this act.

"Money To Be Used Only for Purposes for Which Paid

"(c) All money paid a State under this act shall be used solely for the purposes for which it is paid; and any money so paid which is not used for such purposes shall be returned, at the time specified in the agreement under this act, to the Treasury and credited to current applicable appropriations, funds, or accounts from which payments to States under this act may be made.

"Surety Bonds

"(d) An agreement under this act may require any officer or employee of the State certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in its performance, to give a surety bond to the United States in such amount as the Secretary may deem necessary, and may provide for the payment of the cost of such bond from funds for carrying out the purposes of this act.

"Liability of Certifying Officers

"(e) No person designated pursuant to an agreement under this act, as a certifying officer, shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to the payment of any compensation certified by him under this act.

"Liability of Disbursing Officers

"(f) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this act if it was based upon a voucher signed by a certifying officer designated as provided in subsection (e) of this section.

"Denial of benefits to aliens employed by Communist governments or organizations

"SEC. 206. No person who is an alien shall be entitled to any benefit under this act for any week of unemployment if, at any time on or after the first day of his applicable base period and before the beginning of such week, he was at any time employed by—

"(1) a foreign government which, at the time of such employment, was Communist or under Communist control, or any agency or instrumentality of any such foreign government, or

"(2) any organization if, at the time of such employment (A) such organization was registered under section 7 of the Subversive Activities Control Act of 1950 (50 U. S. C. 786), or (B) there was in effect a final order of the Subversive Activities Control Board requiring such organization to register under section 7 of such act or determining that it is a Communist-infiltrated organization.

"Regulations

"SEC. 207. The Secretary is hereby authorized to make such rules and regulations as may be necessary to carry out the provisions of this act.

"Authorization of appropriations

"SEC. 208. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the purposes of this act."

Frank J. Becker Scholarship

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. DEROUNIAN. Mr. Speaker, the Congressman FRANK J. BECKER Scholar-

ship Award which has been established by the Republican Club of Lynbrook, N. Y., is a wonderful example of true American spirit and it is with great pleasure that I place this informative article concerning it in the RECORD. This article appeared in the April 3, 1958, issue of the Tri-Town Leader, of Nassau County:

BECKER SCHOLARSHIP AWARD ESTABLISHED BY REPUBLICAN CLUB

The Republican Club of Lynbrook has established the Congressman FRANK J. BECKER Scholarship Award, according to an announcement made by Eugene O. Krause, chairman of the award committee.

The award is a cash scholarship grant of $500 and the award is raised through the auspices and under the sponsorship of the Lynbrook Republican Club.

The Congressman BECKER Scholarship Award is nonpolitical, stated Mr. Krause, and it is offered to a senior at any duly accredited high school who has been a resident within the 14 election districts of Lynbrook for 12 months preceding date of application.

Mr. Krause said, "In keeping with President Eisenhower's recent pleas for more private clubs to offer scholarships, the Lynbrook Republican Club has established the Congressman BECKER Cash Scholarship Award of $500."

Mr. Krause added, "The political nature of the sponsor and the political affiliations of the applicant will neither hinder nor aid the applicant in pursuance of the scholarship. The scholarship is awarded on the basis of scholastic record, character, personality ratings, good citizenship, and financial need."

Prospective applicants may obtain a complete copy of the rules by writing to Congressman FRANK J. BECHER Scholarship Award Committee, Eugene O. Krause, chairman, 12 Taft Avenue, Lynbrook, N. Y.

Postal Rate Legislation

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. JACKSON. Mr. Speaker, I have noted with admiration and respect the courageous statement by Postmaster General Arthur E. Summerfield in connection with the action of the House-Senate conferees on H. R. 5836, the postage rate legislation.

Mr. Summerfield issued the following statement when queried by the press on this matter:

The action taken today by the Senate conferees in the Senate-House Conference in rejecting the 5-cent rate on letter mail would scuttle President Eisenhower's proposed $2 billion postal modernization program that would provide 12,000 badly needed post offices to assure better mail service and also provide employment for thousands of workers.

It represents a callous disregard of the Senate's previous approval of this 5-cent letter rate and is a temporary victory for the large business users of the mails who for years have benefited from below-cost postage rate subsidies which are being paid for by American taxpayers to the tune of over $2 million every working day. The fight to stop this unconscionable raid on the Treasury will continue until fair and equitable increases in postage rates are achieved.

I heartily concur with the public spirited statement of the Postmaster General, and I want to urge every Member of the Congress to give it the serious consideration that it so well merits. I, for long, have been amazed at the selfishness of many large users of the mails. They are perfectly content to have the taxpayers pay a large share of their postage for them. I think these freeloaders should be made to pay their own way, and the large majority of Americans with who I have discussed this matter feel the same way. I wish the Postmaster General well in this fight of his to protect the public interest in this matter.

Give Communists the Silent Treatment?

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BECKER. Mr. Speaker, I am inserting in the RECORD an editorial entitled "Give Communists the Silent Treatment?" This appeared in Nassau County's largest weekly newspaper, the Leader, one of the finest grassroots newspapers in the country. I am sure that everyone having an opportunity to read this will agree there is a great deal of merit in the type of campaign promoted in this editorial, and I trust that every Member of the House will have an opportunity to read it.

The editorial follows:

GIVE COMMUNISTS THE SILENT TREATMENT?

Entirely too much has been written and said about the advantage the Red Russians gained in the propaganda war by announcing they had suspended A-bomb tests. Propaganda is effective only when gullible people of a nation fall for it. We think the people of the United States have reached the stage where they take any propaganda eminating from communistic sources at its face value and let it pass unnoticed.

Anyone who thinks the United States should really end its experiments before it is prepared to do so is too naive to be worthy of consideration, or just plain nuts to put it bluntly. Wouldn't the Communists like us to fall for a gag like that? Pacifists who have been wearing out their feet parading from upstate Connecticut and Pennsylvania on to U. N. headquarters in Manhattan demanding that we follow the Communists' example are poor, simple-minded individuals who do not understand they are, without realizing it, aiding and abetting the Russian cause.

The unfortunate thing is that news commentators broadcast the news the Reds send out and newspaper editors, who ought to know better, give it valuable space in their publications. Following this policy is never going to bring the Reds to their knees. Negotiations have failed. The campaign of Prayers for Peace has been ineffective against a Godless people.

But there is one type of campaign that has not been tried. Why not give the Communists the silent treatment, undemocratic though such a plan might be? If news broadcasters and newspapers would agree among themselves to ignore everything of a propaganda nature favorable to the Reds and not publish a line or speak a word about it, the Communists would be stunned.

Soviet scientists got into the air first with their sputniks, but both have dived to earth in flames, while the three United States produced satellites are still whirling through space apparently destined to continue to do so long after the Russian moons have been forgotten. If the Reds should put up another sputnik, the fact should be dismissed with brief mention. The same policy should be followed with all news coming from behind the Iron Curtain. There should be no comparisons.

When the Communists come to realize that their lies are not going to get into print or onto the air, they will have to pause to ponder. They will realize they are not being taken seriously by an enlightened America. And then perhaps they can be brought to the understanding that until they establish themselves as truth-tellers to say the least they will receive no recognition.

It's worth a trial. Let's apply the silent treatment to the Reds.

The Constitution: A Bulwark of Liberty

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD the following composition written by Tommy Mansker:

THE CONSTITUTION OF THE UNITED STATES OF AMERICA AND ITS BILL OF RIGHTS: A BULWARK OF LIBERTY

Our country won its independence from Great Britain in the year 1781. For 8 years its foundation, the Articles of Confederation, was weak and faulty. The United States of America, in spite of its name, was far from being a perfect Union. It was, indeed, as the articles said, "a league of friendship" among the States.

In time, some of the States became less friendly toward one another. Soon they began to quarrel seriously. Instead of pulling together as a team, the States were pulling in different directions. There was danger that the States might break away and become small, separate countries. In order to prevent this, the able leaders of the country, fearing our new Nation might fail, called a Constitutional Convention in May 1787 at Independence Hall in Philadelphia to patch the cracked foundation. After seeing that it was impossible, they wrote a new formula, the Constitution of the United States of America.

The Republic of the United States of America was established as a Government of the people, by the people, and for the people. Though the United States is a republican form of government, it is also a democratic form of government. Even though it is not a true democracy, in which all residents of the country gather at one location to make their laws and choose their leaders, it is a representative democracy in which the different sections of the country vote in their regions and elect representatives to send to their National Capital to make the laws. The Constitution also guarantees each and every State a republican form of government and is bound to protect each of them

against invasion and on application of the legislature or of the executive when the legislature cannot be convened, against domestic violence.

In forming a government that would not be overbalanced, each branch of the Government had to be given enough powers to equal those of the other branches. At times there have been attempts to overbalance the situation by 1 of the 3 branches, but so far, none have been successful. One example of this was during the radical Republican period just after the Civil War when the Republican Party had a majority of over 70 percent in the Congress. With such a majority, they could pass any bill they wished to propose, and the President's veto would be completely worthless.

The Constitution, which set up the 3 divisions of the Government, was itself divided into 3 parts, the preamble, the articles, and the amendments. The first part, the preamble, is the reason for the writing on the Constitution. It is: "We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The second part of the Constitution, the articles, defines the powers given to the different parts of the Government. In article 1, the powers of the Congress are defined. This article gives the Congress, and only Congress, the power to make laws. The most important of these powers are listed in section 8 of article 1. They are: clause 1, collecting taxes, duties, and excises to pay the debts and provide for the common defense and general welfare of the United States; clause 2, to borrow money on the credit of the United States; clause 5, to coin money, regulate the value thereof, and of foreign coin; clause 9, to constitute tribunals inferior to the Supreme Court; clause 11, to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water; clause 12, to raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years; and clause 13, to provide and maintain a navy. All these are most important due to the ever present threat of communism. In order to cope with communism, these duties of the Congress are the most important for they concern the defense and trade of the United States.

In order to be a member of the Congress, there are certain requirements that must be met. To be a member of the House of Representatives, a person must be 25 years old, a resident of the United States for 7 years, and a resident of the State from which he was elected. Before taking office, a Senator must be 30 years old, a resident of the United States for 9 years, and a resident of the State in which he was chosen. All Members of Congress must take an oath. It is: "I do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

In article II, the duties, qualifications, and powers of the executive branch are mentioned. The executive branch is headed by the President and both of them together enforce the laws made by Congress and signed by the President. In order to be President, a natural born citizen must be, at least for 14 years, a citizen of the United States, and 35 years old. The President takes the following oath before taking office. It is: "I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

Duties of the President include being Commander in Chief of the Armed Forces. This keeps anyone from becoming a dictator because the President is elected every 4 years. Also, in doing this, the makers of the Constitution placed in the hands of one man the great governmental and military powers that must be used together in time of war.

Other important powers of the President are: He shall have the power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not provided for, and which shall be established by law.

A President may be removed from office, as can any other member of the United States Government, by the Congress. The House of Representatives impeaches the person and the Senate judges whether he is guilty or not. Only one President has ever been impeached and he was Andrew Johnson. This one case ended in an acquittal of the charges by the Senate. The only Member of the Senate ever to be impeached was William Blount, of Tennessee, on December 17, 1798, to January 14, 1799, but was dismissed for lack of jurisdiction. Only one member of the Supreme Court was ever impeached. He was Samuel Chase whose trial, November 30, 1804, to March 1, 1805, ended in an acquittal.

The third article provides for a Supreme Court and defines its powers. The Supreme Court has the power to decide whether or not a law passed by the Congress and the President, is constitutional. There are 9 members of the Supreme Court, 1 being a Chief Justice. Before taking the post of Justice in the Supreme Court, a man must take the following oath: "I do solemnly swear (or affirm) that I will administer justice without respect to persons and do equal right to the poor and to the rich, and that I will faithfully and impartially discharge and perform all the duties incumbent upon me as ——— according to my abilities and understanding agreeably to the Constitution and laws of the United States. So help me God." To be a Justice of the Supreme Court, a person must have the experience of an attorney.

The judges, both of the Supreme and inferior courts, shall hold their office during good behavior, and shall not be diminished in pay during their continuance in office.

Although the Constitution does not definitely give them the power, the Supreme Court can overrule a State or local law. The only way a decision may be overruled is by a constitutional amendment.

Though the first 3 of the articles are the most important, there are also 4 others. Article 4 has to do with the States and their laws and how they must be observed by other States. Article 5 tells how two-thirds of the Congress and three-fourths of the States must approve in order for an amendment to be added to the Constitution. Article 6 has to do with the debts of the United States and article 7 tells about ratification of the Constitution. All of the States finally ratified it.

After the articles came the third part of the Constitution, the amendments. The first amendment has these four important safeguards for the American people: (1) Congress must not set up any religion for the Nation, and cant' keep anyone from practicing whatever religion he prefers, (2) Congress cannot stop anyone from saying, writing, or printing almost anything he likes, (3) Congress cannot keep anyone from meeting with others to talk on anything they like, (4) Congress cannot keep anyone from asking his Government to correct something that he thinks is wrong. This is probably the most important of the amendments that James Madison had in mind when he organized the first 10 amendments.

The second amendment provides for the State militia and their right to use arms. Amendment three forbids soldiers to invade the privacy of a home, as the British did in the colonies before the Revolution. The fourth amendment gives the people the right to forbid a search of their house without a legal right. The people added this amendment to prevent such arrests and searches without a warrant. In the first half of amendment five, the Federal Government is prevented from bringing anyone to trial for a serious crime without a grand jury first deciding he is guilty. The second half of amendment five tells certain things that the Government is not allowed to do. They are: a citizen cannot be tried for a crime the second time, a citizen cannot be forced to testify against himself, the Government cannot take away anyone's home, unless by the due process of law, and the Government can't take anyone's property legally without giving them a fair price for it.

The sixth amendment describes certain rights which the Federal Government must give anyone arrested on a criminal charge. He must have (1) a public trial as soon as possible after being arrested, (2) a jury trial, composed of usually 12 men, (3) information telling him just what he is supposed to have done, in order for him to prepare his defense, (4) a chance to see, hear, and answer the witnesses who speak against him, (5) the help of the Government, if necessary, in bringing to court witnesses who can help him, and (6) a lawyer to defend him, paid for by the Government if he is unable to pay.

Amendment seven refers to cases of the kind usually called "civil suits." Such cases deal with disagreements about persons' rights and duties toward one another. Amendment eight states that an arrested person is not to be tortured and must not be fined or imprisoned beyond reason. It also gives him the right to post bail and leave jail until he comes to trial.

The first eight amendments listed certain rights belonging to the people. Those rights were so clearly defined that the Federal Government could make no mistake about them. It was not possible, however, to list all the rights which the people wanted to keep for themselves. Amendment nine was added so that the Federal Government would not try to take away people's rights simply because those rights were not named in the Constitution. If a right is not granted to the Federal Government, that right rests with the people. One example of this is education. Education is a matter that, by the Constitution, is to be left up to the local community, but lately has become a tool of the Federal Government.

Amendment 10 deals with the undelegated powers of the people. "The powers not delegated to the United States by the Constitution, not prohibited by it to the States, are reserved to the States respectively, or to the people." This amendment, in short, gives the States rights and powers that the Federal Government cannot take away.

There are 12 more amendments to the Constitution, which were added to make the Constitution itself clearer. They range all the way from the outlawing of slavery to the outlawing of intoxicating liquors, and to the direct election of Senators to the limitation of the President's term to a maximum of 10 years.

Without all of the above mentioned parts of the Constitution, despotism, insurrection, invasion, and domestic violence would be likely to occur. Invasion comes when a country's defenses are not kept up to par of self-protection. Domestic violence, unrest within the country itself, occurs when there is no foundation to hold it together. This might even

lead to insurrection which is an organized effort to overthrow an established government. A country without a strong foundation is always in danger of a one man rule or dictatorship. Adolf Hitler overthrew the President of Germany and became dictator because Germany had no established constitution. With a proper foundation, a country will never be in danger of despotism, unless the people become totally indifferent.

For more than 160 years the United States of America has been a strong Nation of free people. It is like a fine house, carefully planned, well built, and kept modern and in good repair. This house is so large and so carefully laid out that there is room in it for all who live here to work and enjoy life.

Before the Constitution was written, the American people tried for nearly 6 years to build a house of freedom, using the Articles of Confederation as their plan. But the building showed many signs of weakness, and soon seemed likely to fall apart. Instead of having their house on one main foundation with cornerstones of leadership, courage, foresight, and individualism, it was as if each room in the house stood on its own foundation. Not until the Constitutional Convention did its work in 1787 did the American people understand how to build a house of freedom that would be strong and lasting—the same one that we live in today. The United States is truly a house of freedom.

Salute to Israel

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. KEATING. Mr. Speaker, last week, from all over our country came happy birthday greetings to the brave state of Israel on the occasion of its 10th anniversary of freedom. The sentiments of these messages mirrors the deep hope and faith the American people have in this newest bastion of freedom and democracy. They illustrate the enduring ties between these two great nations.

Under leave previously granted, I insert at this point in the RECORD, editorials from the New York Herald Tribune, the New York Times, and a fine article by Eleanor Templeton, from the Washington Post and Times Herald of April 20, 1958:

[From the New York Herald Tribune of April 24, 1958]

ISRAEL AFTER 10 YEARS

This week Israel begins a celebration of its 10th anniversary as a modern nation. There have been moments in its brief history—and agonizing moments they were—when the celebration of future anniversaries appeared remote indeed. Yet many a great nation, including our own, has been called upon to resist enmities and pressures that seemed almost certain to overcome it in its early years. The great nations are those which have suffered but endured, faced disaster but triumphed. Israel is such a nation.

As it completes its first decade it can look back upon achievements which few nations of modern times can match. Its population has nearly trebled—some 2 million inhabitants as compared to the 650,000 who were living there when the British mandate ended. Numerically this is an imposing increase, but in human terms it is even more impressive, for it represents a biblical ingathering of the exiles. To Israel have come survivors of the Nazi holocaust in Europe, refugees from Iron Curtain lands, immigrants from north Africa, and thousands of other homeless and hopeless Jews. In Israel they have found both home and hope.

Through the love and labor of the Israelis of today and the Zionists of yesterday, the land that used to be called Palestine has been transformed from a virtual desert into a thriving national community—a democratic country devoted to art as well as agriculture, education as well as industry, science as well as commerce.

All this has been done in the face of an Arab hostility that has more than once swollen into violence and bloodshed. Israel, again like great nations of the past, was born in strife. A United Nations resolution proclaimed her existence, but her own people died to make the proclamation live. Today, too, there is strife and tension and turmoil, and it is safe to say that these will continue until Israel's neighbors have accepted her as a fact of life in the Middle East.

In an article written for this newspaper recently, Foreign Minister Golda Meir said that the Israelis of today, far from being interlopers, represented an ancient people with no other ambition but to build its national life in freedom and security.

These words are true and today, as 10 years ago, Israel offers its neighbors not a sword, but peace. True, a military parade in Jerusalem will be part of the official celebration, for Israel is a land beleaguered and it, too, has reason to know that only its own strength and striking power is a deterrent to attack. It also knows that the offer of Prime Minister Ben-Gurion to talk peace with Nasser or any other responsible Arab leader, any time, any place, has never been accepted.

This year Israel will celebrate its anniversary with pride in its past and confidence in its future. When the exiled Jews of old were asked by their captors to sing the songs of Israel in Babylonia they refused, saying: "How shall we sing the Lord's song in a strange land?" Today they are singing it in their own land, and the free men of the world, the men who admire courage and respect faith, will extend to them the ancient Hebrew greeting "Shalom aleichem"—Peace be with you.

[From the New York Times of April 24, 1958]

ISRAEL'S TENTH

From the hills of Galilee to the sands of Aqaba, from the waters of the Dead Sea to the shores of the Mediterranean, a myriad of blue-and-white flags will be flying proudly today in celebration of the 10th anniversary of the independence of the State of Israel.

Conceived in idealism and born in fire, Israel has already accomplished the impossible. It has established itself as a free democracy on an ancient, rocky soil that had not known freedom for centuries. It has grown in strength and security though surrounded by hostile neighbors. It has created a new kind of civilization at this traditional crossroads of old civilizations. It has done so through the unconquerable strength of a pioneer spirit welling up from 2,000 years of tragic history.

The force of character, the courage in arms, the determination to survive, the will to create, that have marked the first decade of this extraordinary state combine to give assurance of its future. Militarily undefensible, economically unviable, politically impossible, it has yet managed to defend itself, to develop its economy, to establish its institutions. It has thrown open its doors to Jewish victims of oppression throughout the world, giving a new sense of dignity to those denied this basic human right in the countries from which they came. The men and women who have built the State of Israel in these first 10 crucial years have plowed the soil, have planted forests, have created industries, have brought water to the desert, have constructed homes and towns and cities, have deepened ports, have opened mines; and in doing all this and more they have not failed to give attention to the most important factor of all in their national development: the education of their youth and the fusion of many kinds of people with diverse backgrounds into a vigorous and, eventually, a common culture.

They could not perform the miracles they have performed without help, nor without paying a fearful price. The help has come mainly from the United States, and it will be needed for a long time to come. The price has been the unwavering enmity of the Arab world, which failed in its attempt to throttle Israel at the start and which has not yet become openly reconciled to the fact that Israel is here to stay. The Arabs' reiterated hostility and refusal for 10 years to make peace gives Israel good reason for her constant posture of military readiness; but Israel herself has sometimes in the past seemed too quick on the trigger in an explosive situation that could engulf the globe.

The continuing state of tension between Israel and the Arab countries is obviously one of the most dangerous elements in the world today; and, by any objective appraisal of this situation, it makes no sense. If the Arab States would recognize the realities and negotiate a peace, and if in turn Israel would be willing to make concessions toward that end, the moral, political, and economic benefits to all the peoples of the area would be beyond calculation. David Ben-Gurion, Israel's messianic Prime Minister, has told Parliament in his latest message that "we must make untiring and incessant efforts to find a way to the hearts of the peoples who are still hostile to us and bring about peace between the Jewish people and their Arab neighbors." The achievement of this goal must be the deepest hope of all of Israel's friends throughout the free world who are congratulating her on this, her 10th anniversary.

[From the Washington Post and Times Herald of April 20, 1958]

ISRAEL CELEBRATING A 10-YEAR MIRACLE

(By Eleanor Templeton)

TEL AVIV.—About dusk Wednesday, a concentrated burst of joy will explode all over Israel. That is the eve of Israel's 10th independence day, and celebrations which will continue for several months will be inaugurated in a night-long rejoicing.

Only a few of the celebrants will stop to consider, on this night, all the achievements of their country in its first 10 years of existence. Most of the singing and dancing in the streets, the laughter and gladness, will be an expression of deep gratitude for the miracle of existence itself, for the great fact that Israel's 10th anniversary has come to pass.

Even many of the country's leaders (including Prime Minister David Ben-Gurion) will tell you that this is the crowning achievement, and they also find it somehow miraculous. But at the same time they recall the acts of will and work, the amount of caring and trying that brought this thing about, and they concede that it is not all miracle.

A 70-YEAR FOUNDATION

To begin with, there were the 70 years of Jewish colonization in Palestine, first under Turkish rule and then under British mandatory administration, preceding the establish-

ment of the State of Israel. These were the real foundation years for the advances made in this first decade of statehood. Yet even considering this, the record of this decade is impressive.

The initial big step forward was made on the land, vast areas of which have been restored to fruitfulness. In some instances this was a matter of digging stones out of the hills by hand. But in most cases modern agricultural methods, equipment, and education were employed to increase cultivated areas by nearly 300 percent and irrigated land by more than 400 percent.

Overall agricultural production has trebled and now covers about 70 percent of the Nation's food requirements; in some branches such as vegetables, eggs, and poultry, local demand is fully met. Moreover, substantial amounts of foodstuffs are exported; with citrus fruit heading the list, they comprise 42 percent of total exports.

A DESERT BLOSSOMS

One of the most heartening features of this revitalization of the earth is the change it has made in the landscape. People who knew the old Palestine as brown and barren, with hillsides and even many valleys fit only to pasture sheep and goats, are invariably struck by the transformation they see today.

Almost the entire northern half of the country is verdantly pastoral, lying under the Mediterranean sun like a great garden, green for nearly three-quarters of the year. An intensive afforestation program has covered hills and mountains, once mostly rock, with pine and cypress. Dunelands are dotted with tamarisk trees to control the drifting sand. Eucalyptus, olive, and date palms flourish; citrus groves are, of course, abundant.

And everywhere you see the red roofs of rural settlements of various types, none of them very far apart and all of them established according to a plan (of which national defense is an important element). About 450 of these have been founded since 1948. Along with expanded villages, they have absorbed a fair share of the 915,000 immigrants who have come into Israel since the establishment of the state.

NOT EVEN THE LANGUAGE

This flood of immigrants itself demanded of the struggling young nation one of its most impressive performances. The newcomers originated in 60 different countries. The great majority of them arrived without funds or property. Only one in five knew anything about farming and very few had any vocational training. No more than a handful had any knowledge of Hebrew, the language of the country.

To receive, settle and integrate this multitude into the life of the nation within 10 years was no small feat. Adjustments in this process are still going on and will continue for some time. Nevertheless, what has been done is admirable not only in terms of skill in handling an enormously complex situation but also in terms of humanitarian endeavor.

It was this untrained reservoir of labor which had to supply most of the working force used to build up Israel's industry. Fortunately, response to training was for the most part effective. Industrial production has risen three-fold in volume and value since 1949, and Israel today is the most highly industrialized country of the Middle East.

New industries established include steel, fertilizers, tires and other rubber goods, paper products, piping, diesel engines, electrical appliances and the assembly of motor cars and refrigerators. Textiles, plastics, all essential household items and many nonessential ones are produced locally.

This greater industrial production gave a boost to Israel's exports, which quintupled during the decade. Her balance of trade, however, is still in the red, chiefly because of the import of capital equipment for industry and necessary foreign currency expenditures to met heavy defense costs. But exports now go out to more than 80 countries, and commercial trade agreements are in effect with 20 countries.

To help transport her goods and to serve the tourist trade, Israel has built practically from scratch a modern merchant fleet of 34 cargo and passenger vessels. Other transport facilities have kept pace. Harbors have been improved and are still in the process of development. The railway system has been modernized and expanded to serve the four principal cities and way points. The national airline, El Al, links Israel with Europe and the Americas and recently set an international record for the speediest commercial flight from New York to London (8 hours 3 minutes).

Main roads, extending from one end of the country to the other, are generally good and include one piece of roadbuilding as dramatic as it is economically important. This is the 150-mile Beersheba-Eilat Highway, opened in January, which cuts through the fantastic rock mountains of the Negev desert to connect Israel's Red Sea port (Eilat) with the rest of the country.

These, then, are some of the highlights of Israel's economic progress during her first 10 years. But no account of this progress would be complete without linking it to science, for in Israel science is above all a matter of applied research. Although a great deal of pure and basic research is done, especially by the Hebrew University and the renowned Weizmann Institute of Science, most of the funds and brainpower available are devoted to solving practical problems of industrial, agricultural, and mineral production.

An excellent example of this was the opening last year of the Arid Zone Research Institute at Beersheba, capital of the Negev. This institute will concentrate all the scientific activities concerned with the conquest of the desert—for the Negev is not only the storehouse of most of Israel's minerals but is also the principal future area of agricultural expansion and the consequent absorption of the country's increasing population. Atomic research also will figure in this effort, as will the outstanding work Israeli scientists are doing in the field of solar energy.

Yet no matter how intense the drive toward building and strengthening the economy of the state has been, it has not been pursued at the expense of social gains or of educational and cultural advances.

Health services, operating under a system of socialized medicine which also permits private practice, are very good. There is an adequate supply of doctors and their professional standard is high. The infant mortality rate has been halved, and many diseases indigenous to the area have been virtually wiped out. Salk vaccine is produced locally and all children up to 4 years of age have received it. National insurance covers industrial accidents, maternity care, and old-age and survivor benefits.

Education is free and compulsory between the ages of 5 and 14. The school system provides facilities from kindergarten through university and technical institutes. Two schools of higher learning, the Hebrew University at Jerusalem and the Israel Institute of Technology (Technion) at Haifa, have won recognition abroad and both are building new campuses. Since 1948, university attendance has increased fivefold, as has school attendance in general.

Culture blossoms everywhere in Israel, from the most sophisticated city circles to the simplest farm settlement. Interest and participation in all the arts—notably music, the theater, painting, and sculpture—is lively, and the quality of the creative work done is frequently exceptional. Many Americans have had a chance to see this for themselves in performances of the Israel Philharmonic Orchestra and the Inbal Dance Troupe, both of which have toured the United States and Europe.

As for literature, a new Hebrew-language school of writing is emerging from the pens of Israeli writers. Also, Israel holds second place in the world for the number of book titles published in proportion to the population, as well as in the import of foreign-language books.

Finally, Israel is a genuine democracy and there is no doubt that she has made democracy work to serve the people above all else. This is not to say, naturally, that life in Israel is a ll bliss, or that the nation has found an answer to all its problems, or that it has not made mistakes.

Israel still does not enjoy permanent peace along her borders. She still faces economic problems and internal maladjustments which only additional decades of hard work, devotion, and intelligent guidance can overcome.

But Israel has learned from her mistakes and tries not to repeat them. Moreover, if she suffers from Arab hostility, she also benefits from the friendship of many nations, great and small, East and West, and freely acknowledges that she could not have survived without this friendship. And if one can judge by the record of this first decade, Israel, given the boon of peace, will be a land not only of promise but also of fulfillment.

Guide Given To Curb Executives

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by J. A. Livingston which appeared in the Washington Post and Times Herald of April 25, 1958.

I believe it is high time that the Congress looked into this matter with a view to ending such conduct by corporation officers.

GUIDE GIVEN TO CURB EXECUTIVES' CUPIDITY

(By J. A. Livingston)

The accident of divide and rule serves corporation executives well when they want stockholder approval of self-enriching compensation plans. This is not because stockholders are helpless or impotent. It is because stockholders are divided.

Investment trusts, such as Massachusetts Investors, Investors Mutual, Wellington Fund, and others, hold sufficiently large blocks of stock to influence managements. But the funds are too preoccupied pushing the sale of their own shares and managing investment portfolios to watch scrutinously over executive morality.

They'd rather pay the management of a successful company what it says it's worth—in bonuses, stock-option plans, pensions—than get involved in a proxy argument. Banks, trust companies, insurance companies, endowment funds do likewise. It's the easy way.

Recently, executives of the Aluminum Co. of America, Fairchild Engine & Aviation, and American Optical Co., for example, reduced stock-option prices because of the stock-market drop. They weren't willing to wait, as stockholders must, for their stock

to recover. They were impatient for gain. Now, executives in other companies are establishing fairy-godmother committees to do the same for them. These include National Lead, Consolidated Coal, Standard Oil (Ind.), Chas. Pfizer, Olin Mathieson Chemical, James Lees & Sons, Lehigh Valley R. R.

These heads-I-win-tails-I-can't-lose option plans for executives have bruised the ethical sensibilities of many financial analysts who have studied the proposals. Yet, proxies were sent in—as usual—despite the dilution of stockholder equity and grab-bag morality. No institutional investor wants to stick a lone neck out.

Here, it seems to me, such organizations as the National Association of Investment Companies, the trust division of the American Bankers Association, and the National Federation of Financial Analysts Societies could perform a service for themselves and executives by providing forums for open discussion of executive compensation. Out of such discussions would come standards of self-value.

If a responsible investor group ever set down standards of reasonableness for judging stock-option, bonus, and other plans of compensation, then all institutional investors would have some basis for refusing to send in proxies endorsing overreaching proposals. They'd not be ruled by division, but by fear of reprisal. If, for example, a corporation were confronted by a consistent reaction from banks to a stock-option plan, it would not retaliate by withdrawing the deposits. It has to have banks.

And so, as a basis for discussion, as a starter toward standards, I am setting forth five limitations which seem to me worthy of consideration in stock-option plans.

Not more than 1 percent of the total stock of a company should be allotted under option in any 1 year, with an overall limit of 5 percent in any 10 years. (If additional shares are issued—as in a merger—the percentage would include them; the option quota would rise.)

A 5-year limit on options. An executive ought to be able to make the option pay off in that time. If not, let him ask stockholders for a new option.

The option price (apart from complying with tax laws) should not be below the stock's book value or less than 10 times average earnings on the stock for the last 10 years. (This guards against issuance of options when a stock is unduly depressed—for fortuitous reasons.)

At least 50 percent of stock purchased under option should be held for 2 years after acquisition, the other 50 percent at least 3 years. (Stock option plans are justified as an inducement to hold a good executive. There ought to be ties to the inducement.)

No change in the price of the option in less than 5 years and only if the price of the stock has dropped for reasons utterly beyond anticipation. (A recession, for example, could hardly be considered outside normal expectation. It is a hazard of business which stockholders and optionees ought to be prepared to live through.)

All social orders and all institutions succeed best with guideposts to restraint.

Automation and Technological Program

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. HOLLAND. Mr. Speaker, here, in the United States, organized labor is much concerned with the uses of the new technology of our day, especially with automation. This new technology has already caused many new problems in collective bargaining. It has held forth to us a great promise but that promise is yet to be fulfilled in any real degree.

We learn from a release emanating from the United Nations in New York of Soviet boasts regarding the new technology. Although we of this Nation have long prided ourselves upon our pioneering in technological development, it appears now that the Soviet is also forging ahead in breaking new ground.

The Soviets already boast that some 2 million workers will be released from dull and dangerous employment by 1960 because of the new technology. It boasts that none of these workers will be jobless and that the Soviet Union is able, as benefits a workers state, to shorten the working day without reducing wages.

Now, all of us know the nature of the Soviet boast. But its challenge to us cannot be lightly dismissed. The fact is that the Soviet is forging ahead in the production race. The whole world is watching this race as the result will contribute much in influencing their thinking. Here at home jobless workers are already questioning whether they have not been sold short, since they know that higher production, higher wages, and better living standards can result from the new machines if we use them intelligently.

In this connection I wish to include an address by Albert Whitehouse, director, Industrial Union Department, AFL–CIO, IUD Conference on Automation and Major Technological Changes, Tuesday, April 22, 1958, Statler Hotel, Washington, D. C.:

AUTOMATION AND TECHNOLOGICAL PROGRAM

This is a collective bargaining conference dealing with automation and major technological change. It takes place just as major collective bargaining gets underway in key industry. It takes place also at a time when our economy is undergoing a highly significant shift. The views expressed at this conference will, without doubt, reflect these developments and will almost certainly give emphasis to problems resulting from the new technology and to the kinds of solutions to these problems that we must seek.

The National Industrial Conference Board recently reported that industry's investment in each worker on the job has been rising rapidly since 1939. This means only that more and increasingly complex machines are being used on the job.

The NICB states that United States industry had $16,000 invested in each production worker in mid-1957. This figure was a full $1,200 above the figure for mid-1956. It gives evidence of the vast plant boom that has taken place over the past few years. It also shows the direction of that boom—investment has been increasingly in more complex and more automatic machinery, including highly automated equipment.

All of us are familiar with the advertisements of the notoriously antiunion Warner-Swazey Co. This firm just loves to advertise that big investment makes possible our jobs and that all of us should die of gratitude because investment per worker is increasing.

Warner-Swasey's ads are, of course, blatant half-truth. Sure, the amount of money invested in machinery has increased, but this has also made it possible for fewer workers to turn out an increasing amount of end products. And the fewer the number of workers in a plant, the higher the investment per job will be.

The recent NICB study makes this fact abundantly clear. It also points out one of the reasons for present day economic problems. The study found that in the boom period from mid-1956 through mid-1957, there was an increase of 7 percent in plant investment. Part of this, of course, represented higher prices. Somewhat more than half, however, represented real investment.

This was a time in which output of goods was rising rapidly and one in which business was accumulating inventory at a rapid rate in anticipation of higher prices and steadily rising profits.

The boom in factory building was still very vigorous and more new equipment than ever was being installed. This, then, should have been a period in which the number of production workers should have increased.

The contrary, however, was true. There was a drop of 2 percent in the number of production workers. Under these circumstances, it is no wonder that the investment per production worker has been increasing so rapidly.

Possibly we ought to fear most the day when it will take a hundred thousand dollars of invested capital to provide a production job. If that day ever arrives, we may need very few production workers indeed.

Surely this could be a blessing and could mean the liberation of man from the tyranny of routine work. But, unless we look the facts in the face and recognize the true trends, we may well find that we have bought ourselves a mess of pottage.

* * * * *

Today's factory is far different from that of only yesterday and tomorrow's automated plant will be even more radically altered. Such plants will turn out more and more of our total output and they will be capable of fantastic feats of production. What is true of the productive process is becoming equally true of the information and distributive functions of our economy—the sales, clerical, and bookkeeping jobs.

An eloquent description of what automation involves was contained in a series appearing in one of the world's great newspapers just as the recent feverish period of plant expansion got underway. This description has been reinforced by time and, if anything, may have understated the case.

"So fantastic are the potentialities of new control devices," the account declared, "that it is possible to visualize acres of factory or office space in which no worker is needed. Automated equipment can process raw materials, assemble them into finished goods, package them, and load them into freight cars without direct human help.

"That is not all. The automated machines can adjust to variable productive conditions, correct their own mistakes, inspect the finished product, and even change their own parts when parts break down or wear out.

"Automated machines do not stop with telling other machines what to do; they even breed new automated equipment. With magical new calculators, design data for huge mechanical installations can be completed in one-fortieth of the time formerly required."

That description was written 3 years ago. It was not fantastic then and it is far less so today.

Some 2 months ago, the American Management Association held its fourth annual electronics conference. This conference, among other things, heard a representative of Southern Railway describe how the use of an IBM 705 machine saved his firm $805,000 in clerical costs during its first year of operation. This 1 machine, this representative added, could bring white-collar wage costs down as much as $1,500,000 in 1 more year in his firm alone.

A recent account in the New York Times described an automatic factory for pro-

ducing airplane parts. This factory is operated from punched tapes and controlled by digital computers. Electronic controls have been linked with a milling machine, a drilling device, and a boring machine to make available for the first time the economies of Detroit-type mass production in the area of small-lot production. This kind of production, it seems, makes up most of the machining done by American industry. Interestingly, the plant was described by an official of the Hughes Aircraft Co. as "the nucleus of the first electronically automated factory."

• • • • •

Just 12 machines of the Corning Glass Co. located in 4 different plants can produce 1.88 billion bulbs for electric lamps and other glass pieces in a single year. Each machine is geared to an automated process.

Each machine is capable of turning 2,000 blank bulbs per minute. Not so many years ago a 3-man shop required 14 hours to turn out 1,200 such bulbs. This production is 15 times as great as could be obtained with semiautomatic equipment at the end of World War I. In just 40 seconds, a Corning machine can turn out as many bulbs as an experienced glassblower can make by hand in 8 hours.

Yet each machine requires but one worker per shift for its operation. In plain language, just 24 workers now can turn out a major part of the glass bulb production of the United States.

The wonders of automation have so often been proclaimed that we now tend to take new industrial revolution for granted. At first, we tended to gasp when we learned, for example, that at the Prudential Life Insurance Co., a single combination of IBM 702 and 705 machines handles 8 million premium notices annually to company policyholders in New York, New Jersey, and other Eastern States.

Each month, these new-style business machines select from their "memory" the policies coming up for current premium notices. They then calculate the amount due, determine any dividends forthcoming, and apply them according to the desires of the policyholders. They also handle the figuring necessary for any loans outstanding on policies.

Each time a great scientific advance is made, man seems unable to cope adequately with it. We now have the H-bomb and this great achievement does little more for us than cause shivers to travel up and down our spines. In the world's frantic search for military security, we may find that we have poisoned ourselves and our atmosphere, if we don't first blow ourselves to Kingdom Come.

When the atom first was split, we were greeted with the promise of a great hereafter on earth. And without doubt, the atom even now still offers us great hope as well as terrible fear.

When automation and the new technology were introduced, we were greeted with the same promises. Just remember back a few years when automation first became a national byword. Remember how we were promised that automation—if left to the corporations—would bring about a wonderful brave new world in which our economic and social problems would be resolved with all the precision of an electronic computer.

Only yesterday the experts predicted that automation would create more jobs than it eliminated. Not too long ago we were told that automation was the answer to higher production and that higher production would automatically create higher living standards.

These were the predictions of experts who told us that any dislocations would be very temporary and unimportant. They told us, if you will recall, that automation would create skilled jobs by the tens of thousands and that the new technology would bring higher wages for those it displaced. They told us that the future called for brains in the factory and they freely predicted an end to routine drudgery in the office.

These were the rosy promises and they were not all that was promised. We were promised that automation was the way to higher employment, to stable prices, and to better living standards for all. Anybody who dared offer a word of caution was hit as a saboteur who would destroy the machines and as a flyspeck on the wheels of progress.

Promise is easy enough, but performance requires more than mere complacency. And those who offered major technological change as America's chief diet have indeed been complacent.

Let me hasten to add lest I be brickbatted as a prophet of woe and as antimachine, that I fully recognize the need for more and better machines. And let me stress once more that American labor does not fight technological progress. But we have a right and a duty to question the uses of the machine and to examine the social and economic implications of its use. And we have also the right and the obligation to point out that social progress is not automatic and that the machine by itself guarantees nothing but a method of production.

It is time then to review the performance. And it is time to point out that automation and other major technological change have failed to bring automatically those things promised so blithely. Where are the great numbers of more highly skilled jobs? Where are the lower prices? Where are the jobs for everybody that were virtually guaranteed to us?

Recently, the National Industrial Conference Board made a study of employment developments within 130 companies. The NICB found that automation is changing the structure of the work force. It found that between 1954 and 1957, the proportion of workers engaged in direct production declined, although this was during a period of rising output. In 1955, in fact, the auto industry turned out a record number of cars and the steel industry poured more steel than ever before. In both cases, the number of workers involved failed to keep pace with the tremendous output.

We were told that while there might be a decline in the number of production workers, this would be more than offset by an absolute rise in the number of higher paid workers required for more skilled nonproduction jobs.

This simply didn't happen. Maintenance requirements in automated plants appear to be no greater than those in nonautomated plants. In fact, the evidence seems to point in just the opposite direction. The NICB study found that there was a drop in the proportion of maintenance workers in automated plants, as well as a decline in the number of production control and security personnel involved.

It appears to be true that there now are more white collar clerical and other office workers in the factory work force. But the work of these groups is also being automated. And the increase in white collar workers has not kept up in absolute numbers with the number of displaced production workers.

You will hear figures of all kinds today and I don't want to bore you with them. But in 1953, total employment in all manufacturing numbered 17,238,000. In 1955, a much higher production year, total employment in all manufacturing was 16,557,000.

I think that some of us have been kidding ourselves regarding the purpose of technology under our enterprise system—and probably under any other system. The purpose of better machinery is to cut labor costs by eliminating jobs. Now, it's that simple and if you can find any company that installs better and higher speed equipment for any other purpose, I'd suggest that you capture its president and present him to a museum.

The point is, obviously, that if as a result of lower unit labor costs product costs decline and wages rise, disemployment resulting from the introduction of the new technology will be temporary and localized. I think the economists have a word for it—frictional unemployment. But if prices rise and real wages fail to keep pace with rising output, then watch out.

I know that I have oversimplified all this, but I am not an economist. I do know from brute experience during the great depression that I was unemployed for a long time, although the steel mill that disemployed me had just as much capacity to produce in 1932 as it had in 1929.

They said then and they said only recently that there really isn't any such thing as technological unemployment. Perhaps not for any long pull and I won't argue that question. But tell it to a worker who loses his job and his skill when a new machine is introduced and who can't find a job paying the same level of wages or any new job at all.

The new technology may indeed create new skills. But it also destroys skills of equal degree and, possibly, as many skills as it creates. They call this progress and perhaps it is. But the big question is progress for what. If we can translate the change into human betterment, we are making the only kind of progress that really counts.

Performance even during our most prosperous years has not been of the best, despite the predictions of the experts. And in the past many months, performance has been miserable.

In 1956 and 1957, more was spent on new factories than ever before. Our capacity to produce became greater than ever. But the more we could produce, the higher prices went. And wages did not keep pace. Today, dollar wages of factory workers are almost $2 a week below last year. Real wages have declined by about $2.50 more.

A year ago, the average wage in manufacturing was $82 a week and now it's about $80. Last year, the experts accused us of causing inflation with our big $80 gross pay. This year, the same experts are accusing us of causing the slump. Possibly, the best way to answer the experts is to have them figure out how they can get by on a weekly wage of $80 in this day and age.

Since last year, unemployment has continued to rise. In March of this year, some 200,000 more manufacturing workers became disemployed. Largely because of seasonal rises in construction and agricultural employment, this key fact has been relatively ignored.

There are now 1.5 million fewer manufacturing workers employed than a year ago. Tens of thousands more of these workers are working less than a full workweek.

The same President who only last fall told us not to buy, has now called upon us to extend our purchases. If President Eisenhower will tell the Nation's 15 million employed factory workers how to do this on what they are now earning, I am sure they will be eternally grateful. I, for one, can't figure it out unless the manufacturers lower their prices significantly, or agree to raise wages. Or unless Government will act to cut individual income taxes at the lower and middle levels, raise unemployment compensation, hike minimum wages and take the other commonsense steps that our modern technology makes so obviously necessary at this time.

America's real problem today is certainly not one of production. Our manufacturing workers are ready, willing, and able to man the new technology. They ask but little—jobs at adequate wages. This, it might be pointed out, is entirely consistent with national policy as spelled out in the Employment Act of 1946.

It appears quite certain that our members cannot depend upon industry and Govern-

ment to do the necessary job. Fortunately, our unions are strong enough to make their traditional contribution in the situation. We need wage increases and we intend to get them in this year's negotiations. When we get them, we will be better able to carry out President Eisenhower's mandate to buy more.

The big problem of America is not production. Our problem is to keep our pipelines from choking up with too much goods. Anyone who thinks higher wages are bad in this situation is suffering an acute case of economic myopia. Today's technology calls for higher wages and higher living standards with fewer hours of work and, unless they are forthcoming, all of us may find ourselves threatened by the plenty we are now able to produce. Anyone who cares to dispute this is advised to talk to America's family farmers who are accused of being too productive and are being forced to move off or give up their farms.

I would like to mention one other aspect of modern technology which so often appears to get lost in the shifting social scene. Modern machines and computers are expensive. With the recession, the big firms are resorting more and more to computers in their offices as well as in the factories. Small firms that cannot afford this equipment will find it ever harder to survive, except possibly in the increasingly constricting service areas still defying the inroads of the new machines.

The road ahead is bigness in industry. And bigness in industry leaves the American people but one major economic defense. That economic defense will, more and more, prove to be the unions. Those who would seek to destroy collective bargaining had better have a hard look at where the new technology is leading in the world of industry.

Automation has created many new bargaining problems for unions. The incentive systems of yesterday often make no sense at all in the face of the new machines, not even for management. Job grading systems also tend to lose meaning as the content of jobs is destroyed. Automation creates its own kind of job boredom and this is also a problem for organized labor, as well as for management. These problems and the many others that have already manifested themselves on the job, I leave to your discussions of today.

Neither today's economic situation nor the coming of automation should be cause for lament. If automation and the new technology have not yet brought us the kinds of results we should reasonably expect, we must not forget the great promise that these new instruments contain. We know more than ever that we cannot obtain from these instruments the fulfillment of their promise unless we make them the servant of all the people. We have a tremendous job ahead before we can say that we have achieved this objective. Now is no time to slow down.

* * * * *

Congratulations, Joe Glasser

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. MINSHALL. Mr. Speaker, it has recently come to my attention that one of the Nation's leading weekly newspapers, the West Side News, has been accorded the highest honor by the National Safety Council. This newspaper, which serves the western suburbs of Cleveland and has a weekly circulation of over 100,000, was 1 of 18 suburban newspapers throughout the country accorded the signal honor. This acclaim was awarded for their excellent contribution and service to safety through public-information mediums.

My heartiest congratulations to Joe Glasser for bringing to the city of Lakewood and the other western suburbs of Cleveland this outstanding tribute.

The West Side News article concerning this award follows:

WEST SIDE NEWS SAFETY EFFORTS WIN NATIONAL ACCLAIM—1957 NATIONAL SAFETY AWARD WON BY WEST SIDE NEWS—ONLY LOCAL NEWSPAPER HONORED—FOUR CLEVELAND RADIO STATIONS AND WJW-TV ALSO WINNERS

We hope you will pardon us if we appear to be a little boastful! We are very excited and humbly proud of the distinction that came to the West Side News this week—the announcement from the National Safety Council in Chicago that this newspaper has been named the winner of the council's public interest award for 1957.

The West Side News is the only newspaper, daily or weekly, in northern Ohio to receive the award. The only other recipients in Greater Cleveland were radio stations KYW, WBOE, WGAR, WHK, and television station WJW-TV.

The noncompetitive award is made annually by the National Safety Council to United States and Canadian public information media for exceptional service to safety.

The 1957 award went to 40 daily and 18 weekly newspapers, 147 radio and 36 television stations, 1 television and 2 radio networks, 4 radio-TV syndicates, 10 general circulation, and 29 specialized magazines, 29 advertisers, and 57 outdoor advertising companies.

"A review of these 1957 public interest award entries," said Ned H. Dearborn, president of the National Safety Council, "shows beyond question the tremendous contribution of mass communication media to the sharp reduction in the number of traffic deaths last year.

"We are proud to honor the outstanding leadership represented by these awards."

Judges of the award, all specialists in the public information or safety field, were: Hugh Curtis, editor, Better Homes and Gardens, Norman Damon, vice president, Automotive Safety Foundation; Maxwell Fox, of the Advertising Council; Frederick H. Garrigus, manager of organized services, National Association of Broadcasters; Wesley I. Nunn, advertising manager, Standard Oil Company of Indiana; Dr. Kenneth E. Olson, Medill School of Journalism, Northwestern University; and John Osbon, Midwest news editor, Broadcasting magazine.

A letter from President Dearborn of the council to the editor of West Side News said, in part:

"We here at the council have been well aware of all you have been doing for safety, and we are delighted that the judges agreed.

"I am sure you feel, as we do, that there is another, less tangible result of your safety efforts * * * the knowledge that you have helped prevent many accidents."

Yes, Mr. President; we do share your feelings about the real reward for effort in behalf of safety—the warm, comforting thought that perhaps because of what we did a life or limb was saved.

We are truly grateful for the honor which has come to this newspaper. It will be an inspiration to us as we continue to use the influence of the West Side News in the cause of safety.

Remarks by Treasury Secretary Robert B. Anderson on Law Day, University of Texas, Austin, Tex., Friday, April 25, 1958

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. THORNBERRY. Mr. Speaker, on last Friday, April 26, 1958, the School of Law of the University of Texas in Austin, Tex., observed Law Day.

The principal speaker on this occasion was a distinguished alumnus of the University of Texas, the Honorable Robert B. Anderson, the Secretary of the Treasury.

Secretary Anderson made a very significant and timely address on the new challenges and the opportunities facing the American people to preserve a free society and achieve lasting peace.

The address is as follows:

A free people protects both its political freedom at the ballot box and its economic freedom at the market place. A free society requires not only the right but the duty of individual participation. Our political participation is through political parties; our economic participation is through the opportunity to work at jobs of our own choosing; through the widespread distribution of the fruits of the economy; through a high standard of living; and through ownership of the means of production.

As individuals we participate in ownership in a variety of ways. Approximately 9 million of our people own shares in the country's corporations. There are 3 million farmers who own their own farms. There are more than 4 million business enterprises owned by individuals or small groups. There are more than 30 million families who have bank checking accounts, and almost that many families have savings accounts.

There are over 100 million people who own life insurance. There are 30 million families who own their own homes, almost 40 million families owning automobiles, and innumerable other millions of owners of washers, refrigerators, radios, TV sets and other equipment quite apart from capital goods which in themselves generate further production.

While each segment of the economy seeks to benefit through profit and wages, there must be a general acceptance of the belief that despite self-interest the operations of all groups in our economy must be conducted in the interest of the public good.

Our social institutions we insure through a government by the rule of law. We recognize that behind that law are certain immutable truths. Our laws are framed with a goal of translating these truths into rules that are applicable to everyday living.

It has always been necessary to seek to find a balance between absolute freedom and absolute control. This balance cannot be a static one; it must constantly be adjusted as times change and as society becomes more complex. Also, our changing relationship with other nations must frequently be modified and expressed in terms of new formal international cooperation.

In the economic world we have something of the same problem. There was a time when men of necessity tried very hard to be self-sufficient. As society grew, it was felt that certain economic laws had validity, and that one of the most important of these was

a reliance on self-interest as the best guarantee of the general welfare. It was generally thought that if each man pursued his own interest this natural law would work automatically to accomplish equity between the workers and their employers and to bring the greatest good to society as a whole. Relations between nations likewise proceeded pretty much on the same principle—that self-interest generally provided the best guide to policy and action.

As the industrialy revolution spread through more and more areas of economic activity, it came to be recognized that complete laissez faire was an unrealistic concept—that in few instances was economic power expressed in terms of individuals acting in isolation from others. The very fact that people are coming to express themselves through groups, however, emphasizes rather than minimizes the importance and the responsibility of the individual. Because group action is essential, the role the individual must play in the group, if he is to avoid surrendering his rights as a member of a free society, becomes increasingly vital.

In the international field it took much longer for a policy of national isolation to be seen for what it was—both unrealistic and outmoded. But the coming of the air age finally drove this fact home; in both our internal and external relations it is now pretty generally recognized that we have moved well into a period in which both people and nations must try to meet their responsibilities working with other people and other nations.

The aim of the economic machinery, the ownership of which is so diversely spread, is to supply the goods and services that our people require, at prices that not only make possible effective demand but leave room for experimentation and innovation, for the process of change, for the creation of those new wants and new decisions to buy which are essential to progress. Despite the widespread ownership in this country, we have an increased characteristic of grouping.

Most American production, for example, is achieved through corporations where individuals contribute their funds but entrust the production and distribution processes to managerial efforts. Labor expresses its desires and exercises its powers through unions. Farmers organize into associations or join cooperative marketing organizations. Businessmen, both as individuals and as companies, work together through associations to promote their particular interests. Geographical communities express themselves through chambers of commerce or boards of trade.

All through the spectrum of business, this grouping continues; and in recent years it has pushed increasingly across national borders. Certain of the European countries are trying to join their efforts in the European common market and others are seeking to develop a free-trade area. The nations of the free world are entering into trade agreements and working out international understandings with respect to the distribution of goods among themselves and in and out of the Iron Curtain bloc.

This coming together of group activity develops certain tendencies. In the first place, the wide diffusion of ownership puts increasing emphasis on managerial control. And entrusting decisions to management has a tendency to lessen a consciousness of individual participation and to promote the feeling that the Government in trying to maintain a balance between economic groups can cure all economic ills.

Yet, if we are to have an economic system that is to succeed, the American people must accept economic as well as political duties, economic as well as political responsibilities. And this sense of responsibility must be keen enough and well enough understood so that it becomes an effective influence in determining the use of power by larger groups. Since we act as groups, we must have, in addition to laws and regulations which govern their action, a basic adherence to a principle of economic ethics that transcends the advantages to the group membership. We must recognize correlated duties to other groups and the public as a whole. The economic control relinquished by the individual in our complex American economy has not passed automatically to the Government. It is finally in the hands of people.

While as a matter of public policy we try to maintain a balance between the desires and powers of different elements of the economic system, we must be sure that we give maximum play to freedom of choice, liberty of action, the initiative of the individual, and the dynamic compulsion that stems from incentives. In a free, competitive society we should recognize that Government has an important role but that it has, also, its limitations. Government, for example, may open up and make available certain economic potentialities. This we do through the building of roads, the development of waterways, the stimulation of means of transportation, and the performance of like functions. At the same time, we have taken steps to protect employment, to insure the bargaining rights of individuals, to avoid monopolies, to require certain minimum standards of safety, to mitigate the hardships of unemployment and old age in an industrial society, and generally to insure the equality of opportunity. Here again, we are walking the narrow road between the proper functions of government which means some surrender of individualism to the economic good and the maintenance of individual freedom and incentives.

Whatever the changed distribution may be in the achievement of the balance, I think we might all agree that it should be accomplished through the Government operating by rule of law rather than by fiat or decree.

In the words of John Locke, our goal should be "not to abolish or restrain, but to preserve and enlarge freedom." How much have we abolished, and how much have we preserved? Even more fundamental is the question of how much must be abolished in order to "preserve and enlarge" the scope of freedom in an ever-changing society? Strictly speaking, we do not operate under a free enterprise system—freedom for every man "to do what he lists," to quote Locke once more. Certain individual rights had to be curtailed in the interests of the larger group. We have a competitive price system; but in order to preserve its competitive aspects we found that we had to take away some part of the freedom of individuals to practice unrestrained competition.

Since the first experiments in democracy, in fact, we have been made to realize in many different ways that our liberties carry with them certain ethical responsibilities for not abusing these liberties in order to promote selfish interests.

For example, it is taken for granted that we may invest our savings in any way we choose. The corporation whose shares we may have bought, on the other hand, is not at liberty to conduct its business in any way it wants. We have set up many kinds of rules to assure fair competition, to protect the small investor and stockholder.

All these things are serious limitations on individual liberty and on economic power. Because this is true, each one has had to battle for acceptance. But, however fumbling we may have been in going about it, our goal has always been the one expressed by John Locke of submitting to certain restrictions in order to preserve and enlarge the environment in which society as a whole could function effectively. The difficulties in every age of deciding which limitations will promote freedom and which will limit it unduly are enormous. But these are just the decisions which we must make as responsible members of a democratic society.

We must recognize too that the issues involved never remain quite the same. Technology and innovation may move with lightning speed to change the terms of our problem, almost overnight. In the words of Mr. Justice Cardozo, "Hardly is the ink dry upon our formula before the call of an unsuspected equity—the urge of a new group of facts, a new combination of events—bids us blur and blot and qualify and even, it may be, erase."

We have some particular situations with which we must concern ourselves:

The first is that we live in a world of tensions. There is a disturbing and very real competition between nations on a physical basis. The drive for world domination on the part of an aggressor nation is not a new development in history, but it comes armed in our own time with a new potential for destruction. There is another new development—or rather a development which is taking new forms: the competition among nations now extends into the economic structure. And at the root of both our physical and economic tensions is a wide divergence in ideology—political, social, and economic. We must be relentless in seeking the ways of peace. The world must be spared, if possible, the holocaust of atomic war.

Secondly, our national life is not likely to become more simple, either politically or economically. It is very much more likely to become increasingly complicated. We must learn to live and to work within these complications in order to satisfy both our national needs and the reciprocal requirements of membership in the community of free nations.

Finally, we must accomplish both of these responsibilities within the framework of a free competitive system through voluntary cooperative efforts, or we will gradually be brought to submit more and more to regimentation imposed by a central authority.

In our day the problem is made more difficult because for a long time we may well be engaged in a cold war. If we were engaged in an active war, all of the normal rules both of economics and of society would be ignored and we would temporarily submit to the kind of regimentation that would bring all of our forces into play in order to win. If we were wholly at peace there would be a change of emphasis and in our efforts to help promote sustainable growth, we would be directing more of our economic activity to the making of things to be used and enjoyed by man in increasingly better living.

In a cold war we are somewhat in between. We want to produce the goods and services for maintaining a higher standard of living. We want to win both the ideological and the economic battle for uncommitted countries. We want to avoid dislocations and maladjustments in our economic system without surrendering more than the necessary minimum of freedoms. At the same time, we willingly submit to the fact that a large part of our national effort goes into the making of things which are essential for governments for waging war, but which are of no use whatever in providing for the things that man wears and eats and requires for shelter. And so, imposed upon the complications of an already complicated world, we have the necessity for contributing a larger share of our total national production to something that is inherent waste and whose best use would be to never use it at all.

As a part of the cold war we will be concerned not only with our defense in a physical sense but with the competition which will exist between the Western World and the Soviet bloc countries in an economic sense.

This subject is much too broad to yield to a full discussion here. I should like to point out 2 areas—1 to their advantage and 1 to our advantage—that should weigh in our thinking.

The Soviet Union as a monolithic state with the ownership of all of the means of production concentrated in the central government, may be able to deal with other countries advantageously both on a system of barter and in making ruble loans. For example, it can afford to take foodstuffs of other countries in barter arrangements because of its need to supplement its own production of food, while in the United States we are confronted with problems of agricultural surplus. In making ruble loans to other countries, the Soviets can appear to be generous because they realize that when the ruble is spent for capital goods, it must in the first transaction be spent either in Russia or one of the Soviet-bloc countries. There is the barest kind of international trade in the ruble as such.

On the other hand, if the United States should make a dollar loan to other countries, unless it is accompanied by conditions requiring its expenditures in the United States, the dollars loaned will be competed for by all of the other countries of the free world which produce capital goods.

As a general proposition, therefore, in transactions as between governments and other countries the Soviets would have an advantage. On the other hand, with no means of production owned by the citizens of Russia, they would be hardpressed to go into other countries and purchase capital equity even in participation with the citizens of other countries. It is hardly conceivable that either the neutral or free countries would tolerate substantial investments of capital and equity ownership by the Soviet Government itself.

On the other hand, the private citizens of this and other free countries wishing to invest their own capital find a warm welcome in other countries as equity investors if they follow the rules of good citizenship of the other nations. In this way, great opportunities are opened to the individual citizens of the less developed countries to play an important role in the betterment of their country's economy and its people. On the basis, therefore, of dealing between private individuals, the United States and other free countries may have a net advantage over the Soviet.

If one believes, as I do, that real and lasting peace in our world must have an economic as well as political foundation and that this foundation must be planted most firmly in the consciousness of men concerned with their own betterment and with rising standards of living, we may very well have at our disposal—in these dealings between private individuals—the best means of securing both economic betterment and a just and lasting peace.

As the economic machinery of other countries around the world is developed or goes through processes of evolution and change, we must make it possible for them to adopt those portions of the American and free world system of capital as are consistent with their own traditions and their own capabilities. We are leaders in a tremendous cause—the struggle of men everywhere to live without crushing want and to live in freedom. No tyranny in history has been able to crush this hope in the hearts of men. But it is unrealistic as well as dangerously shortsighted to assume that others will want to take over our entire way of life just at it has developed in this country, regardless of how well it may fit their particular needs at this particular period of their development. We must try to be advocates of our system, with emphasis on the benefits which flow to people—recognizing that the particular techniques which helped us achieve those benefits may have to be modified for use elsewhere.

When we look at our country in perspective, we are impressed with the fact that during the last 75 years we have built the most productive system in the world. When one analyzes why this is so, a great deal of attention must be paid to the process of growth and change resulting from the dynamic demand of people for more goods and for better ways to produce them. These demands are expressed in terms of research, technology, and incentives on the one hand, and in higher standards of living on the other. In the whole process of change and development, the constant conflict between liberty and controls continues.

The forces which have been responsible for the evolution and development of our economic system and its tremendous productive power are as vital today as ever before and beckon us to new horizons of accomplishment. There will always be problems with which we have to cope. A competitive economy with dependence upon myriad decisions and judgments will always incur the hazards of recession and inflation. We have learned a great deal about how to cope with them. We must always be endeavoring to learn more. This requires flexibility and a willingness to utilize our maximum competence and instrumentalities both as a people and as a Government to see that neither inflation or deflation should run a ruinous course.

We will always have the problem of providing the incentives for the formation of adequate capital and the education which will secure an adequate supply of skilled people. We will always be concerned with the complexities of cost and price and the consequent responsibilities that are attendant upon labor and management in order that we maintain a sound relationship in the public interest. We will eternally have with us the problem of maintaining our freedoms and avoiding regimentation.

Our faith in this country and our economic system is strong. We have become the greatest productive Nation in the world. Our distributive capacity has run somewhat behind and we must be sure that our ability to distribute both nationally and internationally matches stride with our productive ability.

We doubled our national output once every 24 years before World War II and once in 18 years since that time. The benefits of our growth are being shared on a widening basis. Individual and family income is on the rise. More than one-third of the American families earn in excess of $5,000 per year. And, the Committee for Economic Development, in a recent report estimated that by 1975 the average family income after payment of taxes will amount to $7,100 a year (in terms of dollars of 1956 purchasing power) and that by 1975 our gross national product may well exceed $725 billion.

Today there is a new challenge and a new opportunity.

Our national population has doubled in 50 years. It is expanding at a rate of 3 million persons per year. The number of American workers is increasing at a rate of nearly 1 million per year. Millions of new workers will be needed to make, sell, and distribute our goods.

Looking at even broader figures, it took the world something like 5,000 years of recorded history to have the first billion people alive on this earth at one time. This occurred in 1830. It took us only a little over 100 years to have the second billion people alive at one time on this globe. By 1970 the world will have 3 billion inhabitants—and those 3 billion are the people whose wants and demands will make the economy of our country and the economy of the world.

These factors of growth bring us to the realization of the new demands that will be impressed upon our technology and our science; new obligations for educational opportunities and a higher quality of education. They emphasize the necessity for improving the national health; for utilizing all our ingenuity as individuals, business and Government to minimize fluctuations in our economy; to provide, in addition to material things, new cultural opportunities for people who have time to enjoy them.

The vistas of the future are as limitless as the capacity of our people. It belongs to the dynamic, to the imaginative, to those who are willing to work and compete.

France—From Reconstruction to Expansion

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following:

FRANCE—FROM RECONSTRUCTION TO EXPANSION

The booklet France, From Reconstruction to Expansion, published by the press and information service of the French Embassy in New York, is an excellently documented economic survey of postwar France. Attractively illustrated and well edited, it provides interesting and informative reading matter.

Starting with a short description of France's economic plight at the end of World War II, the booklet describes what was known as the first modernization and equipment plan, a long-range program of reequipment and modernization which gave France's economy a new forward look.

As a result of this plan, involving an investment of nearly $12 billion, the French railroads today handle 20 percent more passenger traffic and 65 percent more freight than they did before World War II. In the coal mines, output per manshift has increased 30 percent over 1938. Renault automobile works turn out 4 times as many cars as before the war, with only 50 percent more workers.

Most of the credit for this progress is attributed to United States aid under the Marshall plan which gave the initial impetus to reconstruction and contributed largely to the realization of the French goal.

The years 1952–53 marked the turning point in France's postwar economic development. With reconstruction well underway, and her industrial production having increased by 50 percent above the prewar level, orderly expansion together with currency stabilization and a balanced foreign trade became the primary objectives.

A second modernization and equipment plan was devised to develop new areas for capital investment and to create new incentives in agriculture, building, manufacturing industries, and equipment of overseas territories. Private capital was to supply a steadily increasing share of the investment, and it was possible to reduce the percentage of public funds in the total investment from 30 percent in 1952 to 26.8 percent in 1956.

Realizing the importance of merging the various national markets of Western Europe, France was a prime factor in setting up the Organization for European Economic Cooperation, the European Payments Union, the European Coal and Steel Community, and the European Common Market.

The French population, now totaling 44 million, has increased by over 4 million in a little more than 10 years. The country's birthrate is now higher than at any time since the turn of the century, and life expectancy is longer. The birthrate is one of the highest in Western Europe. This has created a new problem—a shortage of adults between the ages of 20 and 64, and therefore a manpower shortage.

There has been practically full employment since the liberation. This, together with the rise in productivity through better equipment, and an increase in the number of working hours to 46 as against 39 per week before the war, has enabled France to attain her high level of production. To remedy the manpower shortage, the French Government took measures that allowed for an increase in immigration of laborers. During 1957, 140,000 foreign workers migrated to France, chiefly from Italy.

The chapter on agricultural progress contradicts the traditional picture of the French farmer as an ultraconservative individualist clinging to obsolete methods, resisting technical advances and practicing diversified farming on a midget-sized plot. In fact, the picture today is very different.

Reparceling of more than 5 million acres between 1945 and 1958 has made it possible for farmers who joined the program to cultivate as a single unit the same acreage that was divided before into a number of nonadjacent parcels. As a result of increased use of fertilizer and lime, and a better selection of seeds, the average output per acre has begun to increase rapidly. New crops are being introduced. A striking example is that of rice which, in a few short years, has progressed enough to render France not only self-sufficient, but even an exporter of this commodity. Education in agriculture is also becoming more popular at all school levels.

France is taking steps to meet her ever-growing needs of sources of energy in coal, hydropower, petroleum and natural gas through increased production at home and from imports. Today, one-third of the energy consumed in France is imported, mainly in the form of petroleum and, to a lesser extent, coal. She is now counting greatly on a vastly larger production of petroleum at home and in her oversea territories, particularly the Sahara and French Equatorial Africa.

Nuclear energy will also play a significant role in the near future. France is not only the most advanced country in Western Europe in the industrial use of nuclear power, but she is also a pioneer in the harnessing of power from the sea and the sun. Conclusive tests have been made in the use of thermal energy from the sea to produce electricity, and a choice of a site for the first plant is under study. A solar furnace which produces heat of 6,300° Fahrenheit was built in 1952 and another one is being erected. This source of energy is used to produce heat-resistant materials and high-temperature alloys.

France is the fifth largest steel-producing country in the world, and fourth in the production of aluminum, and output in both is constantly increasing.

The fame of the small French car has made French automobiles an important export, and the largest truck in the world is manufactured in France. French ingenuity has also produced such revolutionary aircraft as the wingless Atar, the rocket-powered Trident, the Leduc flying stovepipe, and the only supersonic fighter that needs no prepared airstrip for landings or takeoffs. The Caravelle, a commercial medium-range twin jet, now in production, is considered the world's fastest, safest, and most comfortable in its category.

The electrical, chemical, and textile industries have likewise made rapid strides since the setback of World War II.

The drastic destruction of dwellings during that period, plus the sharp rise in population has focused special attention on building construction. The goal of 300,000 new units yearly is expected to be reached in 1958, and this effort will have to be sustained and even amplified in the coming years. In addition, the industrial boom has caused internal migrations which have aggravated the situation in certain cities. Regional planning and legislation designed to encourage a decentralization of industries are, however, beginning to transform the economic map of France.

These far-reaching plans are well served by the existence of an excellent network of communications and efficient transportation. Forty-two percent of the total rail traffic is already being moved economically by electric engines, and this percentage is expected to increase to 70 percent by 1961. The French highway system is the densest in the world. The merchant fleet is one of the most modern, with only 9 percent of its ships more than 20 years old.

Total imports into France constitute over 11 percent of her gross national product, as against a total of 3 percent for imports into the United States. Foreign trade is thus vital to the French economy, and in periods of industrial expansion when imports of raw materials increase sharply, and the pressure of demand on the domestic market hinders a parallel development of exports of manufactured goods and foodstuffs already made difficult by the protectionist policies of other countries, a foreign exchange crisis develops. This happened in 1956–57. Yet, thanks to prompt Government action to maintain a high level of exports, and the possibility now offered to France to draw upon various sources of financial aid (a total of $655 million in credits from the European Payments Union, the International Monetary Fund, and the United States Government and agencies) the international position of the franc is greatly strengthened.

Today the French live better, but they also work harder and save more than they did before the war. The rise in the individual standard of living between 1938 and 1955 is estimated at 29 percent. Consumption patterns reflect this rise. The French now spend twice as much as they did in 1938 for appliances and cars, and less for food, with the exception of meat, fruit and vegetables.

From 1949 to 1957 the gross national product increased 50 percent. Private consumption increased at almost the same rate, but Government purchases have risen at a much faster pace.

The important proportion of defense expenditures is explained by French commitments to NATO, and the need to maintain order and security in the Department of Algeria. Yet, in proportion to gross national income, the military budget of France is comparable to that of her NATO allies, the United States and Great Britain. A special effort has been made in the past year to develop additional fiscal revenues. New taxes were voted in 1957, and it is estimated that in 1958 fiscal revenues will amount to about 540 billion francs ($1,300,000,000) more than in 1957. Actually, according to the figures for 1956, the proportion of the tax burden to gross national product was higher in France than in the United States (31.2 percent in France as against 25.5 percent in the United States).

Thus, the economy of France continues to grow and become more stable, and that country is confident that, through proper measures, she will continue on the road of progress and prosperity.

America's Future Is Up to Youth

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. THORNBERRY. Mr. Speaker, each year a national essay contest is sponsored by the Ladies Auxiliary to the Veterans of Foreign Wars. The topic this year was America's Future Is Up to Youth. In the local contest sponsored among the students of Smithville High School, Smithville, Tex., which is in the 10th Congressional District, which I represent, by the Ladies Auxiliary to the Dr. George M. Jones Post, No. 1309, the first-place winner was Mr. George C.—Mickey—Mick. Mickey is the first boy ever to win first place in the Veterans of Foreign Wars essay contest in Smithville High School. His essay has now been entered in the State contest, from which the winners will go to the national competition.

Because of the nature of the subject, I feel that the Members of Congress will be interested in reading Mickey's excellent essay.

Mr. Speaker, under leave to extend my remarks, I include the following essay in the RECORD:

AMERICA'S FUTURE IS UP TO YOUTH
(By Mickey Mick)

With the coming of the space age, the possibilities for the future of our country have stretched into infinity. Never before have the youth of America, who hold the guiding reins of our Nation's future, been faced with such responsibilities and such challenges.

What will the future bring? Will we continue as a democracy, or will we be influenced and changed by fascism, socialism, communism, and some of the other isms? Will we preserve our precious heritage of freedom and security, or will we succumb to the evils of lust and greed and manmade discord?

A great deal of emphasis is being placed on scientific study these days. Too much cannot be said about the importance of education, but there is much more to our future than staying one jump ahead of our neighboring nations in scientific discoveries. There is no magic formula for human behavior to be found in test tubes.

In preparing for the future of America, we must have vision, faith, and courage—vision to see what needs to be done, faith that it can be done, and courage to do it.

When the Declaration of Independence was signed in Philadelphia over 181 years ago, there was very little evidence to support the hope of the colonists that a great nation had been born. Here were a mere 4 million souls struggling for existence on the fringe of a wilderness, beset by hostile Indians on the north and west, and challenging the power of the British Empire to the east. How could they succeed? And if they did win their independence, how could a little nation so remote from the center of civilization amount to anything? The answers spell the full measure of the Spirit of '76, the spirit of independence.

The Declaration of Independence did more than declare the independence of the American colonies from the British Crown.

It proclaimed the great general principles of free government and the inspired ideals which were to guide the new Nation. The American way of life was born.

The men present at the birth of our Nation were men who had pledged their fortunes, their honor, and even their lives that American democracy might come into being. The heritage they have given us is priceless; yet we seldom realize its value and sometimes our lack of knowledge is deplorable.

During the last war the average American prisoner was under a serious handicap. He had to tell what he knew about American politics and American history, and many times the Chinese or Korean instructors knew more about these things than the prisoner did. He could not answer the arguments in favor of communism with arguments in favor of Americanism because he knew very little about his America.

In a recent survey of popular understanding of the Bill of Rights, it was reported that one-third of the Americans interviewed did not know what the Bill of Rights was.

Any student in the United States, long before he reaches college age, has been exposed to the teachings of American history, heritage and traditions. He learns at an early age that he has a charge and responsibility to keep when he becomes an adult. Yet often, he disregards the lessons of the past as meaningless; that they applied to a different set of circumstances than today. But history has a tendency to repeat itself, and to be prepared for the future, we must study the past.

The Pilgrims, the Puritans, and the Quakers came to this country seeking religious freedom. Our Republic was founded under God's guiding power and belief in a higher authority, the authority of God.

In George Washington's first inaugural address he said, "No people can be bound to acknowledge and adore the invisible hand which conducts the affairs of men more than the people of the United States. Every step by which they have advanced to the character of an independent nation seems to have been distinguished by some token of providential agency."

No truer words have been spoken. Security and strength came from God back through the years our country was engaged in conflict and wars. Providence seemed to intervene, leading us to victory. Loyalty to God, country, and to self is the true basis of Americanism.

Every day we revel in our new inventions that make life more miraculous. We even gloat over discoveries our neighboring nations have not made. We are perfecting now the most effective means of organized war that the world has ever known. But the weapons of organized peace are still in the laboratory stage. Our youth are confronted with a great challenge in seeking world peace.

In facing this challenge we are armed with the knowledge that God's infinite power is ever present. It governs the behavior of men even when they seem to submit to the leaders who oppress and enslave. Evil survives in the world primarily because good men fear to make the sacrifices that must be made to win and retain freedom.

The real question in approaching the future is whether we are willing to meet its tests; whether we will let greed and selfishness reign where we know there must be generosity and unselfishness, whether we will be cowardly or brave, and whether we will extend the hand of friendship and with love open our hearts to other human beings, or whether we will shirk the obligations which inner conscience and the pages of history tell us to fulfill.

Human knowledge does not perish. It lives on under the inspiration of Divine Providence, whose remainders of what truth really is come to us every moment of our lives.

With faith in His wisdom we can face the challengers of the future, courageous and unafraid.

The future is ours, if we make it ours.

Passbook Loans

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. MULTER. Mr. Speaker, under a recently enacted New York State law it is now possible to borrow money at a cost of 3 percent or less, providing you have an amount equivalent to the amount of the loan deposited in your savings account.

I commend to the attention of our colleagues the following article by Donald I. Rogers, which appeared in the New York Herald Tribune of April 24, 1958, and which recounts the details of passbook loans:

YOUR FAMILY'S FINANCES—PASSBOOK LOANS
(By Donald I. Rogers)

One of the prerequisites to being a legislator, we have often thought, is the ability to entomb a really valuable concept in the kind of dank prose that disguises its value beyond all recognition.

At least, that's what seems to have happened to a bill that came out of the last session of the legislature. It was signed by Governor Harriman last week. Called chapter 695 of the Laws of 1958, it performs the very valuable function of offering those who want to borrow money a very low cost way of doing so.

The catch is, you have to have money in the bank. The law lifted the period on which savings banks can make loans secured by an equivalent passbook balance from 90 days to a year.

Thus, if you've got $1,000 tucked away in your account and want to use the cash to buy a new car or make a down payment on a summer cottage, you can do worse—in terms of net interest cost, at least—than taking out a passbook loan.

The loan is secured by your account and the dividends you draw on it—generally 3 percent, sometimes as high as 3¼ percent—cuts your borrowing costs to about as low as you can manage anywhere.

A quick look at the figures will show you this is the case. Assuming your interest cost on the loan will run as high as 6 percent—the fixed rate varies from bank to bank—deduct from it your dividend rate, and you come up with a net borrowing cost of 3 percent, or less.

This is considerably less than the effective rate on conventional installment credit, which runs anywhere from 8 to 12 percent. You can work out a similar arrangement if it's coming on close to a dividend date and you want to make a sizeable withdrawal—and save your dividends, too.

This is a bit like having your cake and eating it, too, but it can be done. Savings banks pay interest on either a quarterly or semiannual basis. Most of them will grant a short grace period, but apart from it, you have to have your money on deposit at the end of the period in order to draw dividend credit. Let's say, though, that you're 6 days away from the end of the dividend period and want to withdraw $3,000. If you've had that much on deposit for a quarter at 3 percent, you rate $22.50 in dividends.

By pulling your money out of the bank, you stand to lose that $22.50. You can manage to keep most of it by taking out a passbook loan for the 6 days remaning in the dividend period.

Let's assume borrowing that much money for 6 days will cost you 4¾ percent in interest, or $2.38. At the same time, however, you will be eligible for your dividends. Deducting from them the $2.38 you come up with a net saving of a little over $20. The original $3,000, of course, goes to pay off the loan.

The size of the saving you can make on this type passbook loan will vary with the size of your account. But like the secured passbook, installment type loan, it can save you money. All it takes is money in the bank.

Nationality Groups Can Render Unique Service to America

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. ANFUSO. Mr. Speaker, on Sunday evening, April 27, 1958, it was my distinct privilege and honor to receive the liberty award from the Nationalities Division of the Democratic National Committee at a dinner at the Waldorf-Astoria in New York. The award was given to me by Gov. Averell Harriman, of New York, on behalf of the committee, and it was presented to me for championing liberal legislation.

In accepting this award, I stressed the fact that the United States is not utilizing sufficiently the talents and the ideas of the immigrant and nationality groups in helping our country to combat communism and Communist propaganda. It is my belief that these groups can render a great and unique service at the present time in promoting the interests of America and of the free world.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of my address in accepting the ward from Governor Harriman.

The address follows:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO, SUNDAY, APRIL 27, 1958, NATIONALITIES DIVISION, DEMOCRATIC NATIONAL COMMITTEE

Mr. Chairman, distinguished guests, ladies and gentlemen, I am indeed very grateful for the signal honor which you have bestowed upon me tonight in the presentation of this award. May I express to all of you my sincere thanks.

In accepting this award, permit me to express a few brief thoughts which I should like to share with you today.

The Nationalities Division, as we all know, is comprised of various groups of immigrant origin or having immigrant antecedents. All of us are very proud of the fact that these immigrants have brought with them to this country the rich heritage of their national culture, along with their passionate love for freedom. They have made wonderful contributions to America in every sphere of activity, and have helped build America to its present greatness.

These people, their children and their grandchildren, are among the most loyal, industrious, and hard-working citizens in our country. American ideals and democratic traditions are precious to them. They have defended American democracy and our way of life when called upon in the past, and are ready to do so again whenever it becomes necessary. Our country is richer and stronger because of the contributions made by immigrants, the infusion of their ideals and traditions, the moral uplift of their spiritual strength—all of which have been blended with American democratic life, to give it greater harmony and greater unity.

Why am I telling all this to you? I have a specific reason in mind.

During the past dozen years or so, since the end of World War II, the free world has been on the defensive against the inroads of Communist subversion and propaganda. How many of us realize that no less than 700 million people in Europe and Asia have come under Communist domination in the short space of those 12 years? But that is a fact, and in many instances it was achieved by the Communists without firing a single shot—merely by means of propaganda and subversion.

Today, the battle of ideas is more important and more productive than the battle of weapons. In fact, I believe that the world may never see another worldwide battle with weapons of total destruction, because both we and the Russians are well aware that they mean suicide for the human race. Consequently, the Kremlin is relying on propaganda and deception to conquer the free world, rather than on atomic weapons or missiles.

In the field of propaganda we do not seem to be much of a match for them. Although we have truth on our side, and morality, and religion, and charitable deeds, and righteousness—somehow we have failed to reach the masses of Asia and Africa and other areas of the world.

Take our foreign aid program as an example. In the 11 years between 1945 and 1956, the United States had given to nations all over the world $57 billion in military, economic and technical assistance, most of it in the form of outright grants. Russian aid in the same period totaled only $1.5 billion—and nearly all of it in the form of loans to be repaid. Yet the humanitarian and charitable deeds of the United States are overlooked by the very nations whom we seek to help, while they listen to Russia and prefer to sing its praises for promises which are never fulfilled.

In extending this aid to our allies, as well as to the neutral nations, we have never given ourselves a pat on the back, nor did we convey to them that Americans were paying for this aid through the nose in backbreaking taxes and assessments, nor that we were indeed sacrificing ourselves for their welfare. Yet it is ironical how our motives have been misconstrued by some of these underdeveloped nations who suspect us of seeking, through our aid, to impose upon them some form of control or domination. At the same time, they prefer to disregard Russia's threats to their very existence. Some of them are truly convinced that the Kremlin's only concern is with the welfare of all humanity.

Thus, my friends, in the greatest public relations test in the world, the test which will ultimately determine our security and the survival of the free world, we act like amateurs. I regret to admit that we are failing that test.

There is no doubt about the fact that we lack boldness and imagination in our propaganda tactics, in our efforts to refute these false impressions, and in our methods of bringing the truth to the peoples of the world. We are the best salesmen in the world for automobiles, TV's, washing machines and the like, but when it comes to selling the best way of life yet devised by man—we have failed miserably. Surely, we have not run out of ideas or imagination.

This is neither the time nor the occasion to analyze why we have failed or where we have failed. Nor am I the one to make such a thorough analysis. But I would like to point out one area which we have not utilized to the extent that we should, and it is an area which could have brought us very telling results.

I refer to the immigrant and nationality groups in this country. Why have we not better utilized this rich resource of people and ideas to help bring the message of America to the people behind the iron curtain and to the uncommitted nations sitting on the fence? Why have we not utilized to greater advantage the people of immigrant origin who still retain certain cultural and spiritual roots in their ancestral homes, but who are of unquestionable loyalty to the land of their adoption?

Surely, such people who have profound understanding and sympathy for their former homelands could render excellent services in promoting the interests of America in these countries. Men in this room make excellent ambassadors, ministers, business representatives, and even undercover agents. Yet we prefer to send others who cannot even speak the language of the country.

Could it be that we still regard people of immigrant origin with suspicion? Can this be true, even after they have shed their blood in lands of their ancestral origin for America? Is the fact that we still have discriminatory immigration laws a basis for this suspicion?

Let me say to my friends who trace their origin to the Mayflower that if this suspicion does still exist—if we cannot attain complete recognition, freedom and equality in our own country, if we are still accorded the status of second-class citizenship—then it is a sad day for America, and I see no hope for it or for the rest of the world which looks to us for guidance and leadership.

Within the iron curtain countries and in the undecided nations today the spark of freedom and independence still burns—and we must keep it burning, if Communist dictatorship is to be eventually subdued. This must come about and will come about, not through war, but from within these countries. We must rally them to action in the interests of all mankind. We must get the truth across to them, and we must keep them alert.

This is a task in which the nationality groups can do yeoman service. They know and understand the languages of these people, their mentality, and their suffering. I know they would gladly assume this task, if given a chance. America has much to learn from its adopted sons and daughters, and much to gain. I know they are most anxious to show their loyalty. In times such as these, it would be criminal negligence not to utilize their energy, their talents, and their ideas.

Frank Polk Wins Again

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. MINSHALL. Mr. Speaker, it has come to my attention that Frank Polk, one of Cleveland's leading high-school seniors, has again added laurels to his short but scintillating career. For the fourth straight year, he has won the 1958 Students Press Crusade for the Universe Bulletin by obtaining 255 subscriptions, far ahead of his nearest competitor.

Also, in addition to winning many essay contests, Frank has won a 4-year scholarship to Xavier University. My congratulations to Frank and to his proud parents.

An appropriate article which appeared in the Catholic Universe Bulletin follows:

BEHIND HIM: TWO NEW CONTENDERS—POLK SCORES 255, WINS FOURTH UNIVERSE BULLETIN CRUSADE TITLE

Frank Polk won his fourth straight—and last—championship in the 1958 Students Press Crusade for the Universe Bulletin.

Frank, now a senior at St. Ignatius High School, came up with 255 subscriptions—his highest total—to outrun the field by 155.

Behind him is a newcomer to the winners' circle, little Janet Waterwash, fifth grader at St. Christine School, Euclid, who finished with an even 100 subscriptions.

In third place is Gerald Patronite, St. Henry fourth grader who came through with 94 in his first year as a crusader.

The three winners will receive prizes of $50, $25, and $15, respectively, in addition to commissions, division prizes, and bonuses. Polk, for instance, will reap a total of $144.25.

In winning his fourth straight crusade crown Frank added 5 subscriptions to last year's 250. He also kept intact another Polk record. He has improved his subscription total every year since his first crusade as a fourth grader at St. Timothy School.

The St. Ignatius youth began about as far back as you can get. As a fourth grader he sold one subscription, and that to his family.

He then boosted his total to 9, 16, and as a seventh grader, to 31. In the eighth grade he broke into the big three of the diocese, taking second place with 88 subscriptions.

He went to the top as a St. Ignatius freshman with 122 and stayed there with totals of 166, 250, and this year's 255.

The son of Mr. and Mrs. Franklin A. Polk, 4243 East 128th Street, Frank thinks he would have hit an even higher total this year except for the recession.

This has been a big year for Frank. Besides walking away with the crusade prizes, he also won a 4-year tuition scholarship to Xavier University, and won $60 in a VFW essay contest. His essay was best in the county and in the State finals.

Though Frank graduates in June, he still has hopes of continuing the Polk crusade dynasty. He said:

"My sister, Loretta, is in the third grade at St. Timothy now * * * she'll be in her first crusade next year."

One of World's Greatest Good-Will Ambassadors, Namely, "Diamond Jim" Moran, Has Passed On

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. MORRISON. Mr. Speaker, there was only one "Diamond Jim" Moran, and I doubt if there ever will be another just like him. He was a most unusual character, so unusual that his memory and spirit will become a legend in

Louisiana, where he was born and reared and rose from a poor shoeshine boy to a fabulous character known all over the United States, and, as a matter of fact, all over the world, as "Diamond Jim" Moran, who owned and operated the world-famous restaurant known as Diamond Jim's La Louisiane. To this colorful restaurant came celebrities from all parts of the world.

While shining shoes in New Orleans in front of some of the world-famous French restaurants as a youngster, he had occasion to see wealthy people going into these establishments, bedecked in furs and jewels. Diamonds caught his fancy and his first purchase as a shoeshine boy was a diamond chip which cost $5, of which he paid $1 a week for 5 weeks out of his shoeshine earnings. This diamond he treasured most of all during his lifetime.

It was not long before he became an outstanding boxer and after that, he rose to fame as a boxing referee. As a matter of fact, many outstanding boxers refused to have him as a referee for their bout because he put on such a dazzling show as referee that he took away much of the showmanship of the boxing match. As a boxer and flamboyant referee, he caught the fancy of the late and sports-minded Senator Huey Long and became one of his closest friends. Huey always called him his good-will man and took him with him on many of his trips as a United States Senator from Louisiana.

After the Senator's death, he decided to open a restaurant, known as Diamond Jim's, where perhaps the toughest competition in all the world existed, in New Orleans, La., where the old French restaurants, many of which have been in operation for over a hundred years, and have been famous for all these years, were known the length and breadth of the world.

From the opening day, success was his and no man ever sported as many diamonds as did "Diamond Jim," and his restaurant and diamonds brought him fame and fortune. Each year, in a private car, he would go to the Kentucky Derby, with diamonds on his shoe laces, diamonds on his glasses, on every finger, on his watch chain, and everywhere a diamond could be located, dressed in a fur derby, ermine tie, and all accessories that went with same. Governors gave him State police for protection of his diamonds whether it was at the Kentucky Derby or when he was visiting other States. At each derby, he would receive tremendous publicity and attraction, as thousands would jam every nook and corner for just a look or an autograph from "Diamond Jim."

With all of this, he never forgot his friends, rich or poor, and whether in his early life as a poor youth struggling for success, or when he was swept away by crowds at the Kentucky Derby, he was always the one and only "Diamond Jim" Moran, a friend of the little man as well as celebrities from all parts of the world.

Known as a one-man Broadway show with a different act for each and every occasion, Joe E. Lewis, the famed comedian, once said "'Diamond Jim' comes by his naturally—I have to work for mine."

The Kentucky Derby, which will be run this coming Saturday, May 3d, will miss "Diamond Jim" Moran; the thousands who had hoped to see this colorful figure will also miss him. Because on Sunday, April 13, he passed away in the place he loved, Diamond Jim's La Louisiane restaurant in New Orleans.

Many things have been said about this colorful and amazing character. Here are some of the things Thomas Griffin, top columnist for the New Orleans Item, in his famous Lagniappe column, wrote about Diamond Jim:

He was true-blue in his friendships and considerably more charitable than most people realized because that was one side of him that never boasted.

Despite his diamonds, his mink neckties and flamboyant suits, there was no pretense about Diamond Jim. He never tired telling of how he started in business for himself at the age of 9, shining shoes. How he later became a barber and owned his own shop at 16. How his eye caught his first diamond in a jewelry store window opposite the French Market.

I've written a lot about Jimmy Moran in the 9 years I've known him but he seemed to cherish one line more than any other that ever rolled off this typewriter. It was: "For what he is, he's as genuine as his diamonds." I'd like to bid him farewell with the same thought in mind.

In another New Orelans newspaper, one of the country's best sports writers, Bill Keefe, had this to say in his celebrated column, Viewing the News, in the Times-Picayune:

MANY BID ADIEU TO JIMMY

Practically every prominent man (and many women) in New Orleans and south Louisiana was at the wake Monday night or the funeral Tuesday of Jimmy Moran, whose hearty greeting and sincere smile long will be remembered by the thousands of friends he made as he went through a lively life. From distant Las Vegas, Nev., came Joe W. Brown, millionaire oilman, thoroughbred breeder and owner of the fabulous Horseshoe Club in the Monte Carlo of America.

From every walk of life the friends of Diamond Jimmy crowded into the funeral parlors of Lamana-Panno-Fallo to bid a last adieu to a man whose chin always was up and who always was able to smile no matter how trying the adversities.

What was of great solace to his family and closest friends, not one person was there on duty attendance; wealth and influence prompted none to go, because Jimmy lacked those possessions. His personality was the only magnet; and that was the sole reason so many gathered at his bier and the sole reason for hundreds of telegrams coming from all parts of the country expressing regrets.

Members of every political faction and every denomination claimed Jimmy as a friend. Happily, nearly all of them had professed their esteem while he was able to appreciate it. His conviction for violating the prohibition law carried no stigma with it; the hypocrisy of that law brought about its death.

Again in his column the following day, Bill Keefe had this to say:

FEW LIKE JIMMY MORAN

Hundreds of men in New Orleahs—in high stations or low stations—will mourn the passing of Jimmy Moran. There was a man who went through life practicing the beautiful doctrine of brotherly love. Through fair weather and foul, good luck and bad, lush times and close-to-the-cushion times Jimmy always had a thought for the fellow who needed a meal or a dollar; and no questions asked.

When a man is blessed with worldly goods, generosity, and benevolence are accepted as matters of course; but when a man is down to "case" money, yet hands it all out to fellow men whose need is great, it's something to be noted. Jimmy Moran had not prospered lately; in fact, he had seen some lean months.

Just 2 weeks ago he phoned and told a couple of us he was preparing a new dish—spaghettini bordelaise with chopped-up oysters and, he said, "come on down." I told him we couldn't because we had made arrangements to eat tripe stew at a little restaurant by the French Market and he said: "Pick me up; I'll put off this dish."

Down we go and in a few minutes word got around that Jimmy was in there. The crowd began to gather. There were prosperous businessmen who just wanted to say hello, as well as a steady flow of boys and men who had seen better days; many of them hungry. Jimmy got a 10 spot and a 20 changed into dollar bills and started handing them out to the ones who looked like they'd welcome a meal. In a corner sat an old man—a cripple; leaning on a cane. Jimmy waded through the crowd: "Pal," he said, "don't you want to eat." The old man said he was sick and couldn't eat; so Jimmy handed him $2 and told him to go buy some medicine—or anything he wanted. It was Jimmy's last two bucks.

One night at the Coliseum, Jimmy, who was about as good a referee as ever performed here, gave a close decision against Johnny Cook. Joe, Johnny's brother, went haywire and slammed a heavy pop bottle down on Moran's head. Never, as far as I know, did Jimmy feel any bitterness over that. He dismissed it by saying: "The boy lost his temper; anyhow, I'm glad he hit me in the head. It didn't hurt too much."

Jimmy had a wide circle of friends among prominent doctors, businessmen, and State and city officials; and a host of appreciative friends from every strata of life. If he ever cheated anyone or did a fellow man a scurvy trick I never heard of it; and he probably didn't know about it either.

Those who walked last with "Diamond Jim" were some of his closest friends, who were his active pallbearers; they were Mayor de Lesseps S. Morrison, United States Representative James H. Morrison, State Senator Robert A. Ainsworth, Jr., Pascal Radosta, Dr. James Tamburello, Ernest Italiano, Claude W. Duke, and Ben Weiner.

His survivors include his widow, the former Mary Latino; 4 sons, Nunzio, Anthony, James, Jr., and Robert Brocato; his mother, Mrs. Sam Brocato D'Antoni; 5 sisters, Mrs. Chetta Dellipanni and Mrs. Frank Carrero of Inverness, Miss., and Mrs. Frank Cabibi, Mrs. Josie DiMaggio and Mrs. Mamie Carrero of New Orleans; 2 brothers, Lawrence Brocato and Joseph D'Antoni; and 8 grandchildren.

With the passing of "Diamond Jim" Moran, New Orleans, the State and the Nation lose a colorful character, a wonderful character, and a man who perhaps did more as a goodwill ambassador to bring celebrities from all over the world into his fabulous restaurant, which he loved so much, located in the famed and fabulous city known the length and breadth of the world, New Orleans. He proved what makes people from all over the world have an eternal burning desire to come to the United

States, because his life showed, that from a humble beginning, the sky is the limit as far as your opportunity to achieve success and fame. He is a perfect example of one who, as a shoeshine boy with an humble beginning, can rise to fame, fortune, and success, and perhaps it can only happen in one country, that country being our beloved United States.

May "Diamond Jim," with all his good deeds, rest, and have peace in the hereafter.

Hobart and William Smith Colleges Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. MULTER. Mr. Speaker, the Hobart and William Smith Colleges, two institutions of learning in Geneva, N. Y., have contributed to a great extent in helping, promoting, and preparing our future leaders of the country.

For the past 17 years these 2 colleges have been instrumental in sponsoring an annual schola cantorum concert, in New York City, which concert has inspired many thousands of appreciative listeners with its splendid concert and religious music.

Saturday, April 19, 1958 was designated by the Honorable Robert F. Wagner, Jr., mayor of the city of New York, as Hobart and William Smith Colleges Day for the city of New York, in honor of these two outstanding colleges.

I am pleased to direct the attention of our colleagues to the proclamation presented by Mayor Wagner to the Reverend Dr. Louis M. Hirshson, president of Hobart and William Smith Colleges, at City Hall, New York City, on Friday, April 18, 1958. The proclamation follows:

Whereas the Right Reverend John Henry Hobart, third Episcopal Bishop of New York, established Hobart College in Geneva, N. Y., in 1822, as a seat of learning and a stronghold of the faith; the college being sustained in troublous times through the generosity of New York's historic Trinity Church; and

Whereas Hobart's sister college for women, William Smith College, is this year celebrating its 50th anniversary and representatives of these colleges and their schola cantorum are returning to the see city of their founder and the home of their renowned benefactor to participate in the celebration of National Christian College Day; and

Whereas the city of New York extends a hearty welcome to the Right Reverend Dr. Louis M. Hirshson, president of these colleges, and to all students, alumni, parents and friends of the colleges on this auspicious occasion:

Now, therefore, I, Robert F. Wagner, mayor of the city of New York, do hereby proclaim Saturday, April 19, 1958, as Hobart and William Smith Colleges Day in New York City, and do call upon the citizens of our city to celebrate with the Nation the return of the faculty, students and friends to the home of the magnanimous benefactor and the esteemed founder of a splendid institution whose contribution to society has been so rewarding in human, spiritual and physical values.

In witness whereof I have hereunto set my hand and caused the seal of the city of New York to be affixed this 18th day of April, 1958.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Communications: 20th Century Ideas in Motion

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. HUMPHREY. Mr. President, recently I had the pleasure of addressing the Department of Audio-Visual Instruction—DAVI—of the National Education Association, at its 1958 convention in Minneapolis.

In this address I discussed certain ideas which have a direct reference to legislation now pending before the Congress, and I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMUNICATIONS: 20TH-CENTURY IDEAS IN MOTION

(Address by Senator HUBERT H. HUMPHREY, Before the 1958 Convention, Department of Audio-Visual Instruction (DAVI), Minneapolis, April 23, 1958)

It is always stimulating to meet with men and women for whom ideas are fresh, vivid, and living things. It is my good fortune to have the opportunity to discuss with such a group as this the problems and the importance of getting good ideas into effective motion.

This is the reason for existence and the motivation after all, of all teachers. Getting ideas translated into action is also the goal of us who are in public life. And each of us takes tremendous pride in achieving that goal, in our own way.

For anyone who works with ideas, these have been particularly challenging times. Somehow, our great Nation has been given the impression of a giant in chains, our tremendous strength somehow impotent. Yet seldom has there been more of a ferment of ideas, nor a more restless, seeking spirit among our people. But our ideas seem to sputter, flare up, and fade away before they can be translated into affirmative action. As a Nation, we just don't seem to be able to get off the ground, like the early Vanguard.

Remember a few short weeks ago—that graphic symbol of frustration and enchained intelligence—the Vanguard rocket. There it sat, a magnificent idea made concrete, choking on its launching pad with some minor fuel malfunction or other, while overhead whirled two Soviet sputniks—very much in motion—unchallenged by the most sophisticated scientific community on the face of the earth.

This international humiliation was ended, as we all know, when another idea or complex of ideas known as the Explorer satellite system, vaulted into space.

A rocket on a launching pad has a lot of potential. An idea on the launching pad of an intellectual's mind has a lot of potential. But it is the push, the thrust, that we can get behind the rocket, and the idea, that is so very critically important.

Putting ideas—good ideas—into motion takes a great deal of energy, decision, and skill.

We are not short on ideas in this country. Far from it. This is one of the blessings of this democracy, that everyone feels free to think up new ideas, and we have a bubbling of opinion and thought that is very healthy and useful.

But to translate the best of these ideas into motion and action, there must be a matching decision and a full use of the wealth of techniques of communication.

Believe me, the Soviet Union under the leadership of the extremely shrewd and capable Khrushchev understands the power of the idea in motion.

Perhaps no one has better stated the contrast betwen the vigorous use of ideas (including false ideas) by the Soviet leaders, and our own unaccountable failure to rise to the occasion recently, than the cartoonist Herb Block of the Washington Post.

I think you would agree, incidentally, that this cartoon is a superb demonstration of the picture that speaks a thousand words. It needs no explanation. It is humorous, bitterly humorous. In a few lines Block has expressed the frustration and exasperation of millions of thoughtful Americans.

I can assure you that I understand how the President or Mr. Dulles must feel when they open their morning paper and get a bang in the eye like the one Herb Block delivers every few days or so.

My office wall is festooned with cartoons like this one by another fine artist, Scott Long of the Minneapolis Tribune. Mr. Long can make quite a point with a few brush strokes, too. You might say that he can trim a subject better than the Senator HUMPHREY in his cartoon. Ray Justus, Scott's able colleague on the Minneapolis Star, also has a real impact. I cannot let this opportunity go by to mention that Scott Long received well-deserved recognition recently, for this superb demonstration of visual shorthand.

This is the newspaper clipping about Scott's award by the journalism fraternity Sigma Delta Chi for the outstanding cartoon of the year. The cartoon originally appeared in the Minneapolis Tribune the day after Little Rock, and was widely reprinted around the country.

There is an example of how to crystalize, or distill an idea, get a solid push behind it, and create a major impact on public opinion.

One of the major underlying causes of the tragedy of Little Rock was, I fear, that the ugly situation developing was not met with sufficient determination at an early enough time. Timing, in political affairs, as well as in audiovisual productions, is extremely critical. Timely decisions, and the determination to put them into effect, are among the first repsonsibilities of leadership in a democracy like our own.

Many felt long before Little Rock that there were ways and means of meeting and preventing the saddening spectacle that developed. Many feel today, that with timely decisions and determination to press forward, there are ways to cope, and cope effectively, with the powerful propaganda drive of the Soviet Union, with this very serious recession, and with the onrushing problems of our expanding population.

We are looking, then, for that thrust that gets us off the ground. All the rich and diverse talents and resources of this democracy await the vital forward impulse that can be released only by the topmost political leadership of the Nation, and particularly by the man who holds the vast powers of the American presidency.

Someone must turn on the switch to set the American dynamo humming. Khrushchev challenges us to compete. Our first decision must be to accept the challenge in the realm of ideas, as we accepted the military challenge of the Soviet Union first made over 10 years ago.

You can't run a footrace, you know, if you are forever bending down to tie your shoelaces.

To paraphrase Lord Palmerston, the great British foreign minister of the early 19th century, ideas are stronger than armies. If they are founded on truth and justice, they will in the end prevail, as he said, "against the bayonet of infantry, the fire of artillery, and the charge of cavalry."

The Soviets have adopted Palmerston's point of view with a vengeance, except that they have conveniently neglected that fine print about truth and justice. We, I fear, are still hypnotized by hardware. Vitally important as it is to maintain parity in weapons with the Soviet Union, what great folly it will be if we do not recognize that military force is but one area of competition.

Now let us assume—and let us devoutly hope—that someone will at least turn on the switch. Let us assume that we are determined to do something.

Now comes the second great task of political leadership: Putting the massive power of the United States behind the right ideas.

A democratic leader has sometimes been compared with an orchestra leader, to get some idea of the diversity which he must weld into unity. Surrounded as I am with men and women steeped in the audiovisual production tradition, I am tempted to compare the democratic leader with a producer. In a sense, the leader in a democracy is like the producer of a motion picture, a television program, a radio broadcast, a sound-slide series. He is trying to persuade people to do something. And to help him in his task, he is truly fortunate in our country to be able to call upon the skills of many people, many specialists, many talents. Like the producer, his job is too big to do by himself. He must, however, select the basic idea, furnish the motive power, and then prepare to follow through, to supervise, encourage, and stimulate his team of specialists.

The producer must find the right idea—the right story, or concept. He knows that the finest of technicians and the most superb talent will give him nothing more than a mediocre production, unless he has an important idea to work from.

Similarly, the democratic leader must spend much time and energy in selection of his program and policy. That is basic. From all the deluge of advice and entreaty, he must select the most promising, judge it against his own intelligence and experience and training, and make that primary decision: This is the program behind which I will throw all my resources and energy.

Just as in a film, a telecast, or radio broadcast—just as in a lecture in a schoolroom—it is absolutely vital that what is chosen to be

said be important. So much, so very much, of what goes on film, over television and radio, in the newspapers is simply frivolous, petty, and unimportant. There is a tragic waste of fine talent and creative energy in the field of communications in America, due to poor ideas and concepts.

Most of the bad pictures, the bad television shows, and the public policies of the Nation which fail, have had lavish productions—crews of writers, squadrons of technical personnel, shoals of money. They are bad, most of them, because the basic idea chosen was a bad one—mistaken, shallow, unimportant. There is too much fanfare and not enough substance.

How difficult it is to pick that right idea, amidst the bombardment from all sides. But how important. For the producer, it is the opportunity for a smash production, fame, possibly fortune.

For the democratic leader it can be the opportunity for greatness.

George Allen, the new Director of the United States Information Agency, recently said something like this: All the radio transmitters, motion picture productions, and television shows in the world cannot substitute for or replace intelligent basic policy.

In other words, you can't get by very long on words and pictures alone. You can't make a bad policy good without changing the policy itself.

But again—let's assume that we decide not only that we are going to get an action program under way, but we have even selected a good, sound program. Now comes the how part—technique, the choice of the medium of communication.

The democratic leader must think about his audience, his target. He is now full-tilt in the field of communication. What is the best way to get his program going? Is his target the chairman of a Senate committee? Is it the Washington press corps? Is it the home constituency?

His audience may be the people of the country directly, as was so often the case with President Franklin Roosevelt, in his radio fireside chats. It may be the people of southeast Asia. It might be American farm families, or small businessmen, or big businessmen; it might be the impoverished young intellectual of India.

In the field of public policy, it is my opinion that audio-visual techniques do not yet play the role they someday will. In his choice of medium, the Democratic leader still relies for the most part on the news release, the speech, the press conference.

I might point out that I am trying something entirely new for me tonight, in using audio-visual materials in an address of this kind, and I am grateful for the kind assistance so freely offered to this rank amateur in the audio-visual field.

While we in Government are still slow in taking advantage of all the possibilities of the audio-visual field, some of the new habit patterns of Americans are being recognized—particularly the incredible amount of time devoted to watching television. The live news interview on television has become a fixed institution for the "trial balloon" on public policy. Even the wire services are now beginning to watch these shows for their morning stories.

TV is having a yet unmeasured impact. We are all familiar with the exciting experimental work being done in the Nation's now 31 educational television stations, often in conjunction with the audio-visual departments of school systems, colleges and universities. Not only are these cooperative undertakings performing a magnificent job of putting ideas in motion, but they are fruitful training grounds for the young men and women whose future tasks will include the interpretation of American life and policy abroad.

Television, film and audio-visual materials in general are becoming vitally important in the communication of ideas in all of the advanced nations of the world, while radio for years has been the possession of the most peasant economy. The United States has not, however, begun to exploit audio-visual techniques as instruments of foreign policy to anywhere near the extent that is possible. As television set ownership rises, as motion picture and slide projectors spread into the have-not areas of the world, a growing opportunity is given us to get our ideas across.

Some steps have been taken in this direction. When Marion Anderson completed her triumphant tour of Asia, the film produced by Ed Murrow for CBS, See It Now, was reproduced in more than 100 copies for distribution overseas. But in general, the fact continues to be overlooked that with the simple, honest portrayal of American life that can be found in the best of our documentary films—many of the ideas of America can break through the hundred language and distance barriers that effectively block the real America from the world's view.

How much can be said about the mind and the heart of America in the kind of artistry represented by such works as The Strange One, with its portrayal of the patient work of a social worker in a home for delinquent boys, or the beautiful conception of the impact of technological America on the boy from the bayou country in Flaherty's Louisiana Story, the stark beauty of this scene of levee building in Pare Lorentz's The River.

And how much of the American conscience and drive toward the reform of evil is reflected in this brief sequence on slumdwellers, from The City.

We must do much more of this kind of work in our overseas information program.

It is true that we have built up rather a substantial number of film libraries overseas—1 in each of more than 200 information centers in 78 countries. And the USIA motion picture or information officer attached to the center offers a rather varied usage of our films. Audiences will range from those in regular commercial theaters all the way to groups who have trudged in from a radius of 10 miles in the jungle or desert. Some 7,000 projectors of its own are used by the Agency in the less developed areas, as well as over 300 mobile motion-picture vans equipped with their own electric generators.

The schools in many countries are using our motion pictures, and apparently in some places have even made them an integral part of the school curriculum. Government agencies, especially in agriculture and health, frequently borrow the USIA films. Civic clubs, religious groups, labor and professional groups, youth organizations—the kinds of groups that use films in our own country—are given access to the USIA films. Practically all of the more than 1,000 titles are also available for use on any TV stations overseas.

Many times, in the best audio-visual tradition, the USIA people make an effort to combine, or as they say "interlock" media—to broaden or to sharpen the impact. A USIA exhibit can be, and often is, later given a form of permanence with the use of the motion-picture camera—just as Marion Anderson's visit to southeast Asia was recorded for later film showings.

About 40 percent of the films in the overseas program are acquired through a regular and systematic screening of the output of educational, documentary, cultural, and industrial films. For other films USIA contracts with private companies for documentary and newsreel type films. Still another group is produced by USIA overseas in 44 countries, in an effort to clothe the message in the local language and settings.

Some intensely interesting work has been done in the less developed areas, where films were tailored specifically for local needs and problems. Incidentally, the first overseas production done for USIA was performed by a group of American university film production units, under USIA contract, including the University of Minnesota's in Iran.

The USIA use of audio-visual materials, along with their use by the International Cooperation Administration, has clearly stimulated a desire in the less developed countries to make use of such materials in their own self-improvement programs. My friends in USIA assure me that many people from the audio-visual ranks which you represent have served with great distinction abroad in the many governmental programs of planning and producing audio-visual materials for rapid mass learning.

But are we doing enough? One way to measure this is to look at what the Soviet competition is doing in the field.

The Central Committee of the Communist Party of the Soviet Union contains a propaganda and agitation section (Agitprop) which receives its orders directly from the Presidium of the Central Committee, the highest body in the Soviet world. The closely interwoven structure of the Communist Party and the Soviet Government insures that for propaganda purposes there is no distinction between the two.

The cost of current Soviet bloc propaganda activity is incalculable, but a few indexes are available. For example, it is estimated that each year the Soviet program spends considerably more on jamming the Voice of America alone than the United States does on its total overseas information program. Incidentally, it has also been estimated that the Sixth World Youth Festival last year in Moscow—the purpose of which was almost exclusively propagandistic—cost more than $150 million. Again more than the entire United States information effort.

It is known that in 1957 an average of 2,254 program hours per week went out over the Communist international broadcasting network. (This can be compared with 750 hours a week on the Voice of America.) The Soviets published approximately 25 million books in free world languages during the first three quarters of 1957 and also published more than 110 foreign language periodicals circulating in free world areas. The cost of activities such as these and of other activities of the thousands of local chapters of the Communist Party and front groups must be staggering. No, I do not think we are doing enough in the use of audiovisual materials in our overseas information program. Congress has a serious responsibility to make more funds available for this purpose. And the administration can surely show more imagination and initiative in encouraging the fuller participation of the thousands of talented figures and craftsmen throughout America who could contribute so much to a broadly expanded program.

Not only could we have a Voice of America. We could, with sufficient planning, produce an enormousful effective visual program. We could say: Here is America. Here we are, with our faults as well as our virtues. Here is the real America of striking vigor, flashing imagination, bursting creativity. Here, we could say, is an America struggling to find the answers, an America earnestly seeking to do what is right, an America not at all reflected in the gangster movies, the technicolor musicals, and all the westerns that have ever galloped across the screens of Europe and Asia and Africa.

Let me emphasize once again, that without something to say, that is, without a policy to implement, doubling and even tri-

pling the USIA budget would largely be a waste of time. Furthermore, it is safe to say that dollars alone will not provide an effective program of audiovisual production for our information porgram overseas.

The scientists assure me that dollars alone will not produce creative thought and important discoveries. They stress, again and again, that the truly creative person is a relative rarity, and that very careful programs must be designed which are entirely without reference to the massive expenditures of funds.

A million dollars could be plunged into the production of one motion picture, and frequently is, in the entertainment industry. That same million could be dedicated to a program of encouragement and incentive to the struggling audiovisual producers around the country, and might produce startling results.

There are gifted individuals, in college and out, throughout the country—experimenting on shoestrings, struggling to advance the art of visual communication, working on budgets of $500 or perhaps $5,000—producing stimulating, honest, sometimes beautiful, films and filmstrips for perhaps 1 or 2 percent of the cost of a Hollywood entertainment film. Just think what they could do with just a few thousand dollars to work with.

Financial worries that affect the typical educational TV station, for example, cannot help but diminish the creativity and effectiveness of their work. I see no reason why governmental units at the local, State, and national level should not participate in the financing of these operations, in the public interest.

Senator WARREN MAGNUSON, I believe, is to begin hearings tomorrow on a bill to provide financial assistance to States which have been unable to move as yet into the field of educational television.

Other proposals are already being given serious attention. In title 10 of S. 3187, which I am proud to sponsor with Senator LISTER HILL, we have proposed a program which I believe would go a long way toward advancing the art and technique—and the habits of use—of audio-visual materials for serious (as opposed to more entertainment) purposes.

Essentially, under title X we would provide $5 million for the first year, and $10 million for each of the next 4 years to promote research and experimentation in the audio-visual field.

There would be grants-in-aid to public and nonprofit agencies and individuals, to be approved by a national advisory council on new educational media. Contracts would be authorized for projects of research and experimentation in audio-visual instruction. A central exchange and library of audio-visual materials would be maintained, including materials produced abroad.

Program units would be organized and made available to State and local educational agencies.

All of these activities would be coordinated under an institute for research and experimentation in new educational media within the United States Office of Education.

Such a broad program of encouragement would strongly supplement the pioneering work which has already been done by the Ford Foundation and other nonprofit foundations and organizations, which has been so important in the steady progress of the past decade in audio-visual production and use.

The Senate has held extensive hearings on this bill, and I am very hopeful indeed that our Committee on Labor and Public Welfare will favorably reput the bill to the Senate floor some time in May. On the House side, similar progress is being made on a matching bill.

With such a two-pronged effort—that is, encouraging creative experimentation on the one hand, and providing in effect a market for audio-visual productions through such agencies as USIA—the whole field of audio-visual work can be enormously stimulated.

This would be good for our Nation. It would make us more articulate in our dealings with the rest of the world. It would also intensify the broad educational effort we are now making, by multiplying the number of students which can be reached by superior teachers. This, in turn, would give impetus to our effort to regain the initiative in our struggle with the Soviet system—a struggle which demands, and will continue to demand, the most intensive planning, coordination, and perseverance.

Only through the vigorous and imaginative use of all the media of communication can an administration expect to convince the country that it must make the sacrifices necessary to meet the multiple Soviet challenges and to avoid the catastrophe of either war or Soviet domination. And only through an equally vigorous use of communications media—founded soundly on intelligent policy, of course—can our leaders expect to rebuild the confidence and unity of the West and shatter the glib confidence of the Soviet leadership.

But even should we succeed in ending the arms race, in reducing the crushing burden of armaments and the overhanging threat of catastrophe from nuclear weapons, we must still be prepared to face a generation of struggle to win the minds and hearts of the peoples of Asia and Africa. Let us hope that we will have the determination to enter the contest seriously, the intelligence to formulate wise policies, and the trained men and women to put them into effective action.

Of all the powerful ideas at work in the world, none has more strength than the world's yearning for peace—and not simply the absence of war, but peace with progress.

We must identify ourselves vigorously, simply and directly, with this great idea, in terms of positive progress toward better housing, more jobs, more food, and for dignity and freedom for the men and women who have had nothing for so long.

Ideas, you see, are in motion—powerful ideas that are sweeping away old political institutions, breaking through the encrusted traditions of five centuries. Nationalism, and fierce nationalism at that, is an idea and a movement among the Asian and African peoples that must be recognized and taken into the most serious consideration by American policy planners. The idea of equal opportunity and nondiscrimination on the grounds of religion or color is another powerful idea that is upsetting the old order. The peoples of colored skin in this world are in the majority, and it has long since become evident that they will no longer tolerate the inferior status we of the West have assigned them for these five centuries of Caucasian domination.

The magnificent conception of international organization for peaceful purposes is still another tenacious and vigorous idea important in our world—and very much in motion. Steadily, in the face of the huge buildup of weapons of mass destruction, men and women of vision and purpose are working to strengthen the economic, social, and cultural organizations that are some of the brightest hopes in an often bleak international picture. The idea that all peoples should be free of the age-old scourge of disease is being magnificently carried forward—in malaria control programs, in the attack of trachoma, tuberculosis, and scores of other plagues.

Still another idea powerfully at work in the world, but one which our Government regretfully has not yet adopted, is that food and fiber are great national treasures, and can be vital instruments of foreign policy. Mr. Khrushchev is the first of the Soviet leaders to recognize this fact, and in the face of our own leadership's indifference to the opportunity to use food intelligently and wisely, the Soviet leaders are surging forward in an effort to overtake us in food and fiber production. American food and fiber abundance is not something we should be ashamed of, but an asset of incalculable value.

Finally, the idea of providing the kind of education that will permit individuals to realize their full intellectual potential, the idea of ensuring that gifted young people will not be denied higher education opportunities simply because of a lack of family finances, is gathering real momentum. In our history we have steadily widened the opportunity for education for everyone. But it is only recently that we have come to realize the great gaps in our educational structure. It is nothing short of tragic—for the individuals and for our Nation—that we have not devised a system that would provide the 150,000 or so young high school graduates with very superior ability who do not now go on to college each year for lack of funds, the opportunity to develop their potential through higher education.

I think we are going to take steps to meet this challenge. As long ago as January of 1957 I proposed legislation to provide direct scholarships and loans for 40,000 such young people. This year, I was privileged to join with Senator LISTER HILL in introducing the national defense education bill about whose title X we have had some discussion earlier. We have even succeeded in encouraging the administration to make a similar, though far smaller, request of Congress. Clearly we are going to have concrete, positive legislation in this field this year, and the impact on the intellectual level of our Nation may be astonishing over the coming decades.

Finally, it is important to point out that were there no Soviet Union, were there no Nikita Khrushchev, were there no overhanging threat of nuclear warfare, we would still live in a world of incredible problems and dangers, and opportunities. Surely it is short-sighted to be forever reacting instead of acting, to be forever holding back instead of forging boldly ahead with our own ideas. This is a world in constant flux, ever changing, constant only in its inevitable change.

The task of encouraging and training the young people of our Nation to assume political, economic, and technical leadership is of nobility and intense importance. You teachers, and you specialists in the visualization of the idea, deserve the warmest support and encouragement of the Nation. I can only assure you that there are many in the Congress of the United States who share my conviction that the profession of teaching must somehow receive the social and financial rewards that have for so long been denied to educators.

This is just another idea that I hope to get into motion.

Meanwhile, while our society, not yet in its full maturity, does not yet recognize in more concrete terms the critical importance of the teaching profession to the strength and economic health of our Nation, let me assure you that never has the prestige of the teacher been higher. Never, it seems to me, have the prospects been brighter for the participation by educators in major policy decisions of our Government. This is a long and important stride forward, I believe, and bodes well for the future welfare of our own, and of the world's people.

Repeal of Federal Transportation Taxes

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. NEUBERGER. Mr. President, for several years I have urged that the first of all Federal taxes to be eliminated should be the wartime Federal excise taxes on travel and transportation, which are so harmful to the Western States. Unlike other excises, the transportation tax not only adds a single percentage increase to the cost of the particular item on which it is levied; rather, it enters several times into the cost of producing, distributing, and selling all manufactured items in this country, and it does so proportionally to the distance that these items must be transported. Thus, again, unlike other excises, it is not only regressive but also specifically discriminatory against areas, such as Oregon, which are located so far from the major industrial and population centers of our Nation that transportation costs constitute a disproportionately heavy element in the cost of everything we buy and sell.

Because the unfairness of this particular tax against my State has long occupied my attention and efforts in the Senate, I have been delighted with the push now being given to the repeal of the Federal transportation excise by the Surface Transportation Subcommittee of the Committee on Interstate and Foreign Commerce, under the able leadership of the junior Senator from Florida [Mr. SMATHERS] and the distinguished senior Senator from Washington [Mr. MAGNUSON] and other members of that committee.

I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of correspondence between the junior Senator from Florida [Mr. SMATHERS] and me and an illuminating editorial from the Portland Oregonian of Thursday, April 24, 1958, endorsing the repeal of the Federal transportation excise tax.

There being no objection, the correspondence and editorial were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
April 24, 1958.

The Honorable RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR DICK: On February 24 Senator MAGNUSON, myself, and other members of the Interstate and Foreign Commerce Committee introduced an amendment intended to be proposed to H. R. 7125, excise tax legislation presently pending before the Senate Finance Committee, the purpose of which is to repeal the 3-percent excise tax on freight and the 10-percent excise tax on transportation.

These excise taxes were imposed during the war period, as you know, to conserve the transportation facilities for the war effort. Since the purpose of these taxes has long since been served, I am convinced their prompt repeal would provide the necessary stimulus to business activity which is so badly needed today. The excise tax on freight, with its multiple aspects, is a drag on healthy economic growth. These taxes differ from the ordinary excise tax in that they apply to almost every conceivable type of consumer goods from baby foods on up to automobiles, and they impose an undue restriction on almost every segment of our economy as well as the transportation industry.

Hearings which I have held as chairman of the Surface Transportation Subcommittee of the Interstate and Foreign Commerce Committee for the purpose of determining the cause of the deterioration of our railroad industry have just been concluded. One recommendation which was made consistently, intended to be helpful not only to the transportation industry but to other segments of our economy as well, was the repeal of these excise taxes. I believe that by taking prompt action to bring about their repeal, business activity can be promoted and hope that you share my views.

I invite you to join with Senator MAGNUSON, myself, and other members of the Senate Interstate and Foreign Commerce Committee in urging that prompt and favorable action be taken on the amendment which we have introduced to bring about the repeal of these taxes. I sincerely trust that you will be able to do so.

An expression of your views with respect to this matter will be very much appreciated.

Sincerely yours,
GEORGE SMATHERS,
United States Senator.

UNITED STATES SENATE,
COMMITTEE ON INTERIOR
AND INSULAR AFFAIRS,
April 28, 1958.

Hon. GEORGE SMATHERS,
United States Senate,
Washington, D. C.

DEAR GEORGE: Thank you for your letter of April 24, concerning the proposal for the repeal of the Federal transportation excises being urged by you, Senator MAGNUSON and other members of the Committee on Interstate and Foreign Commerce. I am more than happy to assure you that you can count on me to give you all possible assistance toward accomplishing the repeal of these taxes at the present session of Congress.

Since 1956, as you may remember, I have repeatedly urged the abandonment of these transportation taxes, because they are highly regressive in general, and because they are particularly discriminatory against areas such as Oregon, which must bear the burdens of heavy transportation costs in everything we buy and sell in the more populous markets of the eastern industrial States. On several occasions I have introduced amendments to repeal the transportation taxes in connection with other tax bills, but the Finance Committee has not so far thought the situation appropriate for consideration and adoption of such amendments in the Senate. You may recall that earlier this year we had a very constructive colloquy on the floor of the Senate on this subject.

That is why I am very glad that you, as a member of the Committee on Finance, and also as chairman of the Surface Transportation Subcommittee, are taking the lead to push for the abandonment of these excises now. I was disappointed that President Eisenhower, in his recent statement of proposals for Federal railroad policies, did not recommend the repeal of the transportation excises. However, I certainly hope that a total repeal and not only a partial reduction can nevertheless be enacted at the present session of the Congress.

Be sure to let me know whenever I may be of any assistance in the efforts of you and your colleagues of the Surface Transportation Subcommittee, when this issue comes before the Senate.

With best personal regards,
Sincerely,
RICHARD L. NEUBERGER.

[From the Portland Oregonian of April 24, 1950]

FIRST AID TO RAILROADS

The case for repeal of the transportation excise tax is so strong that Secretary of Commerce Sinclair Weeks' recommendation that it be considered only as part of a general tax revision is surprising.

What greater, immediate stimulus could common carriers receive than relief from a restrictive tax which gives private truck fleets and leased or chartered trucks and barges a 3-percent advantage over them? Repeal of the freight tax appears from this viewpoint a better aid to the harassed railroads than Mr. Weeks' proposal that the Government guarantee $700 million in loans to the roads.

Perhaps all Federal excise taxes should be reviewed to determine what effect they are having on the business recession. A reduction in the 10-percent excise tax on automobiles, for instance, might be just the incentive needed to revive the lagging automobile market and give the whole industrial complex a boost.

Some excise taxes undoubtedly are necessary as revenue producers. The transportation taxes, however, were never designed to raise revenues. They were adopted in wartime to discourage use of railroads and other transportation facilities when these were needed for full prosecution of the war. The purpose now should be not to discourage but to encourage use of common carriers by both passengers, who must pay a 10-percent tax, and shippers, who pay 3 percent of their freight costs.

Most excise taxes are paid equally by all Americans, but not the transportation tax, which hits disproportionately those living in the West and other districts distant from the large population centers, who already are burdened by higher freight rates. Senator RICHARD L. NEUBERGER has determined that Oregonians who ship a carload of canned fruit to Pittsburgh pay nearly four times as much Federal transportation tax as do middle westerners who make similar shipments to the Pittsburgh market. The same inequity applies to manufactured articles sent to Oregon from the East.

Not only does the transportation tax divert common-carrier business to shipper-owned or leased trucks and barges, but it causes shippers able to do so to send freight over Canadian transcontinental railroads, which have no excise tax to worry about. Thus the country as a whole, not only the West and South, is hurt.

A majority of the Senate Commerce Committee, as well as of a subcommittee which has made a study of railroad problems, has gone on record in favor of repealing the 3-percent freight tax and 10-percent passenger tax. The administration could help bring about this vital improvement in the tax structure by recommending immediate action instead of further delay.

A Look at the Record

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to include in

the Appendix of the CONGRESSIONAL RECORD the attached editorial, A Look at the Record, which appeared in the Indianapolis News on Wednesday, April 23, 1958:

A LOOK AT THE RECORD

Secretary of Commerce Weeks tried this week to help restore that national self-confidence which is essential to recovery from the recession.

Mr. Weeks pointed to several hopeful signs. He predicted a real upturn by late summer.

He may be right, too.

However, implacable partisan opponents of the administration will give him nothing but a pie in the face for his efforts.

The only contributions these extremists have made toward halting the business slump has been to yell for bigger Government expenditures and cuts in low-income taxes.

This combination adds up to a recover-by-deficit approach to economic problems. Its end result could be national bankruptcy.

Responsible Democratic leaders have let Harry Truman become their bellwether on the recession issue. They have not repudiated his shocking performance at a congressional hearing. Instead, they have echoed him—although in meeker tones.

These Democratic leaders—including such men of reputed stature as Senator LYNDON B. JOHNSON—have hypocritically avoided references to the 1948–49 recession.

In that period of business decline, which paralleled the present one, the official Truman administration policy was the same wait and see policy of the Eisenhower administration.

Mr. Truman enunciated that policy in his 1949 economic and state of the union messages. His leading economic adviser, Leon Keyserling, restated it a few weeks later.

Democratic leaders also are stuck with other Trumanesque efforts to rewrite history.

They are stuck with Give-'Em-Fiction Harry's imaginative unemployment claims. The truth: Unemployment between 1933 and 1953 averaged 9½ percent. Since 1953 it has averaged 3.8 percent, with a 5 percent high in 1954. And this without any wars.

They are stuck with Trumanisms about personal income. The truth: Personal income in 1957 was $343,500,000,000. This was far higher than in any war-boom year under the Democrats. And the 1957 gross national product was $89,100,000,000 more than the Korean war peak under Mr. Truman.

They are stuck—these Democratic leaders—with Truman demagogy about high bondholders profits and money-lender interest rates under the Republicans. The truth: In 1939 interest payments were 6.3 percent of national income. In 1957 they were only 3.6 percent. In 1939 wages and salaries represented 66.1 percent of national income and in 1952 67.2 percent. In 1957 they represented 71.1 percent.

They are stuck with a bald-faced misstatement that Republican administrations have shot the cost of living into outer space. The truth: Between 1939 and 1953 the purchasing power of the dollar dropped from 100 cents to 52 cents for an average annual loss of 4 cents. In the last 5 years the annual drop has averaged one-half cent.

We could cite many other distortions of fact which are being given either vocal or silent support by Democratic dignitaries. In following Mr. Truman's lead, they are stuck with them.

But, worst of all, they are stuck with an arrogant philosophy of government which holds that the average American voters is too dumb to distinguish fact from fiction.

The optimistic wait-and-see prophecy of Secretary Weeks probably will not restore any unemployed citizen to his job this week or next week. But we'll take his honest generalities over Harry Truman's alterations of history.

As for the huzzas in high Democratic ranks for the former President's antic behavior, many Democrats at the precinct level must feel there is a poverty of national leadership in their great political party.

Free Enterprise Still Alive in the United States

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

FACTS ABOUT WILLIAM BOX, WILLIAM KENNEDY, AND THE PROVOCATIVE, IMPUDENT BOX CARDS

THE CREATOR

Thirty-year-old Bill Box wanted to be a fine arts or top commercial artist, but his ribald, quixotic sense of humor got the better of him.

Four years ago he was parking cars in a lot adjacent to a Los Angeles restaurant so that he could eat and continue his studies at an art school. Between accordion-pleating car fenders and learning how to paint and draw, Bill sold the first of his provocative ideas and their terse, one-line captions for $25 each.

Almost like a contrived movie scenario, Bill Box became friends with another Bill by the name of Kennedy, and his entire life was set for a change of pace.

THE BUSINESSMAN

Bill Kennedy, 1 year Box's junior, had come to California as a TV salesman, but his ultimate ambition was to crash the video studio gates as a singer. However, his problem was threefold more complex than Box's. Bill had a wife and two children to support, which brought him to the parking lot to supplement his income.

His sense of humor and love of brash, sophisticated realism proved an appreciative audience for the drawings of his new friend, Bill Box, but he didn't quite approve of selling these contemporary art gems for $25. If others could make money from Box's creations, why couldn't he and Bill do it, cutting out the middleman?

THE FIRST TRY

Thus in April 1954, the two Bills pooled their resources and fine-combed Box's art portfolio. With a total capital of $26, they entered the greeting card business, producing the first batch of insolent, eye-popping cards that were later destined to shock, sometimes anger, and always hurl Americans into gales of hysterical laughter.

Converting Kennedy's battered 1948 Ford into a combination office and storehouse, the pair of Bills set out for San Diego to lay siege upon the stationers and greeting card dealers of that city. The junket netted a $238 profit.

OPERATIONS SAN FRANCISCO AND BEYOND

Next came an invasion of San Francisco with a new stock of cards, which were equally as successful as the San Diego trip, but if this business was to provide a decent living for two people and their dependents, it had to expand at once.

In line with this idea, Kennedy borrowed $150 from an aunt to underwrite his partner's journey to Wenatchee, Wash., where the artist talked his father into putting up $1,500.

This capital provided a new stock of merchandise and took the two Bills to New York for the annual stationer's convention. Until their invasion of Gotham, greeting cards had changed very little in design or context in more than a century.

Get-well cards, mothers' day mementos, birthday greetings, showers, wedding and engagement congratulations and an assortment of friendship cards literally dripped with saccharine sentimentality, and their florid designs looked more like seed catalogs than greetings.

"Everybody has a mother, but everybody doesn't think she looks like Whistler's painting," Kennedy recently reflected. "It is more entertaining, honest, and functional to send a contemporary parent one of Box's birthday greeting cards than the kind with a satin pincushion heart and some schmaltzie poem, such as 'M is for the million things she gave me.'"

Those who attended the stationers' convention must have agreed with Kennedy and Box, for they cautiously and conservatively bought assortments of the new-type greeting cards. This encouraged the partners to open an office and to send samples of their line to some 1,500 dealers across the country.

Experts in the direct mail business consider a 1-percent return on a national mailing profitable. The provocative Box card samples brought 400 orders, equal to almost a 27-percent response.

Everybody who ordered Box cards didn't necessarily like them. The boys still keep as a precious memento of those early days, an uncashed check, dated October 22, 1954 (6 months after they started in business), for 90 cents. It is from a Philadelphia stationer in payment for a box of their cards and it bears the warning in the sender's indignant handwriting: "Do not send any more."

NOW WE ARE 20

Since the firm's inception 4 years ago, the 2 Bills have had to move their business 4 times to account for necessary expansion and increased business. Twenty people are employed and there are sales representatives scattered from Maine to Hawaii to Brazil.

Currently the 2 Bills are considering requests from abroad to translate their entire line of cards into 18 foreign languages to meet the demand. Last year they sold 3 million cards and by the end of this year they will have done in excess of $500,000 gross business for the preceding 12 months.

A New York office now takes care of orders from States east of the Mississippi, the Caribbean, and Canada.

THE FUTURE

"No business can base a continued success on the creativity of one man," Bill Box maintains. He and his partner are therefore continually on the lookout for bright, original, and impudent new talent with ideas that can be incorporated into the Box card line.

To better facilitate such a search they are currently sponsoring the second annual national Campus Cartoonist of the Year contest among college artists of both sexes. They offer the winner a free, all-expense-paid, round-trip to Paris and a generous royalty deal on any cards created by the contestants which they decide to publish under the Box card label.

Steve Allen, Groucho Marx, and Al Capp are the judges and thousands of entries have already been received from would-be future Box card artists.

HOW DID IT HAPPEN?

The first thing a Box card fan usually asks either of the two Bills upon meeting them, is how the saucy little cards came to be

born, smashing all American greeting-card traditions.

Actually, the boys will tell you, offbeat and zany messages and cartoons are not new. Americans, between 1860 and 1918 bought and mailed millions of comic, impudent Valentines annually, but these were sent anonymously and designed to deeply wound the recipient.

Box cards are proudly signed by their senders and they are in protest, mainly, over saccharine sentimentality and pure corn. While the granddaddy comic Valentines were the forerunners of this type of greeting, they were sent only on St. Valentine's Day. Box cards are a daily, year-round excuse to make someone happy and to shock them out of their self-pity through astonished laughter.

Activities of the International Labor Organization

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. HUMPHREY. Mr. President, all too often we fail to understand and appreciate the importance of work being carried on by the International Labor Organization.

In Labor's Daily of Thursday, November 28, 1957, an excellent article appeared describing some of the activities of the ILO.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Labor's Daily of November 28, 1957]

ILO EXPERTS HELP HAVE-NOTS FIND PLACE IN MODERN INDUSTRIAL SOCIETY

(By J. Avery Joyce)

UNITED NATIONS, N. Y.—"If you want peace, prepare for social justice."

This simple, yet stirring, sentence is engraved on the foundation stone of the International Labor Office in Geneva.

Simple? Yes. But in it lies a great challenge, not only to the consciences of men but to their knowledges, abilities and skills. It is a challenge which has been taken up by more than 700 picked representatives of the 74 nations which now belong to the ILO.

Under this brave banner, grounded in the democratic principles of the ILO constitution, devoted men and women of scientific and technical training and experience, have gone forth as missionaries of good will to the peoples who have needed their learning and their leadership across the wide earth. Starved of adequate funds, opposed by blind and selfish interests, ignored by the daily press—which thrives on wars and murders and scandals—the ILO has nevertheless proved to the very hilt that its foundation motto is the only practical way forward to world peace in the space age.

"Partners is progress" is the title of the latest summary report of what the ILO has accomplished during 1957. "Partners in Peace" would have equally described the fine role played by these technical assistance experts, working under the ILO program in country after country, on a microscopic budget—which, even so, certain United States interests tried to cut last summer, but failed in face of overwhelming opposition from other countries and from the United States labor movement itself.

COMMUNITIES PROGRESSING

In many parts of the world, communities long steeped in poverty are now adding to their incomes by producing pottery, textiles, and other handicrafts with the guidance of ILO experts. Skills are being taught to thousands of boys in ILO-aided centers and schools. Training centers for adult workers and instructors are being improved and overhauled. Cooperatives, set up with the assistance of ILO experts, are helping to ease the transition from primitive to modern industrial economy.

Output in factories and workshops has everywhere risen, following assistance from ILO productivity teams. Social security, minimum wages, factory inspection, and better working conditions have come for the first time to workers in some of these regions. Campaigns for greater industrial safety are being waged and government departments handling these problems have been overhauled and reorganized. And all this is being done with the active support of the peoples and governments concerned.

More than half of the ILO's activities are devoted to helping countries to develop the skills they need. Take the example of Haiti. This mountainous republic is swept by high winds which devastate the countryside but which, if harnessed, could yield power which Haiti needs.

ILO experts taught Haitian mechanics how to construct windmills for irrigation and other purposes. One of Haiti's principal crops is sugarcane, but the machetes with which the cane is cut had to be imported. ILO experts taught Haitian artisans how to make knives themselves.

Again, the correct construction of the wheel was unknown in Haiti's backcountry. Most people carried loads on their heads. So the wheelwright's trade was introduced. Finally, to meet long-term needs, training specialists are helping Haiti to reorganize technical education and streamlining its vocational schools.

More complicated have been ILO training projects in India, Italy, Yugoslavia, and other countries where the needs of heavy industry have to be met. India's enormous needs for skilled labor—one of her new giant steel plants will need 10,000 workers—have led her to seek ILO assistance in overhauling the vocational and instructor training programs. Italy has a highly skilled labor force, but needs training programs for new or unemployed workers, and ILO specialists are helping to develop two pilot training centers in Genoa and Naples.

The most important assistance rendered by the ILO to Yugoslavia has been placing of hundreds of her workers in western European countries under the ILO's worker-trainee program. ILO instructors are also assisting Yugoslav industry to train workers on the job and to improve other vocational training facilities.

Now, take a more difficult case. Honduras has a tropical climate, luxuriant vegetation, a relatively scanty population and a single crop economy. Out of its active population of 647,393 persons, 538,014 are engaged in agriculture and forestry, 37,556 in industry, 6,512 in construction, and 3,104 in quarries and mines.

Up to 1954, Honduras did not have a code of labor laws like other Latin American countries. This abnormal situation threatened to lead to social strife and, in 1954, the country was swept by strikes. Relations between employers and workers were disrupted by the disputes.

The first step was the drafting of a labor charter by the ILO. The charter took into account the level of social and economic development in the country, but it assured freedom of association and collective bargaining, provided a legal basis for collective agreements, and guaranteed payment of wages. It also laid down principles for the regulation of working hours, the conclusion of labor contracts, and the protection of women and children.

NEW LAWS ENACTED

By 1955, new laws were on the statute book and, in anticipation of the passing of others, ILO experts have already begun training ministry officials and labor inspectors. Steps are now being taken to see that both trade union and employers' representatives understand the techniques of collective bargaining and arbitration.

What has been done about the world's vast army of the disabled? Turning, for a moment to two countries, Guatemala and Indonesia, which we are constantly being told are under the shadow of advancing of communism, let us look at just one as part of the peaceful remedy. ILO projects covered handicapped persons in addition to the blind during 1957.

Guatemala has set up small workshops where workers partially paralyzed or disabled through occupational accidents are now learning a variety of trades from radio repairs to shoemaking. Similarly, Indonesia's rehabilitation center at Solo, designed as a model for the whole of Asia, is making considerable headway with the help of experts drawn from a number of U. N. agencies, including the ILO. There, more than 200 physically handicapped persons are undergoing training in different skills under the ILO. In the medical section, blind Indonesians are learning a new profession, that of masseurs.

What of the future? The projects sketched above are only a few pioneer examples of the genuine peacemaking activities of the ILO. They are not in themselves the complete answer to the major problems of war and peace. But they fit into the vaster pattern of international efforts to promote happiness and to raise living standards on all continents.

In a world which is still trying to live down one hatred and misery are fears of centuries, the technical and scientific activities of the various U. N. agencies, representing the pooled brains of numerous countries, stand out as a bright ray of hope for the earth's forgotten men.

Missouri the Heart of the Nation

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. HENNINGS. Mr. President, when the DAR held its recent annual convention in Washington, one of Missouri's delegates was Mrs. Davis Franklin Eads, the Missouri State regent of the organization. She gave a very short, but, I think cogent, timely, and very excellent speech entitled "Missouri the Heart of the Nation." It describes my State's virtues so well that I ask unanimous consent to have the short address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MISSOURI THE HEART OF THE NATION

Missouri finds itself in the spotlight of your attention at this time, an experience

not new in her history. For over 200 years she has periodically attracted attention from the outside world because of significant people and events. This land where the rivers meet is an enigma to many; a land of cities and quiet rural communities. Attempts to sum Missouri up in one pat phrase have always failed. It has been called the show me State and the Mother of the West. But none has defined it. Its character does not seem to fit into any particular region, not even the Middle West of which it is geographically a part, but where its color and constant variety make it seem almost alien. The New Englander speaks vaguely as out West or down South. The southerner, remembering Missouri's Grant and Sheridan calls it up North or hastily balancing those memories with happier thoughts of Joe Shelby, Sterling Price, or Gov. Claiborne Jackson, moves it closer to Dixie. To the far westerner, Missouri is back East, or more often a wistful back home.

The Missourian is even harder to define than Missouri. Depending on the section and town from which he comes, he may greet you with "Howdy," "Good morning," or "Bon jour." He may serve you with beef and kidney pie, rare roast beef and trifle; or with corn dodgers, greens, and pot likker, and fried apple pies; or with spoon bread, fried chicken, black-eyed peas, and strawberry shortcake. His home may be a brick bungalow, a functional modern, the trim white frame cottage of the 1880's; it may be a stately Greek revival mansion with temple portico, or half timbered in the medieval manner, or French chateau style, or brick corniced and flush with the sidewalk in the German manner. He may go to church in a simple white frame edifice with a tiny bell tower, or in a brush arbor for a protracted meeting, or in a century-old cathedral. He may sing you folk songs older than our country, in English or French or German, or the rollicking ballads of the frontier; he may take you to a sharp note singing festival or to hear symphonic music in Kansas City or St. Louis where the orchestra is the second oldest in our country. He will tell you legends and tall tales with a broad sense of humor. He may seem reserved, but once acquainted, you will find him open, friendly, and hospitable.

Most Missourians are predominantly conservative. They live well but abhor ostentation. Society editors are wont to complain that the really socially prominent avoid publicity like a plague. By and large they are gregarious, and have few racial prejudices. They believe in working hard, owning their own homes, and tolerating their neighbors. They seldom lose their sense of humor or their sense of proportion, and are consequently slow to take up fads or to join radical movements. They call St. Louis, St. Louis—not St. Louey, but Kansas City is sometimes called K. C. Their State is most often called Missoura rather than Missouri. It is called the Show Me State because they are hard believers. Since splendid highways cross the State, it is easy for the State to be shown, and we would like to do just that. We invite each of you to visit the home State of our president general.

Appropriations in Terms of Estimated Annual Accrued Expenditures

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30, 1958

Mr. CASE of New Jersey. Mr. President, at my request the citizens committee for the Hoover report has sent me an analysis of the differences between S. 434, the Kennedy-Payne-Byrd bill which passed the Senate without a dissenting vote last year, and H. R. 8002, the annual accrued expenditure bill passed by the House on February 4. As you know, H. R. 8002 has been pending on the Senate Calendar for nearly 3 months without being brought to the floor for consideration.

I do not know the reason for the delay in considering this measure. However, I do think it would help restore a greater measure of congressional control over Government expenditures and urge that it be brought to the floor without further delay.

I ask unanimous consent that the letter from the citizens committee to me be printed in the Appendix of the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

CITIZENS COMMITTEE FOR
THE HOOVER REPORT,
Washington, D. C., April 29, 1958.

The Honorable CLIFFORD CASE,
United States Senate,
Washington, D. C.

DEAR SENATOR CASE: The citizens committee is glad to answer your inquiry regarding the annual accrued expenditure bill, H. R. 8002, as compared with S. 434, the Kennedy-Payne-Byrd bill, which passed the Senate during the first session. We will not give here a technical explanation, since that is better left to the experts in the appropriate Government agencies.

The pertinent Hoover Commission recommendation upon which these bills are based is recommendation No. 7 of the report on budgeting and accounting: "That the executive budget and congressional appropriations be in terms of estimated annual accrued expenditures, namely, charges for goods and services to be received."

Both bills would put that recommendation into effect, although the two bills differ as to the means by which it would be done.

Under S. 434, the present method of making appropriation in a budget year for not only the goods and services to be received in that year but for long-lead procurement for goods and services to be delivered in subsequent years, would be replaced by:

(a) An appropriation for the budget year representing the goods and services to be delivered in that year, and

(b) Contractual authority for goods and services to be ordered in that year but not delivered or rendered until subsequent years.

Under H. R. 8002, the present method of making appropriations would, in effect, remain the same. However, there would be a limitation in each appropriation which would control the amount of goods and services to be received in the budget year.

In other words, appropriations would be controlled on an annual basis under the limitation procedure, and in addition orders for long-lead-time procurement could be placed under the appropriation similar to the method of placing orders under contractual authority as contemplated by S. 434.

An additional feature of the measure which passed the House, is that it would make it possible for the Congress to include, in appropriation bills, amendments, rescisions, or transfers of appropriations previously made without such provisions being subject to a point of order.

The procedures under both bills would be similar. They would bring about what the Hoover Commission had in mind, namely, annual control of Government programs and a systematic annual review with positive action to be taken by the Congress each year in the review of orders placed for long-lead-time procurement. In the opinion of this committee the two bills would have practically the same result and are virtually equal as to substantive effect.

With respect to the measure, H. R. 8002, J. Harold Stewart, former president of the American Institute of Public Accountants, and chairman of the Hoover Commission Task Force on Budget and Accounting, states:

"In view of the debate in the House today on House bill 8002, I have reviewed the proposed amendment of the bill by Congressman WIGGLESWORTH and believe the bill if so amended would be in substance and principle equivalent to House bill 8002 as originally drawn. The amended bill should provide an adequate framework for carrying out the recommendation of the Hoover Commission that the Federal budget be administered in terms of annual accrued expenditures."

And Robert B. Anderson, Secretary of the Treasury, states:

"The Treasury Department is in favor of the enclosed draft amendment to H. R. 8002 as described in the Bureau of the Budget letter of March 4, 1958.

"This amendment would substantially carry out the recommendations of the Hoover Commission. It would also carry out the intent of the President's 1959 budget message in this regard."

And the then Director of the Budget Percival F. Brundage states:

"As requested, I am setting forth herein the views of the Bureau of the Budget with respect to the enclosed draft of an amendment to H. R. 8002.

"The amendment would require that the budget include a proposed limitation on annual accrued expenditures for each appropriation account whenever a satisfactory system of accrual accounting is established for such account.

"The amendment sets forth the items which would be chargeable against any such limitation on annual accrued expenditures. This constitutes, in effect, a definition of accrued expenditures which is substantially in accord with that term as defined in the reported version of H. R. 8002.

"Any unused balance of the limitation on annual accrued expenditures would lapse at the end of the fiscal year concerned. Goods received during that year but not paid for could be paid for in the next fiscal year without further congressional action—provided the limitation was not thereby exceeded. Goods and services ordered during that year but received during a subsequent year could be paid for under the appropriation against which the obligation was incurred, but only within a new limitation on annual accrued expenditures established by the Congress for the subsequent year.

"The effect of the amendment would be to give the Congress increased control over the value of goods and services to be received in each fiscal year. Appropriations would continue to be made in the same manner as at present and would continue to be available for incurring obligations and for making payment therefor; however, their use for the latter purpose would be subject to the limitations on accrued expenditures which would be established by the Congress each year.

"The existing method of making appropriations and incurring obligations would be preserved. The use of contract authority would not be involved. Although the amendment would not eliminate the carryover of appropriation balances, it would permit Congress to control their use by determining, through the limitation on annual accrued expenditures, the value of goods and services which could be received each year. (While H. R. 8002, as reported, would eliminate the carryover of appropriation balances,

it would involve a carryover of balances of contract authority.)

"We believe that the draft amendment would accomplish substantially the same result contemplated by the recommendations of the Hoover Commission with respect to accrued expenditures, and the Bureau of the Budget would favor its enactment."

We trust this supplies the information you requested and we are grateful for your interest in this important question.

Yours very truly,

CLARENCE FRANCIS.

Wisconsin Projects Eligible for Community Facilities Act Loans

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30, 1958

Mr. PROXMIRE. Mr. President, I have a letter from Mayor Ivan A. Nestingen of Madison, the capital city of Wisconsin, in response to my inquiry about Wisconsin projects which might take advantage of the loan money made available under the Community Facilities Act. I think Mayor Nestingen's letter underscores the need for a lower interest rate. When the Senate changed the rate from the original 3 percent we moved in the wrong direction.

Mr. President, I ask unanimous consent that the letter from Mayor Nestingen be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF MADISON, WIS.,
OFFICE OF THE MAYOR,
April 28, 1958.

The Honorable WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR PROXMIRE: On April 1, 1958, you addressed a letter to this office inquiring as to the needs of this city in regard to aid in obtaining, at a reasonable interest rate, money necessarily borrowed to finance municipal improvements.

In reply to your letter, I wish to state that, in another several months, we will have a capital budget presented to the city council which, in my opinion, will reflect the need for borrowing in this city in the approximate amount of $25 million over the next 7 to 10 years. This includes borrowing for schools, streets, land acquisition for parks and other uses, urban renewal, storm-sewer construction, and other projects. More specific information can be furnished if you desire, but I do wish to wait until after the capital budget has been compiled.

Your letter indicates that the bill, which you mention, would provide for an interest rate of about 3 percent. My subsequent conversation with you indicated that it might be 3¼ percent. I do wish to let you know that, if this is the interest rate that would be established under the bill, it would not be of benefit to this community, barring a change in fiscal circumstances, since the highest interest rate we have paid in the last 10 years has been 2.75 percent about a year ago. Currently, it appears that the market has reduced somewhat and that the interest rate may have tapered off from this peak of 2.75 percent.

On May 20, 1958, we will be issuing $2,300,000 in general obligation bonds for needed school construction. At that time, we can better judge how much the market has eased off from this peak interest rate which we are now paying on bonds issued a year ago.

Please let me know if we can furnish further information to you which will be of benefit to your office on this question.

In the meantime, I wish to extend my best wishes for your continued success.

Respectfully yours,

IVAN A. NESTINGEN,
Mayor.

Economic Conditions in Washington County, Maine

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that a very interesting and thought-provoking article in the April 2 issue of the Calais, Maine, Advertiser, in regard to economic conditions in Washington County, Maine, which was brought to by attention by the Honorable Elbridge B. Davis of Calais, Maine, may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Calais (Maine) Advertiser of April 2, 1958]

COUNTY UNEMPLOYMENT RATE CLIMBS TO ALARMING PEAK OF 40 PERCENT

With an almost total lack of demand for pulpwood and with sardine plants still inoperative, the unemployment rate in Washington county has climbed to a peak unsurpassed since the depression in the 1930's.

The population of Washington county is approximately 32,000 and the labor force has been set at 9,000 men and women. More than 3,000 residents of the county contacted the Maine Employment Security Commission office last month in regard to filing for compensation or jobs. But there apparently are no jobs.

Since the MESC estimates that only three-quarters of the unemployed are registered, this means that another 1,000 persons have no regular source of income at present. The conclusion is, therefore, that more than 40 percent of the county's labor force is unemployed.

CRITICAL SITUATION

This, obviously, is contrary to recently published reports that things were never better downeast—the fact is, without intending to push the panic button, that the situation is indeed critical. The area can use any assistance it can get, either from State or Federal agencies.

The condition as compared to last year at this same time is much worse, according to an informed source. In April 1958 there was a total of 2,100 persons on the county MESC active file—900 less than this year.

The new year for filing for unemployment compensation began Tuesday and MESC representatives began the mammoth task of acting on the 3,000 claims for compensation.

Included in these 3,000 people will be an estimated 300 men and women who, however, failed in 1958 to make even the $900 necessary to qualify them for the minimum compensation of about $6 a week.

Those who do qualify will be paid an average of $16 a week for 26 weeks or until work is found for them. The State average is about $19 per week.

MIGRATION STOPS

What happens to these people who are making such a pittance? Before the business downturn or modified recession took hold, many of them were migrating from the county. Now that there is little work to be found even in the heart of the industrial areas to the south, all the unemployed are sitting tight here in the county.

The tremendous rate of unemployment comes about as a result of an almost total lack of demand for pulpwood and the fact that sardine plants by law must remain closed until April 15. Actually the factories will most likely be inactive until at least mid-June since the herring don't usually make their appearance until then—if then. Of the 3,000 persons applying for compensation for unemployment, 1,800 are associated with the sardine industry.

The United States Navy's $40 million radio station at North Cutler, described by certain county leaders as being a boon, is proving a bust instead so far as employment of local help is concerned. Only about 15 men are on the job of clearing brush and even at the peak the greatest number to be on the payroll will be right around 100 when all is said and done. Politicians may claim a bigger figure but the facts don't back them up.

The Beals Island-Jonesport Bridge is another project that is not directly benefiting the area as far as work is concerned. The majority of the men employed have been and are specialists in steel and cement work.

On the brighter side of the picture, indications are that pulpwood operations will start in about 10 days: Chemical debarking will begin about April 15 employing about 100 men and regular pulp peeling will get underway around May 15 involving 300 or so men. By mid-August there will be jobs for everyone who wants to work in the sardine factories, in the bean fields and on the blueberry barrens.

ROAD WORK

Recognizing the critical condition is the board of county commissioners which has authorized the immediate start on several road construction projects in the county to help eliminate unemployment in this area.

But should the residents of this county be content with seasonal employment? Many think not. Just what the answer will be remains to be seen but one county official said this week that "It would help if the folks here in Washington County would stop bragging about what their grandfathers did and start wondering about what their grandchildren are going to do."

United States Exhibit at the Brussels World's Fair

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30, 1958

Mr. IVES. Mr. President, I have received a most heartening letter from a constituent attending the World's Fair in Brussels, with respect to the United States exhibit at the fair. I ask unanimous consent that the letter be printed in the Appendix of the RECORD, following my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ARNHEM, HOLLAND, *April 25, 1958.*

DEAR SENATOR IVES: I want to be, perhaps, your first constituent to report on the United States pavilion at the Brussels World's Fair from which I have just come. It was terrific. I spent 3 full days at the fair and each day I returned to the United States pavilion—it was so fascinating. We are competing vigorously with the Russians and thus far I would say we are nearly even in crowd drawing.

I would say that the most appealing features of many are:

1. Cinerama: Crowds are so pleased they clap after each 19-minute showing.
2. IBM No. 305: Crowds are always around this machine, which answers questions in 1 of 10 languages covering 2,000 years.
3. Fashion show.
4. Voting machines: This was President Eisenhower's brainchild and they are going over big.

The Russians spent far more money on their exhibit. In fact, it is quite overwhelming and convincing. Should more funds be requested to pep up our exhibit or add to it, I believe the added expense would be well worthwhile.

With all best wishes, I am

Cordially yours,

MAURICE N. BRIDGES.

MORRIS, N. Y.

The Beautiful and Historic Lake Country of Minnesota

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30, 1958

Mr. HUMPHREY. Mr. President, a very fine article by Mr. John C. McDonald of the Minneapolis (Minn.) Tribune appeared in the April 25 Christian Science Monitor. The article is entitled "Canoe Country Anchors to Canada," and in the article Mr. McDonald discusses at some length the very beautiful and historic lakes and streams of Minnesota.

It is most fitting that in the 100th anniversary of the State of Minnesota, the Christian Science Monitor has taken this opportunity to bring Minnesota's magnificent water resources to the attention of a broad readership.

Mr. President, I ask unanimous consent that the article by John C. McDonald be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANOE COUNTRY ANCHORS TO CANADA

(By John C. McDonald)

DULUTH, MINN.—The most northerly part of the Nation is 130 square miles of virgin wilderness which is of the United States but not actually in it.

Populated by moose, mink, muskrat, and some 100 year-round human residents, this northwest angle of Minnesota is touched by water on 3 sides, and its roadless beauty is moored in Canada. It is directly accessible to the rest of Minnesota only by airplane or boat.

Farther east, and still clutched tightly against Canada, is a vaster trackless area—canoe country, truly—which is the Superior National Forest. Intended to be preserved as the land that was once America, every foot of its nearly 1 million acres, larger than all of Rhode Island, is covered with forest and water. Airplanes are forbidden by Presidential edict from flying into it.

HOST OF CHOICES

This, then, is one side—the hardier, roughing-it side—of Minnesota as a vacationland. But the summer traveler has a host of other choices. He can tour the north shore of Lake Superior, Indian mounds and reservations, ghost lumber camps, the metropolitan Twin Cities and the second largest university in America, the lake regions, the western prairies.

Minnesota has 45 State parks, comprising 80,000 acres, and 4,000 lake-resorts which range from thrifty, close-to-nature types to luxurious lodges which provide supervised play for the children while mom and dad play golf or bridge.

Nine out of ten Minnesotans live within 5 miles of water suitable for swimming, boating, or fishing. Inland waters cover more than 4,000 square miles.

Largest and grandest of the State parks is Itasca wherein are vast stands of Norway (the Minnesota tree) and white pine, many lakes, and herds of deer. Here it was that Henry R. Schoolcraft came upon the source of the Mississippi River, across which one can skip today without getting his feet wet.

At Alexandria may be seen the controversial Kensington Runestone, believes to have been left in mid-America by the Vikings in 1362, more than a century before Columbus ventured westward from Spain.

If the traveler's taste leans to vast expanses of blue water, he will find that the 150-mile North Shore Drive from Duluth to the Canadian border at Grand Portage rivals the Côte d'Azur for sheer beauty of inland sea and gracious trees.

There's grandeur for the ear as well as the eye in vivid but not effete place names which contrast delightfully with the myriad Round Lakes and Long Lakes and Mud Lakes encountered so repetitiously elsewhere: Temperance, Flute Reed, Devil's Track, Knife, Portage, Arrowhead, White Face and Baptism Rivers, Sawbill and Meander Lakes, Castle Danger, Gooseberry Falls, Palisade Head, and Grand Marais.

RESTORED STOCKADE

Standing vigil high over Lake Superior on this drive is Split Rock Lighthouse, said to be the most-photographed lighthouse in the United States.

Grand Portage, to which redcapped voyageurs once brought pelts of mink and beaver for the eastern market and Europe, is the site of a restored stockade.

A huge statue built to the memory of the voyageur will be dedicated June 15 at Crane Lake, near Hibbing. The legendary lumberman, Paul Bunyan, whom the North Star State has claimed as its own for more than 100 years, is inshrined in enormous likenesses in Bemidji and Brainerd. On Gull Lake near Brainerd is Lumbertown, U. S. A., a recreation from the past.

The nearby Mille Lacs area is the home of many Indians and their ceremonies.

Our National Arboretum

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial and an article on the National Arboretum which appeared in the Washington Post of Sunday, March 23. I was glad to see that the Senate Committee on Appropriations had called attention to the future of the Arboretum in their report on appropriations for the Department of Agriculture for fiscal year 1959 and that some positive action should be taken on it.

I do not know how many Members of this body have ever visited the Arboretum, but would suggest that a visit at this time would be very worthwhile. At the same time, while viewing the horticulture beauty which exists there, one could see the deplorable conditions under which the persons employed are required to work as well as the utter inaccessibility to the public for the purpose of viewing the wonders of nature.

The editorial and article follow:

TREES TO LOOK AT

So few persons have visited the National Arboretum that the sorry plight of this desirable project in northeast Washington is not widely known. Aubrey Graves, this newspaper's outdoors editor, tells the story elsewhere in today's issue. It is a tale of neglect, indifference, waste, and missed opportunity to give the Nation's Capital an outstanding botanical and horticultural display.

There is much in the Arboretum to be seen—lovely trees and woodlands, magnificent azaleas and other flowering shrubs in an impressive habitat. But facilities for the care and propagation of the many varieties of trees and shrubs are far from adequate. Worse than that, the Arboretum is almost a closed corporation, and the public only occasionally gets a peek. During the mere four weekends a year when it is open to the public, the heavily burdened staff must work overtime to accommodate visitors. Much of the area is inaccessible, and the remainder must be viewed on the move because no parking is provided and roads are not designed for two-way traffic.

Congressional appropriations are not to blame for this pathetic situation; for the past 2 years Congress has voted more money than the Department of Agriculture and the Bureau of the Budget recommended. Congress also approved a 5-year development plan in 1946, but the Agriculture Department has not carried through the program and now it must be brought up to date.

Congress and the Department together can initiate a remedy by seeing to it that the new appropriation includes funds for a decent administration building, laboratories, roads, and staff; and if the Department does not come through with a satisfactory proposal, Congress ought to ask why. If the Department of Agriculture is not basically in sympathy with the concept of an Arboretum that will be genuinely a national showpiece, then the program ought to be transferred to some more interested agency—perhaps to the Smithsonian Institution, which operates the national zoo. There's not much point in an Arboretum that no one can see.

ARBORETUM LONGS FOR LOVE

(By Aubrey Graves)

Like an unwanted stepchild, the National Arboretum prays every night for a real father.

As long as it remains a legal function of the United States Department of Agriculture, sponsors of this outdoor tree museum are convinced, it never will enjoy healthy development.

Thirty-one years ago, Congress directed the Secretary of Agriculture to establish and maintain a national arboretum. For the

next 2 decades, little was done beyond acquiring a 410-acre site at 28th and M Streets NE., on Mount Hamilton and Hickey Hill, along the west bank of the Anacostia River.

"The big difficulty," Frederic P. Lee said in an interview last week, "is that nobody in the Agriculture Department at a policy-making level gives much of a damn about the arboretum."

Lee believes it should be rescued from the United States Department of Agriculture. He thinks it would get far more considerate treatment for instance, under the Smithsonian Institution.

Lee is chairman of the 15-man National Arboretum Advisory Council, created by law in 1927 to advise the Secretary on its planning and development.

Its founders intended the arboretum to become a botanical and horticultural institution serving Americans much as London's famous Kew Gardens serve the British people.

For the public, it was to provide a spot of striking beauty at any time of year. For the school child, it was to be a zoological garden of plants and a museum of woodsy-growing things. For the scientist, a laboratory for study and experimentation.

More than $2 million has been invested in the arboretum. Yet, except, for 4 weekends a year, it has never been opened to the public. And even then, because of the lack of roads and trails, only 60 acres are accessible.

The arboretum has indeed become a spectacular woodland. Each spring, nature puts on a magnificent azalea display there, said to be unrivaled anywhere in the world. Its flowering dogwood and crab apple, hollyhock, mountain laurel, magnolia, and quince are described as fully as impressive as the Tidal Basin's famed cherry blossoms.

"I went out there to look at the azaleas once," remarked Senator CARL HAYDEN, Democrat, Arizona, during a 1956 appropriations hearing, "but I had a time getting around to really see them."

"Senator," said Lee from the witness stand, "if you had gotten there when the crowd was there, chances are you would have been told you could not get out of your car—you get in here, you make this circle, in one door and out the other—because we cannot handle two-way traffic, and we cannot let you go over on this side because there aren't any roads."

Skimpy appropriations, just about enough to do a grass-cutting job, have provided no money for guides, guards, or adequate roads.

When the azalea display is on, scientists and other arboretum staff members work overtime to direct traffic. "We have no guards. Wet get horticulturalists and doctors and others performing such functions, voluntarily, over weekends, just to make it available to the public at that time."

One year the budget-pruners hit the arboretum so hard it was forced to appeal to boy scouts to clear a fire break. During the drought of 1954, 18 maintenance men had little time for ordinary housekeeping duties. They were kept busy carrying water to plantings, because there was no money for an adequate irrigation system. Many plantings died that summer.

That year $156,000 was provided to operate the preserve. "I would not be surprised," said Francis De Vos, assistant director, "if it takes that much to maintain the White House grounds."

Declared Director H. T. Skinner: "During the last depression, the CCC initiated many major improvements. Unhappily, it looks as though we'll have to wait for another depression before we get any real help."

Relatively few Washington area residents have visited the arboretum. Many do not even know it exists. A visitor who asked to be driven to the arboretum completely confounded one taxi driver.

"Lady," he snorted, "I've been hacking for 20 years and there's just no such thing as a National Arboretum here."

Congress is not responsible for the Arboretum's difficulties, declares Lee. "The United States Department of Agriculture at the higher echelons, and the Budget Bureau are."

Twice recently, Congress appropriated more money for the Arboretum than the United States Department of Agriculture wanted. For 1956, the Department asked $161,000; Congress raised the figure to $372,570. For 1957, the Department requested $372,570, was told to take and spend $500,000.

The budget for the fiscal 1959 is being weighed now, and history is repeating itself. The Department proposed to give the Arboretum $185,000 less next year than it got this year. A closed hearing was held several weeks ago, and the matter now is pending in the Senate Appropriations Committee.

The financial straitjacket forced on the Arboretum year after year recently moved HAYDEN to write a scolding letter to Agriculture Secretary Ezra Benson.

"The Aboretum was set up by Congress as a legal function of your Department," the Senator wrote. "It ought to be given the consideration given to other parts of your Department."

Repeatedly, members of the advisory council have protested the bare subsistence diet. Their letters have drawn such replies as: "Your work has been of great value to the administration. * * * We have to view the budget picture as a whole. * * * The proposed reduction does not reflect any lack of interest on our part. * * * We hope you will continue to serve."

Some council members express extreme boredom over serving as advisers whose advice is habitually disregarded.

The United States Department of Agriculture wishes to take $185,000 away from the Arboretum next year, sponsors were told, "to provide additional funds for national defense."

That was disputed by Mrs. Hermann A. Place in recent letters to HAYDEN and to Representative CLARENCE CANNON, Democrat, of Missouri. Mrs. Place is vice chairman of the council.

"The budget (pp. 307–308) shows that * * * the Agricultural Research Service (under which the Arboretum falls) was not cut for national defense or any other reason. It was increased over the appropriation for last year."

What did happen, she declared, is that the USDA decided to increase utilization research at the expense of farm research. Utilization research has to do with finding new uses for surplus agricultural products.

If the $185,000 cut is made, declared Mrs. Place, "the roads, parking spaces, grading and seeding cannot be finished and the Arboretum again cannot be opened to the public."

The Arboretum now boasts only two permanent structures—a small gatehouse and a portion of a service building. The only other buildings are ramshackle frame affairs put up by the CCC boys in 1934.

"One of them," Lee told the Senate group, "was broken down by a hurricane and one fell down later without the necessity of an act of God. All the others leak—and I am overdescribing their splendors."

Lee insists that about $1.5 million is needed for an administration building and laboratories.

"We cannot do a research job out there until we get them," he says. "We also need another $40,000 just to bring that $151,000 batch of unused plans up to date."

"Congress," Lee told the Senators, "should do 1 of 2 things: Equip the Arboretum to serve in the fields of research and education, in ornamental and economic horticulture—or abolish it."

Faster Depreciation of Business Assets

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "CAPEHART Offers Bill To Allow Faster Depreciation of Business Assets," which appeared in the Wall Street Journal on Tuesday, April 29, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPEHART OFFERS BILL TO ALLOW FASTER DEPRECIATION OF BUSINESS ASSETS—IT WOULD AT LEAST DOUBLE AMOUNT FIRMS COULD DEDUCT FOR TAX PURPOSES

WASHINGTON.—Senator CAPEHART, Republican, of Indiana, introduced legislation designed to spur a big capital investment boom by greatly increasing depreciation deductions businesses may take in computing income taxes.

His bill would double or more than double—depending on the type of asset involved—the amount of deduction that could be taken from tax returns of businesses for capital assets built or acquired during 1958 and 1959.

The measure would step up the depreciation deductions by cutting substantially the useful life at present legally set for capital assets ranging from air conditioners to steel mills and from farm tractors to new locomotives. The useful life of the property determines the amount of deduction that can be taken for depreciation each year and the longer the useful life, the smaller the annual deduction.

Mr. CAPEHART expects wide business support for his proposal and is hopeful the Treasury will endorse it also. He discussed the bill at length with Treasury Secretary Anderson yesterday, but Mr. Anderson declined to back it at this time—even though the Treasury is understood to have been thinking along the lines of more liberalized depreciation deductions in the event some tax relief is recommended.

Chances for approval of the measure are slim unless a general tax cut is voted. But if Congress gets into a sweeping reduction program, approval would be possible.

TREASURY HASN'T REVIEWED BILL

Treasury officials said the bill is Mr. CAPEHART's own proposal, and has not been reviewed in detail by the Treasury. They reported Mr. Anderson would take no stand on any tax legislation until he had consulted with the leadership of both parties in Congress. The Treasury and Democratic congressional leaders have been operating under an informal truce agreement to consult with each other before acting in the tax field.

Nevertheless, some Democratic lawmakers would like to overturn their leaders' agreement with the administration's go-slow policy. Senator DOUGLAS (Democrat of Illinois), for instance, yesterday started 3 days of hearing by his House-Senate Economic Subcommittee aimed at gathering evidence that a tax cut is needed. A panel of eight private economists agreed in the opening session that further Federal activity is needed to spur economic activity. More support for tax reduction is expected at today's hearing.

The opposite view was voiced, however, at the United States Chamber of Commerce an-

nual meeting. Senator BENNETT (Republican of Utah), declared in a speech there that the Government is "being urged to go a little wild" on heavy spending programs and tax cuts to combat the recession. He forecast a Federal deficit of $20 billion to $24 billion for this fiscal year and next combined, if all the schemes are adopted, and argued against such action. Lower prices and a stable dollar are the best recession remedies, the Senator argued.

Chamber President Philip M. Talbott also opposed heavy expenditure of Federal funds and "make-work" projects, which he asserted did not materially change the direction of the economy in the 1930's.

Senate Finance Committee Chairman BYRD, Democrat of Virginia), declined comment on the Capehart bill except to say it was a very far-reaching proposal and probably should originate in the House, which constitutionally must start tax bills. Representative SIMPSON, Republican, of Pennsylvania, third ranking Republican on the House Ways and Means Committee, is scheduled to introduce the bill in the House today. Its backers hope to attach it as an amendment to legislation to continue present corporate tax rates and certain excise rates past June 30, when they are scheduled to decline under present law.

Under the traditional "straight line" method of depreciation, business taxpayers can deduct from their taxable income the cost of capital assets evenly over the useful life of the asset. Thus, for a capital asset with a useful life of 10 years, 10 percent may be deducted each year for 1 with a useful life of 25 years, 4 percent a year may be depreciated for tax purposes. The useful life of the various types of capital assets is set forth by the Internal Revenue Service in a rule widely known as Bulletin F.

The Capehart bill would simply cut in half the Bulletin F estimates of the useful life of property where the useful life does not exceed 15 years. If the useful life were greater than 15 years under the present schedules, the measure would cut in half the first 15 years and cut by two-thirds the remaining life expectancy. It would apply to cases where the present useful life is at least 6 years.

RETROACTIVITY TO JANUARY 1, 1958, PROVIDED

The new rates would be retroactive to January 1, 1958, and would cover any property constructed, acquired, or contracted for before the end of 1959. The Indiana Republican estimated it would cost the Treasury about $600 million a year immediately in revenue loss, but he said this would be made up later when the depreciation allowances ran out earlier than they would under present law.

He gave these examples of how depreciation would be figured under his bill: A new plant could be depreciated in 16 years instead of 40, and the same change would apply to most homes, apartment buildings, and office buildings; heavier machine tools could be depreciated in 7½ to 9 years, instead of 15 to 20; a new tractor could be depreciated in 5 years, instead of 10 years, and a corn crib could be depreciated in 12.5 years, instead of 30.

The larger annual depreciation allowances, Mr. CAPEHART said, would create jobs more quickly and more soundly than any other proposal now before Congress. He said his bill would provide major tax relief for the 10 million business units in the United States.

At the Douglas subcommittee hearing, the panel of business, labor, and university economists presented a generally gloomy view of the economic outlook. Their predictions ranged all the way from recovery delayed until the third or fourth quarter of this year to a recession going on well into 1959.

The most optimistic view came from William F. Butler, vice president of the Chase Manhattan Bank, who thought the most likely situation to be that "the business curve is now bottoming out and we shall see a renewed advance before the year's end."

When Mr. DOUGLAS asked whether the Government should try to cut spending and balance its budget now, as some groups advocate, or whether it should further stimulate the economy by public-works spending or tax cuts, the panel agreed that budget balancing was out of the question under present economic conditions and that additional Federal stimulants were needed. The individual prescriptions of what should be done varied, however.

Mr. Butler said he expected early signs of a leveling and then an upturn, and added he thought a tax cut now would be unwise. But if signs appear that the downturn is snowballing, he said, a tax cut would be in order.

At the other extreme, University of Illinois Economics Professor V. Lewis Bassie argued that in the absence of more vigorous Federal action, the decline would continue and that even with Federal action, there was only a slight chance now of averting the most extreme phase of the downturn late this year.

Agreeing with this view, Nathaniel Goldfinger, AFL–CIO economist, characterized the present recession as the most severe economic decline in 20 years. Even the most optimistic view of recovery in the next few months, he said, would probably mean a continuation of over 4 million unemployed unless the Government undertakes a comprehensive program of tax cuts to stimulate consumer spending and a public-works program to provide jobs.

National Teachers Day

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. PROXMIRE. Mr. President, the Eau Claire Auxiliary to Post 305, Veterans of Foreign Wars, takes a praiseworthy interest in getting recognition for the public and parochial schoolteachers of the Nation who carry the enormously important responsibility of educating our children. I have a letter from Mrs. Frances Hyde, legislative chairman of the auxiliary, urging that Congress adopt May 4, the birth date of Horace Mann, as National Teachers Day.

Mr. President, I ask unanimous consent that Mrs. Hyde's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 20, 1958.

Senator WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR PROXMIRE: Eau Claire Auxiliary to Post 305 of the Veterans of Foreign Wars is requesting your support of the bill our national organization has before the House naming May 4 as National Teachers Day. This date, the birthdate of Horace Mann, father of the American public school, will be recognized locally by presenting each public and parochial teacher with a flower as a token of appreciation.

It is hoped that we may have publicity on radio, television, and in the newspapers as well as recognition from the pulpits on May 4.

The problem seems to be getting the bill to a vote as we are sure at this time, with the urgency for teachers and education, public recognition and appreciation are imperative.

Gratefully yours,

FRANCES HYDE,
Legislative Chairman, Eau Claire Auxiliary to Post 305, Veterans of Foreign Wars.

The Air-Pollution Problem Facing America

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 30, 1958

Mr. WILEY. Mr. President, on a number of occasions I have spoken on the floor of the Senate on the danger of pollution in our country. There are various kinds of pollution. This morning some of us were privileged to hear about pollution by the Communist philosophy. There is no question that it is insidious, essentially evil, and that it penetrates the minds of persons who should not be susceptible to that line of thinking. But now I want to speak not of that kind of pollution, but of another kind. I mean not only water pollution, either. I mean air pollution as well.

It does not make much difference whether we determine the greatest menace is dirty water, dirty ideas, or dirty air. The fact is that all three are very dangerous to health and the security and continuity of the Republic.

My own State has a long tradition, perhaps one of the earliest traditions in this country, of fighting to clean things up, to clean up wrong ideas. As someone has said, the time for right thinkers has come. It is time to clean up our water as well. But now I want to speak about cleaning up smoky, dirty air. I know of no one in the State of Wisconsin who would be so smug as to say we have arrived at perfection.

My particular reference today is to the air-pollution problem. Much has been done about it nationally, and in certain selected cities.

The other day I was looking out the window of my apartment and I saw in this, the great capital city of the Nation, a great belching forth of smoke from a chimney about 300 feet away. The wind was blowing my way and, of course, the smoke affected the screen of the window, and even affected the curtains. But even that kind of air pollution is not the worst kind. In many places air pollution has interfered with the health of the community. The fact is that in industrial towns, especially, the air is still far too dirty. Of course, the heavier the industry, and the more auto traffic in the town, the tougher the problem, ordinarily.

I send to the desk now an article from the April 26 issue of the Milwaukee Journal, which devotes itself to the problem of reducing still further air pollution in Wisconsin's largest city, Milwaukee.

Fortunately, Milwaukee, thanks to fine civic leadership and local industry cooperation, does not have a fraction of the problem faced by some of our other metropolises. But, as the article shows, it does have a problem; and it is trying to meet it. Readers will, I feel, understand that if a great city like Milwaukee, with its superb traditions of clean government and clean living, still faces this problem, just how severe the problem is in areas which do not have one-tenth the model record that Milwaukee enjoys.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR CITY AIR IS CLEAN, THAT IS, COMPARATIVELY—IN OTHER METROPOLITAN AREAS THE PROBLEM IS WORSE—OUR LUNGS ARE DIRTY PINK

(By James C. Spaulding)

The pedestrian who breathes a sigh of disgust at the polluted river flowing through downtown Milwaukee must first inhale air containing dirt, rubber, asphalt, unburned gasoline, acids, and a variety of other chemicals harmful to man.

The Milwaukee adult consumes daily, if his appetite is average, about 2¾ pounds of food, 4½ pounds of water and assorted other liquids. His air consumption is closer to 30 pounds.

Into a theoretical mixture of 20.93-percent oxygen, 79.04-percent nitrogen, and .03-percent carbon dioxide are spewed the noxious gases and unburned hydrocarbons from 660,000 gallons of gasoline consumed daily by close to 450,000 cars and trucks in Milwaukee County.

CAN WHIFF REFINERIES

The sulfur from gasoline, diesel fuel, coal, oil, and various industrial processes produces irritant sulfur dioxide and sulfurous acid. Poisonous oxides of nitrogen and irritant ozone, an unstable form of oxygen that is toxic in low concentrations, also are a result of automobile engine exhaust fumes and the action of sunlight on them.

If the wind is right and there is not too much of it, the city dweller in Milwaukee also may get a whiff of the refineries at Whiting and Gary, Ind., blended with the rich essence of Menomonee Valley rendering plants.

The lungs of the adult Milwaukeean are, as a result, a dirty pink, a condition recognized by pathologists as anthracosis. The cause is simply breathing dirty air.

AIR IS PRETTY CLEAN

Yet for all the seeming menace it appears that Milwaukee's air pollution problem is minimal compared with most other metropolitan areas in the United States.

The blustery winds and flat terrain of Milwaukee protect its residents from what has become a growing hazard of metropolitan living.

A doctor who specializes in lung function studies said that Milwaukee probably had the cleanest air of all cities he had visited. Another physician, who has studied air pollution elsewhere, said that Milwaukee appeared to be particularly fortunate.

An engineer expert in air pollution said that while it was theoretically possible for a killing smog to develop in Milwaukee, it was practically impossible.

CONTROL REDUCES PROBLEM

An active smoke control program in Milwaukee County appears to have reduced air pollution here in the last 10 years, despite population and industrial growth.

Complaints about coal fumes date back to 1661 in England, but it was not until well after the industrial revolution that London fogs began to kill.

In Donora, Pa., 5 days of fog in late October 1948 killed 22 persons and prostrated nearly half the 12,500 inhabitants of the Monongahela River Valley city.

The worst fog of all occurred in London in 1952. From December 5 to 8, an estimated 4,000 persons died in the metropolis as a result of the fog.

The word "smog" was coined in Los Angeles, the acknowledged champion in air pollution in the United States. There is controversy over whether Los Angeles smog is deadly.

The California city is almost ideally situated for smog to develop. It is ringed by steep hills on three sides and the gentle breeze from the west only serves to keep fumes from escaping.

Cool air from the Humboldt current wafts in from the Pacific. Warm air coming down is heated and clamps a lid over the city. This condition, known as temperature inversion, is a requirement for smog.

Los Angeles has 240 days of temperature inversion a year. It is one of the conditions that make the climate so pleasant. But into this balmy, unmoving air is poured daily 1,000 tons of unburned hydrocarbons from the burning of 5 million gallons of gasoline. There are 3 million cars in the county.

The chief effects of the smog are eye irritation, reduced visibility, and crop damage.

PROBE RESULTS CITED

Both the Milwaukee Health Department and the county smoke-control office have been watching the air-pollution prospects here.

A few years ago the health department investigated diesel exhaust fumes because of frequent complaints about their smell.

It was discovered that the exhaust of gasoline-burning engines contains 30,000 to 70,000 parts per million of carbon monoxide, an odorless, colorless, tasteless, and deadly gas. Diesel exhaust contains only 50 parts per million.

However, the diesels produced much more of chemicals called aldehydes; these can be smelled at concentrations too low to be measured.

PARTICLES ARE MEASURED

The department also measured the concentration of carbon monoxide in the evening rush hour along West Capitol Drive and found five parts per million in the middle of the road, but none at the sidewalk.

At the southeast corner of North Plankinton Avenue and West Wisconsin Avenue, the concentration was 10 parts per million in the late morning and 20 parts per million in the late afternoon.

A concentration of not more than 100 parts per million is considered safe exposure for 8 hours.

The smoke control office measures both the particles falling out of the air and those so fine that they remain suspended. Fallout in the county ranges from about 17 tons per square mile per month in agricultural areas to 55 tons in heavy industrial sections, where the amount has been declining steadily.

Chicago's average air debris fallout is 66.1 tons per square mile per month, and in the Loop it is nearly 250 tons.

FILTER IS WEIGHED

Earlier this week, the smoke control office took one of its periodic samples of the air Milwaukeeans breathe to see what was floating in it.

To do this, 59,750 cubic feet of air was sucked through a 7 by 9 inch pure white filter in 24 hours in a machine about 80 feet above West Wells Street in the new library addition.

When the filter was removed it was black with dust, carbon, soot, rubber, and asphalt particles. It weighed 123 micrograms more than when it was inserted in the machine.

It is only fair to say, however, that the amount of debris collected was less than nearly any American city of comparable size and less than many much smaller cities.

Need for Increased Social Security Benefits

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30, 1958

Mr. PROXMIRE. Mr. President, I have recently received a letter from one of my constituents which very ably and very dramatically underscores the need for immediate action by Congress to provide increased social-security benefits for our older and retired citizens.

The writer, Mr. Clarence Russell, of Superior, Wis., points out that these senior citizens have been giving their lives and families to further the best interests of our Nation and the welfare of their communities. They have been paying taxes and contributing to the social-security fund. Now, as they choose or are forced into retirement, they are not just human junk, Mr. Russell points out; they have a valid claim for more realistic return from their social-security contributions.

Mr. Russell is a power use advisor for the head of the Lakes Electric Co-op, and has wide contacts with rural people of northern Wisconsin to back up his views. I believe we in Congress must act now to insure our elder citizens a sense of continuing usefulness to their families and communities and economic security against the hazards and infirmities of old age.

Mr. President, I ask unanimous consent that Mr. Russell's letter be inserted in the Appendix of the CONGRESSIONAL RECORD.

Their being no objection, the letter was ordered to be printed in the RECORD as follows:

HEAD OF THE LAKES CO-OPERATIVE ELECTRIC ASSOCIATION,
Superior, Wis., April 16, 1958.

Senator WILLIAM PROXMIRE,
United States Senate,
Washington, D. C.

DEAR SENATOR PROXMIRE: We now live in the midst of a mighty revolution. The complacency of the 19th century has been succeeded by the turmoil of the 20th. Long established values in morals and ethics have been discarded; widely accepted beliefs have been abandoned. Government and business particularly responsible for the affairs of the Nation are dragging their anchors.

These great changes are felt all over the world; they affect the life of every individual. There are none so lowly as to escape, none so remote as not to feel the turbulance of these times.

It is particularly important at this time that our Government seriously consider our old people who have been forced into re-

tirement for these reasons: (1) old age; (2) health; and (3) most important, they could not cope with the challenge of change.

Some have admitted complete defeat and are endeavoring to exist on the minimum subsistence. Others have gone down fighting to the last of their resources, still trying to pay taxes, maintain their homes and pridefully hold a place in their society. Being of keen mind, though physically handicapped they could capably take over the administration of the schools and communities if it were not for the bureaucratic limitations of Social Security and Welfare. They have no place in industry. They are taking abuse and criticism for working after retirement age.

As power use adviser for the Head of the Lakes Cooperative Electric Association, I work among its 2,000 members. I am also closely associated with other men and women doing the same work for other electric co-ops. The questions and remarks are the same:

1. After giving our lives and families to the best interests of this Nation, are we just human junk? We have paid taxes, paid social security since it began, supported our schools and churches and contributed to the civic welfare of our community and neighbors, gave our sons to two world wars and Korea and now in the service of our country when called.

2. Our Senators and Congressmen have taken good care of their security?

3. I have shown your recent brochure in which you state the amount of money in the social security fund. Some are simply stunned into sad silence, others just say, what good is idle money? And more, not in print.

4. Whose money is that?

As time goes on there will be more old folks to use social security for their remaining years. There will also be thousands more to contribute to this fund.

Since we have made and are enforcing a retirement law, a reasonable standard of living must be provided. Our old people are not just human junk. They are trained and educated. Their influence at the polls is already being felt locally. It will be felt in Washington.

One more punch below the belt would be to sell out their electric cooperatives serving them electric power. They pioneered that movement after years of wasted effort to get power otherwise.

In this instance, I speak for our rural people. No doubt, the same conditions exist in all States and all walks of life.

No doubt, you are aware of all this and have your finger on the pulse of the Nation, so to speak; I do the same with a smaller group. One would go far to find a finer, more stable people than those of rural America. Don't sell them short.

Yours very truly,

CLARENCE RUSSELL.

The Teacher's Contribution

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. EDMONDSON. Mr. Speaker, today the entire Nation is concerned as never before by the problem of education.

A significant contribution to public understanding of the basic factor in effective education was supplied by Prof. H. G. Thuesen in the March 1958 issue of the Oklahoma Teacher.

Professor Thuesen's timely article follows:

THE TEACHER'S CONTRIBUTION
(By H. G. Thuesen, Oklahoma State University)

The cost of education has received a great deal of attention. Much less has been said of education's contribution to the benefit of our people. Formal education in our grade schools, high schools and universities is carried on through the activities of teachers. Since teachers are the basic instruments in education, education's contribution is essentially the contribution of teachers.

Now it appears that many, if not most teachers, are insufficiently aware of what their services are worth in terms of the economic and cultural benefits enjoyed by our people and our ability to defend ourselves. This is unfortunate, for if teachers are not aware of their contributions in the scheme of things, who can be? Not only would it be desirable for teachers to be well versed in the value of their accomplishments, but it would be of great value if teachers would accept the responsibilitiy of informing the community of the benefits conferred by their work.

WORK HAS TWO FACETS

A teacher's work has two facets. One of these is the benefit derived by students as individuals. Such benefits are great. They often have been spelled out in terms of increased earnings of the individual. A commonly quoted figure for the increase in total lifetime earnings is $100,000 for the average person who completes 16 years of instruction, carrying him through a 4-year course in college. This averages about $6,000 per year of schooling. There is no telling which of the 16 years of schooling is the most important, so let us assume that it is the same for all years. Thus, the teacher who teaches the equivalent of 20 students for a year brings a contribution of $120,000 to the 20.

The benefits that education confers upon a student have little meaning to a first grader, and many times not much more even to college students. Many students at all levels fail to realize that it is what they learn that counts, and not grades or diplomas.

TEACHERS UNAWARE OF VALUE

Could this be because teachers do not sufficiently apprise the student of the worth of learning? And is this, in turn, because they themselves are insufficiently aware of the value their teaching holds for the student?

Parents as well as students often do not have a clear idea of what it is that gives value to education. Most parents make some sacrifice to send their children to school, but many seem unaware that the worth of education lies in the extent that learning increases their child's capacity. Consequently, too many parents who will go to great length to obtain the best for their children in other things, complacently tolerate inadequate instruction for them. The Nation, education, children, and teachers suffer from such lack of knowledge. Teachers need to take measures to insure that parents shall realize the need for quality in education and demand the best obtainable for their children.

A second facet of the teacher's work is its contribution to the citizenry of the community, State and Nation. Teaching helps not only those who directly benefit from it, but also helps all persons in the community. Recently we have come to realize that all of us are dependent for survival upon our learned scientists. Wonder drugs, the product of educated minds, are a boon to the illiterate as well as to the learned.

BENEFITS FROM TEACHING

The general public, which must support education, does not appear to understand the general benefits that flow from teaching. Consequently, education is not supported at the level that would be of greatest advantage to the public. Teachers might well make it a point to learn the importance of their contributions to national, cultural, and economic welfare and survival, and then become articulate in disseminating this information.

What has education contributed to the general welfare? Let us consider a few examples. Consider the matter of health. Everybody now can have effective protection against diphtheria, smallpox, typhoid, and polio due to marvelous vaccines. The wonder drugs have tamed pneumonia, tuberculosis, and other infectious diseases. Mortality from appendicitis has dropped nearly to zero. Repairs are made to hearts, bones, and eyes. None of these boons to man was produced by the uneducated. When a successful treatment for cancer is discovered, and it will be, it will be discovered by persons who have been subject to a long formal course of education beginning with the first grade, gained at the hands of the teachers.

PRODUCTS OF EDUCATION

People at large set a more bountiful table as a result of the teachers' contribution. Geneticists have produced hybrid grains which have greatly increased grain yields. Better animal and poultry strains and the use of antibiotics and growth hormones have resulted in meat production per pound of feed much greater than was possible just a few years back. Tires produced 40 years ago had a life of about 3,000 miles, but cost as much as present-day tires that are good for 30,000 miles. An early-day maker of automobiles advised the user of his products to "clean spark plugs every 10 miles." Automobiles of 30 years ago had a life expectancy of 26,000 miles. Twenty-five years later the life expectancy had increased to well over 100,000 miles. Automobiles have increased in comfort, reliability, and ornateness but have decreased in real value cost per mile of operation.

The modern city or rural home has electric lights, power washing machine, gas or electric stove, freezer, telephone, radio, and television. These are not the products of the self-taught. These appliances are indirectly the product of teaching, for they are developed and made possible only by formally taught people who once were in grade school, high school, and college. Our entire agricultural and industrial complex would collapse if formal education was interrupted for a period of but a few years.

Similarly, our democratic way of life, religious life, literature, art, and music which give life meaning would suffer severely if we neglected to teach our youth for but a single generation.

TRAINED MINDS NEEDED

Our leaders feel that we are now in a race for national survival. The race will be run and won by trained minds. Minds trained to deal with concepts and ideas will be needed. Airplanes faster than sound, missiles, rockets, space satellites, radar, atomic fission, and fusion on which our survival in the future depends are the products of trained minds. Schools are but orderly means for progressive training of our mental resources. In this process it is the teacher who is the central figure. It is the teacher who imparts to students individually and in groups, knowledge, wisdom, insight and appropriate attitudes at all levels of our educational effort. The teacher is the crux of our culture, our welfare, our health, and our survival.

This is the contribution of the teacher. This is the contribution that the public must come to understand.

When the public does understand, we may expect them to select the most capable persons in the community to instruct their youths, following the practice of the good husbandman who selects the best of this year's crop for next year's seed. Then the teacher will be the community's leading citizen, first in prestige, remuneration, respect, and esteem.

H. R. 8609

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. BARING. Mr. Speaker, since I introduced H. R. 8609, a bill to protect the right of the blind to self-expression through organizations of the blind, 54 Members of Congress have introduced similar bills. More than 200 Members of Congress have directly or indirectly indicated their support of this bill. I believe that this is a wonderful tribute to the blind population of our country and to the progress that they have made in the past several years.

In its broadest sense, it is recognition on the part of the Congress of the United States of all of our blind population, that they are first-class citizens, and that they should enjoy all of the rights and privileges that are the heritage of every American citizen.

It is further recognition that as first-class citizens there should be no discrimination against the blind simply because they are blind, either social, legal or economic.

When the time comes, I am confident that the entire bodies of both the Senate and the House will give unanimous support to H. R. 8609 and its Senate companion bill, S. 2411, because I am convinced that there is not a Member of this august body who would deny our blind citizens the freedoms that we who have sight enjoy.

I should like, Mr. Speaker, to insert a letter addressed to Senator LISTER HILL, chairman of the Senate Committee on Labor and Education, which was written by Jack Murphy, a brilliant Missourian who is both deaf and blind:

It gave me great pleasure to read in the Braille Monitor that you are in sympathy with Senator KENNEDY'S bill, S. 2411, and that you have promised to grant it a fair and thorough public hearing. I believe that such assistance from you will guarantee the eventual enactment of this just and necessary legislation.

S. 2411 and its companion bill, H. R. 8609, certainly will encounter formidable opposition from influential spokesmen of agencies for the blind, but their arguments must not prevail. The point at issue is so fundamental, so essential to the economic and social integration of the blind with society, that reason and common sense simply have got to outweigh professional posturings and rationalizations. This controversy between the agencies for and the organizations of the blind is one of those historically common clashes between tradition and change—between what was right and what is right—that have so often revealed how enlightened leaders in one era become misguided obstructionists in the next. The Maginot Line was a great feat of military engineering but the wrong answer to mobile warfare. Bigger battleships (though impressive achievements) were impotent to deal with air power. Multi-million-dollar schools and learning-can-be-fun programs haven't prepared us to meet the Russian challenge. Nor does mere growth in the size and complexity of our agencies assure maximum benefit to the blind people of America.

Schools and teachers, psychiatrists, psychologists, social workers, supervisors of job-training programs, vocational counselors, placement agents, training centers for guide dogs, office staff, consultative agencies—all these and many more figure in the costly business of work for the blind. But is this vast and rapidly growing social mechanism adequately helping blind people to grasp the manifold opportunities open to the visually handicapped in our industrial society? Or is it, in part at least, stubbornly clinging to obsolete concepts of public assistance and overemphasizing the desirability of segregating the blind in sheltered shops, where officials receive good salaries while the blind employees are paid substandard wages? Are too many incompetents swelling the ranks of workers for the blind? Which deserve greater benefit from a given service, the professional personnel or the clients?

Who should be the judge of all such questions? Not the paid worker for the blind. Professional solidarity, self-interest and the tendency to follow the line of least resistance inevitably condition their judgments. Nor the general public. Blindness and the problems and potentialities of the blind are only vaguely understood by the average sighted person. Only the blind—who are actually living with the problems which the agencies are unable to solve—can evaluate, on a realistic basis, the role played by the workers for the blind. We need a voice in the councils of our agencies, and we must be empowered to speak with some degree of authority.

Wilkes-Barre Church Marks Golden Jubilee Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Sunday Independent of April 27, 1958, calling attention to the 50th anniversary of the founding of St. Stanislaus Kostka Parish, of Wilke-Barre, Pa., which will be observed with services on Sunday, May 4:

NORTH END CHURCH TO MARK GOLDEN JUBILEE—ST. STANISLAUS KOSTKA PARISH WILL OBSERVE FIRST CENTURY WITH SERVICES ON SUNDAY, MAY 4

St. Stanislaus Kostka Parish, North Main Street, will observe the 50th year of its founding on Sunday, May 4, with a solemn pontifical high mass of thanksgiving offered by Most Rev. Jerome D. Hannan, D. D., bishop of Scranton.

Assisting Bishop Hannan at the pontifical mass will be Rev. Francis J. Zolcinski, pastor of St. Stanislaus, assistant priest; Rev. Joseph Pliny and Rev. Simon Struckus, deacons of honor; Rev. John Piontek, deacon of mass, and Rev. Henry Zapotocki, subdeacon; Rt. Rev. Joseph Madden and Rev. Thomas Gola, master of ceremonies and assistant master of ceremonies.

St. Stanislaus was organized in 1908 through the efforts of Rev. Leon Broda, who at the time was assistant pastor at St. Peter and Paul Church in Plains. A list of eligible parishioners was drawn up and organizational work went on despite various hardships and difficulties. The records of the parish show the following to be among the first organizers and founders: Vincent Tluczek, Stanislaus Fabian, Joseph Gwara, Blase Burry, Joseph Wojtanowski, Blase Kopec, Walter Makarewicz, Anthony Lafaj, Vincent Lesewicz, Anthony Dziewit, Joseph Cichocki, Anthony Wilk, Stanley Sawicki.

PURCHASED OLD CHURCH

With the appointment of Rev. J. Sargalski as the first resident pastor the opportunity arose to purchase the old church from the Greek Catholic Parish of St. Mary's for they were in the process of building a new and larger church for their congregation.

The first baptism in the parish church was that of John Ziemba, son of Mr. and Mrs. Adam Ziemba; the first marriage recorded was that of Valentine Litwinski and Helen Chmielewski; and the first funeral that of Martin Brzystonia.

Priests who served the parish as pastors after Father Sargalski were: Rev. A. Pawelski, Rev. S. Sobieniowski, and Rev. I. Ritter. In 1928 Reverend Ritter was transferred to Throop, Pa., and Rev. John J. Podkul was appointed pastor of St. Stanislaus. From the beginning he showed signs of great interest in the parish by the number of improvements and repairs to the parish property. The old church was moved to the Franklin Street side with the intention of building a new church on the site of the old church, but due to the depression, these plans were abandoned for the time. It was through Father Podkul's efforts that a parish school was opened for the children by purchasing the old public school that is directly across the street from the church. A home was also purchased and renovated for the future home of the Bernardine Sisters.

In April 1940 the present pastor, Rev. Francis J. Zolcinski, was appointed pastor of St. Stanislaus. During the last 17 years many things have been accomplished through the cooperation and good will of the parishioners, but the highlight of those years was the fulfillment of the hopes and sincere desires of the parishioners in seeing a new church replace the small and inadequate one that served them for so many years. This was finally realized when the late Bishop Hafey dedicated the new St. Stanislaus Church on Main Street on Sunday, October 25, 1953.

The parishioners of St. Stanislaus know that they have much to be thankful for; they realize that they have been recipients of countless graces and blessings over this span of 50 years and realizing this they will give thanks to God in a special way when they, with their bishop, observe the golden jubilee on Sunday, May 4, 1958.

Polish Independence Day

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. FORAND. Mr. Speaker, I would like to call the attention of this body to

the anniversary of Poland's Constitution Day, which for 167 years is being celebrated on May 3.

Free Poland's Constitution Day was May 3, and it is still observed in the hearts of the people within the country, and throughout Polish communities the world over.

It has become a tradition for Members of the United States Congress to commemorate on the floor of their respective Houses Poland's National Day on May 3, to evoke links of friendship between both Nations, and to stress United States interest in the fate of Poland. Members of the United States Congress, who visited Poland lately, unanimously agree that although the Polish Government is Communist—the Polish people are not. American visitors are impressed by the friendly feelings of the population toward the United States of America. This attitude is not surprising to me, I have known many people of Polish ancestry for many years in my own State of Rhode Island and I have always found them to be of honest integrity, peace loving, and possessing great Christian virtues. Many of my closest friends, whom I respect very much, are made of the same fiber as the people encountered by my colleagues in Poland.

The people of Poland, in spite of ruthless Communist subjugation on the Stalin pattern, have maintained their patriotism and moral resistance. Their feelings and beliefs did not flinch under Communist indoctrination and terror. This also applies to the much exposed young generation today.

The Poznan revolt and the events of October 1956, which took place under popular pressure, have shown the resistance of the Poles against Soviet rule and their aversion to every form of communism. Ideological slogans, like "Polish road to socialism" proclaimed as a new program by the Gomulka regime are regarded by the average Pole merely as tactical moves, Communist style.

I can fully realize that the country finds itself in a compulsory situation toward Soviet Russia. The suppression of the Hungarian freedom uprising by Soviet troops, practically without any reaction of the Western powers, remains as a threatening memento.

It is useful to remember that any country subjected to communism is considered by Soviet Russia as virtually conquered for the Soviet bloc with all consequences deriving therefrom. This means, in practical terms, that any effort on behalf of the people of that country to replace the Communist system of government by a democratic one, through free voting expressing the popular will, is regarding as a hostile interference in the omnipotent right of the Communist Party to rule the country. And, therefore, as an act of aggression against Soviet Russia and other member states of the bloc. The use of Soviet troops to extinguish the Hungarian freedom uprising constitutes an evident proof of Soviet policy methods.

It is my contention, Mr. Speaker, that somehow, what we are saying today will reach the ears of our friends in Poland, and will help to sustain their hope of freedom. We wish them well in their continued fight to throw off the yoke of communism.

The Town That Killed Hay Fever

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. DENNISON. Mr. Speaker, my good friend and constituent, Floyd Bixler, of Hiram, Ohio, has called my attention to the following article entitled "The Town That Killed Hay Fever," by Dwight E. Stevenson. This modern parable, which appeared in the Christian Evangelist for April 21, 1958, should be read by everyone. I commend it to the Members of the House.

THE TOWN THAT KILLED HAY FEVER

(By Dwight E. Stevenson, the College of the Bible, Lexington, Ky.)

Once upon a time there was a town in which every inhabitant was afflicted annually with hay fever.

Year after year, generation after generation, during the months of July and August the people went about with watery eyes and running noses and without being able to say their N's, their M's, and their NG's properly.

Then one year a bright high-school senior who had been studying botany after school hours discovered that the hay fever was caused by ragweed growing in Farmer Brown's cow pasture. So the senior told his parents and friends what he had discovered.

"An interesting theory," they said, but they did nothing. After he had told everybody he met and had talked at length with people of watery eyes and running noses—and without being able to articulate his N's, M's, and his NG's properly—the senior became disgusted because nobody would believe him or do anything.

So early one morning while the dew was still heavy, he borrowed his father's scythe and stole quietly out to Farmer Brown's cow pasture. There, with violent sneezes punctuating his labors, he mowed steadly until he had destroyed every ragweed. And then in the late afternoon he made a fire and burned the withering plants which he had slain. Then at sundown, with a throbbing head the size of a rainbarrel, he struggled back to his home and dropped wearily into bed.

The next day all over town eyes stopped watering, noses ceased dripping, and all the people suddenly found that they could say their N's, their M's and their NG's properly. The senior tried to tell his friends that this was because he had destroyed the ragweed.

Most of them laughed in his face and some of them even coined for him the nickname of "Ragweed Willie." But a few believed him and with the help of these few he kept the ragweed down all that summer, and the next, and the next. In fact, the town fathers joined him before many summers passed and the annual slaying of the ragweed was turned into a community festival.

In time Ragweed Willie died, and a grateful community laid him to rest with a huge funeral and even dedicated a school building to his memory. Every year on R-Day the town sallied forth to the old cow pasture which had since become a town park, and slew ragweed to the accompaniment of band music, picnic lunches, and games.

Since by now, three generations had passed and no one living had ever actually seen a ragweed, the ritual of R-Day had become a quaint folk custom, and a sharp division arose concerning it. Some defended it stoutly as the most important single day in the whole year, and emphatically affirmed that the rituals of that day had deep cultural—not to say mystical and even religious—significance.

Others disagreed, but in order not to be disagreeable they simply stayed away from the festival; on R-Day they climbed into their automobiles and went to the mountains and the lakes while an ever-diminishing number of their fellow citizens carried on the empty rituals.

Thus it came about that the park grew neglected and R-day was forgotten. Ragweeds, unknown for a generation, began to reappear; and during the months of July and August the people who had known of hay fever only from what they read in their history books began to go around with watery eyes, running noses, and without being able to say their N's, their M's, and their NG's properly.

Finally, the malady became so bad that the mayor called a public meeting in the assembly hall of the Ragweed Willie High School. The mayor made a speech—without his N's, his M's, and his NG's, and many others—amid the encouraging response of coughs and sniffles—added their contribution to the patriotic occasion. Some said one thing, some another.

"The icecap at the North Pole is melting. That's the cause of it," said one. "Think back and you'll see that the winters are milder than they used to be and the summers are hotter."

But the speech that all of them liked best and the one they applauded the longest went something like this: "Fellow-citizens and proud sons of the Ragweed Willie tradition. This is no ordinary crisis. We have elected representatives in Congress. They are supposed to look out for our interests. But what are they doing for us? I demand that our Government use some of our tax money to look after our interests. I pay my taxes every year, and what do I get for them? Hay fever. Why doesn't somebody in Washington do something?"

After that, somebody made a motion and a petition was drawn up. Everybody signed it. Then they all went home thinking what great things had been accomplished. It was now up to Washington to do something.

On the way home, one sufferer who seemed to be a little worse off than the others, was heard to complain. "Hay fever. What did I ever do to bring this upon me? You know that I never bothered anybody or stuck my nose—achew—into other people's business. What did I ever do to deserve this?" And there were many that spoke the same sentiments.

Meanwhile, outside the town, in the abandoned park that long, long ago had been Farmer Brown's cow pasture, tall ragweed groves flourished and waved gently in the evening breeze.

The Medical, Legal, Literary, and Political Status of Ezra Pound

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third installment of

the Legislative Reference Service report on Ezra Pound, by H. A. Sieber:

THE MEDICAL, LEGAL, LITERARY, AND POLITICAL STATUS OF EZRA WESTON (LOOMIS) POUND (1885–)—SELECTED FACTS AND COMMENTS

(Third installment)

(By H. A. Sieber, Research Assistant, Senior Specialists Division, the Library of Congress Legislative Reference Service, March 31, 1958, revised April 14, 1958)

APPENDIX A

(Extracts pertinent to Mr. Pond's competence to stand trial)

TESTIMONY OF PSYCHIATRISTS BEFORE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLUMBIA, CRIMINAL No. 76,028, FEBRUARY 13, 1946

Dr. Marion King: [1]

"Question. Is he able to advise his attorney relative to the facts, the cause, and what he did?

"Answer. No, not in a reasonable manner.

"Question. Do you think he is feigning insanity in any way?

"Answer. No."

Dr. Wendell Muncie: [2]

"Question. Now, will you explain to the jury why you do not think he is able to consult with counsel?

"Answer. Because I do not have any doubt but that his counsel * * * when he would try to pin him down to anything would be left out on a limb * * * through his distractibility and vagueness."

Dr. Joseph L. Gilbert: [3]

"Answer. * * * he would be unable to cooperate in a defense, to cooperate and understand."

Dr. Winfred Overholser: [4]

"Answer. It was the fact that he felt he was so important and of such value to the United States under those theories, that I put him down as suffering a mental disorder."

APPENDIX B

IN THE AMERICAN JOURNAL OF PSYCHOTHERAPY, 1949

Dr. Frederic Wertham: [5]

"The counsel for the defense used the expression 'insanity common to genius.' Ezra Pound himself answered long ago:

" 'It has been your habit for long to do away with good writers,
You either drive them mad, or else you blink at their suicides,
Or else you condone their drugs, and talk of insanity and genius,
But I will not go mad to please you.'

"Surely the psychiatrists know the difference between a political conviction and a delusion. * * * Ezra Pound has no delusions in any strictly pathological sense."

APPENDIX C

TELEPHONE INTERVIEW WITH DR. ADDISON DUVAL, ACTING SUPERINTENDENT OF ST. ELIZABETHS HOSPITAL, AUGUST 21, 1957 [6]

Question: "Dr. Duval, how would you describe Mr. Pound's present physical health?"

Dr. Duval: "Mr. Pound, as you well know, is an old man. I would say that he is in very good physical health for a man of his age. He plays tennis, for example."

Question: "How would you describe Mr. Pound's present mental health?"

Dr. Duval: "The hospital, of course, has the legal duty of advising the court that committed Mr. Pound at such time when Mr. Pound has recovered so that he might be said to be competent to defend himself, that is, to stand trial. I can say this much: He has not improved or recovered to such an extent that we can say that he is competent to stand trial. There might be some justification to think that he is in sufficient mental health to live in a community. Mr. Pound is not dangerous."

Question: "Then, would you say that he could be released, conceivably?"

Dr. Duval: "Dr. Overholser has, I am sure, given some thought to this, and I suppose that if charges were disposed of, ameliorated or dropped."

Question: "I do not want to ask you to tell me anything which is confidential, naturally. Of course, I will treat whatever you tell me discretely. Would you think, Dr. Duval, that Mr. Pound, if he were released, would have to be an outpatient to a doctor or to the hospital?"

Dr. Duval: "No—well, let me put it this way, chances are that Mr. Pound would not ask or feel that he needed any treatment. The question might arise, however, if his neighbors—unaccustomed to any erratic behavior on his part—might think that he needed treatment."

Question: "Does Mr. Pound still appear to hold the extreme views which——"

Dr. Duval: "I definitely feel that Mr. Pound's basic philosophy has not changed. I do not suppose you can expect a man who has lived with certain views all his life to change, especially at his age. How long has he been here? Nine, 10 years?" [7]

APPENDIX D

COMMENTS MADE BY WRITERS ON OCCASION OF MR. POUND'S SEVENTIETH BIRTHDAY, OCTOBER 30, 1955

W. H. Auden: "There are very few living poets, even if they are not conscious of having been influenced by Pound, who could say, 'My work would be exactly the same if Mr. Pound had never lived.' " (From A Tribute to Ezra Pound, broadcast over WYBC, the Yale Broadcasting Co.)

E. E. Cummings:

"Re Ezra Pound: Poetry happens to be an art; and artists happen to be human beings.

"An artist doesn't live in some geographical abstraction, superimposed on a part of this beautiful earth by the nonimigination of unanimals and dedicated to the proposition that massacre is a social virtue because murder is an individual vice. Nor does an artist live in some soi-distant world, nor does he live in some socalled universe, nor does he live in any number of 'worlds' or in any number of 'universes.' As for a few trifling delusions like the 'past' and 'present' and 'future' of quote mankind unquote, they may be big enough for a couple of billion supermechanized submorons but they're much too small for one human being.

"Every artist's strictly illimitable country is himself.

"An artist who plays that country false has committed suicide; and even a good lawyer cannot kill the dead. But a human being who's true to himself—whoever himself may be—is immortal; and all the atomic bombs of all the anti-artists in spacetime will never civilize immortality." (From Six Nonlectures.)

T. S. Eliot: "I believe that I have in the past made clear enough my personal debt to Ezra Pound during the years 1915–22. I have also expressed in several ways my opinion of his rank as a poet, as a critic, as impresario of other writers, and as pioneer of metric and poetic language. His 70th birthday is not a moment for qualifying one's praise, but merely for recognition of those services to literature, for which he will deserve the gratitude of posterity, and for appreciation of those achievements which even his severest critics must acknowledge."

Ernest Hemingway: "Will gladly pay tribute to Ezra, but what I would like to do is get him the hell out of St. Elizabeths, have him given a passport, and allow him to return to Italy, where he is justly valued as a poet. I believe he made bad mistakes in the war in continuing to broadcast for that sad Mussolini after we were fighting him. But I also believe he had paid for them in full and his continued confinement is a cruel and unusual punishment."

Archibald MacLeish: "Every year since I began teaching at Harvard and for long years before that I have been more and more impressed by the extraordinary vitality of Pound's work. Most work ages with time. His doesn't. It keeps the hard sharp glitter—the cutting edge."

APPENDIX E

SOME ADDITIONAL COMMENTS

John Ciardi: "* * * he is the one master above all others who has taught contemporary poets their trade and that—agree or disagree with him * * * he is a man with a vision, and that vision has been suffered for and won." (New York Times, book-review section, June 24, 1956, pp. 4–5.)

Robert Fitzgerald: "Ezra Pound's place in the story of poetry is not in question, and with every year, it becomes more discriminated and understood. * * * It goes without saying that all of us who practice the art of poetry are indebted to him." (The Kenyon Review, autum, 1956, p. 518.)

Allen Tate: "Pound is a great poet in petto, and an even greater instigator of literary enthusiasms and schools." (Sixty American Poets, 1896–1944 (revised by Kenton Kilmer, Library of Congress, 1954), p. 93.)

Dag Hammarskjold: "Modern are * * * makes us seers—seers like Ezra Pound when, in the first of his Pisan Cantos, he senses 'the enormous tragedy of the dream in the peasants' bent shoulders.' Seers—and explorers—these we must be if we are to prevail." (Address, October 19, 1954.)

Carl Sandburg: "Brother Ezra, quite a poet. He never cared too much for humanity, but he won't be forgotten for his beautiful words. I think, after a year at that hospital, Ezra had discovered humanity right there among the crazy people, the most interesting, most human people in the world. I wonder does Ezra know that the United States Government made it possible for him to find out about people? But they ought to let him out now; he's had enough." (Interview at Flat Rock, N. C., December 18, 1957.)

Robert Frost:

"I am here to register my admiration for a Government that can rouse in conscience to a case like this. Relief seems in sight for many of us besides the Ezra Pound in question and his faithful wife. He has countless admirers the world over who will rejoice in the news that he has hopes of freedom. I append a page or so of what they have been saying lately about him and his predicament. I myself speak as much in the general interest as in his. And I feel authorized to speak very specially for my friends, Archibald MacLeish, Ernest Hemingway, and T. S. Eliot. None of us can bear the disgrace of outletting Ezra Pound, come to this end where he is. It would leave too woeful a story in American literature. He went very wrongheaded in his egotism, but he insists it was from patriotism—love of America. He has never admitted that he went over to the enemy any more than the writers at home who have despaired of the Republic. I hate such nonesense and can only listen to it as an evidence of mental disorder. But mental disorder is what we are considering. I rest the case on Dr. Overholser's pronouncement that Ezra Pound is not too dangerous to go free in his wife's care, and too insane ever to be tried—a very nice discrimination.

"Mr. Thurman Arnold admirably put this problem of a sick man being held too long in prison to see if he won't get well enough to be tried for a prison offense. There is probably legal precedent to help toward a solution of the problem. But I should think it would have to be reached more by magna-

Footnotes at end of speech.

Footnotes at end of speech.

nimity than by logic and it is chiefly on magnanimity I am counting. I can see how the Department of Justice would hesitate in the matter from fear of looking more just to a great poet than it would be to a mere nobody. The bigger the Department the longer it might have to take thinking things through." (Statement to the court, April 14, 1958.)

Hayden Carruth:

"The means exist by which the United States Government could quash Pound's indictment and set him free. * * * In fact, it is hard to think of a good reason why Pound should not have his freedom immediately. * * *

"Pound restored integrity to the language. That is the gift for which all writers must offer him their thanks. (Perspectives No. 16, summer 1956.)

Louis Untermeyer: "It is easy to belittle the eccentric theorist, but the poet's importance must not be deprecated." (Makers of the Modern World, 1955.)

Paul Green: "I do not know all the factors involved in the Ezra Pound case but so far as I can see there is no good reason to keep him any longer at St. Elizabeths. I have never had any sympathy with his attitude toward this country. He has always been abusive of it and never really tried to help it like other honest and hard-working Americans. For that I condemn him and tell him to stay out of my hair. Still I don't have any interest in seeing him punished if punishment it is. He is sick and sorry no matter how good a poet. So kick him out, get him out, I say—and let him root hog or die. * * * There are worse traitors in the American scene than Pound and they're neither shut up nor punished." (Letter, September 17, 1957, Hanover, N. H.)

Richard Rovere:

"The main thing about Ezra Pound is that he is a poet of towering gifts and attainments. Poetry is not a horserace or any other sort of competition, and it is silly to argue over which poet runs the fastest, jumps the highest, or dives the deepest. Still, a respectable case could be made out to the effect that the century has produced no talent larger or more fecund than Pound's. * * *

"Pound's position is secure, not only because of the power of his own work but because of his service as a midwife to genius and as an influence on other poets." (Esquire magazine, September 1955.)

(The following comments are extracts from letters to the editor of Esquire magazine following the Rovere essay in the September 1957 issue:)

Marianne Moore: "Yes, indeed, I feel strongly that it is stagnant and unrealistic of us not to secure the release of Ezra Pound from St. Elizabeths."

Van Wyck Brooks: "I would gladly sign any petition for the release of Ezra Pound."

William Carlos Williams: "Ezra Pound is a superb poet whatever else he may be and well worth the country's preserving."

Selden Rodman: "I do emphatically agree that Pound has suffered more than enough for his foolishness * * * and should be released."

John Dos Passos: "I certainly think he (Pound) should be released in the custody of his wife."

APPENDIX F

AMERICAN CIVIL LIBERTIES UNION,
New York, N. Y., August 28, 1957.

Mr. ARNOLD GINGRICH,
Esquire Magazine,
New York, N. Y.

DEAR MR. GINGRICH: I have read with interest Richard Rovere's article on Ezra Pound in the September Esquire, which you kindly sent to me. The American Civil Liberties Union has for a number of years been concerned over Mr. Pound's continued confinement at St. Elizabeths Hospital. We have repeatedly offered our support for a possible legal challenge not only because of assertions by Mr. Pound's friends that there is no necessity for keeping him in the hospital, but also because of the larger legal problem his confinement represents.

We, of course, have no judgment as to whether Mr. Pound's mental condition would normally justify his release. Even though his condition may justify the conclusion that, at liberty, he would be no menace to society or to himself, he may nevertheless need special care. Unless his wife or some other responsible person such as a court appointed guardian or committee, is prepared to assume responsibility for such care, it would be a cruel thing to turn him out of "the sanctuary of St. Elizabeths" if he still believes that he would be "shot by agents of the international crew." But we are willing to cooperate in a court test of his continued confinement with anyone who is in a legal position to assure this responsibility.

His position is by no means unique. Not only in the District of Columbia, but in New York and many other jurisdictions, a person charged with crime but held mentally incompetent to stand trial receives what amounts to a life sentence without conviction of crime. (Other persons whose mental condition requires their confinement can eventually be released for private hospital care, out-patient treatment or home care if they are considered to be harmless, even though they have not regained their sanity.)

The Federal law requires that any person charged with crime and found to be insane, shall be certified as such to the Secretary of Health, Education, and Welfare, who may order him to be confined in St. Elizabeths Hospital. When a person is so confined the superintendent of the hospital must deliver him to the court "when he is restored to sanity." If he is not so restored to sanity, he is continued in confinement. The Secretary of Health, Education, and Welfare apparently has some discretion in this matter, and probably could release a person charged with crime, even though he is not "restored to sanity," but, under the law of New York and some other States, the responsible official has no such discretion and a person cannot possibly be released until he has stood trial for the crime with which he has been charged.

I hope that Esquire will continue to give attention to the broader ranges of the problem which you have so effectively presented in the case of Ezra Pound.

Yours sincerely,

PATRICK MURPHY MALIN,
Executive Director.

APPENDIX G

THE DISCIPLINARY TRAINING CENTER NEAR PISA, ITALY

(Some excerpts from correspondence in Army files, and some excerpts from statements by military personnel stationed at the Pisa DTC:)

The commandant of the disciplinary training center near Pisa, at which Mr. Pound was detained from May to November 1945, was Lt. Col. John L. Steele, Corps of Engineers.

The center was not the usual Army prison—it was, according to an article in Yank, the Army weekly "a wonderful place—to stay out of. Life for the 3,600 prisoners at the center is planned to be tougher than combat and when the Army tries to make things rugged it does a good job." [9]

Mr. Pound was the only civilian at the center during the period of his incarceration, according to the training officer of the center at that time.[9]

The commanding officer of the 61st Station Hospital wrote in March 1946 (about 3 months after Mr. Pound had been returned to the United States) that complaints of mistreatment at the center were "a daily occurrence" and "it is inconceivable that such a constantly repeated complaint have no basis in truth." The trainees had to "sleep in 50 degree temperatures in pup tents" and endured "daily rations * * * which are insufficient." [10]

It had been reported in February 1946 that there was evidence of physical trauma in the disciplinary training center.[11]

Upon Mr. Pound's admission to the prison camp, he was placed in a "security cage," such as described in the disciplinary training center standard operating procedures.[12]

Signal Corps photograph No. SC 250735 shows such security cages and reveals the difference between Mr. Pound's special cage and the others.

Mr. David Park Williams, a former guard at the center, has testified:

"The first of these cages was torn down when Pound was brought to the disciplinary training center and a new enclosure of heavy grillwork was built in its place * * * because of an alleged fear the Italian Fascists would attempt to rescue the accused traitor. * * *

"Pound did not remain longer than a few weeks in his gorilla cage probably because of his increasingly poor health. He was moved from the cage to the medical area * * * relatively comfortable." [13]

Another disciplinary training center jailer, Robert L. Allen, has written:

"The trainees marching by or working in the area (of the cage) considered Pound with awe, taking the reinforced cage as evidence that he was a particular tough customer.

"The weeks in the cage were hard on Pound. As shelter, a piece of tar paper was thrown over the top. * * * Because the dust and harsh sun in the cage inflamed his eyes he was transferred to a tent within the Medical Compound." [14]

It has been suggested by Professor Giovannini and others that the nature of Mr. Pound's imprisonment in the open cage and the detention of over 6 months at the disciplinary training center represented less than due process for a man charged with treason, punishable by death. It has been also suggested by Mr. Giovannini and others that the "cruel and unusual" imprisonment of Mr. Pound might have brought about the mental collapse which later made him incompetent to stand trial, although it has never been determined whether Mr. Pound's legal insanity might not extend back to the period of his broadcasts. On April 14, 1958, the Superintendent of St. Elizabeths Hospital indicated "a strong probability that the commission of the crimes charged was the result of insanity."

APPENDIX H

EXTRACTS FROM BROADCASTS, 1942–43

January 29, 1942: "The United States has been for months, and illegally, at war through what I consider to be the criminal acts of a President whose mental condition was not, so far as I could see, all that could or should be desired of a man in so responsible a position or office."

February 3, 1942: "You are at war for the duration of Germans' pleasure. You are at war for the duration of Japan's pleasure. Nothing in the Western World, nothing in the whole of our Occident can help you dodge that. Nothing can help you dodge it."

April 16, 1942: "For the United States to be making war on Italy and on Europe is just plain damn nonsense, and every native-

---

Footnotes at end of speech.

Footnotes at end of speech.

born American of American stock knows that it is plain downright damn nonsense. And for this state of things Franklin Roosevelt is more than any other one man responsible."

April 23, 1942: "I ask whether the 'spirit of '76' is helped by a-floodin' the ranks of the Navy with bridge sweepin's; whether war is won by mercantilist ethics; and, in any case, whether men like Knox, and Stimson, and Morgenthau can be expected to fill the heart of youth with martial ardor and the spirit of sacrifice."

May 10, 1942: "The next peace will not be based on international lending. Get that, for one. The next peace will not be based on international lending, and England certainly will have nothing whatever to say about what its terms are. Neither, I think, will simple-hearted Joe Stalin, not wholly trusted by the kikery which is his master."

May 26, 1942: "Every hour that you go on with this war is an hour lost to you and your children. And every sane act you commit is committed in homage to Mussolini and Hitler. Every reform, every lurch toward the just price, toward the control of a mark is an act of homage to Mussolini and Hitler. They are your leaders however much you think you are conducted by Roosevelt or told by Churchill. You follow Mussolini and Hitler in every constructive act of your government."

May 31, 1942: "The melting pot in America may have been a noble experiment, though I very much doubt it. At any rate it is lost."

June 28, 1942: "You are not going to win this war. None of our best minds ever thought you could win it. You have never had a chance in this war."

July 20, 1942: "You ought not to be at war against Italy. You ought not to be giving or ever have given the slightest or most picayune aid to any man or nation engaged in waging war against Italy. You are doing it for the sake of a false accountancy system."

July 22, 1942: Europe calling * * * Ezra Pound speaking! I hear that my views are shared, most of them, by a large number of my compatriots, so it would seem, or maybe an increasing number of my compatriots. And there is a comforting thought on a warm day in a fine climate. I should hate to think that all America had gone haywire. I should like to feel that the American race in North America, in the North American continent, had some wish toward survival. That they wanted there to be a United States of tomorrow. * * *

"Well, you have been fed on lies, for 20 years you have been fed on lies, and I don't say maybe. And Mr. Squirmy and Mr. Slime are still feeding it to you right over the BBC radio, and every one of the Jew radios of Schenectady, New York and Boston—and Boston was once an American city; that was when it was about the size of Rapallo.

"And how much liberty have you got anyhow? And as to the arsenal—are you the arsenal of democracy or of judeocracy? And who rules your rulers? Where does public responsibility end and what races can mix in America without ruin of the American stock, the American brain? Who is organized? What say have you in the choice of your rulers? What control of their policy? And who does own most of your press and your radio? E. P. asking you."

April 27, 1943: "I don't think there is any American law that permits you to shoot Nicholas Butler. It's a pity, but so it is no ex post facto laws are to be dreamed of. Not that Frankfurter or any other damn Jew cares a hoot for law, or for the American Constitution."

May 4, 1943: "What are you doing in the war at all? What are you doing in Africa? Who amongst you has the nerve or the sense to do something that would conduce to getting you out of it before you are mortgaged up to the neck and over it? Every day of war is a dead day as well as a death day. More death, more future servitude, less and less of American liberty of any variety."

On January 29, 1942, when Mr. Pound returned to the Rome microphone for the first time since Pearl Harbor Day, the announcer who introduced him said:

"We now present a talk by Ezra Pound. * * * The Italian radio, acting in accordance with the Fascist policy of intellectual freedom and free expression of opinion by those who are qualified to hold it, following the tradition of Italian hospitality, has offered Dr. Ezra Pound the use of the microphone twice a week. It is understood that he will not be asked to say anything whatsoever that goes against his conscience as anything incompatible with his duties as a citizen of the United States of America." [15]

Mr. Pound began: "Ezra Pound speaking, speaking from Europe. Pearl Arbor Day, or Pearl Harbor Day, at 12 noon, I retired from the capital of the old Roman empire, that is, Rome to Rapallo, to seek wisdom from the ancients. I wanted to figure things out. * * * I spent a month trying to figure things out * * * so I began figuring out that a complete [break ?] in self communication between the calm and men of the Jewish hemisphere is not to be desired. * * * The United States has been misinformed. The United States has been led down the garden-path and maybe down under the daisies. All through shutting out the news." [16]

On the reliability of the transcripts of the monitored broadcasts, Hugh Kenner has commented:

"This indictment relates to his having made broadcasts over a shortwave radio maintained by the Italian Government during a period when a state of war existed between the United States and his country of domicile. It does not appear that he said anything that would have constituted treason had he said it in the United States Senate; what he did say it is difficult to discover, the indictment being publicly supported only by transcripts of grotesque unreliability. On February 12, 1942, for instance, he is alleged to have alluded to 'Max Bearbon,' 'Helen of Troy,' and the classical authors 'Askulus' and 'Propursious,' and to have read, with a commentary, Canto 46, which according to the transcription of the broadcast in the Library of Congress, opens as follows:

" 'And if you'll say that this day teaches a less, all that the Reverent Eliot (Haston) more natural language, you who think you'll get through hell in a hurry, huh, ah, that day how those cloud over his (horizon) and for 3 days snow clouds over the sea, banked like a line of mountains.' [17]

"There is even, in an earlier broadcast, a reference to the 'confusion system,' the transcriber having evidently not been able to bring Confucius immediately to mind. Posterity will smile to notice the wealth of attention that in those years was focused on every word of a great poet (the psychiatrists examined even his published work): the expenses devoted to monitoring the broadcasts, recording them, making shorthand transcriptions, typing from the notes, cutting stencils, mimeographing, filing, and disseminating through channels: the resources of a great commonwealth backing all this activity not in pursuit of crumbs of wisdom, but in the hope that he would say something for which he could be hanged." [18]

APPENDIX I

PASSPORT FILE F130—EZRA POUND, PASSPORT OFFICE, STATE DEPARTMENT

1. Memo, October 11, 1941, referred to Pound as a "pseudo American."

2. From the Division of Foreign Activities, a memorandum, June 18, 1941:

"On July 12, 1941, this Department instructed the American embassy at Rome to limit Pound's passport for immediate return to United States. However, he refused to return home and to best of our knowledge is still residing in Italy.

"* * * Mr. Pound should never again be granted passport facilities by this Government." [19]

3. Passport No. 3154, Ezra Loomis Pound, date April 4, 1941, was returned to the State Department on August 25, 1943, with a memorandum advising the Secretary of State that it was "left behind and * * * has expired."

4. The Swiss delegation at Rome forwarded to the Secretary of State a copy of a letter from Ezra Pound addressed to Attorney General Francis Biddle, under date of August 25, 1943. Mr. Pound, in his letter, wrote:

"I have not spoken with regard to this war, but in protest against a system which creates one war after another, in series and on system. I have not spoken to the troops, and have not suggested that the troops should mutiny or revolt.

* * * * *

"At any rate a man's duties increase with his knowledge. A war between the United States and Italy is monstrous and should not have occurred. And a peace without justice is not peace but merely a prelude to future wars. Someone must take count of these things. And having taken count must act on his knowledge, admitting that his knowledge is partial and his judgment subject to error.

"Very truly yours,

"EZRA POUND."

Department of Defense Award Given to King's College, Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of April 25, 1958, calling attention to the Department of Defense Reserve award presented to King's College, of Wilkes-Barre:

KING'S GETS DEFENSE DEPARTMENT AWARD FOR RESERVES' COOPERATION

King's College yesterday received Department of Defense Reserve award from Rear Adm. E. R. McLean, Jr., commandant of Fourth Naval District.

The award, which had been announced in Washington by Secretary of Defense Neil McElroy, was presented to Rev. George P. Benaglia, C. S. C., president of the college. Impressive presentation ceremonies took place on the second floor Regina Lounge of the main building. Uniformed representatives of all the armed services were on hand, and later attended a buffet luncheon on the sixth-floor lyceum.

It was the first visit to Wyoming Valley by Admiral McLean since assuming command of the district. The admiral was greeted at the entrance to the turnpike, after coming to this city yesterday morning from Philadelphia by automobile. A motorcade formed at King's Hafey-Marian Hall and went to meet the dignitary.

Acting Mayor J. Harry May presented the key to the city to Admiral McLean, and the party then proceeded to the main building in Wilkes-Barre. Following the presentation of the Reserve award to King's, Admiral McLean and his party visited Naval Reserve Training Center, Kingston, and inspected the base. A farewell party was held at Charles Weissman Recreation Center, Terrace Street.

Many King's students, members of the Armed Forces Reserves, were in the guard of honor at the presentation ceremonies.

King's gained the award in recognition of the college's outstanding cooperation with reservists and Reserve activities achieved through its personnel policies.

Rev. Edward Nolan, pastor of St. Jude's Church, Mountaintop, gave the invocation. Lt. Comdr. Jay A. Young, a faculty member at King's, introduced the admiral at the award ceremony. Closing remarks were by Comdr. William Boyd, head of Naval Reserve training in Wilkes-Barre and Scranton areas.

Admiral McLean spoke of the importance of a strong Reserve program as being of vital necessity to the security of the Nation. He also said, in his opinion, the Russian launching of the satellites might prove to be a blessing in disguise.

He said:

"It has given our educators the means with which they can go to the parent and plead for the extra hours of work. It has made possible the increased benefits for deserving students who have not the necessary money for higher education. And, in addition, it awakened us from the complacent attitude which I believe prevailed—that solely by virtue of our being Americans, we were the ones who had a corner on the market in scoring 'firsts.'

"It is obvious that we cannot enter into a numerical steeplechase with the Soviet. To do so would be to court economic disaster. And in spite of the present size of our active-duty forces, I have already indicated that they would be insufficient to wage any sizable war. They would have to be the 'shock troops,' augmented by vast numbers of our 'civilian armed forces,' the Reserves.

"And it is not enough to have mere numbers on our Reserve rolls. These reservists must be of the highest caliber and trained to the greatest degree possible. This training cannot be accomplished after the bell has rung. It must be now that we make every effort to give the up-to-the-minute facilities and training so necessary in this era of technological advance."

King's president, Rev. George P. Benaglia, C. S. C., said the college always has been happy to participate and cooperate with the Reserve program. Members of the student body and faculty have been encouraged to take part in the training, he added.

"Our system of education may be falling behind the Russians in certain phases," Reverend Father Benaglia added, "but the Russians may be sowing the seeds of their own destruction by making education available to the masses of that nation.

"We must be prepared," he continued. "Our leaders recognized the need of propagating moral ideas in the world and of remaining prepared and ready for any emergency. At King's College, we recognise the need of disciplining the mind and will of our young men," added the college president.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. FALLON. Mr. Speaker, the 3d of May marks the 167th anniversary of the Polish Constitution of 1791, which every Pole, throughout the world, cherishes as the symbol of the Polish fight for freedom and nationalism. All freedom-loving peoples of the earth join with the Polish people in hallowing the document as a famous moment in the history of man's striving for liberty and equality.

The American people sympathized with the Polish people in the late 18th century and indirectly shared in the establishment of the Polish constitutional monarchy. Many of the immortal patriots of the Polish struggle had fought alongside the American revolutionists. The flame of liberty kindled in the American colonies spread with them to Poland. The American Constitution provided a model, in many respects, for the Polish Constitution. When the news reached America of the action of the Polish patriots, George Washington, our own great leader in revolution, war, and peace, said to a friend:

Poland * * * appears to have made large and unexpected strides toward liberty, which * * * reflects great honor on the (Polish) * * * king.

As our forefathers two centuries ago, we extend our sympathy to the Polish people, who are today held in bondage by the Red army. May the Polish people once again celebrate this memorable day in peace and freedom.

Social Security for Adopted Children

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. POFF. Mr. Speaker, I have introduced a bill, H. R. 12194, to amend the Social Security Act to authorize insurance benefits for a dependent adopted child effective upon the entry of the final order of adoption.

Under current law, such benefits do not accrue until 3 years after the date of adoption. I am told that the 3-year period was incorporated in the law as a precaution against abuse by those who might adopt children for the sole purpose of increasing the family's social-security benefits. In my judgment, this is an unrealistic danger and an unnecessary precaution.

Under the adoption laws of most States, the child is admitted to the home of its adoptive parents under an interlocutory court decree which grants conditional custody for 1 years. During that year, frequent supervisory visits by constituted State authorities are required. If the adoptive parents fail to exercise proper parental influence, fail to demonstrate appropriate parental devotion, fail to make adequate provision for the child's physical, mental, and social welfare, or fail in any other particular to meet the requirements of the State adoption laws, the interlocutory decree is vacated and the child is remanded to the custody of its natural parents or the child-placement agency as the case may be. On the other hand, if all statutory requirements are met, the interlocutory decree is merged by the court with a final order of adoption. Effective with the date of entry of the final order, the adoptive parents stand in loco parentis to the child and assume all legal rights and obligations incidental to and incumbent upon natural parenthood; and the child assumes all the legal rights and obligations of a natural child. The child becomes an heir-at-law, and in most States, the child is required by statute, as soon as he reaches the legal work age, to support a disabled parent, whether natural or adoptive.

Mr. Speaker, the rigid elegibility criteria and the exacting regulatory provisions of State adoption statutes preclude the possibility of abuse of the social security program by greed adoptive parents, and surely the 1 year period is sufficient to resolve the question of good faith.

I submit that it is and should continue to be the policy of Government to encourage rather than discourage the humane act of adoption of dependent children. The Federal Government recognizes the social validity of that policy and gives it positive effect in the Internal Revenue laws under which an adopted child is eligible for a dependent's income tax exemption of $600 in the taxable year in which the final order of adoption is entered.

I am advised by the Director of the Bureau of Old-Age and Survivors Insurance that the passage of this legislation "would add no appreciable cost—less than 0.01 percent of payroll—to the program." Indeed, very few workers approaching the retirement age of 65 and even fewer workers already retired will adopt young dependent children who would be covered by this amendment. As a practical matter, the amendment would affect primarily orphans or semi-orphans adopted by grandparents or older collateral kindred.

I hope it will be possible for the Committee on Ways and Means to give this legislation its early consideration.

We Can Do the Job

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely article by Mr. Alexander Barkan, deputy director, Committee on Political Education, which appeared in the AFL–CIO American Federationist, issue for May 1958. The article attempts to answer the question: "Does the American labor movement have any influence in politics?"

WE CAN DO THE JOB

(By Alexander Barkan, deputy director, Committee on Political Education)

As we approach the eve of another biennial election we might as well face up to the fact that we will have to answer the biennial question, "Does the American labor movement have any influence in politics?"

The quick answer, for those who would like to read and run, is "Yes." And I think I can prove it.

Between now and election day—and for weeks and months after election day—the question will be posed in many forms and in many places.

If the form sheet has any validity, there will be at least six columns by Raymond Moley saying that labor cannot deliver the vote but issuing a call to arms against labor in politics.

Six or seven (the form sheet is a little hazy on this) Senators will insert articles in the CONGRESSIONAL RECORD denying labor can be effective in politics.

Representative RALPH GWINN, of New York, will again claim COPE is spending over half a million dollars in his district to defeat him.

Westbrook Pegler will rewrite his piece on labor in politics for the 25th time; Fulton Lewis will continue ihs breathless revelations; a television panel show will badger a guest—just to get the story, of course.

And with all of this knowledge pounded into them, somewhere between 50 and 60 million people will vote on election day for and against candidates recommended by the labor movement. Some will win and some will lose, and the debate will taper off until this time in 1960.

It's all good clean fun and a valuable part of the political process. The fact that it sheds very little light on the subject is beside the point. What is important is that it is a legitimate subject for debate in the great market place of ideas that constitutes our democratic system.

In approaching the subject dispassionately it is lucky that the American electorate is probably the most thoroughly surveyed and polled electorate in the world. Particulrly in recent years, thoughtful public opinion scientists—found mostly in universities as opposed to those of a different breed found mostly on New York's Madison Avenue—have devoted a good deal of time and attention to what makes the American voter tick.

The best work, perhaps, has been done by the survey-research center at the University of Michigan. It has also done the most work.

In Febeuray 1957, the SRC published a study showing the composition of the American electorate in the 1956 election. It estimated that 15 percent of the population was strongly Republican, 14 percent weakly Republican, 23 percent independent, 23 percent weakly Democratic, 21 percent strongly Democratic and 4 percent nonpolitical.

Lumping those without strong views together, it comes out 15 percent Republican, 21 percent Democratic, 60 percent without fixed views and 4 percent with no views at all.

In the 1956 election President Eisenhower got a substantial majority of the 60 percent who occupy the middle ground between strongly Republican and strongly Democratic.

Against that background it is useful to look at the way people classified as workers voted. Union members voted 52 percent for the Democratic candidate for President who was recommended by the AFL–CIO General Board and 48 percent for the Republican candidate. The contrast with the voting behavior of the general public, of which union members are a part, is marked. The contrast with the voting behavior of nonunion workers is even greater.

While 52 percent of the union workers voted for the candidate recommended by the AFL–CIO, only 35 percent of the nonunion workers voted for the same candidate. Sixty-five percent of the nonunion workers voted for the opposing candidate, while 48 percent of the union workers voted for the same candidate.

It seems to me that the difference between the 52 percent and the 35 percent is the area of labor's influence. The only distinction between the two groups, according to the survey research center material, was that one was composed of union members, the other was not. They were equally distributed, presumably, over the same areas of the country, came from the same racial and religious backgrounds and were in the same general social and economic brackets.

I leave it to the statisticians to figure out to the decimal point how much of the difference is attributable to our efforts. I would only stress that these figures relate to the way people voted in the 1956 presidential election. They have no bearing on party membership.

This February 1957 study was followed up in September 1957 with another study, by Philip Converse, also of the University of Michigan survey research center. He sought to isolate the voting behavior of union members, as one group, for a further look.

His conclusion was that "workers who have a strong, personal feeling of belonging to a union and who understand clearly where their union stands politically are the ones most likely to cast a labor vote in national presidential elections."

Converse added: "The longer a person has been a union member, the more likely he is to identify with the union and to behave politically as the union would desire. Further checks show this relationship is not the result of an older depression generation of members who joined under rather unusual circumstances. New union members in their fifties and sixties have about the same low identification with unions as do new memgers in their twenties—and the reverse holds true for long-term union members, regardless of their age."

More detailed study confirmed the findings. In those unions which expressed a clear political preference in their publications, whose leaders took strong stands and gave direction to their members, the vote for backed candidates was higher than in unions in which this was not the case.

Put in a simpler way, workers most familiar with their unions understand best the necessity for political education and agree most with the political recommendations of their organizations.

A January 1958 study by 2 members of the Institute of Management and Labor Relations at Rutgers University of 2 local unions in New Jersey came up with the same conclusions.

There are many things not touched upon by either of the studies. Obviously it is vital that recommendations, to have weight with the membership, must be arrived at on a sound basis of logic and arrived at through a democratic process. Recommendations based on the predilections of a small group carry no weight nor do they deserve to.

Obviously, also, mere recommendation is not sufficient. The reasons must be spelled out and they must be sound reasons. It is the responsibility of the leadership to see to it that members are made aware of the union's position and that they have the facts.

These studies, of course, do not fit the pattern cut by the foes of the labor movement whose minds are filled with labor bosses pushing buttons which marshal millions of nameless slaves to the polls. But, somehow, serious studies never do fit the images these people have or seek to conjure.

That, however, is their problem. Ours is to do the job we can do with all the vigor and energy at our command. There is nothing so convincing in a debate as demonstration.

Progress on Conservation Legislation

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. ENGLE. Mr. Speaker, a recent résumé of notable conservation legislation in this Congress, by John B. Oakes, a famous conservationist and New York Times feature writer, appeared in the Times of April 20, 1958.

I am especially glad to note that, as 1 of the 2 major pieces of conservation

legislation, he cites the bill, of which I am the author, to limit military withdrawals on the public domain. Mr. Oakes comments on other conservation legislation and pending measures of interest to conservationists. I believe that the article will be of interest to Members, and I insert it in the RECORD at this point for their information:

CONSERVATION: LEGISLATIVE GAINS—CONGRESS SETS A MARK WITH PASSAGE OF TWO MAJOR MEASURES

(By John B. Oakes)

Enactment of two major pieces of conservation legislation as this session has already given to the 85th Congress a special significance from the point of view of preserving America's scenic and natural resources. It also illustrates once again the growing power of conservation as a major legislative force.

Most notable achievement in this field was passage of the so-called anti-billboard bill, which will encourage the respective States to control billboards along a large part of the new 41,000-mile Federal Interstate Highway System. Although in the course of a long and lively Senate debate this measure was seriously weakened, the fact still remains that it represents the first expression on the part of the United States Government that billboards are undesirable excrescences along our highways and that they ought to be limited and restricted as a matter of public policy.

The principal dilution of the bill came on the motion of Senator NORRIS COTTON of New Hampshire, whose own State provides some choice examples of the ruination of beautiful roadsides by the billboard industry.

In any event, under the act as adopted, the Federal Government offers a small financial bonus to the States if they control billboards according to Federal standards along those portions of the new highway system not built on existing rights-of-way. It is estimated that this may mean that about two-thirds of the total mileage could be covered. Principal credit for the victory goes to that indefatigable conservationist Senator RICHARD L. NEUBERGER of Oregon; to Senator ALBERT GORE of Tennessee and to Senator THOMAS H. KUCHEL, of California. The next move is up to the States themselves.

THE ENGLE BILL

The other important conservation measure that has become law at this session is the Engle bill. Its passage means that the Armed Forces will no longer be able to grab huge chunks of the national domain without specific congressional approval. This measure, sponsored by Representative ENGLE of California, is designed to put an end to the increasing practice of the Army, Navy, and Air Force of trying to lay hands on large tracts of public land—frequently wildlife reservations—as target areas and maneuver grounds.

The new legislation requires prior congressional approval for any such transaction involving more than 5,000 acres. It also requires observance of State fish and game laws in all military areas. This will be a new experience for many military personnel.

WHICH WAY MISSION 66?

A lively argument among men dedicated to the protection of America's natural resources revolves around the objections of a number of militant conservationists to what they think they see going on under Mission 66, the national parks' 10-year development program.

Their basic criticism is that the Park Service is allowing unnecessary inroads to be made on the parks in the effort to accommodate increasing visitor pressure. They also charge that the Park Service is violating the spirit of the national parks in other ways, such as permitting salvage and sale of hurricane-felled timber in some areas or encouraging certain kinds of recreational activity that could better be carried on outside the parks.

For example, a ski run and tow at Hidden Valley in the Rocky Mountain National Park has aroused objections from persons who believe that winter sports in the parks should not be permitted to disfigure or deface the natural aspect of the parks themselves—as any ski run cut down a forested slope must do to some extent. Furthermore, it is argued that mass recreational activities in summer or winter have no place in the parks, which have been set aside essentially as scenic, wilderness, and wildlife preserves.

FOR FISHERMEN

Recently, the new million-dollar development at Flamingo, near the southern end of Everglades National Park, was described in this newspaper from the point of view of its benefits to salt-water fishermen. A trailer park, motor court, and marina have all been built there. The article stated: "Obviously, the Park Service expects this to be a big fishing deal and it appears that it will become one."

Query: Is it a proper use of a national park to develop a large-scale fishing establishment, or should fishing be kept merely an incidental use as it always has been previously throughout the park system? Will the people flocking to Flamingo be coming there to see and enjoy a national park as such, or will they be coming, irrespective of park values, simply to enjoy fine new fishing grounds?

The critics say there is danger of the parks' being deflected from their statutory purpose of conservation, preservation, and use "in such manner * * * as will leave them unimpaired for the enjoyment of future generations." They fear that the construction aspects of Mission 66, principally roadbuilding and new physical facilities, are leading to a destructive overdevelopment.

In a letter to this column, Conrad L. Wirth, Director of the Park Service, makes the following comment on this kind of criticism:

"Believe me, we are aware of the pitfalls that are ahead of us in connection with taking care of the large numbers of people that are coming to the parks. We are also aware of the general impression that * * * Mission 66 is nothing but a construction program. But it is really not a construction program; it is a protection program. Be that as it may, I am still thoroughly convinced that if we do this right, the parks are going to be better protected from the mass use of people who are now coming into them than they were before we started."

The men of the Park Service are acutely conscious both of park values and of the tremendous pressure of visitors on the parks—some 60 million annually today and 80 million expected less than a decade hence. The parks suffered severely from neglect at the hands of Congress and the public during and after the war, and only recently has the demand for better facilities for both protection and use of the parks begun to be translated into adequate appropriations. This is the Mission 66 program.

NO OUTSIDE OBJECTIONS

To the extent that the funds are used for more personnel, better training, more adequate interpretative methods or land acquisition, there has been no outside objection. But the bulk of the money is going into roads, buildings and physical improvement. In its construction aspects alone, Mission 66 has in its first 18 months (July 1, 1956–January 1, 1958) completed or started over $15 million in visitor accommodations in the parks, and some $80 million in Government-built facilities including camp grounds, roads and utility systems.

Mr. Wirth states that "the development program under Mission 66 is pointed in this direction: to move developments for mass use away from the heart of the park; to pull mass-use developments away from the climax scenic areas, sometimes even beyond the boundaries of the park * * * Today it is fair to claim that nine-tenths of the area within the national parks is still in as fresh and natural condition as when these areas were established. One of the objectives of our whole park program is to preserve the wilderness character of those scenic, natural areas."

EROSION TAKING PLACE

This is just where some of the critics fear an erosion is taking place.

Behind this lively dispute lies another area of disagreement between some of the Government's natural resource agencies and many conservationists. This is the argument over the wilderness bill, a proposal that would give special statutory protection to all recognized wilderness areas owned by the Federal Government, including those in national parks, national forests, and on other public lands.

Opponents of the bill argue that it is either unnecessary or too restrictive, while the conservationists maintain that the only way to make sure America's remaining wilderness will be protected in the future is to nail it down by law instead of relying on the good will of the Federal agencies involved.

Thirty-ninth Anniversary of Death of Slovak Patriot General, Dr. Milan Rastislav Stefanik

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Viktor Nesnadny, vice president, Slovak Liberation Committee in the United States, on the 39th anniversary of the death of the Slovak patriot general, Dr. Milan Rastislav Stefanik, which will be observed on May 4:

THIRTY-NINTH ANNIVERSARY OF THE DEATH OF THE SLOVAK PATRIOT, GEN. DR. MILAN RASTISLAV STEFANIK

Milan Rastislav Stefanik, the son of a Lutheran clergyman, was born on July 21, 1880, at Kosariska in Slovakia. His elementary education was had in the school in his native village. After attending the lyceum in the capital city of Slovakia in Bratislava and in Sopron, he left Slovakia to study at the Institute of Technology at Prague. After obtaining his doctorate at Prague in 1904, he enrolled at Charles University, for advanced study in higher mathematics and philosophy. He chose astronomy for his life's work and pursued his specialty at the University in Paris and later in Zurich and Milan. Upon his return to France, he was appointed professor at the Meudon Observatory on the outskirts of Paris. He soon established a name for himself in the science of astronomy. In short time, he was commissioned to build an observatory on Tahiti Island. This work attracted the attention of the whole scientific world. He was made a member of the French Academy. Soon afterward, England honored him with membership in the British Royal Society. Aside

from the years of his childhood and early youth, he spent nearly all of his adult life in foreign lands—the many influential friends he made outside of Slovakia stood him, and his collaborators, in good stead during the years of World War I, when the New Republic was in the making.

Upon the outbreak of World War I, he enlisted in the French Army as an aviator. Wounded in action over the Balkans, he refused to be hospitalized and continued flying and fighting. He took part in repelling the German attack near Arras. He was decorated for bravery and steadily advanced in rank. By 1916, he rose from the rank of private to the rank of general in the French Army.

In 1915, when the Czecho-Slovak National Council was established in Paris, he, and his collaborators worked for the liberation of the Slovaks and Czechs. The Allies were naturally more than willing to foster a Separatist movement in the heart of the Central Powers. On December 17, 1917, President Poincare of the French Republic commissioned him to organize an independent Czecho-Slovak Legion to serve under his command. Then, as commander-in-chief of the Czecho-Slovak Legion, he went from country to country—due to his fame as a scientist and his many friends in scientific circles throughout the world, he found the doors of all governments open to him and their officials most attentive to his pleas—and shrewdly and patiently, he pulled together the slender threads of Slovak and Czech interest, sympathy and influence in America, in England, and in Russia. He blazed the trail and paved the way for Masaryk, particularly in France and America.

He recruited 3 armies, 1 in France, 1 in Italy, and 1 in Russia, aggregating 175,000 extraterritorial volunteers, of which the Slovaks constituted at least a third. On September 20, 1917, he met with a great body of Catholic priests in New York, rekindled in their hearts the fires of Slovak nationalism, and as a result, the million dollar drive in America for the new republic was a huge success.

The liberation of Slovaks and Czechs came. The Republic was proclaimed on October 28, 1918. He was one of the signers of the Declaration of Independence of the Czecho-Slovak Republic signed in the United States. Subsequently, under the Treaty of Versailles, the Republic was officially accepted into the family of nations.

On May 4, 1919, he started for Slovakia—to be appointed Minister of National Defense in the new republic—the land where he was born, the land he loved, the land for which he was ready and willing to die—first in the French Army, and then in the Czecho-Slovak Legion—the land that he was now to see free. He was traveling in his favorite mode, by airplane.

At half past 11 o'clock in the morning, when over Vajnory—within the sight of capitol city of Slovakia—Bratislava, where a huge crowd, including his aged mother, had gathered to welcome him, the Army, active under the Prague government orders, fired a sharp gun salute as a result of which the Caproni plane suddenly burst into flames and spun to the ground and ended the life of one of the greatest sons of Slovakia. When rescuers reached the plane, they found his face to the ground, as though he were kissing his homeland a last farewell.

He came back to Slovakia, but he did not see the joy of the people. He did not live to see his country free. Slovak people were never free under Czechoslovak Government.

Milan Rastislav Stefanik—may he rest in peace on the hilltop of Bradlo—Slovakia's most venerated shrine. On the anniversary of the day of his tragic death, Slovaks from far and near, make an annual pilgrimage to his resting place, not in that time—Czechoslovak Government is ruling under communism, and in commemoration of the emancipator of the Slovak people light fires on the four pillars of his tomb.

The immortal Stefanik once wrote to a friend: "I am a Slovak, body and soul; I have no divided affection."

With the untimely passing of Stefanik went the balance wheel of the Czecho-Slovak movement. Had Stefanik lived, the deadly mistakes of the first Republic under Masaryk and Benes never would have happened—he was a Slovak nationalist and never would have tolerated the attempted fusion of the Slovaks with the Czechs. Never would he have tolerated the Czecho-Slovak ideology. Stefanik was truly one of Slovakia's greatest sons.

VIKTOR NESNADNY,
Vice President, Slovak Liberation Committee in U. S. A.

Teachers as Informers

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. SANTANGELO. Mr. Speaker, uncertainty builds hysteria and gives rise to bad legislation or oppressive regulation. I was pleased to note New York State Commissioner of Education James E. Allen views clearly fundamental principles.

An editorial in the New York Times of April 30, 1958, commenting on Commissioner Allen's ruling on Teachers as informers proves valuable and interesting reading:

TEACHERS AS INFORMERS

In March of 1955, the New York City Board of Education authorized the superintendent of schools to require teachers to reveal the names of any of their associates who ever had been Communists. Reiterating our belief that adherence to communism was "an automatic disqualification for teaching in the schools of a free democracy," this newspaper protested the resolution forcing teachers to act as informers, on the ground that it would be immoral as well as ineffective, would be more likely to ensnare the man with a conscience than the one trying to protect Communists and would, in short, do the entire school system more harm than good.

This point of view was shared by State Education Commissioner James E. Allen when, the following year, he was called on to rule on an appeal by five New York City school employes dismissed under the Board's regulation. In an admirable opinion, Commissioner Allen then pointed out that "this type of inquisition has no place in the school system." It was obvious to him, as it is to us, that a requirement that a teacher be an informer "engenders an atmosphere of suspicion and uneasiness" and, without proving anything, merely opens the way toward a spirit of mutual mistrust fatal to the morale of any teaching body. None of this affects the duty of a teacher to tell about himself; it is the idea of being forced, on pain of dismissal, to tell about others that is morally repulsive.

Commissioner Allen's ruling was upheld by Justice Donald S. Taylor in the State supreme court; but the New York City Corporation Counsel and Board of Education, with a persistence worthy of a better cause, appealed the decision. Now, the five-man appellate division of the State Supreme court has unanimously upheld him again. The city can appeal once more, but doggedly to go on with further efforts to overrule the State commissioner's eminently just and sensible determination of policy would probably be futile and certainly demeaning. The school system is not going to become one whit purer by continuing the persecution of five employes who have refused to be informers. There are infinitely better ways to fight communism than that.

Andrew Johnson, Man of Indomitable Courage and Incorruptible Integrity—An Address Delivered at the Dedication of the Andrew Johnson National Monument, Greeneville, Tenn., in Connection With the Completion of the Restoration of His Home, by Carroll Reece, the Representative from Andrew Johnson's Old District

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. REECE of Tennessee. Mr. Speaker, the following is an address I delivered at Greeneville, Tenn., April 26, in connection with the dedication of the Andrew Johnson National Monument:

On January 3, 1935, I had the honor to introduce in the House of Representatives a bill to acquire the Andrew Johnson homestead as a national monument. The bill, after amendment, passed the House; passed the Senate; and was approved by the President, August 29, 1935. The bill, in its final form, provided not only for the acquisition of the homestead proper, but likewise for that of the tailor shop as well as for the burial place of Johnson to be combined as a national monument.

So you can understand, this is a gratifying occasion for me today. The dedication of the house and tailor shop of Andrew Johnson, with tomb on yonder hill, draws us, as it were, around the hearth fires of remembrance and makes us, the sons and daughters of Tennessee, which Johnson loved and where he now sleeps, feel as one family, bound together in the bonds of fraternal kinship and spiritual affiliation.

It is well that we have these visible monuments to remind us of an illustrious life. Man is, and always has been, greatly dependent upon symbols, the outward and visible tokens of his inspiration and his reverence for the past. That is why men build beautiful churches; that is why they erect splendid memorials to commemorate those who have gone before and have deserved well of their fellow men; that is why they seek out the birthplaces and homes of great men of the past, that they may be preserved for future generations. That is what we are doing here today.

As we gather to dedicate as a national shrine—this home, this tailor shop, this beautiful cemetery where he requested to be buried—we are moved not only to reflect upon the record of an illustrious life, but we can also have the satisfaction of saying to ourselves: Here this man lived; here he

labored; within these walls he dreamed and meditated and worked out his philosophy of life; here his character was formed; here he worked out the pattern of his career; here he determined to devote his life and his career; here he determined to devote his life and his energy—regardless of cost to himself—to the Constitution and the Federal Union.

So it is good that we should gather here today amid these scenes, recalling a life of which every Tennessean, every American, regardless of party or traditional affiliation, is now proud, and in a feeble way make amends for the lack of appreciation that was shown him during his lifetime. Even to this day, there is no memorial—not even a bust—of Andrew Johnson displayed in the Nation's Capitol, and this despite the fact he is the only President who also served in the House, in the Senate, and as Vice President, and then again elected to the Senate after serving as President.

Like the garment which, long after its wearer has divested himself of it, yet retains in its folds the lines and lineaments of the owner's figure, so this homestead and this humble tailor shop still form the mold of Andrew Johnson; and we shall ever prize and cherish them.

As one reviews the story of that stormy and tumultuous life, one is reminded of the perspective afforded by a vast mountain chain, serrated, range upon range, with towering peaks, with few and far the quiet valleys between. Our own Great Smokies might well constitute a magnificent illustration of what I have in mind.

Johnson's whole life was composed of just such violent contrasts; he rose to towering heights of moral grandeur and political triumph; he plumbed the depths of political defeat and abysmal personal humiliation.

His successor in the Senate, David M. Key, described his mental operations as follows: "The very unequal distribution of advantages doubtless appeared to him in the aspect of a wrong. A restless and longing mind, shackled and imprisoned, is not apt to be always reasonable and just when it discovers, in the pathway through which its aspirations lead, obstacles which seem to be insurmountable, and beholds beyond them those who have been favored by fortune."

As one reflects upon his life, three salient characteristics strike the mind instantaneously, with the swiftness of light: First, the implacable, unconquerable courage of the man; second, and more important, in those stormy times in which he lived, his incorruptible integrity; and, third, his complete, sacrificial devotion to duty as he saw his duty. The life of Andrew Johnson should teach us all a vital lesson—a lesson those of us who have journeyed far enough along life's pathway to see honest effort ripen into human achievement have already observed—that hard work, high courage, unfaltering energy and indestructible integrity will, in the end, bring success over all obstacles.

Shakespeare has Mark Antony say in the hour of his disillusionment:

"My fortunes have corrupted honest men."

Never, never, never in this world, could Andrew Johnson have been corrupted; such a thing was impossible in his nature. What a priceless endowment. What an imperishable tribute. What a heritage to his countrymen. What an example for men in public life in these trying times.

During his impeachment trial, his chief defense counsel offered a compromise which, if accepted, would have resulted in immediate acquittal and Johnson indignantly refused it: "I regard the proposal as dishonorable and insulting. Before I will sign an order contrary to law and against my conscience, and be driven by coercion to that end, I'll suffer my right arm to be torn from its socket. I denounce the course you advise me to pursue, for I will not purchase my acquittal at the cost of my integrity. It is my pleasure to accept your resignation."

In the long perspective of time the true Andrew Johnson slowly but surely emerges. Bit by bit, the mud drops off; the old insults and vilifications have died down.

Andrew Johnson is the greatest martyr and unsung hero in American history, a thing former President Truman, doubtless, had in mind when he recently declared that he was "the most mistreated and maligned man who ever occupied the White House."

But an interesting little sidelight upon the innate prestige and majesty of the Presidency, by whomsoever it may be temporarily occupied, and the ultimate dependence upon it, by Congress no less than by the public at large, is furnished by the late Harry Thurston Peck in his book, Twenty Years of the Republic.

"When President Johnson was at the very ebb of his popularity in 1867," wrote Dr. Peck, "and when House and Senate were over-riding his vetoes and treating his recommendations with contempt, he once said to a personal friend: 'Even now if I really wish anything very much indeed, I can get it done' ". In other words, if Johnson, as President, demanded something of Congress as absolutely imperative to the Nation's interests, Congress would give him what he asked for.

There is something, it seems to me, heartening about this incident. It seems to bring reassurance that, no matter how strained our political passions may become, the heart of the Republic still beats strongly, or, to change the metaphor, the timbers may creak a bit in stormy weather, but the Ship of State still rides serenely on. May it be ever thus. As Henry Wadsworth Longfellow, still the most universally beloved of American poets because he kept his finger ever on the American pulse, so beautifully put it at the very time Andrew Johnson was struggling to preserve the Union—and Johnson, probably read the poem:

"Sail on, O Ship of State.
Sail on, O Union, strong and great.
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate.
We know what Master laid thy keel,
What workmen wrought thy ribs of steel,
Who made each mast, and sail, and rope,
What anvils rang, what hammers beat,
In what forge and what a heat
Were shaped the anchors of thy hope.
Fear not each sudden sound and shock,
'Tis of the wave and not the rock;
'Tis but the flapping of the sail,
And not a rent made by the gale.
In spite of rock and tempest's roar,
In spite of false lights on the shore,
Sail on, nor fear to breast the sea.
Our hearts, our hopes, are all with thee,
Our hearts, our hopes, our prayers, our tears,
Our faith triumphant o'er our fears,
Are all with thee—are all with thee."

How Andrew Johnson would have echoed every word of that.

It is not my purpose, to review Johnson's career in detail. You are familiar with its main outlines—how could you live in Greeneville and be otherwise? I shall attempt merely a brief summary of that career insofar as such summary may serve to throw light upon the mental, moral, and spiritual development of the man. For today, amid these scenes of his early struggles, it is the man rather than the statesman which concerns us.

Born in Raleigh, N. C., on December 29, 1808, the younger son of Jacob and Mary McDonough Johnson, he faced a world with more than his share of handicaps. His father was a bank porter and a sexton in Raleigh, but he was described as an honest man, loved and respected by all who knew him. "An honest man. How one's thoughts leap to the future of the infant born on that December day of long ago. It is pleasant to know that this honesty was not only inherent in the future President of the United States but was likewise a legacy bequeathed by a father who had nothing else to leave. One of the duties of Jacob Johnson's simple life was to toll the bells for those who had passed on. While thus engaged one day in the year 1811 he collapsed from exhaustion and a few days later he died. Johnson's biographer, Lloyd Paul Stryker, thus comments: "The boy Andrew, at the age of 4, was thus left fatherless, penniless, and friendless."

"Childhood," continues the same biographer, "Andrew never knew, youth passed him by. At the age of 10 necessity took him roughly by the hand and apprenticed him to one Selby, a tailor in his native town. Poverty is a grim and cruel master. He teaches his lessons with long hours, sour looks, and hard knocks. Andrew Johnson had a thorough knowledge of this tutor. Many years later he told his fellow Congressmen: 'If being poor was a crime * * * I should have to plead that I was guilty; that I was a great criminal; that I had been born a criminal; and that I had lived a criminal a large portion of my life. Yes, I have wrestled with poverty, that gaunt and haggard monster. I have met it in the day and night. I have felt his withering approach and his blighting influence.' "

An unschooled tailor's apprentice at the age of 10, where was there any hope for the future? But, happily for the sons of men, Providence is prepared to intervene when least it might be looked for. There was in Raleigh in those lean and bitter years a gentleman whose influence upon the poor apprentice was to make history. Dr. William G. Hill, the town physician, was one of those born philanthropists whom nature seems to produce at exactly the right moment. He would come to the tailor shop where the boy worked and read to him and his fellow apprentices masterpieces of English literature—by preference, the great orations of British statesmen. The mind of the boy took fire like flax from the spark of a tinder. Here was a new, and undreamed of, world. Here was a vast, limitless horizon offering boundless exploration, boundless riches. There was one volume in particular. The title of this incendiary book, was The American Speaker. It contained some of the greatest forensic efforts in the English langauge. The orations which struck home were those of Charles James Fox and the younger Pitt. It was by poring over them that the boy slowly and painfully learned to read and spell. Could a future orator and statesman have a better exercise book? One is inevitably reminded of another boy over in Kentucky, at this time, also painfully learning his letters, only, unlike the young Lincoln, Johnson had not yet learned the mysterious art of writing and ciphering "to the rule of three."

In 1826, Johnson, with his mother and stepfather, decided to try to mend their fortunes by moving to Tennessee and, after some wandering, he settled here in Greeneville. Tailoring was the only trade he knew, and here he opened this little shop.

The family is described by an early biographer, John Savage, as arriving in town in "an old wooden cart drawn by a worthless horse (which) carried all their worldly goods." Again, one thinks of the Lincoln family in its wanderings. Mr. Stryker who wrote brilliantly of Johnson says:

"Dust-laden, on a Saturday afternoon they arrived at their destination. It could not have been a dramatic entrance and yet there was one who noted it with approval. Andrew, if he observed at all a little knot of giggling girls standing by the roadside,

doubtless turned hastily away, recalling his travel-worn and unimpressive equipage. There was, however, in that feminine group 17-year-old Eliza McCardle; she had seen Andrew Johnson as he passed in his creaking cart, dust-laden and travel-worn as he was. She liked him and then and there to her friends she confessed that fact." "It was," remarks Mr. Stryker dryly, "an un-Victorian method, but this was 1826. Eliza was 17 and Johnson was less than 2 years older, but on the 17th of May 1827, by Mordecai Lincoln, a magistrate of the town and an uncle of Abraham Lincoln, they were married."

That marriage was the turning point, the golden milestone, of Johnson's life as he would unquestionably assure us, could we evoke him into our midst today from where he sleeps over yonder. Eliza McCardle was the daughter of a Scotch shoemaker and her opportunities for education had been greater than those of her young husband. She took him mentally in hand. She taught him to write; she taught him arithmetic. The familiar scene has come down to us of the young tailor sitting cross-legged on his bench while his wife read to him. Again to quote Mr. Stryker, "As a tailor he was debarred from equal association with the 'aristocratic coterie' ruling the community, so he spent his evenings and late nights in company with Eliza and his British statesmen."

And so the busy years passed, with gaining a livelihood and acquiring an education going hand in hand. Five children were born of Andrew's and Eliza's marriage, and Johnson was assured of the greatest solace of his life—a happy home. It never failed him. To it, and to the loving embrace of a remarkable woman, who thoroughly understood him, who never failed him, Johnson could always turn. It was the sheet anchor by which he was enabled to ride out every storm.

It was not long before Johnson's natural aptitude for a public career made itself manifest. Indeed, from the days he had learned to read and spell sitting, as it were, at the feet of Burke and Fox and the younger Pitt, it would seem as if he had been shaped for no other purpose. He was drawn to it by an overpowering instinct. His first venture into politics was in 1829, when he was elected an alderman. Reelected the following year, in 1831, he was chosen as mayor, and the one-time tailor's apprentice was on his way. He served, respectively, in the lower house of the State legislature and then in the State senate. In 1843, he began the first of five consecutive terms as Congressman. Returning home, he was elected governor of Tennessee in 1853, and 2 years later, reelected. By the year 1857, the great issue unionism, of the slaveholding agricultural South versus the antislavery and industrial North, was being ever more tightly drawn; the state of the Union appeared ominous indeed. The following year, the leader of the newly formed Republican Party, William E. Seward, was openly to proclaim an irrepressible conflict. Fortunately, at this juncture, Andrew Johnson was elected a Senator from the State of Tennessee. His colleague was John Bell, later to be an unsuccessful presidential candidate on the Constitutional Union ticket in the fateful year 1860.

Southerner and slaveholder though he was, there never was any question as to Johnson's position: he was, first and last, absolutely, inflexibly, eternally for the Federal Union. There was never a flicker or shadow of doubt in his mind: that mind was four-square; for him, the issue was made up, and his choice was irrevocable. That he was a southerner and a slaveholder, made, to his mind, not the slightest difference. In an interesting article in the New York Times Magazine of March 16 last, foreshadowing the ceremonies being held here today, the author, Pierce Fredericks, remarks:

"The gradual rehabilitation of (Johnson's) memory is progressing. It will reach a new climax next month when the Department of the Interior opens his home in Greeneville, Tenn., as a National Shrine. The timing seems particularly appropriate. Most of the mud slung at Johnson resulted from his notion that the Southern Negro problem was not to be solved overnight. From the perspective of 1958 it would appear that there was a great deal to be said for his point of view."

One thing alone was paramount, as expressed in the immortal words of his political idol, Andrew Jackson: "Our Federal Union. It must and shall be preserved."

On December 18, 1860, and the following day, Johnson delivered in the Senate of the United States what was undoubtedly the greatest speech of his career and, I think, the greatest speech ever made on the floor of the United States Senate.

The only comparable speech was another made by him in the Senate on February 5 and 6, 1861.

These two speeches constitute a magnificent utterance of faith—faith in America, faith in his countrymen, abiding faith in the Union he was sworn to preserve "against all enemies, foreign and domestic." The impact on the country and upon the Government was unbelievable. His analysis and discussion of the great constitutional issues involved sounded more as if they had come from the lips of John Marshall than from the lowly tailor of Greeneville, Tenn. He spoke extemporaneously. He stood there among the great men of the times and amazed them with his analysis of the Constitution and the principle of government which must be preserved if the Union was to survive.

Lincoln had already been elected. South Carolina was about to secede from the Union. The atmosphere in Washington was tense as if charged with electricity. Johnson rose from his seat in the Senate,

"Sir," he exclaimed, addressing the Chair, "I will stand by the Constitution of this country as it is, and by all its guaranties. I am not for breaking up this great confederacy. I am for holding on to it as it is, with the mode and manner pointed out in the instrument for its own amendment. It was good enough for Washington, for Adams, for Jefferson, and for Jackson. It is good enough for me. I intend to stand by it, and to insist upon a compliance with all its guaranties, North and South."

Senator Morton, an arch radical from Indiana, was a bitter opponent of Andrew Johnson and voted for his impeachment. Yet when Johnson died and resolutions of respect were offered in the Senate, Morton arose to pay tribute. Confessing that Johnson was a man with remarkable traits of character, Morton not only eulogized him but also read excerpts from Johnson's great speeches which Morton said he had taken pains to hunt up. Then commented the Senator from Indiana: "Those were brave words to be uttered by Andrew Johnson under the circumstances. I admired and honored him at the time; I do so now, and ever shall. He was a brave man, and he encountered risks and subjected himself to dangers of which we of the North knew scarcely anything. Perhaps no other man in Congress exerted the same influence as Andrew Johnson on the public sentiment of the North at the beginning of the war."

Unquestionably, these two speeches of Johnson's did more to clarify and crystallize the thinking in the North on the questions involved than the word or actions of any other one man.

The terrible war came, and when the legislature of Tennessee finally voted to leave the Union, Johnson stood adamant as one of the eternal hills in his refusal to follow his State into secession. When all other southern Senators withdrew, Johnson alone remained. The enormous importance of his stand was at once recognized by President Lincoln, who in the second year of the war appointed him military governor of Tennessee.

By the irony of fate the eastern portion of the State, which was strongly pro-Union and whence Johnson himself came, remained under Confederate control until the summer of 1863; and Johnson actually began his work of reconstruction in western Tennessee after Grant's capture of Fort Henry and Fort Donelson and the subsequent flight of the Confederate State Government to Memphis. I shall not attempt to enter into a discussion of his course as a military governor; suffice to say that in circumstances of peculiar difficulty in which he was forced to exercise arbitrary power, Johnson acquitted himself with great courage and wisdom, and with the collapse of the Confederate armies in Tennessee, was able to bring about the restoration of civil government and restore Tennessee into a practical working relation with the Union. At Johnson's request, Lincoln exempted Tennessee from the Emancipation Proclamation because, adhering to his deep convictions on States rights, Johnson wanted Tennessee to free the slaves within its own border.

Meanwhile he paid a bitter price for his loyalty:

Harried day and night, in hourly danger from ambush, with a price on his head, he had been forced to leave his family behind the Confederate lines here. Their home was seized and they would have starved but for the food smuggled to them by loyal mountaineers. Patriotism sometimes exacts a high fee.

With the approach of the campaign of 1864, Lincoln decided to appeal to the country on a National Union ticket. This meant that loyal Democrats were invited to support the administration which, in turn, meant that a pro-Union Democrat would be invited to be Lincoln's running mate, and Johnson was the obvious choice. The President was triumphantly reelected and on March 4, 1865, Andrew Johnson became Vice President of the United States. The awful tragedy of the President's assassination the following month placed Johnson in Lincoln's chair and one of the grimmest chapters of United States history began.

As Johnson entered the Presidential Chair Senator Key describes the emotions of the South:

"I remember well the alarm of the people of the South when the sad news was borne to them of President Lincoln's assassination. Mr. Johnson's denunciations of those who had opposed the Federal Government, and the punishment and penalties he had invoked and threatened, justified the gravest apprehensions. But when he came to be President; when his enemies had laid down their arms and furled their flag, and after the power to pardon as well as to punish had passed into his hands, satisfied, as he must have been, that the great mass of the southern people had been honest, though mistaken, as he believed, in the motives which had impelled their action, all his bitterness and acrimony toward them were dissipated. The man sank himself out of sight, and the President of the powerful Nation shielded his late foes by clemency, though the liberal policy he exercised toward them contributed powerfully to lose him the support of the party which had placed him in office. He who could exercise such magnanimity under such circumstances had a great heart and unflinching fortitude. Those who think Mr. Johnson was cold and very selfish never understood his inner nature.

In many respects he was strange and peculiar so that it is no matter of surprise that many who did not fully comprehend him had an unfavorable estimate of some of the qualities of his mind and heart."

Immediately after taking the oath of office in the old Ebbitt Hotel, upon being notified of Lincoln's death, a small delegation of radical Senators headed by Senator Thad Stevens called upon him and proposed a course of harsh action, later referred to as carpet bag rule, toward the South which they expected him to follow. Johnson's reply was:

"I shall carry out Lincoln's policies as I understand them. I am sorry." When he uttered those words Johnson know the opposition which he was to encounter in Congress.

As President he was standing by his duty as he saw it regardless of threats and opposition, just as he had done as a United States Senator. It was there that the radicals resolved to contrive his impeachment and have him succeeded by a man who would do their bidding.

It is not my purpose, even if time were not lacking, to enter into that dark and somber record. As I said earlier, it is not the statesman we are considering primarily today, but the man. I shall, therefore, content myself with the brief but admirable summary as set forth in the pamphlet issued last year by the Department of the Interior.

"Johnson lacked Lincoln's prestige as a victorious war President, and he did not have Lincoln's political finesse in handling opposition groups. His liberal policy was soon frustrated by Congress. Seeking to regain political control of the country and curtail the powers of the Presidency, which had increased during the war period, the leaders in Congress, known as radicals, denied seats to newly elected Representatives from the Southern States. This prevented the natural combination of northern and southern Democrats and insured radical control of the legislative branch. With radical influence extending to two-thirds, thus destroying the effect of the President's vetoes, Congress enacted its own reconstruction program. This featured military rule of the Southern States, enfranchisement of the Negro, and disenfranchisement of the Confederate veterans. On the whole, the program proved a failure. Based on force, it collapsed in 1877 with the end of bayonet rule."

The struggle between a resolute Executive and equally unyielding Congress led almost inevitably to impeachment.

The radicals had only been biding their time. The issue was joined on the Tenure of Office Act, which limited the power of the President to remove officials whose appointments had been approved by the Senate. In 1867, in defiance of this act which he regarded as unconstitutional, President Johnson removed from office, a disloyal member of his Cabinet, Secretary of War Edwin M. Stanton, who was conspiring with the radicals for his impeachment.

Johnson was then impeached by the House of Representatives. The trial was held before the Senate from March to May 1868. The final vote was found to be one short of the two-thirds necessary for conviction, and Johnson was acquitted. This is the only time in our history that a President has been impeached. The Tenure of Office Act, modified during Grant's administration and repealed in part in 1887, was declared unconstitutional by the Supreme Court in 1926. And, thus, Johnson was at last vindicated by the Supreme Court. After the fateful years of the Presidency, Johnson returned to his home here, his courage unshaken, his head bloody but unbowed. He continued his interest in political affairs and, after an unsuccessful candidacy he was chosen Senator in 1874. On March 5, 1875, he took his seat once more in the Chamber he had quitted 13 years before. The session lasted merely a few weeks and Johnson left the scene which had witnessed so many triumphs and defeats. Before the Senate adjourned he had made one more memorable address in which he displayed all of his old fire and eloquence. On March 22, 1875, he delivered a severe attack on President Grant whom he could not forgive for having declined the appointment as Secretary of War to succeed Stanton, and on the administration's policy in Louisiana, and closed with the plea in which his spirit and life's philosophy may be said to be forever enshrined:

"Let peace and prosperity be restored to the land. May God bless this people; may God save the Constitution."

May these words linger in our own minds and hearts as we turn over today this hallowed dwelling, this humble but precious workshop, this cemetery where his head lies pillowed on the Constitution, to the people of the United States and their posterity as a National Monument to America's great commoner, Andrew Johnson.

Law Day, U. S. A.

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. RODINO. Mr. Speaker, May 1, 1958, having been designated as Law Day, U. S. A., by Presidential proclamation, the governing body of the School of Law of Seton Hall University has appropriately urged its faculty and student body to carry out and support the objectives of the proclamation.

Under leave to extend my remarks in the RECORD I include herein the greeting addressed to the principals of schools under Catholic auspices in New Jersey by Rev. Thomas M. Reardon, regent, and Miriam T. Rooney, dean of the School of Law of Seton Hall, together with the text of the Presidential proclamation:

To the Principals of Schools Under Catholic Auspices in New Jersey, Greeting:

The enclosed proclamation of Law Day U. S. A., by President Eisenhower is an historic document. It marks the first time that official recognition has been given to the tremendous importance our great common law system has upon our lives. Please read, or otherwise inform all students about it on May 1, 1958, and, if possible, explain something of the history of the common law, from its formulation by the priest-judges in the Middle Ages to our own day, and point out how essential it is to the development of true liberty.

This request is made upon the recommendation of the president of the American Bar Association, Charles S. Rhyne, Esq., who believes that one of the best ways of overcoming the current widespread disrespect for law is to make our legal system better understood. The fields of traffic-safety laws, crimes of violence by youthful offenders, and the attempt to settle international disputes by war instead of law, he mentions as particularly flagrant areas of disrespect at present. The first day of May was chosen designedly to emphasize the need to strengthen law instead of force.

Seton Hall University School of Law supports this nationwide program strongly. As the first and only law school under Catholic auspices in New Jersey, it is undertaking to ask the cooperation of all other schools under Catholic auspices in the State in making our great legal system better understood and appreciated by our citizens generally.

At the beginning of the month dedicated to our lady, it also urges that as many as possible say a prayer for the restoration of our law in Christo, thereby joining with the court criers who, before requiring those who speak in court to call God to witness to the truth of what they say, have, day after day for centuries never failed to say, in one form or another: God save our country and this court.

A brief note to the dean of Seton Hall Law School, Newark, N. J., or to President Rhyne of the American Bar Association, 1155 East 60th Street, Chicago, Ill., reporting the way in which your school has observed the first Law Day, U. S. A., May 1, 1958, would be much appreciated.

(Rev.) THOMAS M. REARDON, *Regent.*
MIRIAM THERESA ROONEY, *Dean.*

THE PRESIDENT'S PROCLAMATION: LAW DAY, U. S. A.

THE WHITE HOUSE,
February 3, 1958.

A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

Whereas it is fitting that the people of this Nation should remember with pride and vigilantly guard the great heritage of liberty, justice, and equality under law which our forefathers bequeathed to us; and

Whereas it is our moral and civic obligatiton as free men and as Americans to preserve and strengthen that great heritage; and

Whereas the principle of guaranteed fundamental rights of individuals under the law is the heart and sinew of our Nation, and distinguishes our governmental system from the type of government that rules by might alone; and

Whereas our Government has served as an inspiration and a beacon light for oppressed peoples of the world seeking freedom, justice, and equality for the individual under law; and

Whereas universal application of the principle of the rule of law in the settlement of international disputes would greatly enhance the cause of a just and enduring peace; and

Whereas a day of national dedication to the principle of government under law would afford us an opportunity better to understand and appreciate the manifold virtues of such a government and focus the attention of the world upon them:

Now, therefore, I, Dwight D. Eisenhower, President of the United States of America, do hereby designate Thursday, May 1, as Law Day. I urge the people of the United States to observe the designated day with appropriate ceremonies and activities; and I especially urge the legal profession, the press, and the radio, television, and motion-picture industries to promote and to participate in the observance of that day.

DWIGHT D. EISENHOWER.

Factory Worker's Purchasing Power Down in Los Angeles

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on purchasing power in Los Angeles by the State of California Division of Statistics

and Research, which is a sober pronouncement in the face of the cheery statements that the American people are being handed. After all, what is important to prosperity is consumer ability to buy not just the mainstays of life, but such hard goods as appliances and other durable articles. This summary, from an official State source rather than a political source, is proof positive of the decline in purchasing power for a great mass of people.

STATE OF CALIFORNIA,
DEPARTMENT OF
INDUSTRIAL RELATIONS,
DIVISION OF LABOR
STATISTICS AND RESEARCH,
San Francisco, April 27, 1958.

FACTORY WORKER'S PURCHASING POWER DOWN IN LOS ANGELES

Purchasing power of the take-home pay of factory workers in the Los Angeles-Long Beach area fell in March to the lowest level in 2½ years, Ernest B. Webb, California director of industrial relations, announced today.

Gross earnings before deductions averaged $94.36 per week last month, the highest March on record. This was nearly $8 per week above the September 1955 average of $86.49.

Despite this gain, the purchasing power of the average factory paycheck is no higher than it was 2½ years ago.

After allowing for increased tax deductions and the rise in consumer prices the buying power of the factory worker's net take-home pay is back to the level of September 1955.

Peak purchasing power of factory earnings in the Los Angeles area was recorded in December 1956. Since then the trend has been generally downward.

Measured from a year ago March, purchasing power of the average factory worker's paycheck is down more than 3 percent.

Lines on the Washington National Cathedral by the Honorable Robert B. Anderson

---

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. HAYS of Arkansas. Mr. Speaker, a very inspiring statement was made at a recent meeting of the Washington National Cathedral Association. Not only was the content of great significance but the form, blank verse, was both original and creative. The author of this religious verse was none other than the Secretary of the Treasury of the United States, the Honorable Robert B. Anderson. The ability of a man of affairs to write such beautiful poetry and express himself with majestic utterances is in the best tradition of the Founding Fathers, who were men of many accomplishments. His sentiments reflect great insight into the character of America and keen awareness of our need to abide by the rule of law to reconcile our many differences. I am pleased to share Secretary Anderson's reflections with my colleagues, under leave to extend my remarks, as follows:

LINES ON THE WASHINGTON NATIONAL CATHEDRAL

(By Robert B. Anderson)

A nation needs to pray;
For things it has—for things it has not earned,
For gifts from men now dead, some dead
So long ago we never knew they lived.
Their hopes and dreams, their genius and their sweat
Now molded into wood and sculptured stone,
Iron and steel and countless things we cannot sense
But by awareness of an ordered scheme
That had to come from minds and plans and hopes
And struggle to reality.

A nation needs to pray:
For what will come out of a time unknowingly beyond,
Obscured by present tasks and inabilities,
Scarcely glimpsed by imagination,
Yet struggled toward and with a certainty
Beyond our reach except for fragments,
Parts of patterns, tossed into our paths
That lead us to believe we view the whole;
And viewing, pray that we may be
Spared confusion, and avoid futility;
That we may dream of the inaccessible,
And touch the possible.

A nation needs to pray:
That in humility we see that greatness
Is not measured by industrial grandeur,
Or destiny achieved by things we touch,
By things produced, nor things consumed,
Nor things we set afloat upon the sea,
Nor send into the air,
Nor delving down, gouged out of earth;
Nor is it known by tower set on tower
Groping for a finite place in infinity
Nor by any other things
That man may proudly say
Were made by mind or hand.

All these we take, or make
In gratitude—with thanks
For what was added to us by the past,
Or by our contemporaries,
Out of substance that was part of earth
As we, before we became articulate.

These things we do that men
May eat and sleep—may work and rest,
And have a separateness.
And yet when all is done, we still shall seek
To yet define that which is humanity,
That quality that makes of mass,
And flesh, and good and bad,
A nation: That needs to pray.

What occupies our time?
What thoughts fill our minds and make innumerable demands
On limited intelligence?
What thoughts come in the darkness of the night,
When sleep evades us, and spectres march
Down mental avenues of thought,
To challenge what our place on earth may be?

How brought to awe are we by history's wars!
Fought for causes that men hold dear yet still dispute;
Wrought by power, ambition, expansion, or the need
To hold these in abeyance that others may survive.

How we cling to things called institutions;
So frequently the name assumed by rationality;
How we are bound to customs of long use,
Defying what we know is best for now,
And blinding us to that which would enlarge
The quality that makes us each distinct,
Yet part of all—new faiths and new beliefs.

How preoccupied is man with progress;
With new homes and factories, devices that spare work,
Machines that humble speed and challenge light,
And a hundred thousand things to use, or be used by.
How right it is to give a proper place
To those material things which free the mind,
And point indeed to other worlds beyond,
Yet all man's goods have value only in regard
To man's real worth as man.

How greatly we concern ourselves with change;
Cling to the old chair—keep with sentiment
Each remembrance of vanished youth.
Ground becomes hallowed by age and experience,
And each new building tears away a part
Of history's accumulation, left
Wherever men have put their mark on time.
Still every space that we advance
From antiquity to eternity is change.
What forces challenge the constancy of our march!

How many things divide us!
Color, creed,
A different faith or tongue, geography;
The customs and the habits of our land,
A heritage as much a part of us as flesh and bone;
Yet all the time we seek to find the things
That will unite us; some universality
That spans our differences.
We labor to produce by rule and plan,
By treaty and documents, what we fail
In practice and in precept to lay down.

And in our search for common truths,
So frequently we translate these truths to mean
That others must conform to what we hold is best,
Regardless of their own inheritance.
Even that which we most highly prize:
Our freedoms, our democracy, our way of life
We would export neatly packaged,
As we use it, and fail to understand
That others would adjust that which we see,
Only in the trappings of our fathers,
To fit their own accustomed usages.

From out of all that troubles us,
Toward solutions that clarify and not confound us
Where shall we seek the answer?
How shall peace be made a practice and not a principle?
How make justice a world reality?
How minimize the frailties of man's rule
And live by the rule of law?

How shall we reckon with the forces of energy,
When for the first time in man's history,
We have in sight the possibility of
Freeing man to exert his own creativeness,
Rather than to toil under the dictatorship
Of need and want?

With such enchanting possibilities
Have we the means and the ability to
Avoid the use of energy to destroy?

No other question has this urgency;
No other men have faced the fearful choice
That history, pausing, places in our hands.
Yet first must come our own assured defense,
Not merely of our land and of our ways,
Not merely to protect our lives or what we hold as dear,
But in the knowledge that our free world holds
The sanctuary of the hope of man,
For freedom on this earth,
For the avoidance of world dictatorship,
Against the forward drive of ruthless power,
Of godless men, denying human worth.

So for all its awesomeness,
For all its destructiveness,

There is a moral purpose for the bomb;
There is a reason for its terror,
There is a need that will exist
Until we find the yet obscured
Concern of man for man.

Time might provide the leaven for us all,
But we do not have the time to wait;
Too closely press the possibilities of destruction;
Too cumulative are the consequences of continued waste;
Too fragile are the qualities of mortality.

With all these imponderables,
Beyond the scope of mind and hand,
Our greatest need is:
For a wisdom that transcends our own;
For a devotion that insures
There is no instant of neglect
For that, wherein is held
The fate of all. This Nation
Needs to pray.

Throughout our most enlightened past,
When needs were great,
Men built retreats where they might be
Alone with Diety. Today, they
Stand as monuments to moments
When we reached for that beyond
Our grasp. They are our shrines.

Today, we build an altar:
A great cathedral,
Where on bended knee,
With bowed head,
And reverent heart,
We search for the Divine
And for immortality.

Here there is no creed to exclude us;
No doctrine denys us
Access to the threshold,
Where even human voices penetrate
The secrecy of eternity.

How overpowering to contemplate
Man talks with God.

Is there one to say this temple
Should be less imposing, and enduring,
Less magnificent?
Then let him define the limits
Of factory size, or towers and buildings,
Where commerce reigns;
Or stadiums and pleasure palaces;
Let him measure the limits of finite things,
Lest anyone should say we should do less
In building things for God than man.

Here the widow's mite,
The sums of kings of industry,
The labor, and the dreams
Of all who give a thing of value,
Are melded into one:
A nation's shrine of Trinity.
And each, who gives, may know the
Whole is part of his own offering.

So may it be that we, and all the host
Who follow on, find here the solace,
And the way through man's recurring doubts,
To peace, and what endures in souls,
That make of us the children of immortal heritage;
And here come to believe that earth
Will know its destiny, and man his purpose,
When each shall pray
"Thy will be done."

May 1—Law Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. LANE. Mr. Speaker, under leave to include my remarks in the RECORD, I wish to include a very interesting editorial concerning the proclamation by the President to observe Thursday, May 1, as Law Day. This editorial entitled "Law and Loyalty" appeared in the National Tribune, the Stars and Stripes, on May 1, 1958.

The editorial follows:

LAW AND LOYALTY

President Eisenhower by proclamation has called on the people of the United States to observe Thursday, May 1, as Law Day. In his proclamation the President urges the people of the United States to observe the designated day with appropriate ceremonies and activities and especially urges the legal profession, the press, radio, television, and motion picture industries to promote and to participate in the observance of that day.

President Eisenhower points out that the people of this Nation should remember with pride and vigilantly guard the great heritage of liberty, justice and equality under the law which our forefathers bequeathed to us.

He further states in his proclamation that the principle of guaranteed fundamental rights of individuals under the law is the heart and sinew of our Nation, and distinguishes our governmental system from the type of government that rules by might alone.

It so happens that in order to combat communism, the Veterans of Foreign Wars of the United States conceived the idea a good many years ago that May 1 would be a good day on which to demonstrate to the world the ideals on which our country was founded and to set forth our loyalty to those ideals and all which we hold true in our endeavor to live peacefully with all nations, but to let the world know, also, that our faith in those ideals will not permit us to lose the courage to uphold them.

Fortunately the ideas do not conflict. Dedication to the principle of government under law and loyalty to our country go hand-in-hand. Proper observance of the law brings of itself loyalty to the country and loyalty to the country must result in recognition of law which governs the people.

Both ideas may be observed by the citizens of the United States with proper ceremonies and a national observance of these ideas can only result in better citizenship. Good citizens obey the law and good citizens are always loyal to their country.

America is being challenged by a ruthless world power, without decent principles but only the will to conquer—a power which has dedicated itself to world domination.

Never before have we needed in the United States of America the unity of purpose to withstand any onslaught from this common enemy of freedom.

This thought of a special day for our citizens to set aside as a day in which to proclaim our faith in our country and our will to withstand any attack upon it proved to be an excellent one.

State by State and city by city the suggestion set forth by the Veterans of Foreign Wars has been accepted and scarcely a spot in the Union has not taken up the challenge to Russia on May 1 to show the world that we are united in our determination to oppose any encroachment on our freedom.

Loyalty Day has now become a part of our yearly ritual as governor after governor proclaims May 1 as the day on which all citizens of the Nation join in patriotic exercises to show the world, friendly and inimical, that we are really one, united and indivisible.

It is important that we mark this day, May 1, and join in the pageants and processions to prove to all the world that despite our profession of peace, which is an honest one, we are still ready to defend ourselves and, if necessary, our friends against inroads which might deprive us and them of the right to live in freedom and to pursue the quiet way we seek "with malice toward none and charity to all."

It is a good thought to realize that Loyalty Day was the idea of a veterans' organization—an organization whose members had fought the good fight on land and sea—individuals who knew the horrors of war and who were determined to see to it that their fellow countrymen might understand the sacrifices of their fighting men and dedicate themselves to a love of country which these same fighting men had shown when need arose.

More than 30 years ago the leaders of the Grand Army of the Republic, the United Spanish War Veterans, the American Legion, the Disabled American Veterans, and the Veterans of Foreign Wars pledged their separate organizations to the support of a common definition of Americanism. They agreed that:

"Americanism is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enemies; undividad allegiance to the flag; and a desire to secure the blessings of liberty to ourselves and posterity."

Believing fully in that definition of Americanism, the leaders of the Veterans of Foreign Wars decided that, if possible, the people of our country might be made to understand just what America and Americanism stood for, in order to counteract the bombastic show of might paraded by Russia, and they chose May 1, the big day in Russia, to see that the Red demonstrations no longer went unchallenged.

Our American patriots made no move to put down any show of communism in the United States by those deluded followers of this false gospel. They decided, however, that we must show the world that millions of Americans are proud of their allegiance to the United States.

Thus the VFW adopted the idea of counter-demonstrations—parades of loyal Americans that would be big enough to capture the headlines from the Communists.

The idea was a success from the start and today, on May Day, May 1, hundreds of thousands of loyal Americans are marching to show their allegiance to the flag and the country which they call their own.

Except in time of peril we are not a particularly demonstrative people when it comes to showing our patriotism. We all know that deep down within us it exists and we are inclined to let it go at that.

For this reason Loyalty Day as sponsored by the Veterans of Foreign Wars was a splendid thought. It brought home to all of us the realization of the greatness of our Nation and what we owed to it. If for only 1 day it made us feel that if the time came when we must defend ourselves we would be as ready as our forefathers from 1776 to the present and even in the future.

We commend the Veterans of Foreign Wars for its sponsorship of Loyalty Day and we recommend to all our people to join in its recognition, if only for a few short moments, on May 1, in order that our hearts may swell again in the love of country which is a part of us and to let the whole world know that, bewildered as we may seem by the problems at home and abroad which beset us, we are one in proclaiming our loyalty to our country no matter what the cost—that we are willing to fight and die, if need be, for the freedom which we feel is our just due as citizens of the United States of America.

So also do we commend the American Bar Association for sponsoring Law Day and the President of the United States for setting aside this particular day to recognize our moral and civic obligation as freemen and Americans to strengthen our heritage.

As we have endeavored to point out, law and loyalty to country go hand in hand. Where the one is observed the other will be

found and we urge that all our citizens join in observation of May 1 with respect for the law of our land and love of its patriotic traditions.

The Missouri School of Journalism

SPEECH
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. MOULDER. Mr. Speaker, this year of 1958 is the 50th anniversary of the University of Missouri School of Journalism. The University of Missouri, which I had the honor and opportunity of attending, was the first State university established west of the Mississippi. The University of Missouri School of Journalism was the first school of journalism in the world. We of Missouri are proud of our university and proud of the fact that the Missouri School of Journalism is known and honored by the free press throughout the world.

Mr. Speaker, I ask unanimous consent to insert at this point in the record the following article printed in the Los Angeles Times, April 20, 1958:

THE MISSOURI SCHOOL OF JOURNALISM

Journalism is something like motherhood: It is neither a trade nor a very formal profession, yet it requires great skill and understanding from its superior practitioners, and these are hard things to teach. Consequently journalism schools, with a few honorable exceptions, are vacuous places, manipulated by teachers with little newspaper experience, much flam and no flair, who stand in the same relation to their students as the spinster social worker to the troubled bride.

Today we wish to salute one of the honorable exceptions, the University of Missouri School of Journalism, which has just weathered its first 50 years. Even disenchanted old editors show a gleam of interest when a Missouri alumnus comes along and some newspapers operate a sort of futurity stakes, picking their entries before they graduate.

The school is making quite a thing of the anniversary—a 10-month celebration beginning in August with a noble theme: "A Stronger Free Press for a Better Free World." President Elmer Ellis of the university and Dean Earl F. English of the School of Journalism said in their joint announcement:

"We believe that today the free world is confronted with the most serious threat to its existence since the dawn of western civilization, and that—more than ever before in history—the preservation of this free world depends on the ability of its citizens to exchange information and opinions openly without fear of retribution.

"We believe that the primary responsibility for keeping these avenues of expression open lies not with the Government or with any other agency or group, but with the journalism profession itself * * *.

"We believe that the immense contributions of the communications field are too often 'taken for granted' in democratic societies and that there is a need to emphasize these contributions through a series of events which can earn worldwide attention."

The United States has some pretty poor newspapers along with the great ones and good ones, but the lot of them averages out as the best of the free presses of the world. The Missouri School of Journalism has surely done as much as any single instrumentality of education to help the American press; and if it can, during its golden jubilee, teach a larger part of the public to believe what President Ellis and Dean English believe, it will do more for newspapering—and the free world—than it, or any other school, has ever done before. The enterprise has promise, for the Missouri school has the prestige to make itself heard.

The Plight of Our Railroads

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. DENT. Mr. Speaker, I would like to address my remarks today to the Members of Congress who are vitally affected by the present plight of our American railroads.

Legislation is now pending to relieve the Nation's railroads of some of the restrictions heretofore, perhaps necessarily, imposed on them by the Congress as a result of which they find themselves in serious straits, particularly as to their ability to compete under present conditions.

Much water has gone over the dam since the railroads were rich and powerful both financially and politically.

Today we have to recognize the facts, and the facts are such that both management and labor are deeply concerned over the railroads ability to survive under present conditions.

The proper defense of our country, the maintenance and expansion of its productive capacity and the economic well-being of our people require the sound maintenance of at least the existing network of national railroads. They are not now being properly maintained. The Pennsylvania Railroad alone admits that essential maintenance in terms of money of close to $200 million has been permitted to go undone. What this has already meant in terms of disruption of commerce and public inconvenience was illustrated by the almost total collapse of the Pennsylvania system for several days at the end of February this year and again in early March.

Over and beyond the damaging amount of deferred maintenance already accumulated, the Pennsylvania Railroad proposes to discontinue all heavy repair work on freight and passenger cars, to discontinue 12 percent of its normal railroad renewal program and one-third of its normal tie replacements.

The employees of the railroads, for the most part excluded from the improving benefits of unemployment insurance, have been the most immediate and most serious sufferers from the railroad crisis. In the last 6 months the Pennsylvania has laid off 18,600 employees. Men with 20 years and more of railroad service have exhausted their unemployment benefits under the railroad retirement act and, with their families, are now the public concern of the railroad communities. And the Pennsylvania now announces the impending layoff of 3,000 more. The plight of these employees is also the immediate and pressing concern of Congress.

Spokesman representing over 25,000 railroad employees urges prompt congressional action to revive the railroads.

For years the people of western Pennsylvania have been talking about the overregulation that has made the Nation's railroads the poor relatives in our industrial economy. For the past year the whole country has been talking about this alarming situation. And for the past few months, since the start of hearings by a Senate subcommittee, under the able leadership of the distinguished Senator from Florida, the Honorable GEORGE A. SMATHERS, the talk has intensified.

Almost every newspaper in this great land has urged the Government to take action before bankruptcy overtakes some of our leading railroads and turns this recession into a full-fledged depression. Thousands of well-authenticated news articles and editorials have appeared, pointing to the deteriorating situation.

Despite this universal call for action, the White House has procrastinated. Three years ago the famous Cabinet committee report was published, but nothing came of it. The Secretary of Commerce recently, on two occasions, postponed scheduled appearances before the Smathers committee—the last time being March 31.

With the Congress eagerly awaiting administration proposals, and looking for some semblance of leadership, the Secretary last week finally acted, but he only tossed an anchor to a drowning man. The administration proposals are five watered-down recommendations that sound noble but mean little.

The mountain has labored and brought forth a mouse.

This recession is real—make no mistake about that. Unemployment is so widespread in my area of western Pennsylvania that we think in terms of depression, rather than recession. John L. Lewis once made a good distinction between the two terms when he said: "When the man next door loses his job, it's a recession. When you lose yours, it's a depression."

One of the quickest and surest ways to get the national economy back on its feet is to permit the railroads—our second largest industry—to earn the money they need to call back furloughed employees and buy the billions of dollars worth of materials they need to rehabilitate their plants and equipment.

It is not only the railroad industry that is suffering. All the industries they buy from are suffering. I am worried about these railroad people, and the unemployed railroad suppliers as people. Because so many railroads are losing money, more railroad maintenance workers have been furloughed. Track that should have been renewed has not been laid. Because those new rails were not purchased, more steel workers are

without jobs. Because those railroad and steelworkers have been furloughed, their planned purchases of automobiles, washing machines, refrigerators, and television sets have been postponed. So more workers are jobless, and the vicious circle grows while the administration does nothing.

Surely the plight of the railroads is not a partisan issue. It is true that Senator SMATHERS, who has taken the lead in getting something done about the deteriorating railroad situation, is a Democrat. But the New York Herald Tribune agrees with him. Let me quote from an editorial appearing in that Republican newspaper on April 24:

No other single national asset is more vital to the security and the future growth of the United States than its 221,000 miles of railroads, the largest system in the world.

Were enemy paratroopers dropped to destroy it, the Army would be called out to prevent it.

Nevertheless, it is now being destroyed, just as effectively as if paratroopers were demolishing it.

Speaking of the White House proposals, the editorial continues:

All this is needed.

But much more is needed.

What is needed, above all, is the creation of a national transportation policy. Here are some of the urgent needs of such a policy:

It should combine all the regulatory agencies into a single Department of Transportation.

The entire concept of regulation should be changed. Instead of being based on the obsoleted concept of monopoly, it should be aimed at creating the maximum possible growth and efficiency.

The editorial concludes:

An adequate railway system is absolutely indispensable, as World War II proved, to national defense.

Without it, a growing nation faces economic strangulation.

Let's quit strangling ourselves.

Let's put the railroads on the track—on new tracks, with new wheels.

To which I would like to add, amen.

In an editorial of the same date, entitled "Crumbs for the Crumbling Railroads," the Cleveland Plain Dealer, a politically independent newspaper, had this to say:

Once again the Nation's railroads have received a roundhouse, and we don't mean the kind used for the care and feeding of locomotives.

This was a punch—of pure disappointment.

It came from an administration which for 6 years has talked sympathy for rail ills. But the cure as set forth in Commerce Secretary Sinclair Weeks' recommendations to Congress, sound more like sugar pills than penicillin.

The editorial went on to say:

The closest Weeks came toward getting at the heart of this thing was when he urged revision of Federal rate making policies to encourage more service and price competition while providing adequate minimum regulation.

Nothing specific, of course. Only a broad generalization that something should be done—sometime, somewhere.

Again I add, amen.

I have seen similar strong editorials, extremely critical of the weak-kneed White House proposals, in such newspapers as the New York Times, the Pittsburgh Post-Gazette, the Wall Street Journal, the Philadelphia Bulletin and the New York Journal of Commerce. But nowhere have I been able to find favorable comment.

Just as the White House has vacillated with a wavering wait-and-see policy during this depression, as millions of men plod the streets in a vain search to find a job, so has the administration's feeble and timid approach failed to offer a prescription that would cure the ills of the tottering railroad industry.

The situaiton is frightening. Just last Friday the Nation's two largest railroads reported combined losses for the first quarter of this year of more than $32 million. How long can this go on? Must we wait until these roads are bankrupt before we act?

It is readily apparent that we cannot look to the White House for help in solving this serious situation.

It is apparent, too, that if the industry—and the vitally interested public—is to get any relief, the leadership will have to come from the Congress. In the near future we will have the recommendations of the Smathers committee. I trust they will reject the caution and timidity of the administration's recommendations. And when we get the report, let us not then start long hearings on this side of the Hill. The time for study is over. Now is the time for action.

The latest figures from the Pittsburgh Press show that the 18,600 unemployed railroaders in Pennsylvania far exceeds that of any other State. I note also that Ben Fairless, in testifying before the SMATHER'S subcommittee, said that railroad purchases of steel had been cut in half and that more than 20,000 steelworkers were unemployed because of this cutback. I do not know what proportion of the 20,000 are Pennsylvania unemployed, but it must be at least one-third. Therefore we already have accounted for better than 25,000 of the Pennsylvania unemployed. All directly attributable to the deteriorating plight of the railroads.

The point is this, no State in the Union has as much to gain from a solution of the railroad problem as the Commonwealth of Pennsylvania.

A very interesting angle on this subject is residual oil. It is seldom considered as being of interest to the railroads and yet the importance of residual oil has a great bearing on the loss of income and labor work days.

For instance, between residual oils and refined waste some 50 million tons of coal is replaced with this import. Setting aside the millions of man-hours and loss of income to mine labor and management the figures on railroad losses are astounding.

At an average carloading of 60 tons of coal the rails lost approximately 83,000 carloadings of freight last year and will lose even more this year.

The average tonnage freight is $3.50 per ton making a loss in railroad revenue of $175 million for 1 year.

One can imagine the millions of man-hours and paycheck dollars lost by labor.

Sometimes one wonders whether we have taken enough time to evaluate this problem both internally and externally.

Evidently some of our communities are awakening to the danger to both the community and the country.

In closing and under leave granted, I submit for insertion in the RECORD an editorial typical of the many editorials in my local newspapers that reflects the serious consideration every community is giving this problem and the resolution unanimously adopted by the City Council of New Kensington similar to resolutions passed by the cities and towns in my district.

The editorial and resolution follow:

[From the Vandergrift (Pa.) News of February 28, 1958]

THE RAILROAD'S PLIGHT

It is difficult to feel sorry for any person who has brought a host of troubles on himself through shortsighted, greedy policies. That is why the railroads are today having so much trouble presenting their case to the public. They asked for it. They got it. And now they are suffering.

Railroads are essential to our present economy. Particularly in a time of war they are essential, as no other overland means of moving freight has proved economically feasible. But the railroads are being choked by a lack of profits, and, when and if the point of no return is reached, only one alternative will remain. That is Government operation of the freight arteries.

The unfortunate part about the suffering of the railroads is that, unless something is done, all of us will suffer. The fact that railroads at one time were monopolies and misused their power is no longer revelant. What was done to curb the railroads' misuse of power no longer applies, yet the Interstate Commerce Commission is still hamstringing the railroads as if they were monopolies.

When the railroads were new, the Government subsidized their building. But the men who actually constructed the roadbeds used the taxpayer's money for dividends and graft rather than for building or improvement of the rails. Then a mad scramble began, with powerful groups fighting to control important roadways. Eventually power concentrated in the hands of a few, and these few gave rebates to favored customers, upped the price to midwestern farmers when crops were good, even indulged in stock watering and manipulation to such a shocking degree than an aroused public finally put a stop to the nonsense.

Once Government control was established, about the turn of the century, those in charge failed to keep pace with the times. Private automobiles have taken over 90 percent of the Nation's passenger traffic. The other 10 percent must be divided between trains, buses and airplanes, and the trains are the losers. At one time losses in passenger service could be made up in profit from freight, but today even the freight profit is dwindling.

Profits are down because of two reasons. First, the railroads were not farsighted enough to keep up with technological advancements. Second, Government regulations do not allow them to follow normal good business practices. Railroads are forbidden to bid for mail, as trucks do. They must maintain duplicating, unprofitable lines. They are taxed and taxed from every side. They are not allowed to raise rates. And all the while they maintain and pay taxes on their roadways, and build their own stations, they watch their competitors being subsidized by the Government.

So, if the railroads asked for their present troubles, who is the loser? We can't say they made their bed and they should lie in it.

For if we do, we suffer too. The only thing the railroads need now is the chance to compete on equal footing. That fact was brought out at recent congressional hearings. Now it's up to Congress to chart a sensible course midway between absolute free competition and Government regulation.

Whereas the railroad industry, which has served as the backbone of the Nation's transportation system during times of war and peace, faces a crisis and threatens to have serious and far-reaching effects on the economy of the United States; and

Whereas the effects of the railroad's plight has resulted in a steady decline of employment with thousands of railroad workers unemployed in western Pennsylvania alone; and

Whereas the railroads have been large users of steel, aluminum, and glass and the cutbacks in purchases have meant curtailments in these various industries which are vital to this area; and

Whereas the sound financial condition of railroads is a prerequisite to the industrial development and future industrial progress of New Kensington, Westmoreland County, and Commonwealth of Pennsylvania: Now, therefore be it

Resolved, 1. That the Mayor and City Council of the City of New Kensington go on record as commending the purpose of the current hearings before Congress and urge that every effort be made to reestablish the competitive position and financial health of the railroad.

2. That copies of this resolution be forwarded to Senator GEORGE SMATHERS, chairman of the Subcommitee on Surface Transportation of the Senate Interstate and Foreign Commerce Committee, Washington, D. C.; to the members of this committee; and to Senators JOSEPH S. CLARK and EDWARD MARTIN, and Representative JOHN H. DENT.

Capital: Antirecession Medicine

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. BEAMER. Mr. Speaker, the editorial in the Nation's Agriculture, May 1958 issue, by Charles B. Shuman, president of the American Farm Bureau Federation, is most timely.

Under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD this editorial entitled "Capital: Antirecession Medicine":

The strength of the United States economy is in its productivity. We produce more goods, more services and more farm products per worker than any other nation in the world. What are the reasons for this high level of production which is the envy of the world?

Other nations have equal or superior natural resources, scientific knowledge or skilled craftsmen. However, no other nation has accumulated and invested as much capital in the tools and machinery for production as have we in the United States.

The real difference between the workers in India, for example and those in this country is that we have earned and saved the necessary capital to buy tools and machines to replace hand labor.

The free choice capitalist system which has worked so well for us is founded on private sources for capital funds. The socialist nations depend upon public sources for capital funds. Private capitalism succeeds because the people have incentives to work and to save. They are compensated for the risk of investment and the delayed use of their lands by interest and dividend payments.

Public sources for capital are often inadequate and unreliable because investment decisions are made on a political bias rather than on the basis of the greatest need. Furthermore, the Government depends primarily upon high taxes on income and profits for its source of investment funds.

High taxes on the income of individuals reduces their incentive to work harder to secure more income. Thus Government financing of capital needs is self-defeating—it results in inadequate funds to purchase tools and machines, lower production, and a gradually declining standard of living. Freedom of choice in the investment of private funds stimulates the flow of capital while Government collection tends to dry up the source of these capital funds.

Industrial payrolls—jobs of all kinds—depend upon a steady flow of new capital from private savings. Government tax and fiscal policies influence the amount and rate of savings and investments made by individuals. Continuous inflation, such as we have had during the last several years, depreciates the value of savings.

Heavy Government spending which results in a high level of taxation reduces the incentive to earn and also the ability of business corporations to accumulate capital from earnings. Perhaps the current recession is the result of inadequate capital investment—a product of inflation and excessive Government spending. If this is true, the remedy for this recession is not more spending by Government. Reduced taxation would help speed up the capital accumulation that is needed to buy more tools and machines to make more jobs. The way to lower taxes is to reduce Government spending.

CHARLES B. SHUMAN,
President, American Farm Bureau Federation.

Public Works and the Recession

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an article appearing in the April 1958 edition of the American Public Works Association News Letter. The article is authored by Mr. Harry L. Severson.

The article follows:

PUBLIC WORKS AND THE RECESSION

(By Harry L. Severson)

Following the close of World War II, traffic jams, double shifts in the public schools, breakdowns in mass transportation, and inadequate water and sewer facilities combined to dramatize the essential nature of public works. To some extent everyone was inconvenienced by these shortages, and in certain instances business expansion was impeded. Gradually there came to be a wide recognition of the fact that inadequate public works are a deterrent to economic and social progress. Consequently, the pressures upon State and local governments for large improvement of their capital facilities became very great.

In spite of the fact that the construction of large public works increased the demands for the types of labor and capital which were in short supply, due to the large volume of new construction which was also taking place in the private sectors of the economy, many business groups threw their active support behind the campaigns for such improvements as: better highways, extension of water and sewer facilities, improved ports, and additional schools. Some civic leaders, however, were disturbed because these great public works programs, although badly needed, were contributing to inflationary pressures, which continued except for two very short periods to be a serious national problem until the middle of 1957.

In the past few months, however, the storm clouds of a gathering recession have placed the situation in a different light. As the volume of unemployment began to rise to a point generally regarded as a danger signal, more and more attention has been directed to the possibility of using this large volume of needed public works as a stabilizing force. In a period of recession, it is argued, necessary projects should be speeded up, thereby offsetting to some extent the declining volume of business in the private sectors of the economy.

THE PRESENT DIFFERS FROM THE 1930'S

The discussion of the possibility of using public works to moderate an economic slump recalls the great depression of the 1930's, when the role of public works as an antidepression measure was argued at length, and faltering steps were taken belatedly to develop projects in an effort to stimulate the lagging volume of business. This experience was far from reassuring, but it does not mean that there is not much to be learned from it. Three obvious conclusions stand out: (1) Public works alone are not enough to turn the tide or even to be very effective in moderating the decline. To be effective an acceleration of public works must be accompanied by appropriate fiscal and monetary policies. (2) The earlier in the business decline that such programs (or any other antidepression measures) are started, the more likely they are to be successful. One difficulty with using public works in this connection is that it often takes a long time to get a project under way. (3) Local administration of public works is much more efficient than Federal control.

The situation today is different in many respects than it was in the 1930's. The built-in stabilizers about which we hear so much provide a more favorable environment for combating an economic slump than was the case 30 years ago. Another important difference is the fact that the population is presently expanding at a much more rapid rate. At that time the advocates of public works were to some extent plumping for make-work projects. There were serious reservations on the part of large groups about the worthwhileness of many of the projects which were advocated and in certain cases later undertaken. This was unfortunate, as it tended to induce a still further loss of faith in the future. When laborers believe that they are engaged in a make-work endeavor, cynicism develops which undermines morale and this in turn contributes to the downward spiral.

At the present time there appears to be a strong underlying feeling of optimism, sometimes more implicit in behavior than expressed openly in discussions. The economy is growing rapidly, and the younger generation in particular is acting in a manner which indicates great confidence in the future. Under these circumstances there is no reason for promoting a project which has any hint of a make-work character. The prob-

lem is rather which ones should have priority, and the political leaders who hope to use public works as a stabilizing force merely wish to reduce the lead time and push badly needed improvements through to completion somewhat more rapidly than would otherwise be the case.

THE VOLUME OF PUBLIC WORKS IS LARGE AND STILL INCREASING

The volume of public works has become so great that it must be considered in any evaluation of the business situation. From the extremely low level of $1.5 billion in 1946 construction expenditures of State and local governments have increased steadily. In 1957 they had reached an estimated total of $11 billion. As already indicated, the demand for the services provided by these improvements is also expanding rapidly and even at this rapid rate of construction (the highest on record) very little headway is being made in reducing the backlogs held over from World War II. If a substantial proportion of the needs of our expanding economy are to be met, construction expenditures of these governments must continue to expand. This upward movement is expected to carry on to a level of around $18 billion by 1962, and still higher to $25 billion by 1968. New capital facilities in approximately these amounts must be built if the hopes of individuals and communities for a continued improvement in the standard of living are to be realized.

POSITIVE ACTION REQUIRED TO KEEP PUBLIC WORKS PROGRAMS FROM DRAGGING

Inasmuch as a recession tends to feed upon itself for a considerable period of time, some positive action will be required to prevent these public works programs from dragging. The recession psychology tends to make voters and public officials alike more conservative. The optimism which prevailed so generally only a few months ago seems to belong to a past and perhaps somewhat naive era. The inconveniences involved in getting along with existing capital facilities do not seem quite as great as they did earlier and smaller increases to capacity are more appreciated by the public. Furthermore, the financing of the new projects is becoming increasingly difficult for the local subdivisions to arrange in spite of the easier credit policies of the Federal Reserve System and lower levels of interest rates generally. A recession causes the current expenditures of most governments to increase, while higher taxes become even more distasteful. Under these circumstances it is extremely difficult to arrange for the servicing of additional long-term debts and investors begin to scrutinize the credit quality of new offerings more sharply. When there is an upturn in business, the attitude of the voters again becomes favorable toward public works, and there is apt to be a spurt at the very top of the cycle.

A BROADER MARKET IS NEEDED FOR STATE AND LOCAL BONDS

To add still further to the problems of State and local governments in selling their bonds, the benefit of tax exemption to them has been eroding. At the close of World War II the total debt of State and local governments was approximately $16 billion, but by the middle of 1957 the large volume of new bond offerings had raised this total to over $50 billion. As the volume of new offerings continues its upward trend, the total of outstanding debt of these governments will continue to mount. It now appears that this total will cross the $100-billion mark in less than 10 years. In 1946 when tax-exempt bonds were in such short supply there was a sellers' market. The issuers enjoyed very substantial advantages at the bargaining table. If certain investors did not like a particular bond issue, there were others who were anxious to get the bonds with only minor concessions in price. But as the new offerings poured out, the portfolios in which tax exemption is very valuable gradually filled up, and as this occurred, the issuers were forced to make substantial concessions. Currently it is the investors who are in the most advantageous position in the bargaining. The issuer who wishes to get the best price must adjust his offering very carefully to conditions in the capital market. Since the portfolios which value tax exemption very highly are not growing as rapidly as the total supply of tax-exempt securities, this process will continue—except to the extent that new markets for State and local bonds are found.

One simple proposal for attracting additional funds into the tax-exempt sector of the capital market is the so-called pass-through which would allow investment companies to purchase the bonds of State and local governments and pass the interest to their shareholders without the loss of its tax-exempt status. This proposal in its broad form, such as embodied in H. R. 8702, would tap large pools of funds over the years.

CONCLUSION

After an economic slump has started, the problem of bolstering the economy to a point where the number of unemployed will begin to decline is an extremely large undertaking. This writer is firmly convinced that this cannot be done with one type of program. Rather there must be a bold approach on many fronts simultaneously. There is more than 1 way of combating a recession; in fact, since no 2 recessions are likely to run the same course, an effective plan for 1 may not be entirely feasible for another. The most promising focusing point for an antirecession program under existing circumstances appears to be a series of coordinated fiscal and monetary policies which will provide more purchasing power and easier credit. These policies should be supported by measures to stimulate the rate of construction of public works, particularly those already on the drawing boards, or which can be started quickly.

The volume of construction of capital facilities by State and local governments is so large that it cannot safely be ignored in formulating economic policies. There is a very real danger that in the absence of positive action on this front the recession psychology will result in a slowing down of plans already under consideration, thereby contributing still more to the downward spiral. One way to encourage public works is to provide State and local governments with a readier access to the accumulating pools of savings, such as would be provided by the broad pass-through. This has the advantage of costing the Federal Government very little in the way of lost revenue. Furthermore, it does not alter existing Federal, State, and local relationships. The complete control of these projects would be left at the local level, where it can be exercised most efficiently and economically.

Israel Is 10 Years Old

SPEECH

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, of the Gary (Ind.) Post Tribune, reviews Israel's 10-year progress.

We all hope that this bastion of democracy in the Middle East will continue to expand and progress and enjoy self-government and peace.

The editorial follows:

ISRAEL IS 10 YEARS OLD

The Jewish community in Gary, along with some 300 others in the United States and many in other countries throughout the world are celebrating the 10th birthday of the State of Israel (Medimet Yisrael)—"God strives," or rules.

The timing of the celebration in Israel may seem somewhat confusing. The Jewish state in Palestine was proclaimed on May 14, 1948. That was the 5th day in the month of Iyar in the Jewish calendar. The corresponding date in the Christian calendar this year was April 24. Thus the observance now.

The new state actually came into being at midnight on May 14, the moment the British mandate over Palestine ended. Two minutes later Awni Khalidy, of Iraq, paused in a United Nations Assembly debate in New York over an American trusteeship plan for Jerusalem, to declare, "The game is up." Another 9 minutes later in Washington, President Harry S. Truman issued an unexpected United States defacto recognition of the new state, acting on an appeal from Dr. Chaim Weizmann, the late Zionist leader who was to be declared the first president of Israel.

The American gesture threw the special U. N. meeting into a turmoil and caused some bad feelings between the United States and Britain. But de jure recognition was held off until the following January 31 after the first elected Israeli Government took over.

As British troops left the new Israeli nation, five Arab countries joined in an attack. The Israelis won that war, amazingly in view of the odds against them. They have more than held their own in the intermittent fighting that has followed.

Tragically, there has been much such fighting and there still is only an uneasy truce in the Holy Land. The world cannot be happy over that phase of the last decade in Palestine, nor can the blame for it be assessed entirely against either side. The problem of establishing peace is a thorny one that must still be worked out.

Aside from that, however, there is reason for great satisfaction in Israel, and in the world's Jewish communities, for what has been accomplished in the new nation. Jews and non-Jews can join in applauding a tremendous development.

Israel had a population of only 650,000 when it was established in May 1948. In the decade it has tripled in numbers. An insurge of Jews from all over the world, in addition to normal growth, brings the total today to just under 2 million, plus 214,000 Arab residents.

Most of the new immigrants to Israel have gone to work in the fields. They have literally made the desert bloom again. In 1948 some 412,000 acres were under cultivation; the latest figure is 956,250, with production tripled. Settlements have been built up in wastes that had been desolate for centuries.

New industries have been established, electric output has more than tripled. The government has built more than 180,000 apartments and established 430 new communities.

All this has required an outlay of about $3 billion. From the United States has come $469 million in official funds. In addition Americans have been heavy buyers of Israel state bonds and contributors to voluntary aid funds that together with other aid have given the new state more than $1 billion in funds.

As it starts its second decade, Israel's great internal problems are absorption of the remaining Arab population, irrigation, the readjustments to a socialist, welfare state. The many immigrants must be integrated into the population, and further immigration

must be absorbed. One of the first major tasks will be completion of the Jordan River project, so its waters will flow to the south and the Negev to provide new agricultural land.

But all of Israel's internal problems are both conditioned and dwarfed by the huge external problem of Arab enmity. There can be achievements in the second decade of the Jewish Nation far surpassing those of the last 10 years if a solution to this problem can be found. The whole Western world, not only the nations of the Middle East, have an important stake in what is done about it.

Proposal for a World Youth Convention

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. ANFUSO. Mr. Speaker, the battle of ideas and the effort to influence the minds of men is of greatest importance today. In the ideological struggle now going on in the world it is imperative that we apply boldness and imagination, if we desire to refute Communist propaganda whose primary aim is to confuse the minds of people everywhere. In the interest of world peace and the survival of mankind, it is our task to get the truth across to the nations of the world, to keep them informed and alert, and to build greater international amity and understanding.

In order to help develop a bold and imaginative program on our part, I am suggesting that the United States take the initiative in calling together an international convention of youth and youth leaders who have demonstrated an interest in science, scientific progress, and their application toward peaceful uses. It is my conviction that youth representatives of Iron Curtain countries be likewise included in this world youth convention, so that they too may have the opportunity to see for themselves that we desire peace and not the destruction of humanity.

For this reason and to achieve this aim, I am today introducing a Concurrent Resolution authorizing and requesting the President to issue a call for an international convention or conference of youth and youth leaders of all countries of the world, which is to be held in the very near future. The time and place of such convention is to be left to the discretion of the President.

The purpose of this international youth convention would be to obtain the views and opinions of world youth on the following and related problems:

First. The development of science for peaceful uses, rather than for war or for destructive purposes.

Second. The need for agricultural, industrial, and commercial development of the underprivileged and underdeveloped countries of the world, and how youth can be helpful in promoting this growth.

Third. Seek specific ways and methods to raise the standard of living in all countries, including health and education standards.

Fourth. Seek specific ways and methods to provide an incentive and a future for youth everywhere, including greater opportunities for education, an appreciation of scientific knowledge, and a desire to cooperate with the youth of other nations toward better international understanding.

My resolution also provides that this youth convention should set up specific recommendations for an international designed to encourage the youth of the world to take up scientific projects and research for peaceful uses and of benefit to all mankind, so that the present and future generations may be able to live in peace and without fear of destruction.

I should like to add this one stipulation: When and if such a convention is held, we must take every precaution to make certain that the delegates of all countries without exception be given full opportunities to express their views on the problems to be considered.

It is my belief that the convocation of an international youth convention would give us the opportunity to take the leadership in a stroke of world-wide propaganda for the cause of freedom. It would enable us to prove beyond any doubt to the undecided and the uncommitted peoples of the world that we are genuinely seeking peace, that we are sincerely interested in the peaceful application of science for the benefit of mankind.

I think that the youth of these nations, through their representatives at this international convention, would understand our earnest desire to live in peace and to eliminate all fear of human destruction.

In short, a bold step of this kind on our part would help to put the Soviet Union on the defensive in the eyes of freedom-loving and peace-loving peoples all over the world. I urge the Congress to take fast action on this proposal and to request the President to put it into practice. We stand to gain a great deal by quick action.

Dangers of the Present Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. DORN of South Carolina. Mr. Speaker, I commend to the attention of the Congress the following speech by Mr. Blackmore, who is making every effort to warn America of the dangers of the present foreign trade policy:

REMARKS BY A. H. BLACKMORE, PRESIDENT, THE CHAMBER OF COMMERCE OF GREATER SPARTANBURG, SPARTANBURG, S. C., BEFORE THE POLICY LUNCHEON MEETING OF CHAMBER OF COMMERCE OF THE UNITED STATES, WASHINGTON, D. C., APRIL 30, 1958

Mr. Chairman and gentlemen, my remarks pertain to policy declarations adopted by the Chamber of Commerce of the United States and to the proposed policy declaration relating to foreign commerce now before this assembly.

These remarks are justified by the yardsticks suggested by Senator Dirksen yesterday. You will recall the Senator admonished local groups to curb pleas for selfish, individual purposes. He declared presentations would best merit the interest and concern of the lawmakers and other agencies in Washington which would affect:

1. The survival and security of our Nation;
2. The solvency of this country;
3. The preservation of the free enterprise system; and
4. The need to keep abreast of progress.

Today I should like to point out that the foreign trade program of this country has been so completely modified and so drastically revised from the original concept of reciprocal trade in the past decade that it demands the immediate, serious reconsideration of the Congress, the Chamber of Commerce of the United States, and all champions of the free enterprise system.

The United States textile industry was America's first major industry to be affected adversely by this country's revised foreign trade policies in recent years.

The slow strangulation, crippling and discouraging retrenchment of the domestic textile industry started about 1954.

Calls for caution by industry spokesmen since that time provoked no realistic remedies, but some irritation, in Washington. Industry spokesmen were, in effect, rebuffed for trying to call the Nation's attention to what these businessmen felt was a dangerous practice and precedent and a critical trend if we are to preserve our American free-enterprise system.

While the dilemma of the textile industry continues unabated, there is now before this country a dire threat to several other important industries and major employers of American workingmen and women.

The only consolation today is that the textile industry is not alone now in its fear of ultimate destruction less the extremely liberal foreign trade program is reconstructed on a true reciprocal trade basis. The free flow of goods in a sound foreign trade program can be most beneficial to the free world when such trade is to the mutual advantage of the countries concerned.

Today we, who continue to be gravely concerned about the textile industry, can point finally to other industries which are suffering—and dying—from the effects of current operations of the foreign trade program.

Take a good look at the economic stability and employment levels in the domestic camera and watch industries, the pottery and chinaware industries of California, many coal producers of West Virginia and Tennessee, the wood screw manufacturers in Hartford, Cleveland, Cincinnati and many other cities, the typewriter and sewing machine manufacturers, the tuna fish industry on the west coast, the chemical industry and independent oil producers in this country, to name but a few.

The wholesale importation of these foreign-made products or substitutes thereof, produced in most cases by workers who are paid less than one-tenth the pay scale of American workingmen in comparable industries, will gradually bring a greater and more severe challenge to the very existence and survival of these and—in the not-too-distant future—many more American industries.

While these several industries are keys to the economic security of hundreds of communities throughout the country, let me remind you that the great American textile industry, and related apparel industries, employs one out of every seven persons in manufacturing.

Can we continue to practice the preachments of theorists, or is it about time to examine our general policies in this important field which appear to be leading to

the very bankruptcy of these key domestic industries?

My only hope today is that the Chamber of Commerce of the United States accept our words of caution as sincere suggestions, worthy of consideration. The foreign trade program of the United States must be reappraised in the light of what is happening to industry today throughout the country. These industries are important to our economy today; they will be even more important in the event of war.

We also beseech the National Chamber to re-examine its current concept and support of practices in the field of foreign commerce and to consider the desirability of restating and effectuating a practical, realistic policy to recreate a true reciprocal foreign trade program that will be mutually advantageous to the United States and the free world.

In closing, let me state that I am in no way connected with the American textile industry. However, the State of South Carolina is one of America's foremost producers of textiles. I am an electrical contractor who has a fierce sense of fair play and champion the three-enterprise system that has made America great. We must not jeopardize it.

Dispel the Gloom

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. HILLINGS. Mr. Speaker, it would be disastrous if we permitted continuous pessimistic talk to bring about a depression in the United States.

This would be a case of talking our way into something from which no amount of talk would extricate us.

I believe that positive action, positive talk will lead to a rapid recovery in this country. If the negative is emphasized, a negative situation will result.

In view of the current economic situation, I am convinced that our talk should be directed toward what our dynamic economy can do to take up the present slack with a view to promoting greater expansion of this economy so that no one willing to work will be out of work.

I fully believe that our economic frontiers are limited only by our own ideas, our own initiative, and our own energy.

I was, therefore, very interested in a recent speech sent to me by a friend wherein George Hammond, president of Carl Byoir & Associates, told an executive group of his public relations organization that private enterprise can do much to help in righting the economy through positive talk and positive action. This is the approach that I subscribe to.

Mr. Hammond made the point in his speech that Ralph Cordiner, president of General Electric, is bothered considerably because "when we lay off 300 people, people seem to forget that we still have 275,000 employed."

Mr. Hammond's antidote is to let people know what is on the good side of the economic ledger, which far outweighs the other side, as a major step in rebuilding our confidence in the economy.

This is Mr. Hammond's prediction: "In 1958, the people of our country will forget there is a recession—and there soon won't be any because they'll have the inclination to buy again—if they have an opportunity to read the affirmative news that exists all around us."

That is a sound prediction, and one which is based on confidence in the American people.

I Believe in the United States of America

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows an address by the distinguished dean of the Michigan delegation, the Honorable CLARE E. HOFFMAN, representing the Fourth District. The address was given on Tuesday, April 29, 1958, at the Michigan Congressional Dinner Association Executives of Michigan at the Statler Hotel, Washington, D. C.

The address follows:

I BELIEVE IN THE UNITED STATES OF AMERICA

The honor of appearing before you tonight is due to the fact that my term of service in the House is longer than that of any of the other present Michigan Members, either Democrat or Republican.

Placed in the position of speaking for the Members of the House, nothing that may be said should be construed as in any way partisan.

In years gone by, the 2 great parties, Democratic and Republican, and their leaders have had in mind but 1 objective, the welfare of the people, the security of the Republic.

Party methods may have varied. Some of our policies may have been characteristic of the party to which we owed allegiance.

There was a time when he who advocated a high protective tariff or spoke in favor of and worked for a tariff for revenue only or for free trade, by his words and his actions labeled himself as a member and adherent of 1 of the 2 great parties.

But, to a great degree that day of demarcation has gone.

In a month or two on the Hill a real fight will be waged on the extension of the Reciprocal Trade Act. Members of both parties will be found on both sides of that issue, as they have been and are found from day to day on opposite sides of many issues.

No longer can the individual Member's party alinement be determined by scanning the record of the rollcall votes.

What has been said does not mean, however, that the future will not have need for the two-party system. Each major political party of today is split by deep, sincere convictions on issues which will become more important as the future unfolds.

On more than one occasion, on a teller vote, in the House, the Speaker, who hails from Texas, the majority leader who comes from Massachusetts—both Democrats—have walked down the aisle, one supporting a nay, the other a yea vote.

A similar situation exists on the minority side of the aisle, where no great surprise is evidenced if minority leaders vote contrary to what the press has stated to be the administration's viewpoint. Nor do Members on either side blindly follow their chosen leaders on a sometimes basic issue.

Many of us believe that a two-party system is vital if we are to have sound government and many believe that a new political alinement is coming—an alinement under which the so-called liberals and progressives in both parties may unite, while the conservatives, or as they are sometimes disparagingly referred to, reactionaries, may be found in opposition.

But be all this as it may, it may truthfully be said that as long as the people, by secret ballot, select their representatives, those representatives will reflect the wishes, the desires, and the convictions of the people themselves.

If, in the future, the people are misgoverned, the fault will lie not with the women and the men they send to Congress, but with the people themselves—the people who, because of their lack of vigilance and the nonexercise of their voting privilege, have surrendered their right to govern.

To put it in a few brief words, this is the people's Government and, be it good or bad, the responsibility for what it does or fails to do rests upon the shoulders of the people themselves.

It is altogether too much to expect the agent to disregard the wishes of his principal; the servant to act contrary to the interests of the master.

So, we reach the conclusion that, this being the people's government, a government established by our forefathers, its efficiency, its durability, and its desirability having been demonstrated by time and experience, the future welfare of our people and the security of our Nation depend not upon the action of the Congress but upon what you, and others in similar situations, think and do.

This Government of ours will continue to make progress and to succeed—to guarantee opportunity for prosperity, the enjoyment of freedom, as you—this because each of you is an outstanding individual, a leader in your community—and those among whom you live—assume and exercise your responsibility.

The Members of Congress are but your representatives, your servants.

This is not an attempt to shirk or to shift responsibility. If, speaking for all Members of Congress, one thought may be expressed, it is this:

Regardless of party affiliations, and however devious may seem the path, each of us sincerely desires to carry out the wishes of the people he represents insofar as they do not conflict with his convictions of what is best for the Republic.

If he fails, then—as time rolls on, in November of each even-numbered year—the people have opportunity to attempt to select a better servant. Once again, the immediate responsibility is yours.

FAITH IN THE UNITED STATES OF AMERICA

A previous speaker expressed his faith in Michigan. He gave some of the reasons upon which he based that faith.

Permit me to express my confidence in our Nation. To give some of the reasons for my faith in the United States of America—for my loyalty to the Flag and to the Republic for which it stands.

First, the Founding Fathers who established this Government of ours knew what tyranny and depression were—their effect upon a people. Our forefathers knew the value of liberty, of security, of opportunity.

And because our forefathers knew of the things to which reference has been made, they were willing not only to sever all homeland ties, but to courageously face the un-

known, to endure whatever hardship might be necessary, to establish here in a new land a new and an unprecedented form of government.

Today, to some a trip to the moon presents no more of a mystery, or a hardship, or impossibility of attainment, than did the situation confronting Columbus when he sailed west. At least, we know there is a moon. Columbus thought the world was round—not flat. He had never dreamed of an America.

It is almost impossible for us today to visualize the hardships which our forefathers faced, the sufferings which they endured, the sacrifices which they made—not only that they might have a better government, but that those who came after might enjoy the blessings which they sought.

That they built not only wisely, but for endurance, as well as for success, when they divided the powers of the Government which they established into 3 separate and distinct branches, has been demonstrated time and time again.

The progress which has been made under the Constitution, to which some seem to refer apologetically, has astonished an envious world.

Today, we have no reason to be ashamed, or humiliated, because of the achievement of any other nation or nations. True, Russia launched the sputnik. But what was it? A showpiece, built at the sacrifice of the Russian people of many a blessing enjoyed by the humblest of our citizens.

Today, those in whom we have every reason to have confidence have told us time and again that we have no reason to fear the military might of any other nation.

And who is there among us who would become the subject of the greatest military power on earth, if, with it, went the loss of liberty, a denial of the blessings which we now all here enjoy?

DO SOMETHING—NO MATTER WHAT

Today's situation calls to mind my memories of Kipling's description of the Bandarlog—the monkeys of the animal world.

All other animals seemed, as described by Kipling, to have a definite place, a definite purpose—but the monkeys were continually running about, chattering, drifting from place to place, finding something new to do but never finishing anything they undertook, although all the time hurling missiles of some kind in the path of whatever animal they might encounter.

Today, a vocal few seem obsessed with the idea that, because the Constitution is old, it has outlived its usefulness as a guide—that there is some power in legislation which will enable it to solve all our problems, real or fancied—ignore all of nature's laws, perhaps cause the earth to turn from the East to the West to greet a rising sun.

From day to day, we discover a new fear. With it, a new panacea.

We forget the great truth uttered by President Franklin D. Roosevelt on March 4, 1933, when he said:

"This great Nation will endure as it has endured, will revive and will prosper. So, first of all, let me assert my firm belief that the only thing we have to fear is fear itself: nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance."

Let us forget our fancied fears, adhere to the principles which have brought us so far along the road of progress and contentment. Let us quit seeking quack remedies.

The rapid and tremendous increase in the public debt, our inability to meet necessary current expenditures, indicates we are following a dangerous course.

On July 30, 1932, President Franklin D. Roosevelt gave us some sound advice, among other things saying:

"Revenues must cover expenditures by one means or another. Any government, like any family, can for a year, spend a little more than it earns. But you and I know that a continuation of that habit means the poorhouse."

And again in October of 1932, he called attention to the fact that—

"Now, the credit of the family depends chiefly on whether that family is living within its income. And this is so of the Nation. If the Nation is living within its income, its credit is good.

"If, in some crisis, it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms.

"But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing to the limit of the people's power to pay and continues to pile up deficits, it is on the road to bankruptcy."

Apparently, many have forgotten that the Federal Government has no dollars except as it acquires them through taxation.

In October of 1932, President Roosevelt, at Pittsburgh, advised us that—

"Taxes are paid in the sweat of every man who labors because they are a burden on production and can be paid only by production. If excessive, they are reflected in idle factories, tax-sold farms, and, hence, in hordes of the hungry, tramping the streets and seeking jobs in vain.

"Our workers may never see a tax bill, but they pay in deductions from wages, in increased cost of what they buy, or, as now, in broad cessation of employment."

Today's immediate problem grows out of unemployment—of what some term a depression, others a recession.

As a remedy, many proposals have been made, most of which are based upon the thought that those who have should assume the care of and provide for, temporarily at least, the needs and the desires of those who have less. For the unfortunate, that we must do; but those who are able should at least make some effort to help themselves.

Perhaps the remedy for one of today's problems was given us by President Franklin D. Roosevelt on September 9, 1931, when he said:

"This depression is today's problem. We cannot and must not borrow against the future to meet it. We must share now out of what we have, but not out of what we expect to have some day in the future."

That advice is as sound today as when given.

But limitation of time brings us back to the basic issue. So, permit me to add that, for the average, healthy, and mentally competent individual, opportunity is all that anyone is justified in seeking.

Dependency is a fool's paradise, and will ruin not only he who accepts it but, ultimately, all of us.

Chew that one over—digest it—and, if there be a substitute for individual responsibility, for free enterprise, for the greatest possible degree of individual liberty consistent with the general welfare—let us have it, citing first, however, a proven example in the world's history. The world's junkyard is filled with the wrecks of nations which sought prosperity and enjoyment through socialism or tyranny.

Viewed in the light of tradition and of history, judged by experience, under the Constitution, under the Stars and Stripes—not under a one-world flag—measured by the world's standards, we are the most powerful nation on earth. Our people—as individuals and as a whole—have more of everything man considers enjoyable and good than do the people of any other country.

None of this is due to accident. It all exists because those who founded this Government thought wisely, planned well. Those who followed adhered to true principles—the good Lord was merciful to us and blessed us far beyond what we have earned.

This is our Government. The Members of Congress will, sincerely and to the best of their ability, attempt, through legislation, to translate your desires into action. We are, however, no more than your servants.

This is the people's Government. As you and your associates at home use your ability, exercise your judgment, and actively participate in the selection of your representatives, the future of this Nation will be determined.

The responsibility is yours—the word "yours" means the individuals who have opportunity to go to the polls. As that opportunity and responsibility is used and assumed, so the future welfare of our people and of our Nation will be determined.

Thank you and God bless you.

Testimony of Brig. Gen. H. A. Boushey Before Select Committee on Astronautics and Space Exploration

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. McINTOSH. Mr. Speaker, all of us are vitally interested in the current hearings of the House Select Committee on Astronautics and Space Exploration. The committee is conducting these hearings for the purpose of enabling it to recommend action which the Congress should take on astronautics or interplanetary travel and communications and the exploration of the vast expanse of space between the earth and other planets.

I am pleased to direct the attention of our colleagues to the statement presented to the committee on April 23, 1958, by Brig. Gen. H. A. Boushey, deputy director of research and development, Office of the Air Force Deputy Chief of Staff for Development.

General Boushey has focused to a possibility of realization what to a layman would seem fantastic and imaginary dreams for the control of space. Of especial interest are his remarks on the possibility of establishing an inhabited lunar base useful for civilian and military purposes. General Boushey's statement follows:

Mr. Chairman, members of the committee, and counsel, man's future is inevitably linked with the problems which this committee is considering. Thus I feel honored that you have requested me to appear before you today to present my views—views which I recognize may be controversial, but nevertheless, ones which I believe sincerely, and which I shall attempt to present clearly and concisely.

We in the military services sincerely pray that weapons of space may never be used—but rather, that peaceful benefits of space may be freely enjoyed by all men. However, I have been called before your committee as a military witness, and thus I shall try to limit my remarks to those which are pertinent to the military potential of space.

But at the outset, I would like to make one observation. Past experience has shown that some of our most respected thinkers have failed to appreciate new concepts. Typical expressions of our military and

scientific past come to mind—"Steam will never replace the sail," "the airplane can never sink a battleship," "power can never be obtained from the atom," "a jet engine will always be too inefficient to be useful," and fairly recently, "the hydrogen bomb won't work."

So I feel we should analyze proposals with intelligence and imagination—for again and again, the "absurd impossible" of today becomes the reality of tomorrow.

From a military consideration, the debate of the space age can be narrowed to two questions. These are:

1. Can space power provide significant military advantage? and

2. If this be true, what specific military applications of space power will give us the greatest advantage?

Now, without claiming to be the only persons who have considered these critical questions, we in the United States Air Force, on the basis of actual military experience, feel we can answer the first question in terms of plainest commonsense. For years our job has been to achieve—and at times to exercise—a dominant capability to deliver firepower against an enemy by military operations above the surface of the earth. In doing this job we have been and still are guided by one major premise—that a decisive margin of advantage goes to the nation whose delivery vehicles can attain the greatest speed, the greatest range, and the greatest altitude.

The battle-tested validity of that premise has impelled the Air Force to continue its efforts to fly higher, farther, and faster. The technical endeavors that have been accelerated and intensified by this program have produced truly spectacular results. For example, the improvements in rocketry, guidance, and hypersonic aerodynamics which are incorporated in our intercontinental and intermediate range ballistic missiles are truly major technical advances. But these, and other achievements are well known to this committee and need no elaboration.

It is a fact that the first military space weapons will be the Air Force intercontinental and intermediate range ballistic missiles Atlas, Titan, and Thor. To these should be added the Army's Jupiter and the Navy's promising Polaris. While these missiles only remain in space a relatively short period of time, they do leave the sensible portion of the atmosphere and during this time they respond only to astronautic laws, the basic laws which control the motion of the bodies of our solar system. Such weapons are space weapons, and they produce tremendous improvements in the range, speed, and reaction time of our Nation's deterrent force.

It thus becomes obvious that the answer to our first question, "Can space power guarantee significant military advantage?—is a decisive, yes.

This brings us to the second question, "What other specific military applications of space power will give us the greatest advantage?" And by other specific military applications of space power I refer to space vehicles which can operate above the earth's sensible atmosphere for longer periods of time and which are not earth-based. These space vehicles include primarily manned and unmanned satellites, piloted, maneuverable spacecraft, and eventually even an inhabited lunar base.

Nobody at this time can present a fully detailed chart of future space operations. There is too much still to be learned, and there are too many theories still to be tested to submit a bill of particulars. But I do have several firm convictions regarding our development of spacepower.

First of all I do not believe that machines alone, controlled from earth, can establish a capability to dominate space. I do believe that piloted vehicles are also essential to insure that our space systems can respond flexibly and promptly to unforeseen changes. I also believe that on-the-spot exercise of human intelligence, judgment, and discrimination will be needed for effective control of space.

Undoubtedly various types of earth-circling satellites will prove useful, not only for military needs, but for peaceful purposes as well. I am sure the committee already appreciates many of the valuable functions which such satellites can perform.

One of the most attractive features of an earth-circling satellite is the tremendous improvement in telescopic and photographic resolution which is possible because of the total absence of atmosphere. What may not be widely recognized is the degree of detail which could be distinguished from, say, a 500-mile orbit. With only a 40-inch diameter telescope, it is estimated that objects on the earth of a size less than 2 feet could be detected.

If a 200-inch-diameter telescope, the size of the present Palomar reflecting mirror, were located in space at the "stationary orbit" distance of roughly 22,000 miles, objects on the earth approximately 17 feet in diameter could be viewed. I believe man will be an essential element for such an observation platform. Even the problem of deciding where to look is a formidable one, and if left to a mechanical device the chances of profitable search and detailed scrutiny would be far less than if under the direct supervision of an intelligent operator who could immediately exercise the faculties of suspicion, comparison, and reason.

Such an orbiting reconnaissance platform might very well improve earth-based ICBM warning times by a factor of two. Enemy missiles as they rose above the atmosphere during launch could be detected clearly and warning transmitted to the free world in half the time of our best earth-based early warning systems.

Another function which I believe only man can perform effectively, is that of interception and midspace rendezvous. At first, such missions probably would be for the purpose of refueling, thus permitting a manned, maneuvering space vehicle to receive fuel from an uninhabited tanker satellite which might have been circling in orbit for months or years. If such refueling operations were not utilized, the size and costs of vehicles for true space exploration would be vastly greater, and our timetable for manned flight to the Moon or Mars and Venus would be extended greatly.

Eventually, the capability to control space would be augmented by the ability of manned military spacecraft to make interception or rendezvous in space.

Various other types of unmanned earth-circling satellites will undoubtedly prove useful but a frequently overlooked requirement, that of maintenance and resupply, will require the use of manned spacecraft. Malfunctions of automatic equipment do occur. Periodic replenishment of parts and fuel will be desirable and preferable to the alternative, uneconomical use of "one-time disposable vehicles." It is inconceivable to me that any method other than by manned maneuverable spacecraft could effectively perform this vital maintenance function.

But man's usefulness in space becomes most apparent when considered in relation to our only natural satellite, the moon.

My conviction is that ultimately the establishment of an inhabited lunar base will provide numerous advantages, both civilian and military.

Materials synthesized from matter obtained from the moon itself could be used for construction, and the support of human life. Oxygen could be extracted from the ores of the moon, and even water could most probably be obtained from its minerals.

As the Russians recognize and so stated in their space movie Blazing Roads to the Stars, rocket fuels could be synthesized from lunar material. The cost is great, in both dollars and energy, to place any material at a location having only one-sixth earth's gravity. Since the moon abounds in material, it is destined to become the launching site for further explorations of our solar system—and perhaps even the best supply base for lower orbit, earth-circling satellites.

Lunar conditions would offer unparalleled advantages for astronomical observation. For example, today from the earth, using present telescopic and photographic equipment, it is possible to detect an object approximately 1 mile in diameter, or not a great deal larger than the Pentagon, including its parking lots, for the Pentagon building alone is over one third mile in diameter. Even assuming no improvement, a lunar station having no better optical resolution would be very useful. Worldwide weather surveillance needs resolutions of many miles—not feet—and would be undisputed military advantage as well as peacefully benefitting mankind throughout the world. But the optical resolution would improve considerably once beyond the earth's atmosphere. There would be a fivefold improvement in seeing, and thus the diameter of an object which could be detected on the earth's surface from a lunar observatory would then be approximately one-fifth of a mile, or close to 1,000 feet. During the next 15 to 20 years, with the inevitable improvements in optics, photochemistry, and especially electronic amplification of light, it would seem quite conservative to expect great improvement over present day astronomical detection capabilities. Such improvement would then permit detection from the moon of objects on the earth of the order of less than 100 feet, or sufficient to distinguish individual aircraft or missiles.

And last, as regards the moon, I personally believe it could, at some future date, be used as a secure base to deter aggression. Lunar launching sites, perhaps located on the far side of the moon, which could never be viewed directly from the earth, could launch missiles earthward. They could be guided accurately during flight and to impact, and thus might serve peaceful ends by deterring any would-be aggressor.

But as regards the entire subject of space control, one thing is certain, the inevitable advancement of technology. As General Putt stated last week, we in the Air Force do not expect to marry present-day concepts and weapons to future space vehicles. We do not know what precise form these future weapons may take, but advances, in other branches of science, will surely keep pace with space technology and provide in the future defensive weapons of undreamed effectiveness.

Above all else, we must be bold and imaginative about the future of astronautics. We cannot be inhibited by the lack of imagination or our inability to foresee the exact application of each element of our national space program. We must support a broad program of basic and applied research. We cannot be overly fearful of failures, and thus attempt only the sure things which result only in a short-term gain. The cost of testing radical ideas and techniques to the point of determining their feasibility is small indeed when compared to the price of step by step small gain advancements to existing equipment.

Simultaneously, we must not let our deterrent power deteriorate by concentrating too great a proportion of our research and development efforts in astronautics. Because we are a peaceful Nation and will never strike except in defense of freedom, we must keep our present deterrent power strong and improve it simultaneously with our advance

into the space age. The cost will be high, but it is a price which we must accept if our way of life is to prevail.

The Russians do not appear to doubt the desirability of obtaining Soviet, manned space capability, nor do they discredit the worth of manned exploration of the moon.

My own views are that we can win the race to space if we so desire. And I feel we must win it so that all humanity can profit from these benefits which God has surely placed within the reach of man.

"Medinat Yisrael": The State of Israel, 1947–58

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. ROOSEVELT. Mr. Speaker, last week the 10th anniversary of the declaration of independence of the State of Israel was celebrated all over the world. Mr. Al S. Waxman, an influential and outstanding publisher in my district, has written an editorial which appeared in his newspapers. Because I feel it will be appreciated by my colleagues and others, I consider it a privilege to bring it thus to their notice:

"MEDINAT YISRAEL": THE STATE OF ISRAEL, 1947–58

Throughout the world Jews and non-Jews are observing the 10th anniversary of the State of Israel. The observance celebration began with sundown Wednesday, April 23, and is to last 1 full year. This is the 10th anniversary, proclaimed worldwide.

To give the chronology of this valiant little nation would almost be impossible. Time, since it has been recorded, spoke of the Promised Land; the Bible devotes great space to the subject of Yisrael; post-World War I gave hopes that this would become a reality; post-World War II did likewise.

It was on November 29, 1947, that the United Nations General Assembly voted for the the partition of Palestine and the establishment of a Jewish State, an Arab State, and an International Zone of Jerusalem, joined by economic union.

Bloodshed followed this announcement. Arabs drifted in and assassinated Jews. The member nations of the Arab League directed attacks on the Jewish population.

So it went into 1948. A small handful of Jewish pioneers fighting for the existence of a land which they had sought for thousands of years. With rifle in one hand and spade in the other they began to till the soil and fight their way to freedom. Thousands upon thousands of Arabs began to evacuate Palestine for the purpose of expediting the advance of the Arab Armies, to disrupt service and to demonstrate that Jews and Arabs could not live side by side.

In April 1948 the United Nations Palestine Commission reported to the U. N. that it was unable to implement the 1947 resolution because: "Powerful interests both in and outside Palestine are defying the resolution of the General Assembly and are engaged in a deliberate effort to alter by force the settlement envisaged therein. Armed Arab bands from neighboring Arab States, together with local Arab forces, are defeating the purpose of the resolution by acts of violence."

Shortly after this report was issued the British formally ended their mandate and completed the withdrawal of their forces from Palestine. This left the tiny Jewish State to fend for itself; and that it did.

On May 14, 1948, the provisional state council proclaimed from Tel Aviv the establishment of the Jewish State in Palestine, to be called Medinat Yisrael (the State of Israel).

Three pledges were contained in the proclamation of independence. They were:

1. "The State of Israel will be open to the immigration of Jews from all the countries of their dispersion, will promote the development of the country for the benefit of all its inhabitants, will be based on the principles of liberty, justice and peace, as conceived by the prophets of Israel, will uphold the full social and political equality of all its citizens, without distinction of religion, race, or sex; will guarantee freedom of religion, conscience, education, and culture; will safeguard the holy places of all religions, and will loyally uphold the principles of the United Nations Charter."

2. The proclamation calls "upon the Arab inhabitants of the State of Israel to preserve the ways of peace and play their part in the development of the state on the basis of full and equal citizenship and due representation in all its bodies and institutions—provincial and permanent."

3. The proclamation extends its "hand in peace and neighborliness to all the neighboring States and their peoples" and invites them "to cooperate with the independent Jewish nation for the common good of all."

On May 14, 1948, the Government of the United States was the first nation to give recognition to the State of Israel.

The following day the regular armies of Egypt, Iraq, Jordan, Lebanon, and Syria proclaimed their intention to the Security Council of the United Nations to launch an organized attack on Israel—and did so immediately. Simultaneously, the Arab League initiated a blockade against Israel, including a ban on all trade with Israel, as well as a denial to it of the right to use the Suez Canal.

Significantly enough, on that same day—May 15—Israel opened its doors to the survivors of Hitlerism who were still in DP camps and elsewhere. Fulfillment of its pledge of free immigration to all Jews seeking it had begun.

So began the lilfe of Israel. In the face of adversity, the people opened their doors and their hearts to fellow sufferers throughout the world. Despite the fact that war had been declared against them, that complete annihilation had been threatened, this band of pioneers thought first of giving help to their fellow Jews.

Ten years are long. Ten years are short. It all depends upon what happens during the decade. Israel's "long" 10 years have been filled with constant threats, snipings, actual bitter warfare; Israel's 10 "short" years have been those devoted to expansion, tilling the soil, building the land, growing with dignity to maturity.

All of the help has not been within. Much has come from other shores. Immigration of people has helped to build the nation; sale of bonds for Israel has helped meet financial needs; prayers and kind words from abroad have helped build Israel's morale.

Hardships have not departed; just lessened; freedom is more secure than ever before, but still threatened; progress has been tremendous, but not yet near fulfillment; dignity, and only dignity, started at the acme and has been retained there.

Resolution of the Independent Bankers Association

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter which I received from Howard Bell, of the Independent Bankers Association, dated April 10, 1958, together with a copy of a resolution adopted at the 24th annual convention of that association in Dallas, Tex., on March 8, 1958:

THE INDEPENDENT BANKERS ASSOCIATION,
Sauk Centre, Minn., April 10, 1958.

Representative ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE MULTER: The proposed Financial Institutions Act provides that the Comptroller of the Currency is to be a member of the Federal Deposit Insurance Corporation Board of Directors. This provision guarantees that national banks are represented on the Board, a privilege that is not granted to State banks.

The attached resolution, adopted at the 24th annual convention of the Independent Bankers Association in Dallas on March 8, calls your attention to this provision and suggests that the proposed Financial Institutions Act shall not provide mandatory representation of the Comptroller on the FDIC Board.

Sincerely,

HOWARD BELL,
Assistant Secretary.

Whereas the proposed Financial Institutions Act of 1957 provides mandatory representation for national banks by provision that the Comptroller of the Currency be a member of the Federal Deposit Insurance Corporation Board of Directors; and

Whereas said bill fails to give equal mandatory representation for State-chartered banks on said Board of Directors; and

Whereas equal representation and recognition of State and National banks will preserve and strengthen our dual banking system: Now, therefore, be it

Resolved, That the Independent Bankers Association, in convention assembled, requests that the proposed Financial Institutions Act shall not provide that the Comptroller of the Currency be a member of the Federal Deposit Insurance Corporation Board of Directors.

Resolved further, That a copy of this resolution be forwarded to each member of the Banking and Currency Committee in the United States Senate and the United States House of Representatives.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.
